6.0 Historical Text Files

> **Note:** *Only PC-DNETOPC-60, PC-DNETOPC-UN, PC-DNETUPG-30, PC-DNETUPG-60, and PC-DNETUPG-UN support data logging.*

In addition to displaying live data on a Web page, DataNet OPC also logs historical data into text files. These data files can be accessed directly from the DataNet OPC data-presentation Web page. The logged files can be viewed, printed and saved from any computer that has Internet access (requires Internet Explorer 6.0 or higher). No third-party software is needed.

> **Note:** *Each row must be individually configured for historical data logging, in order for a data log to be created for it. For more information on configuring and activating data logging, please see section 5.4: Row-Logging Configuration.*

Data logging is configured and stored for each individual row. To view a row's historical data file, click the *Data Log* link to the left of the row, from the DataNet OPC Web page:

The DataNet OPC - Data Log Files page, similar to the one below, will open:
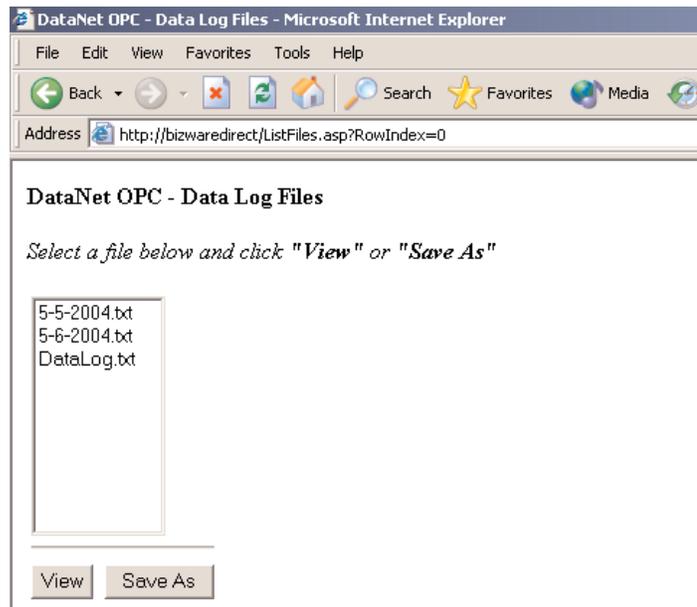

Select the desired file by clicking on the filename.

> **Note:** *New files are created as often as specified by the user during the data-logging configuration. For more information on how to setup historical data logging, please refer to "Row-Logging Configuration," in section 5.4.*

Click *View* to open and/or print the file. Click *Save As* to save the file to a disk, CD or hard drive. You will be prompted to specify a location in which to save the chosen file.

Click the *Return to DataNet OPC* link to return to the main data-presentation Web page.
