The table(s) below shows the weaknesses and high level categories that are related to this weakness. These relationships are defined as ChildOf, ParentOf, MemberOf and give insight to similar items that may exist at higher and lower levels of abstraction. In addition, relationships such as PeerOf and CanAlsoBe are defined to show similar weaknesses that may want to be explored.

*Relevant to the view "Research Concepts" (CWE-1000)*

Nature	Type	ID	Name	Page
ChildOf		657	Violation of Secure Design Principles	1451

## Applicable Platforms

**Language** : Not Language-Specific (*Prevalence = Undetermined*)

**Operating System** : Not OS-Specific (*Prevalence = Undetermined*)

**Architecture** : Not Architecture-Specific (*Prevalence = Undetermined*)

**Technology** : Not Technology-Specific (*Prevalence = Undetermined*)

## Common Consequences

Scope	Impact	Likelihood
Confidentiality Integrity Availability	Varies by Context  <i>The consequences vary widely, depending on the vulnerabilities that exist in the component; how those vulnerabilities can be "reached" by adversaries, as the exploitation paths and attack surface will vary depending on how the component is used; and the criticality of the privilege levels and features for which the product relies on the component.</i>	

## Detection Methods

### Automated Analysis

For software, use Software Composition Analysis (SCA) tools, which automatically analyze products to identify third-party dependencies. Often, SCA tools can be used to link with known vulnerabilities in the dependencies that they detect. There are commercial and open-source alternatives, such as OWASP Dependency-Check [REF-1312]. Many languages or frameworks have package managers with similar capabilities, such as npm audit for JavaScript, pip-audit for Python, govulncheck for Go, and many others. Dynamic methods can detect loading of third-party components.

*Effectiveness = High*

*Software Composition Analysis (SCA) tools face a number of technical challenges that can lead to false positives and false negatives. Dynamic methods have other technical challenges.*

## Potential Mitigations

**Phase: Requirements**

**Phase: Policy**

In some industries such as healthcare [REF-1320] [REF-1322] or technologies such as the cloud [REF-1321], it might be unclear about who is responsible for applying patches for third-party vulnerabilities: the vendor, the operator/customer, or a separate service. Clarifying roles and

responsibilities can be important to minimize confusion or unnecessary delay when third-party vulnerabilities are disclosed.

#### Phase: Requirements

Require a Bill of Materials for all components and sub-components of the product. For software, require a Software Bill of Materials (SBOM) [REF-1247] [REF-1311].

#### Phase: Architecture and Design

#### Phase: Implementation

#### Phase: Integration

#### Phase: Manufacturing

Maintain a Bill of Materials for all components and sub-components of the product. For software, maintain a Software Bill of Materials (SBOM). According to [REF-1247], "An SBOM is a formal, machine-readable inventory of software components and dependencies, information about those components, and their hierarchical relationships."

#### Phase: Operation

#### Phase: Patching and Maintenance

Actively monitor when a third-party component vendor announces vulnerability patches; fix the third-party component as soon as possible; and make it easy for operators/customers to obtain and apply the patch.

#### Phase: Operation

#### Phase: Patching and Maintenance

Continuously monitor changes in each of the product's components, especially when the changes indicate new vulnerabilities, end-of-life (EOL) plans, etc.

### Demonstrative Examples

#### Example 1:

The "SweynTooth" vulnerabilities in Bluetooth Low Energy (BLE) software development kits (SDK) were found to affect multiple Bluetooth System-on-Chip (SoC) manufacturers. These SoCs were used by many products such as medical devices, Smart Home devices, wearables, and other IoT devices. [REF-1314] [REF-1315]

#### Example 2:

log4j, a Java-based logging framework, is used in a large number of products, with estimates in the range of 3 billion affected devices [REF-1317]. When the "log4shell" (CVE-2021-44228) vulnerability was initially announced, it was actively exploited for remote code execution, requiring urgent mitigation in many organizations. However, it was unclear how many products were affected, as Log4j would sometimes be part of a long sequence of transitive dependencies. [REF-1316]

### MemberOf Relationships

This MemberOf relationships table shows additional CWE Categories and Views that reference this weakness as a member. This information is often useful in understanding where a weakness fits within the context of external information sources.

## CWE-1419: Incorrect Initialization of Resource

**Weakness ID** : 1419

**Structure** : Simple

**Abstraction** : Class

### Description

The product attempts to initialize a resource but does not correctly do so, which might leave the resource in an unexpected, incorrect, or insecure state when it is accessed.

### Extended Description

This can have security implications when the associated resource is expected to have certain properties or values. Examples include a variable that determines whether a user has been authenticated or not, or a register or fuse value that determines the security state of the product.

For software, this weakness can frequently occur when implicit initialization is used, meaning the resource is not explicitly set to a specific value. For example, in C, memory is not necessarily cleared when it is allocated on the stack, and many scripting languages use a default empty, null value, or zero value when a variable is not explicitly initialized.

For hardware, this weakness frequently appears with reset values and fuses. After a product reset, hardware may initialize registers incorrectly. During different phases of a product lifecycle, fuses may be set to incorrect values. Even if fuses are set to correct values, the lines to the fuse could be broken or there might be hardware on the fuse line that alters the fuse value to be incorrect.

### Relationships

The table(s) below shows the weaknesses and high level categories that are related to this weakness. These relationships are defined as ChildOf, ParentOf, MemberOf and give insight to similar items that may exist at higher and lower levels of abstraction. In addition, relationships such as PeerOf and CanAlsoBe are defined to show similar weaknesses that may want to be explored.

*Relevant to the view "Research Concepts" (CWE-1000)*

Nature	Type	ID	Name	Page
ChildOf		665	Improper Initialization	1462
ParentOf		454	External Initialization of Trusted Variables or Data Stores	1089
ParentOf		1051	Initialization with Hard-Coded Network Resource Configuration Data	1891
ParentOf		1052	Excessive Use of Hard-Coded Literals in Initialization	1892
ParentOf		1188	Initialization of a Resource with an Insecure Default	1979
ParentOf		1221	Incorrect Register Defaults or Module Parameters	2001

### Applicable Platforms

**Language** : Not Language-Specific (*Prevalence = Undetermined*)

**Operating\_System** : Not OS-Specific (*Prevalence = Undetermined*)

**Architecture** : Not Architecture-Specific (*Prevalence = Undetermined*)

**Technology** : Not Technology-Specific (*Prevalence = Undetermined*)

### Common Consequences

Scope	Impact	Likelihood
Confidentiality	Read Memory Read Application Data Unexpected State	Unknown
Authorization Integrity	Gain Privileges or Assume Identity	

Scope	Impact	Likelihood
Other	Varies by Context  <i>The technical impact can vary widely based on how the resource is used in the product, and whether its contents affect security decisions.</i>	

### Potential Mitigations

#### Phase: Implementation

Choose the safest-possible initialization for security-related resources.

#### Phase: Implementation

Ensure that each resource (whether variable, memory buffer, register, etc.) is fully initialized.

#### Phase: Implementation

Pay close attention to complex conditionals or reset sources that affect initialization, since some paths might not perform the initialization.

#### Phase: Architecture and Design

Ensure that the design and architecture clearly identify what the initialization should be, and that the initialization does not have security implications.

### Demonstrative Examples

#### Example 1:

Consider example design module system verilog code shown below. The register\_example module is an example parameterized module that defines two parameters, REGISTER\_WIDTH and REGISTER\_DEFAULT. Register\_example module defines a Secure\_mode setting, which when set makes the register content read-only and not modifiable by software writes. register\_top module instantiates two registers, Insecure\_Device\_ID\_1 and Insecure\_Device\_ID\_2. Generally, registers containing device identifier values are required to be read only to prevent any possibility of software modifying these values.

Example Language: Verilog

(Bad)

```
// Parameterized Register module example
// Secure_mode : REGISTER_DEFAULT[0] : When set to 1 register is read only and not writable//
module register_example
#(
parameter REGISTER_WIDTH = 8, // Parameter defines width of register, default 8 bits
parameter [REGISTER_WIDTH-1:0] REGISTER_DEFAULT = 2**REGISTER_WIDTH -2 // Default value of register
computed from Width. Sets all bits to 1s except bit 0 (Secure_mode)
)
(
input [REGISTER_WIDTH-1:0] Data_in,
input Clk,
input resetn,
input write,
output reg [REGISTER_WIDTH-1:0] Data_out
);
reg Secure_mode;
always @(posedge Clk or negedge resetn)
if (~resetn)
begin
Data_out <= REGISTER_DEFAULT; // Register content set to Default at reset
Secure_mode <= REGISTER_DEFAULT[0]; // Register Secure_mode set at reset
end
else if (write & ~Secure_mode)
begin
Data_out <= Data_in;
end
endmodule
module register_top
```

```
(
input Clk,
input resetn,
input write,
input [31:0] Data_in,
output reg [31:0] Secure_reg,
output reg [31:0] Insecure_reg
);
register_example #(
    .REGISTER_WIDTH (32),
    .REGISTER_DEFAULT (1224) // Incorrect Default value used bit 0 is 0.
) Insecure_Device_ID_1 (
    .Data_in (Data_in),
    .Data_out (Secure_reg),
    .Clk (Clk),
    .resetn (resetn),
    .write (write)
);
register_example #(
    .REGISTER_WIDTH (32) // Default not defined 2^32-2 value will be used as default.
) Insecure_Device_ID_2 (
    .Data_in (Data_in),
    .Data_out (Insecure_reg),
    .Clk (Clk),
    .resetn (resetn),
    .write (write)
);
endmodule
```

These example instantiations show how, in a hardware design, it would be possible to instantiate the register module with insecure defaults and parameters.

In the example design, both registers will be software writable since Secure\_mode is defined as zero.

*Example Language: Verilog*

*(Good)*

```
register_example #(
    .REGISTER_WIDTH (32),
    .REGISTER_DEFAULT (1225) // Correct default value set, to enable Secure_mode
) Secure_Device_ID_example (
    .Data_in (Data_in),
    .Data_out (Secure_reg),
    .Clk (Clk),
    .resetn (resetn),
    .write (write)
);
```

## Example 2:

This code attempts to login a user using credentials from a POST request:

*Example Language: PHP*

*(Bad)*

```
// $user and $pass automatically set from POST request
if (login_user($user,$pass)) {
    $authorized = true;
}
...
if ($authorized) {
    generatePage();
}
```

Because the \$authorized variable is never initialized, PHP will automatically set \$authorized to any value included in the POST request if register\_globals is enabled. An attacker can send a POST

request with an unexpected third value 'authorized' set to 'true' and gain authorized status without supplying valid credentials.

Here is a fixed version:

*Example Language: PHP*

*(Good)*

```
$user = $_POST['user'];
$pass = $_POST['pass'];
$authorized = false;
if (login_user($user,$pass)) {
    $authorized = true;
}
...
```

This code avoids the issue by initializing the \$authorized variable to false and explicitly retrieving the login credentials from the \$\_POST variable. Regardless, register\_globals should never be enabled and is disabled by default in current versions of PHP.

### Example 3:

The following example code is excerpted from the Access Control module, acct\_wrapper, in the Hack@DAC'21 buggy OpenPiton System-on-Chip (SoC). Within this module, a set of memory-mapped I/O registers, referred to as acct\_mem, each 32-bit wide, is utilized to store access control permissions for peripherals [REF-1437]. Access control registers are typically used to define and enforce permissions and access rights for various system resources.

However, in the buggy SoC, these registers are all enabled at reset, i.e., essentially granting unrestricted access to all system resources [REF-1438]. This will introduce security vulnerabilities and risks to the system, such as privilege escalation or exposing sensitive information to unauthorized users or processes.

*Example Language: Verilog*

*(Bad)*

```
module acct_wrapper #(
...
    always @(posedge clk_i)
        begin
            if(~(rst_ni && ~rst_6))
                begin
                    for (j=0; j < AcCt_MEM_SIZE; j=j+1)
                        begin
                            acct_mem[j] <= 32'hfffffff;
                        end
                    end
                end
            ...
```

To fix this issue, the access control registers must be properly initialized during the reset phase of the SoC. Correct initialization values should be established to maintain the system's integrity, security, predictable behavior, and allow proper control of peripherals. The specifics of what values should be set depend on the SoC's design and the requirements of the system. To address the problem depicted in the bad code example [REF-1438], the default value for "acct\_mem" should be set to 32'h00000000 (see good code example [REF-1439]). This ensures that during startup or after any reset, access to protected data is restricted until the system setup is complete and security procedures properly configure the access control settings.

*Example Language: Verilog*

*(Good)*

```
module acct_wrapper #(
...
    always @(posedge clk_i)
        begin
            if(~(rst_ni && ~rst_6))
                begin
```

```

for (j=0; j < AcCt_MEM_SIZE; j=j+1)
  begin
    acct_mem[j] <= 32'h00000000;
  end
end
...

```

### Observed Examples

Reference	Description
<b>CVE-2020-27211</b>	Chain: microcontroller system-on-chip uses a register value stored in flash to set product protection state on the memory bus and does not contain protection against fault injection (CWE-1319) which leads to an incorrect initialization of the memory bus (CWE-1419) causing the product to be in an unprotected state. <a href="https://www.cve.org/CVERecord?id=CVE-2020-27211">https://www.cve.org/CVERecord?id=CVE-2020-27211</a>
<b>CVE-2023-25815</b>	chain: a change in an underlying package causes the gettext function to use implicit initialization with a hard-coded path (CWE-1419) under the user-writable C:\ drive, introducing an untrusted search path element (CWE-427) that enables spoofing of messages. <a href="https://www.cve.org/CVERecord?id=CVE-2023-25815">https://www.cve.org/CVERecord?id=CVE-2023-25815</a>

## CWE-1420: Exposure of Sensitive Information during Transient Execution

Weakness ID : 1420

**Structure** : Simple  
**Abstraction** : Base

## Description

A processor event or prediction may allow incorrect operations (or correct operations with incorrect data) to execute transiently, potentially exposing data over a covert channel.

## Extended Description

When operations execute but do not commit to the processor's architectural state, this is commonly referred to as transient execution. This behavior can occur when the processor mis-predicts an outcome (such as a branch target), or when a processor event (such as an exception or microcode assist, etc.) is handled after younger operations have already executed. Operations that execute transiently may exhibit observable discrepancies (CWE-203) in covert channels [REF-1400] such as data caches. Observable discrepancies of this kind can be detected and analyzed using timing or power analysis techniques, which may allow an attacker to infer information about the operations that executed transiently. For example, the attacker may be able to infer confidential data that was accessed or used by those operations.

Transient execution weaknesses may be exploited using one of two methods. In the first method, the attacker generates a code sequence that exposes data through a covert channel when it is executed transiently (the attacker must also be able to trigger transient execution). Some transient execution weaknesses can only expose data that is accessible within the attacker's processor context. For example, an attacker executing code in a software sandbox may be able to use a transient execution weakness to expose data within the same address space, but outside of the attacker's sandbox. Other transient execution weaknesses can expose data that is architecturally inaccessible, that is, data protected by hardware-enforced boundaries such as page tables or privilege rings. These weaknesses are the subject of CWE-1421.

In the second exploitation method, the attacker first identifies a code sequence in a victim program that, when executed transiently, can expose data that is architecturally accessible within the victim's processor context. For instance, the attacker may search the victim program for code sequences that resemble a bounds-check bypass sequence (see Demonstrative Example 1). If the attacker can trigger a mis-prediction of the conditional branch and influence the index of the out-of-bounds array access, then the attacker may be able to infer the value of out-of-bounds data by monitoring observable discrepancies in a covert channel.

## Relationships

The table(s) below shows the weaknesses and high level categories that are related to this weakness. These relationships are defined as ChildOf, ParentOf, MemberOf and give insight to similar items that may exist at higher and lower levels of abstraction. In addition, relationships such as PeerOf and CanAlsoBe are defined to show similar weaknesses that may want to be explored.

### Applicable Platforms

**Language** : Not Language-Specific (*Prevalence = Undetermined*)

**Operating\_System** : Not OS-Specific (*Prevalence = Undetermined*)

**Architecture** : Not Architecture-Specific (*Prevalence = Undetermined*)

**Technology** : Not Technology-Specific (*Prevalence = Undetermined*)

### Common Consequences

Scope	Impact	Likelihood
Confidentiality	Read Memory	Medium

### Detection Methods

#### Manual Analysis

This weakness can be detected in hardware by manually inspecting processor specifications. Features that exhibit this weakness may include microarchitectural predictors, access control checks that occur out-of-order, or any other features that can allow operations to execute without committing to architectural state. Academic researchers have demonstrated that new hardware weaknesses can be discovered by exhaustively analyzing a processor's machine clear (or nuke) conditions ([REF-1427]).

*Effectiveness = Moderate*

*Hardware designers can also scrutinize aspects of the instruction set architecture that have undefined behavior; these can become a focal point when applying other detection methods. Manual analysis may not reveal all weaknesses in a processor specification and should be combined with other detection methods to improve coverage.*

#### Fuzzing

Academic researchers have demonstrated that this weakness can be detected in hardware using software fuzzing tools that treat the underlying hardware as a black box ([REF-1428]).

*Effectiveness = Opportunistic*

*Fuzzing may not reveal all weaknesses in a processor specification and should be combined with other detection methods to improve coverage.*

#### Fuzzing

Academic researchers have demonstrated that this weakness can be detected in software using software fuzzing tools ([REF-1429]).

*Effectiveness = Opportunistic*

*At the time of this writing, publicly available software fuzzing tools can only detect a subset of transient execution weaknesses in software (for example, [REF-1429] can only detect instances of Spectre v1) and may produce false positives.*

#### Automated Static Analysis

A variety of automated static analysis tools can identify potentially exploitable code sequences in software. These tools may perform the analysis on source code, on binary code, or on an intermediate code representation (for example, during compilation).

*Effectiveness = Limited*

*At the time of this writing, publicly available software static analysis tools can only detect a subset of transient execution weaknesses in software and may produce false positives.*

### Automated Analysis

Software vendors can release tools that detect presence of known weaknesses on a processor. For example, some of these tools can attempt to transiently execute a vulnerable code sequence and detect whether code successfully leaks data in a manner consistent with the weakness under test. Alternatively, some hardware vendors provide enumeration for the presence of a weakness (or lack of a weakness). These enumeration bits can be checked and reported by system software. For example, Linux supports these checks for many commodity processors:

```
$ cat /proc/cpuinfo | grep bugs | head -n 1 bugs : cpu_meltdown spectre_v1 spectre_v2
spec_store_bypass l1tf mds swapgs taa itlb_multihit srbds mmio_stale_data retbleed
```

*Effectiveness = High*

*This method can be useful for detecting whether a processor is affected by known weaknesses, but it may not be useful for detecting unknown weaknesses.*

### Potential Mitigations

#### Phase: Architecture and Design

The hardware designer can attempt to prevent transient execution from causing observable discrepancies in specific covert channels.

*Effectiveness = Limited*

*This technique has many pitfalls. For example, InvisiSpec was an early attempt to mitigate this weakness by blocking "micro-architectural covert and side channels through the multiprocessor data cache hierarchy due to speculative loads" [REF-1417]. Commodity processors and SoCs have many covert and side channels that exist outside of the data cache hierarchy. Even when some of these channels are blocked, others (such as execution ports [REF-1418]) may allow an attacker to infer confidential data. Mitigation strategies that attempt to prevent transient execution from causing observable discrepancies also have other pitfalls, for example, see [REF-1419].*

#### Phase: Requirements

Processor designers may expose instructions or other architectural features that allow software to mitigate the effects of transient execution, but without disabling predictors. These features may also help to limit opportunities for data exposure.

*Effectiveness = Moderate*

*Instructions or features that constrain transient execution or suppress its side effects may impact performance.*

#### Phase: Requirements

Processor designers may expose registers (for example, control registers or model-specific registers) that allow privileged and/or user software to disable specific predictors or other hardware features that can cause confidential data to be exposed during transient execution.

*Effectiveness = Limited*

*Disabling specific predictors or other hardware features may result in significant performance overhead.*

#### Phase: Requirements

Processor designers, system software vendors, or other agents may choose to restrict the ability of unprivileged software to access to high-resolution timers that are commonly used to monitor covert channels.

*Effectiveness = Defense in Depth*

*Specific software algorithms can be used by an attacker to compensate for a lack of a high-resolution time source [REF-1420].*

#### **Phase: Build and Compilation**

Isolate sandboxes or managed runtimes in separate address spaces (separate processes). For examples, see [REF-1421].

*Effectiveness = High*

#### **Phase: Build and Compilation**

Include serialization instructions (for example, LFENCE) that prevent processor events or mis-predictions prior to the serialization instruction from causing transient execution after the serialization instruction. For some weaknesses, a serialization instruction can also prevent a processor event or a mis-prediction from occurring after the serialization instruction (for example, CVE-2018-3639 can allow a processor to predict that a load will not depend on an older store; a serialization instruction between the store and the load may allow the store to update memory and prevent the prediction from happening at all).

*Effectiveness = Moderate*

*When used to comprehensively mitigate a transient execution weakness (for example, by inserting an LFENCE after every instruction in a program), serialization instructions can introduce significant performance overhead. On the other hand, when used to mitigate only a relatively small number of high-risk code sequences, serialization instructions may have a low or negligible impact on performance.*

#### **Phase: Build and Compilation**

Use control-flow integrity (CFI) techniques to constrain the behavior of instructions that redirect the instruction pointer, such as indirect branch instructions.

*Effectiveness = Moderate*

*Some CFI techniques may not be able to constrain transient execution, even though they are effective at constraining architectural execution. Or they may be able to provide some additional protection against a transient execution weakness, but without comprehensively mitigating the weakness. For example, Clang-CFI provides strong architectural CFI properties and can make some transient execution weaknesses more difficult to exploit [REF-1398].*

#### **Phase: Build and Compilation**

If the weakness is exposed by a single instruction (or a small set of instructions), then the compiler (or JIT, etc.) can be configured to prevent the affected instruction(s) from being generated, and instead generate an alternate sequence of instructions that is not affected by the weakness. One prominent example of this mitigation is retpoline ([REF-1414]).

*Effectiveness = Limited*

*This technique may only be effective for software that is compiled with this mitigation. For some transient execution weaknesses, this technique may not be sufficient to protect software that is compiled without the affected instruction(s). For example, see CWE-1421.*

#### **Phase: Build and Compilation**

Use software techniques that can mitigate the consequences of transient execution. For example, address masking can be used in some circumstances to prevent out-of-bounds transient reads.

*Effectiveness = Limited*

Address masking and related software mitigation techniques have been used to harden specific code sequences that could potentially be exploited via transient execution. For example, the Linux kernel makes limited use of manually inserted address masks to mitigate bounds-check bypass [REF-1390]. Compiler-based techniques have also been used to automatically harden software [REF-1425].

### Phase: Build and Compilation

Use software techniques (including the use of serialization instructions) that are intended to reduce the number of instructions that can be executed transiently after a processor event or misprediction.

*Effectiveness = Incidental*

*Some transient execution weaknesses can be exploited even if a single instruction is executed transiently after a processor event or mis-prediction. This mitigation strategy has many other pitfalls that prevent it from eliminating this weakness entirely. For example, see [REF-1389].*

### Phase: Documentation

If a hardware feature can allow incorrect operations (or correct operations with incorrect data) to execute transiently, the hardware designer may opt to disclose this behavior in architecture documentation. This documentation can inform users about potential consequences and effective mitigations.

*Effectiveness = High*

## Demonstrative Examples

### Example 1:

Secure programs perform bounds checking before accessing an array if the source of the array index is provided by an untrusted source such as user input. In the code below, data from array1 will not be accessed if x is out of bounds. The following code snippet is from [REF-1415]:

*Example Language: C*

*(Bad)*

```
if (x < array1_size)
    y = array2[array1[x] * 4096];
```

However, if this code executes on a processor that performs conditional branch prediction the outcome of the if statement could be mis-predicted and the access on the next line will occur with a value of x that can point to an out-of-bounds location (within the program's memory).

Even though the processor does not commit the architectural effects of the mis-predicted branch, the memory accesses alter data cache state, which is not rolled back after the branch is resolved. The cache state can reveal array1[x] thereby providing a mechanism to recover the data value located at address array1 + x.

### Example 2:

Some managed runtimes or just-in-time (JIT) compilers may overwrite recently executed code with new code. When the instruction pointer enters the new code, the processor may inadvertently execute the stale code that had been overwritten. This can happen, for instance, when the processor issues a store that overwrites a sequence of code, but the processor fetches and executes the (stale) code before the store updates memory. Similar to the first example, the processor does not commit the stale code's architectural effects, though microarchitectural side effects can persist. Hence, confidential information accessed or used by the stale code may be inferred via an observable discrepancy in a covert channel. This vulnerability is described in more detail in [REF-1427].

## Observed Examples

Reference	Description
<b>CVE-2017-5753</b>	Microarchitectural conditional branch predictors may allow operations to execute transiently after a misprediction, potentially exposing data over a covert channel. <a href="https://www.cve.org/CVERecord?id=CVE-2017-5753">https://www.cve.org/CVERecord?id=CVE-2017-5753</a>

## CWE-1421: Exposure of Sensitive Information in Shared Microarchitectural Structures during Transient Execution

**Weakness ID** : 1421

**Structure** : Simple

**Abstraction** : Base

### Description

A processor event may allow transient operations to access architecturally restricted data (for example, in another address space) in a shared microarchitectural structure (for example, a CPU cache), potentially exposing the data over a covert channel.

### Extended Description

Many commodity processors have Instruction Set Architecture (ISA) features that protect software components from one another. These features can include memory segmentation, virtual memory, privilege rings, trusted execution environments, and virtual machines, among others. For example, virtual memory provides each process with its own address space, which prevents processes from accessing each other's private data. Many of these features can be used to form hardware-enforced security boundaries between software components.

Many commodity processors also share microarchitectural resources that cache (temporarily store) data, which may be confidential. These resources may be shared across processor contexts, including across SMT threads, privilege rings, or others.

When transient operations allow access to ISA-protected data in a shared microarchitectural resource, this might violate users' expectations of the ISA feature that is bypassed. For example,

if transient operations can access a victim's private data in a shared microarchitectural resource, then the operations' microarchitectural side effects may correspond to the accessed data. If an attacker can trigger these transient operations and observe their side effects through a covert channel [REF-1400], then the attacker may be able to infer the victim's private data. Private data could include sensitive program data, OS/VMM data, page table data (such as memory addresses), system configuration data (see Demonstrative Example 3), or any other data that the attacker does not have the required privileges to access.

## Relationships

The table(s) below shows the weaknesses and high level categories that are related to this weakness. These relationships are defined as ChildOf, ParentOf, MemberOf and give insight to similar items that may exist at higher and lower levels of abstraction. In addition, relationships such as PeerOf and CanAlsoBe are defined to show similar weaknesses that may want to be explored.

*Relevant to the view "Research Concepts" (CWE-1000)*

Nature	Type	ID	Name	Page
ChildOf		1420	Exposure of Sensitive Information during Transient Execution	2293

*Relevant to the view "Hardware Design" (CWE-1194)*

Nature	Type	ID	Name	Page
ChildOf		1420	Exposure of Sensitive Information during Transient Execution	2293

## Applicable Platforms

**Language** : Not Language-Specific (*Prevalence = Undetermined*)

**Operating\_System** : Not OS-Specific (*Prevalence = Undetermined*)

**Architecture** : Not Architecture-Specific (*Prevalence = Undetermined*)

**Technology** : Not Technology-Specific (*Prevalence = Undetermined*)

## Common Consequences

Scope	Impact	Likelihood
Confidentiality	Read Memory	Medium
	<<put the information here>>	

## Detection Methods

### Manual Analysis

This weakness can be detected in hardware by manually inspecting processor specifications. Features that exhibit this weakness may include microarchitectural predictors, access control checks that occur out-of-order, or any other features that can allow operations to execute without committing to architectural state. Academic researchers have demonstrated that new hardware weaknesses can be discovered by examining publicly available patent filings, for example [REF-1405] and [REF-1406]. Hardware designers can also scrutinize aspects of the instruction set architecture that have undefined behavior; these can become a focal point when applying other detection methods.

*Effectiveness = Moderate*

*Manual analysis may not reveal all weaknesses in a processor specification and should be combined with other detection methods to improve coverage.*

### Automated Analysis

This weakness can be detected (pre-discovery) in hardware by employing static or dynamic taint analysis methods [REF-1401]. These methods can label data in one context (for example, kernel data) and perform information flow analysis (or a simulation, etc.) to determine whether tainted

data can appear in another context (for example, user mode). Alternatively, stale or invalid data in shared microarchitectural resources can be marked as tainted, and the taint analysis framework can identify when transient operations encounter tainted data.

*Effectiveness = Moderate*

*Automated static or dynamic taint analysis may not reveal all weaknesses in a processor specification and should be combined with other detection methods to improve coverage.*

### Automated Analysis

Software vendors can release tools that detect presence of known weaknesses (post-discovery) on a processor. For example, some of these tools can attempt to transiently execute a vulnerable code sequence and detect whether code successfully leaks data in a manner consistent with the weakness under test. Alternatively, some hardware vendors provide enumeration for the presence of a weakness (or lack of a weakness). These enumeration bits can be checked and reported by system software. For example, Linux supports these checks for many commodity processors: `$ cat /proc/cpuinfo | grep bugs | head -n 1 bugs : cpu_meltdown spectre_v1 spectre_v2 spec_store_bypass l1tf mds swapgs taa itlb_multihit srbds mmio_stale_data retbleed`

*Effectiveness = High*

*This method can be useful for detecting whether a processor is affected by known weaknesses, but it may not be useful for detecting unknown weaknesses.*

### Fuzzing

Academic researchers have demonstrated that this weakness can be detected in hardware using software fuzzing tools that treat the underlying hardware as a black box ([REF-1406], [REF-1430])

*Effectiveness = Opportunistic*

*Fuzzing may not reveal all weaknesses in a processor specification and should be combined with other detection methods to improve coverage.*

### Potential Mitigations

#### Phase: Architecture and Design

Hardware designers may choose to engineer the processor's pipeline to prevent architecturally restricted data from being used by operations that can execute transiently.

*Effectiveness = High*

#### Phase: Architecture and Design

Hardware designers may choose not to share microarchitectural resources that can contain sensitive data, such as fill buffers and store buffers.

*Effectiveness = Moderate*

*This can be highly effective at preventing this weakness from being exposed across different SMT threads or different processor cores. It is generally less practical to isolate these resources between different contexts (for example, user and kernel) that may execute on the same SMT thread or processor core.*

#### Phase: Architecture and Design

Hardware designers may choose to sanitize specific microarchitectural state (for example, store buffers) when the processor transitions to a different context, such as whenever a system call is invoked. Alternatively, the hardware may expose instruction(s) that allow software to sanitize microarchitectural state according to the user or system administrator's threat model. These mitigation approaches are similar to those that address CWE-226; however, sanitizing microarchitectural state may not be the optimal or best way to mitigate this weakness on every processor design.

*Effectiveness = Moderate*

*Sanitizing shared state on context transitions may not be practical for all processors, especially when the amount of shared state affected by the weakness is relatively large. Additionally, this technique may not be practical unless there is a synchronous transition between two processor contexts that would allow the affected resource to be sanitized. For example, this technique alone may not suffice to mitigate asynchronous access to a resource that is shared by two SMT threads.*

#### **Phase: Architecture and Design**

The hardware designer can attempt to prevent transient execution from causing observable discrepancies in specific covert channels.

*Effectiveness = Limited*

*This technique has many pitfalls. For example, InvisiSpec was an early attempt to mitigate this weakness by blocking "micro-architectural covert and side channels through the multiprocessor data cache hierarchy due to speculative loads" [REF-1417]. Commodity processors and SoCs have many covert and side channels that exist outside of the data cache hierarchy. Even when some of these channels are blocked, others (such as execution ports [REF-1418]) may allow an attacker to infer confidential data. Mitigation strategies that attempt to prevent transient execution from causing observable discrepancies also have other pitfalls, for example, see [REF-1419].*

#### **Phase: Architecture and Design**

Software architects may design software to enforce strong isolation between different contexts. For example, kernel page table isolation (KPTI) mitigates the Meltdown vulnerability [REF-1401] by separating user-mode page tables from kernel-mode page tables, which prevents user-mode processes from using Meltdown to transiently access kernel memory [REF-1404].

*Effectiveness = Limited*

*Isolating different contexts across a process boundary (or another kind of architectural boundary) may only be effective for some weaknesses.*

#### **Phase: Build and Compilation**

If the weakness is exposed by a single instruction (or a small set of instructions), then the compiler (or JIT, etc.) can be configured to prevent the affected instruction(s) from being generated, and instead generate an alternate sequence of instructions that is not affected by the weakness.

*Effectiveness = Limited*

*This technique may only be fully effective if it is applied to all software that runs on the system. Also, relatively few observed examples of this weakness have exposed data through only a single instruction.*

#### **Phase: Build and Compilation**

Use software techniques (including the use of serialization instructions) that are intended to reduce the number of instructions that can be executed transiently after a processor event or misprediction.

*Effectiveness = Incidental*

*Some transient execution weaknesses can be exploited even if a single instruction is executed transiently after a processor event or mis-prediction. This mitigation strategy has many other pitfalls that prevent it from eliminating this weakness entirely. For example, see [REF-1389].*

#### **Phase: Implementation**

System software can mitigate this weakness by invoking state-sanitizing operations when switching from one context to another, according to the hardware vendor's recommendations.

*Effectiveness = Limited*

*This technique may not be able to mitigate weaknesses that arise from resource sharing across SMT threads.*

#### Phase: System Configuration

Some systems may allow the user to disable (for example, in the BIOS) sharing of the affected resource.

*Effectiveness = Limited*

*Disabling resource sharing (for example, by disabling SMT) may result in significant performance overhead.*

#### Phase: System Configuration

Some systems may allow the user to disable (for example, in the BIOS) microarchitectural features that allow transient access to architecturally restricted data.

*Effectiveness = Limited*

*Disabling microarchitectural features such as predictors may result in significant performance overhead.*

#### Phase: Patching and Maintenance

The hardware vendor may provide a patch to sanitize the affected shared microarchitectural state when the processor transitions to a different context.

*Effectiveness = Moderate*

*This technique may not be able to mitigate weaknesses that arise from resource sharing across SMT threads.*

#### Phase: Patching and Maintenance

This kind of patch may not be feasible or implementable for all processors or all weaknesses.

*Effectiveness = Limited*

#### Phase: Requirements

Processor designers, system software vendors, or other agents may choose to restrict the ability of unprivileged software to access to high-resolution timers that are commonly used to monitor covert channels.

*Effectiveness = Defense in Depth*

*Specific software algorithms can be used by an attacker to compensate for a lack of a high-resolution time source [REF-1420].*

### Demonstrative Examples

#### Example 1:

Some processors may perform access control checks in parallel with memory read/write operations. For example, when a user-mode program attempts to read data from memory, the processor may also need to check whether the memory address is mapped into user space or kernel space. If the processor performs the access concurrently with the check, then the access may be able to transiently read kernel data before the check completes. This race condition is demonstrated in the following code snippet from [REF-1408], with additional annotations:

*Example Language: x86 Assembly*

*(Bad)*

```
1 ; rcx = kernel address, rbx = probe array
2 xor rax, rax # set rax to 0
3 retry:
4 mov al, byte [rcx] # attempt to read kernel memory
5 shl rax, 0xc # multiply result by page size (4KB)
6 jz retry # if the result is zero, try again
```

```
7 mov rbx, qword [rbx + rax] # transmit result over a cache covert channel
```

Vulnerable processors may return kernel data from a shared microarchitectural resource in line 4, for example, from the processor's L1 data cache. Since this vulnerability involves a race condition, the mov in line 4 may not always return kernel data (that is, whenever the check "wins" the race), in which case this demonstration code re-attempts the access in line 6. The accessed data is multiplied by 4KB, a common page size, to make it easier to observe via a cache covert channel after the transmission in line 7. The use of cache covert channels to observe the side effects of transient execution has been described in [REF-1408].

### Example 2:

Many commodity processors share microarchitectural fill buffers between sibling hardware threads on simultaneous multithreaded (SMT) processors. Fill buffers can serve as temporary storage for data that passes to and from the processor's caches. Microarchitectural Fill Buffer Data Sampling (MFBDS) is a vulnerability that can allow a hardware thread to access its sibling's private data in a shared fill buffer. The access may be prohibited by the processor's ISA, but MFBDS can allow the access to occur during transient execution, in particular during a faulting operation or an operation that triggers a microcode assist.

More information on MFBDS can be found in [REF-1405] and [REF-1409].

### Example 3:

Some processors may allow access to system registers (for example, system coprocessor registers or model-specific registers) during transient execution. This scenario is depicted in the code snippet below. Under ordinary operating circumstances, code in exception level 0 (EL0) is not permitted to access registers that are restricted to EL1, such as TTBR0\_EL1. However, on some processors an earlier mis-prediction can cause the MRS instruction to transiently read the value in an EL1 register. In this example, a conditional branch (line 2) can be mis-predicted as "not taken" while waiting for a slow load (line 1). This allows MRS (line 3) to transiently read the value in the TTBR0\_EL1 register. The subsequent memory access (line 6) can allow the restricted register's value to become observable, for example, over a cache covert channel.

Code snippet is from [REF-1410]. See also [REF-1411].

*Example Language: x86 Assembly*

*(Bad)*

```
1 LDR X1, [X2] ; arranged to miss in the cache
2 CBZ X1, over ; This will be taken
3 MRS X3, TTBR0_EL1;
4 LSL X3, X3, #imm
5 AND X3, X3, #0xFC0
6 LDR X5, [X6,X3] ; X6 is an EL0 base address
7 over
```

## Observed Examples

Reference	Description
<b>CVE-2017-5715</b>	A fault may allow transient user-mode operations to access kernel data cached in the L1D, potentially exposing the data over a covert channel. <a href="https://www.cve.org/CVERecord?id=CVE-2017-5715">https://www.cve.org/CVERecord?id=CVE-2017-5715</a>
<b>CVE-2018-3615</b>	A fault may allow transient non-enclave operations to access SGX enclave data cached in the L1D, potentially exposing the data over a covert channel. <a href="https://www.cve.org/CVERecord?id=CVE-2018-3615">https://www.cve.org/CVERecord?id=CVE-2018-3615</a>
<b>CVE-2019-1135</b>	A TSX Asynchronous Abort may allow transient operations to access architecturally restricted data, potentially exposing the data over a covert channel.

## CWE-1422: Exposure of Sensitive Information caused by Incorrect Data Forwarding during Transient Execution

**Weakness ID** : 1422

**Structure** : Simple

**Abstraction** : Base

### Description

A processor event or prediction may allow incorrect or stale data to be forwarded to transient operations, potentially exposing data over a covert channel.

### Extended Description

Software may use a variety of techniques to preserve the confidentiality of private data that is accessible within the current processor context. For example, the memory safety and type safety properties of some high-level programming languages help to prevent software written in those languages from exposing private data. As a second example, software sandboxes may co-locate multiple users' software within a single process. The processor's Instruction Set Architecture (ISA) may permit one user's software to access another user's data (because the software shares the same address space), but the sandbox prevents these accesses by using software techniques such as bounds checking.

If incorrect or stale data can be forwarded (for example, from a cache) to transient operations, then the operations' microarchitectural side effects may correspond to the data. If an attacker can trigger these transient operations and observe their side effects through a covert channel, then the attacker may be able to infer the data. For example, an attacker process may induce transient execution in a victim process that causes the victim to inadvertently access and then expose its private data via a covert channel. In the software sandbox example, an attacker sandbox may induce transient execution in its own code, allowing it to transiently access and expose data in a victim sandbox that shares the same address space.

Consequently, weaknesses that arise from incorrect/stale data forwarding might violate users' expectations of software-based memory safety and isolation techniques. If the data forwarding behavior is not properly documented by the hardware vendor, this might violate the software vendor's expectation of how the hardware should behave.

### Relationships

The table(s) below shows the weaknesses and high level categories that are related to this weakness. These relationships are defined as ChildOf, ParentOf, MemberOf and give insight to similar items that may exist at higher and lower levels of abstraction. In addition, relationships such as PeerOf and CanAlsoBe are defined to show similar weaknesses that may want to be explored.

Relevant to the view "Hardware Design" (CWE-1194)

Nature	Type	ID	Name	Page
ChildOf		1420	Exposure of Sensitive Information during Transient Execution	2293

### Applicable Platforms

**Language** : Not Language-Specific (*Prevalence = Undetermined*)

**Operating\_System** : Not OS-Specific (*Prevalence = Undetermined*)

**Architecture** : Not Architecture-Specific (*Prevalence = Undetermined*)

**Technology** : Not Technology-Specific (*Prevalence = Undetermined*)

### Common Consequences

Scope	Impact	Likelihood
Confidentiality	Read Memory	Medium

### Detection Methods

#### Automated Static Analysis

A variety of automated static analysis tools can identify potentially exploitable code sequences in software. These tools may perform the analysis on source code, on binary code, or on an intermediate code representation (for example, during compilation).

*Effectiveness = Moderate*

*Automated static analysis may not reveal all weaknesses in a processor specification and should be combined with other detection methods to improve coverage.*

#### Manual Analysis

This weakness can be detected in hardware by manually inspecting processor specifications. Features that exhibit this weakness may include microarchitectural predictors, access control checks that occur out-of-order, or any other features that can allow operations to execute without committing to architectural state. Hardware designers can also scrutinize aspects of the instruction set architecture that have undefined behavior; these can become a focal point when applying other detection methods.

*Effectiveness = Moderate*

*Manual analysis may not reveal all weaknesses in a processor specification and should be combined with other detection methods to improve coverage.*

#### Automated Analysis

Software vendors can release tools that detect presence of known weaknesses on a processor. For example, some of these tools can attempt to transiently execute a vulnerable code sequence and detect whether code successfully leaks data in a manner consistent with the weakness under test. Alternatively, some hardware vendors provide enumeration for the presence of a weakness (or lack of a weakness). These enumeration bits can be checked and reported by system software. For example, Linux supports these checks for many commodity processors:

```
$ cat /proc/cpuinfo | grep bugs | head -n 1 bugs : cpu_meltdown spectre_v1 spectre_v2
spec_store_bypass l1tf mds swapgs taa itlb_multihit srbds mmio_stale_data retbleed
```

*Effectiveness = High*

*This method can be useful for detecting whether a processor is affected by known weaknesses, but it may not be useful for detecting unknown weaknesses.*

### Potential Mitigations

**Phase: Architecture and Design**

The hardware designer can attempt to prevent transient execution from causing observable discrepancies in specific covert channels.

*Effectiveness = Limited*

*Instructions or features that constrain transient execution or suppress its side effects may impact performance.*

#### **Phase: Requirements**

Processor designers, system software vendors, or other agents may choose to restrict the ability of unprivileged software to access to high-resolution timers that are commonly used to monitor covert channels.

*Effectiveness = Defense in Depth*

*Disabling specific predictors or other hardware features may result in significant performance overhead.*

#### **Phase: Requirements**

Processor designers may expose instructions or other architectural features that allow software to mitigate the effects of transient execution, but without disabling predictors. These features may also help to limit opportunities for data exposure.

*Effectiveness = Moderate*

*Instructions or features that constrain transient execution or suppress its side effects may impact performance.*

#### **Phase: Requirements**

Processor designers may expose registers (for example, control registers or model-specific registers) that allow privileged and/or user software to disable specific predictors or other hardware features that can cause confidential data to be exposed during transient execution.

*Effectiveness = Limited*

*Disabling specific predictors or other hardware features may result in significant performance overhead.*

#### **Phase: Build and Compilation**

Use software techniques (including the use of serialization instructions) that are intended to reduce the number of instructions that can be executed transiently after a processor event or misprediction.

*Effectiveness = Incidental*

*Some transient execution weaknesses can be exploited even if a single instruction is executed transiently after a processor event or mis-prediction. This mitigation strategy has many other pitfalls that prevent it from eliminating this weakness entirely. For example, see [REF-1389].*

#### **Phase: Build and Compilation**

Isolate sandboxes or managed runtimes in separate address spaces (separate processes).

*Effectiveness = High*

*Process isolation is also an effective strategy to mitigate many other kinds of weaknesses.*

#### **Phase: Build and Compilation**

Include serialization instructions (for example, LFENCE) that prevent processor events or mis-predictions prior to the serialization instruction from causing transient execution after the serialization instruction. For some weaknesses, a serialization instruction can also prevent a processor event or a mis-prediction from occurring after the serialization instruction (for example, CVE-2018-3639 can allow a processor to predict that a load will not depend on an older store;

a serialization instruction between the store and the load may allow the store to update memory and prevent the mis-prediction from happening at all).

*Effectiveness = Moderate*

*When used to comprehensively mitigate a transient execution weakness, serialization instructions can introduce significant performance overhead.*

### Phase: Build and Compilation

Use software techniques that can mitigate the consequences of transient execution. For example, address masking can be used in some circumstances to prevent out-of-bounds transient reads.

*Effectiveness = Limited*

*Address masking and related software mitigation techniques have been used to harden specific code sequences that could potentially be exploited via transient execution. For example, the Linux kernel makes limited use of this technique to mitigate bounds-check bypass [REF-1390].*

### Phase: Build and Compilation

If the weakness is exposed by a single instruction (or a small set of instructions), then the compiler (or JIT, etc.) can be configured to prevent the affected instruction(s) from being generated, and instead generate an alternate sequence of instructions that is not affected by the weakness.

*Effectiveness = Limited*

*This technique is only effective for software that is compiled with this mitigation.*

### Phase: Documentation

If a hardware feature can allow incorrect or stale data to be forwarded to transient operations, the hardware designer may opt to disclose this behavior in architecture documentation. This documentation can inform users about potential consequences and effective mitigations.

*Effectiveness = High*

## Demonstrative Examples

### Example 1:

Faulting loads in a victim domain may trigger incorrect transient forwarding, which leaves secret-dependent traces in the microarchitectural state. Consider this code sequence example from [REF-1391].

*Example Language: C*

*(Bad)*

```
void call_victim(size_t untrusted_arg) {
    *arg_copy = untrusted_arg;
    array[**trusted_ptr * 4096];
}
```

A processor with this weakness will store the value of `untrusted_arg` (which may be provided by an attacker) to the stack, which is trusted memory. Additionally, this store operation will save this value in some microarchitectural buffer, for example, the store buffer.

In this code sequence, `trusted_ptr` is dereferenced while the attacker forces a page fault. The faulting load causes the processor to mis-speculate by forwarding `untrusted_arg` as the (transient) load result. The processor then uses `untrusted_arg` for the pointer dereference. After the fault has been handled and the load has been re-issued with the correct argument, secret-dependent information stored at the address of `trusted_ptr` remains in microarchitectural state and can be extracted by an attacker using a vulnerable code sequence.

**Example 2:**

Some processors try to predict when a store will forward data to a subsequent load, even when the address of the store or the load is not yet known. For example, on Intel processors this feature is called a Fast Store Forwarding Predictor [REF-1392], and on AMD processors the feature is called Predictive Store Forwarding [REF-1393]. A misprediction can cause incorrect or stale data to be forwarded from a store to a load, as illustrated in the following code snippet from [REF-1393]:

Example Language: C

(Bad)

```
void fn(int idx) {
    unsigned char v;
    idx_array[0] = 4096;
    v = array[idx_array[idx] * (idx)];
}
```

In this example, assume that the parameter `idx` can only be 0 or 1, and assume that `idx_array` initially contains all 0s. Observe that the assignment to `v` in line 4 will be `array[0]`, regardless of whether `idx=0` or `idx=1`. Now suppose that an attacker repeatedly invokes `fn` with `idx=0` to train the store forwarding predictor to predict that the store in line 3 will forward the data 4096 to the load `idx_array[idx]` in line 4. Then, when the attacker invokes `fn` with `idx=1` the predictor may cause `idx_array[idx]` to transiently produce the incorrect value 4096, and therefore `v` will transiently be assigned the value `array[4096]`, which otherwise would not have been accessible in line 4.

Although this toy example is benign (it doesn't transmit `array[4096]` over a covert channel), an attacker may be able to use similar techniques to craft and train malicious code sequences to, for example, read data beyond a software sandbox boundary.

**Observed Examples**

Reference	Description
<b>CVE-2020-0551</b>	A fault, microcode assist, or abort may allow transient load operations to forward malicious stale data to dependent operations executed by a victim, causing the victim to unintentionally access and potentially expose its own data over a covert channel. <a href="https://www.cve.org/CVERecord?id=CVE-2020-0551">https://www.cve.org/CVERecord?id=CVE-2020-0551</a>
<b>CVE-2020-8698</b>	A fast store forwarding predictor may allow store operations to forward incorrect data to transient load operations, potentially exposing data over a covert channel. <a href="https://www.cve.org/CVERecord?id=CVE-2020-8698">https://www.cve.org/CVERecord?id=CVE-2020-8698</a>

**MemberOf Relationships**

This MemberOf relationships table shows additional CWE Categories and Views that reference this weakness as a member. This information is often useful in understanding where a weakness fits within the context of external information sources.

## CWE-1423: Exposure of Sensitive Information caused by Shared Microarchitectural Predictor State that Influences Transient Execution

**Weakness ID** : 1423

**Structure** : Simple

**Abstraction** : Base

### Description

Shared microarchitectural predictor state may allow code to influence transient execution across a hardware boundary, potentially exposing data that is accessible beyond the boundary over a covert channel.

### Extended Description

Many commodity processors have Instruction Set Architecture (ISA) features that protect software components from one another. These features can include memory segmentation, virtual memory, privilege rings, trusted execution environments, and virtual machines, among others. For example, virtual memory provides each process with its own address space, which prevents processes from accessing each other's private data. Many of these features can be used to form hardware-enforced security boundaries between software components.

When separate software components (for example, two processes) share microarchitectural predictor state across a hardware boundary, code in one component may be able to influence microarchitectural predictor behavior in another component. If the predictor can cause transient execution, the shared predictor state may allow an attacker to influence transient execution in a victim, and in a manner that could allow the attacker to infer private data from the victim by monitoring observable discrepancies (CWE-203) in a covert channel [REF-1400].

Predictor state may be shared when the processor transitions from one component to another (for example, when a process makes a system call to enter the kernel). Many commodity processors have features which prevent microarchitectural predictions that occur before a boundary from influencing predictions that occur after the boundary.

Predictor state may also be shared between hardware threads, for example, sibling hardware threads on a processor that supports simultaneous multithreading (SMT). This sharing may be benign if the hardware threads are simultaneously executing in the same software component, or it could expose a weakness if one sibling is a malicious software component, and the other sibling is a victim software component. Processors that share microarchitectural predictors between hardware threads may have features which prevent microarchitectural predictions that occur on one hardware thread from influencing predictions that occur on another hardware thread.

Features that restrict predictor state sharing across transitions or between hardware threads may be always-on, on by default, or may require opt-in from software.

## Relationships

The table(s) below shows the weaknesses and high level categories that are related to this weakness. These relationships are defined as ChildOf, ParentOf, MemberOf and give insight to similar items that may exist at higher and lower levels of abstraction. In addition, relationships such as PeerOf and CanAlsoBe are defined to show similar weaknesses that may want to be explored.

## Applicable Platforms

**Language** : Not Language-Specific (*Prevalence = Undetermined*)

**Operating\_System** : Not OS-Specific (*Prevalence = Undetermined*)

**Architecture** : Not Architecture-Specific (*Prevalence = Undetermined*)

**Technology** : Microcontroller Hardware (*Prevalence = Undetermined*)

**Technology** : Processor Hardware (*Prevalence = Undetermined*)

**Technology** : Memory Hardware (*Prevalence = Undetermined*)

**Technology** : System on Chip (*Prevalence = Undetermined*)

## Common Consequences

Scope	Impact	Likelihood
Confidentiality	Read Memory	Medium

## Detection Methods

### Manual Analysis

This weakness can be detected in hardware by manually inspecting processor specifications. Features that exhibit this weakness may have microarchitectural predictor state that is shared between hardware threads, execution contexts (for example, user and kernel), or other components that may host mutually distrusting software (or firmware, etc.).

*Effectiveness = Moderate*

*Manual analysis may not reveal all weaknesses in a processor specification and should be combined with other detection methods to improve coverage.*

### Automated Analysis

Software vendors can release tools that detect presence of known weaknesses on a processor. For example, some of these tools can attempt to transiently execute a vulnerable code sequence and detect whether code successfully leaks data in a manner consistent with the weakness under test. Alternatively, some hardware vendors provide enumeration for the presence of a weakness (or lack of a weakness). These enumeration bits can be checked and reported by system software. For example, Linux supports these checks for many commodity processors:

```
$ cat /proc/cpuinfo | grep bugs | head -n 1 bugs : cpu_meltdown spectre_v1 spectre_v2 spec_store_bypass l1tf mds swpags taa itlb_multihit srbds mmio_stale_data retbleed
```

*Effectiveness = High*

*This method can be useful for detecting whether a processor is affected by known weaknesses, but it may not be useful for detecting unknown weaknesses*

### Automated Analysis

This weakness can be detected in hardware by employing static or dynamic taint analysis methods [REF-1401]. These methods can label each predictor entry (or prediction history, etc.) according to the processor context that created it. Taint analysis or information flow analysis can then be applied to detect when predictor state created in one context can influence predictions made in another context.

*Effectiveness = Moderate*

*Automated static or dynamic taint analysis may not reveal all weaknesses in a processor specification and should be combined with other detection methods to improve coverage.*

### Potential Mitigations

#### Phase: Architecture and Design

The hardware designer can attempt to prevent transient execution from causing observable discrepancies in specific covert channels.

#### Phase: Architecture and Design

Hardware designers may choose to use microarchitectural bits to tag predictor entries. For example, each predictor entry may be tagged with a kernel-mode bit which, when set, indicates that the predictor entry was created in kernel mode. The processor can use this bit to enforce that predictions in the current mode must have been trained in the current mode. This can prevent malicious cross-mode training, such as when user-mode software attempts to create predictor entries that influence transient execution in the kernel. Predictor entry tags can also be used to associate each predictor entry with the SMT thread that created it, and thus the processor can enforce that each predictor entry can only be used by the SMT thread that created it. This can prevent an SMT thread from using predictor entries crafted by a malicious sibling SMT thread.

*Effectiveness = Moderate*

*Tagging can be highly effective for predictor state that is comprised of discrete elements, such as an array of recently visited branch targets. Predictor state can also have different representations that are not conducive to tagging. For example, some processors keep a compressed digest of branch history which does not contain discrete elements that can be individually tagged.*

#### Phase: Architecture and Design

Hardware designers may choose to sanitize microarchitectural predictor state (for example, branch prediction history) when the processor transitions to a different context, for example, whenever a system call is invoked. Alternatively, the hardware may expose instruction(s) that allow software to sanitize predictor state according to the user's threat model. For example, this can allow operating system software to sanitize predictor state when performing a context switch from one process to another.

*Effectiveness = Moderate*

*This technique may not be able to mitigate weaknesses that arise from predictor state that is shared across SMT threads. Sanitizing predictor state on context switches may also negatively impact performance, either by removing predictor entries that could be reused when returning to the previous context, or by slowing down the context switch itself.*

#### Phase: Implementation

System software can mitigate this weakness by invoking predictor-state-sanitizing operations (for example, the indirect branch prediction barrier on Intel x86) when switching from one context to another, according to the hardware vendor's recommendations.

*Effectiveness = Moderate*

*This technique may not be able to mitigate weaknesses that arise from predictor state shared across SMT threads. Sanitizing predictor state may also negatively impact performance in some circumstances.*

#### **Phase: Build and Compilation**

If the weakness is exposed by a single instruction (or a small set of instructions), then the compiler (or JIT, etc.) can be configured to prevent the affected instruction(s) from being generated. One prominent example of this mitigation is retpoline ([REF-1414]).

*Effectiveness = Limited*

*This technique is only effective for software that is compiled with this mitigation. Additionally, an alternate instruction sequence may mitigate the weakness on some processors but not others, even when the processors share the same ISA. For example, retpoline has been documented as effective on some x86 processors, but not fully effective on other x86 processors.*

#### **Phase: Build and Compilation**

Use control-flow integrity (CFI) techniques to constrain the behavior of instructions that redirect the instruction pointer, such as indirect branch instructions.

*Effectiveness = Moderate*

*Some CFI techniques may not be able to constrain transient execution, even though they are effective at constraining architectural execution. Or they may be able to provide some additional protection against a transient execution weakness, but without comprehensively mitigating the weakness. For example, Clang-CFI provides strong architectural CFI properties and can make some transient execution weaknesses more difficult to exploit [REF-1398].*

#### **Phase: Build and Compilation**

Use software techniques (including the use of serialization instructions) that are intended to reduce the number of instructions that can be executed transiently after a processor event or misprediction.

*Effectiveness = Incidental*

*Some transient execution weaknesses can be exploited even if a single instruction is executed transiently after a processor event or mis-prediction. This mitigation strategy has many other pitfalls that prevent it from eliminating this weakness entirely. For example, see [REF-1389].*

#### **Phase: System Configuration**

Some systems may allow the user to disable predictor sharing. For example, this could be a BIOS configuration, or a model-specific register (MSR) that can be configured by the operating system or virtual machine monitor.

*Effectiveness = Moderate*

*Disabling predictor sharing can negatively impact performance for some workloads that benefit from shared predictor state.*

#### **Phase: Patching and Maintenance**

The hardware vendor may provide a patch to, for example, sanitize predictor state when the processor transitions to a different context, or to prevent predictor entries from being shared across SMT threads. A patch may also introduce new ISA that allows software to toggle a mitigation.

*Effectiveness = Moderate*

*This mitigation may only be fully effective if the patch prevents predictor sharing across all contexts that are affected by the weakness. Additionally, sanitizing predictor state and/or preventing shared predictor state can negatively impact performance in some circumstances.*

#### **Phase: Documentation**

If a hardware feature can allow microarchitectural predictor state to be shared between contexts, SMT threads, or other architecturally defined boundaries, the hardware designer may opt to disclose this behavior in architecture documentation. This documentation can inform users about potential consequences and effective mitigations.

*Effectiveness = High*

### Phase: Requirements

Processor designers, system software vendors, or other agents may choose to restrict the ability of unprivileged software to access to high-resolution timers that are commonly used to monitor covert channels.

### Demonstrative Examples

#### Example 1:

Branch Target Injection (BTI) is a vulnerability that can allow an SMT hardware thread to maliciously train the indirect branch predictor state that is shared with its sibling hardware thread. A cross-thread BTI attack requires the attacker to find a vulnerable code sequence within the victim software. For example, the authors of [REF-1415] identified the following code sequence in the Windows library ntdll.dll:

*Example Language: x86 Assembly*

*(Bad)*

```
adc edi,dword ptr [ebx+edx+13BE13BDh]
adc dl,byte ptr [edi]
...
indirect_branch_site:
  jmp dword ptr [rsi] # at this point attacker knows edx, controls edi and ebx
```

To successfully exploit this code sequence to disclose the victim's private data, the attacker must also be able to find an indirect branch site within the victim, where the attacker controls the values in edi and ebx, and the attacker knows the value in edx as shown above at the indirect branch site.

A proof-of-concept cross-thread BTI attack might proceed as follows:

1. The attacker thread and victim thread must be co-scheduled on the same physical processor core.
2. The attacker thread must train the shared branch predictor so that when the victim thread reaches `indirect_branch_site`, the `jmp` instruction will be predicted to target `example_code_sequence` instead of the correct architectural target. The training procedure may vary by processor, and the attacker may need to reverse-engineer the branch predictor to identify a suitable training algorithm.
3. This step assumes that the attacker can control some values in the victim program, specifically the values in edi and ebx at `indirect_branch_site`. When the victim reaches `indirect_branch_site` the processor will (mis)predict `example_code_sequence` as the target and (transiently) execute the `adc` instructions. If the attacker chooses ebx so that ``ebx = m`
  - `0x13BE13BD - edx`, then the first `adc` will load 32 bits from address `m` in the victim's address space and add `*m` (the data loaded from) to the attacker-controlled base address in edi. The second `adc` instruction accesses a location in memory whose address corresponds to `*m``.
4. The adversary uses a covert channel analysis technique such as Flush+Reload ([REF-1416]) to infer the value of the victim's private data `*m`.

#### Example 2:

BTI can also allow software in one execution context to maliciously train branch predictor entries that can be used in another context. For example, on some processors user-mode software may be able to train predictor entries that can also be used after transitioning into kernel mode, such as

after invoking a system call. This vulnerability does not necessarily require SMT and may instead be performed in synchronous steps, though it does require the attacker to find an exploitable code sequence in the victim's code, for example, in the kernel.

### Observed Examples

Reference	Description
<b>CVE-2017-5754</b>	(Branch Target Injection, BTI, Spectre v2). Shared microarchitectural indirect branch predictor state may allow code to influence transient execution across a process, VM, or privilege boundary, potentially exposing data that is accessible beyond the boundary. <a href="https://www.cve.org/CVERecord?id=CVE-2017-5754">https://www.cve.org/CVERecord?id=CVE-2017-5754</a>
<b>CVE-2022-0001</b>	(Branch History Injection, BHI, Spectre-BHB). Shared branch history state may allow user-mode code to influence transient execution in the kernel, potentially exposing kernel data over a covert channel. <a href="https://www.cve.org/CVERecord?id=CVE-2022-0001">https://www.cve.org/CVERecord?id=CVE-2022-0001</a>
<b>CVE-2021-33149</b>	(RSB underflow, Retbleed). Shared return stack buffer state may allow code that executes before a prediction barrier to influence transient execution after the prediction barrier, potentially exposing data that is accessible beyond the barrier over a covert channel. <a href="https://www.cve.org/CVERecord?id=CVE-2021-33149">https://www.cve.org/CVERecord?id=CVE-2021-33149</a>

### MemberOf Relationships

This MemberOf relationships table shows additional CWE Categories and Views that reference this weakness as a member. This information is often useful in understanding where a weakness fits within the context of external information sources.

## CWE-1426: Improper Validation of Generative AI Output

**Weakness ID** : 1426

**Structure** : Simple

**Abstraction** : Base

### Description

The product invokes a generative AI/ML component whose behaviors and outputs cannot be directly controlled, but the product does not validate or insufficiently validates the outputs to ensure that they align with the intended security, content, or privacy policy.

### Relationships

The table(s) below shows the weaknesses and high level categories that are related to this weakness. These relationships are defined as ChildOf, ParentOf, MemberOf and give insight to similar items that may exist at higher and lower levels of abstraction. In addition, relationships such as PeerOf and CanAlsoBe are defined to show similar weaknesses that may want to be explored.

*Relevant to the view "Research Concepts" (CWE-1000)*

Nature	Type	ID	Name	Page
ChildOf	IP	707	Improper Neutralization	1551

### Applicable Platforms

**Language** : Not Language-Specific (*Prevalence = Undetermined*)

**Architecture** : Not Architecture-Specific (*Prevalence = Undetermined*)

**Technology** : AI/ML (*Prevalence = Undetermined*)

**Technology** : Not Technology-Specific (*Prevalence = Undetermined*)

### Common Consequences

Scope	Impact	Likelihood
Integrity	Execute Unauthorized Code or Commands Varies by Context  <i>In an agent-oriented setting, output could be used to cause unpredictable agent invocation, i.e., to control or influence agents that might be invoked from the output. The impact varies depending on the access that is granted to the tools, such as creating a database or writing files.</i>	

### Detection Methods

#### Dynamic Analysis with Manual Results Interpretation

Use known techniques for prompt injection and other attacks, and adjust the attacks to be more specific to the model or system.

#### Dynamic Analysis with Automated Results Interpretation

Use known techniques for prompt injection and other attacks, and adjust the attacks to be more specific to the model or system.

#### Architecture or Design Review

Review of the product design can be effective, but it works best in conjunction with dynamic analysis.

### Potential Mitigations

#### Phase: Architecture and Design

Since the output from a generative AI component (such as an LLM) cannot be trusted, ensure that it operates in an untrusted or non-privileged space.

**Phase: Operation**

Use "semantic comparators," which are mechanisms that provide semantic comparison to identify objects that might appear different but are semantically similar.

**Phase: Operation**

Use components that operate externally to the system to monitor the output and act as a moderator. These components are called different terms, such as supervisors or guardrails.

**Phase: Build and Compilation**

During model training, use an appropriate variety of good and bad examples to guide preferred outputs.

**Observed Examples**

Reference	Description
<b>CVE-2024-3402</b>	chain: GUI for ChatGPT API performs input validation but does not properly "sanitize" or validate model output data (CWE-1426), leading to XSS (CWE-79). <a href="https://www.cve.org/CVERecord?id=CVE-2024-3402">https://www.cve.org/CVERecord?id=CVE-2024-3402</a>

**MemberOf Relationships**

This MemberOf relationships table shows additional CWE Categories and Views that reference this weakness as a member. This information is often useful in understanding where a weakness fits within the context of external information sources.

Nature	Type	ID	Name	<input checked="" type="checkbox"/>	Page
MemberOf		1409	Comprehensive Categorization: Injection		1400 2547

**Notes****Research Gap**

This entry is related to AI/ML, which is not well understood from a weakness perspective. Typically, for new/emerging technologies including AI/ML, early vulnerability discovery and research does not focus on root cause analysis (i.e., weakness identification). For AI/ML, the recent focus has been on attacks and exploitation methods, technical impacts, and mitigations. As a result, closer research or focused efforts by SMEs is necessary to understand the underlying weaknesses. Diverse and dynamic terminology and rapidly-evolving technology further complicate understanding. Finally, there might not be enough real-world examples with sufficient details from which weakness patterns may be discovered. For example, many real-world vulnerabilities related to "prompt injection" appear to be related to typical injection-style attacks in which the only difference is that the "input" to the vulnerable component comes from model output instead of direct adversary input, similar to "second-order SQL injection" attacks.

**Maintenance**

This entry was created by members of the CWE AI Working Group during June and July 2024. The CWE Project Lead, CWE Technical Lead, AI WG co-chairs, and many WG members decided that for purposes of timeliness, it would be more helpful to the CWE community to publish the new entry in CWE 4.15 quickly and add to it in subsequent versions.

## Categories

### Category-2: 7PK - Environment

Category ID : 2

#### Summary

This category represents one of the phyla in the Seven Pernicious Kingdoms vulnerability classification. It includes weaknesses that are typically introduced during unexpected environmental conditions. According to the authors of the Seven Pernicious Kingdoms, "This section includes everything that is outside of the source code but is still critical to the security of the product that is being created. Because the issues covered by this kingdom are not directly related to source code, we separated it from the rest of the kingdoms."

### Category-16: Configuration

Category ID : 16

### Summary

Weaknesses in this category are typically introduced during the configuration of the software.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	635	Weaknesses Originally Used by NVD from 2008 to 2016	635	2564
MemberOf	C	933	OWASP Top Ten 2013 Category A5 - Security Misconfiguration	928	2403
MemberOf	C	1032	OWASP Top Ten 2017 Category A6 - Security Misconfiguration	1026	2450
MemberOf	C	1349	OWASP Top Ten 2021 Category A05:2021 - Security Misconfiguration	1344	2505

### Taxonomy Mappings

Mapped Taxonomy Name	Node ID	Fit	Mapped Node Name
WASC	14		Server Misconfiguration
WASC	15		Application Misconfiguration

### Notes

#### Maintenance

Further discussion about this category was held over the CWE Research mailing list in early 2020. No definitive action has been decided.

#### Maintenance

This entry is a Category, but various sources map to it anyway, despite CWE guidance that Categories should not be mapped. In this case, there are no clear CWE Weaknesses that can be utilized. "Inappropriate Configuration" sounds more like a Weakness in CWE's style, but it still does not indicate actual behavior of the product. Further research is still required, however, as a "configuration weakness" might be Primary to many other CWEs, i.e., it might be better described in terms of chaining relationships.

## Category-227: 7PK - API Abuse

Category ID : 227

### Summary

This category represents one of the phyla in the Seven Pernicious Kingdoms vulnerability classification. It includes weaknesses that involve the software using an API in a manner contrary to its intended use. According to the authors of the Seven Pernicious Kingdoms, "An API is a contract between a caller and a callee. The most common forms of API misuse occurs when the caller does not honor its end of this contract. For example, if a program does not call `chdir()` after calling `chroot()`, it violates the contract that specifies how to change the active root directory in a secure fashion. Another good example of library abuse is expecting the callee to return trustworthy DNS information to the caller. In this case, the caller misuses the callee API by making certain assumptions about its behavior (that the return value can be used for authentication purposes). One can also violate the caller-callee contract from the other side. For example, if a coder subclasses `SecureRandom` and returns a non-random value, the contract is violated."

## Category-265: Privilege Issues

Category ID : 265

### Summary

Weaknesses in this category occur with improper handling, assignment, or management of privileges. A privilege is a property of an agent, such as a user. It lets the agent do things that are not ordinarily allowed. For example, there are privileges which allow an agent to perform maintenance functions such as restart a computer.

### Taxonomy Mappings

Mapped Taxonomy Name	Node ID	Fit	Mapped Node Name
PLOVER			Privilege / sandbox errors

### Notes

#### Relationship

This can strongly overlap authorization errors.

#### Theoretical

A sandbox could be regarded as an explicitly defined sphere of control, in that the sandbox only defines a limited set of behaviors, which can only access a limited set of resources.

#### Theoretical

It could be argued that any privilege problem occurs within the context of a sandbox.

#### Research Gap

Many of the following concepts require deeper study. Most privilege problems are not classified at such a low level of detail, and terminology is very sparse. Certain classes of software, such as web browsers and software bug trackers, provide a rich set of examples for further research. Operating systems have matured to the point that these kinds of weaknesses are rare, but finer-grained models for privileges, capabilities, or roles might introduce subtler issues.

## Category-275: Permission Issues

Category ID : 275

### Summary

Weaknesses in this category are related to improper assignment or handling of permissions.

PLOVER			Permission errors
OWASP Top Ten 2004	A2		CWE More Specific Broken Access Control
OWASP Top Ten 2004	A10		CWE More Specific Insecure Configuration Management

## Notes

### Terminology

Permissions are associated with a resource and specify which actors are allowed to access that resource and what they are allowed to do with that access (e.g., read it, modify it). Privileges are associated with an actor and define which behaviors or actions an actor is allowed to perform.

## Category-310: Cryptographic Issues

Category ID : 310

## Summary

Weaknesses in this category are related to the design and implementation of data confidentiality and integrity. Frequently these deal with the use of encoding techniques, encryption libraries, and hashing algorithms. The weaknesses in this category could lead to a degradation of the quality data if they are not addressed.

**Category-361: 7PK - Time and State**

Category ID : 361

**Summary**

This category represents one of the phyla in the Seven Pernicious Kingdoms vulnerability classification. It includes weaknesses related to the improper management of time and state in an environment that supports simultaneous or near-simultaneous computation by multiple systems, processes, or threads. According to the authors of the Seven Pernicious Kingdoms, "Distributed computation is about time and state. That is, in order for more than one component to communicate, state must be shared, and all that takes time. Most programmers anthropomorphize their work. They think about one thread of control carrying out the entire program in the same way they would if they had to do the job themselves. Modern computers, however, switch between tasks very quickly, and in multi-core, multi-CPU, or distributed systems, two events may take place at exactly the same time. Defects rush to fill the gap between the programmer's model of

how a program executes and what happens in reality. These defects are related to unexpected interactions between threads, processes, time, and information. These interactions happen through shared state: semaphores, variables, the file system, and, basically, anything that can store information."

### Taxonomy Mappings

Mapped Taxonomy Name	Node ID	Fit	Mapped Node Name
PLOVER			Signal Errors

### Notes

#### Maintenance

Several weaknesses could exist, but this needs more study. Some weaknesses might be unhandled signals, untrusted signals, and sending the wrong signals.

## Category-388: 7PK - Errors

Category ID : 388

### Summary

This category represents one of the phyla in the Seven Pernicious Kingdoms vulnerability classification. It includes weaknesses that occur when an application does not properly handle errors that occur during processing. According to the authors of the Seven Pernicious Kingdoms, "Errors and error handling represent a class of API. Errors related to error handling are so common that they deserve a special kingdom of their own. As with 'API Abuse,' there are two ways to introduce an error-related security vulnerability: the most common one is handling errors poorly (or not at all). The second is producing errors that either give out too much information (to possible attackers) or are difficult to handle."

## Category-389: Error Conditions, Return Values, Status Codes

Category ID : 389

### Summary

This category includes weaknesses that occur if a function does not generate the correct return/status code, or if the application does not handle all possible return/status codes that could be generated by a function. This type of problem is most often found in conditions that are rarely encountered during the normal operation of the product. Presumably, most bugs related to

common conditions are found and eliminated during development and testing. In some cases, the attacker can directly control or influence the environment to trigger the rare conditions.

### Membership

## Category-398: 7PK - Code Quality

Category ID : 398

### Summary

This category represents one of the phyla in the Seven Pernicious Kingdoms vulnerability classification. It includes weaknesses that do not directly introduce a weakness or vulnerability, but indicate that the product has not been carefully developed or maintained. According to the authors of the Seven Pernicious Kingdoms, "Poor code quality leads to unpredictable behavior. From a user's perspective that often manifests itself as poor usability. For an adversary it provides an opportunity to stress the system in unexpected ways."

## Category-417: Communication Channel Errors

Category ID : 417

### Summary

Weaknesses in this category are related to improper handling of communication channels and access paths. These weaknesses include problems in creating, managing, or removing alternate

channels and alternate paths. Some of these can overlap virtual file problems and are commonly used in "bypass" attacks, such as those that exploit authentication errors.

## Category-485: 7PK - Encapsulation

Category ID : 485

### Summary

This category represents one of the phyla in the Seven Pernicious Kingdoms vulnerability classification. It includes weaknesses that occur when the product does not sufficiently encapsulate critical data or functionality. According to the authors of the Seven Pernicious Kingdoms, "Encapsulation is about drawing strong boundaries. In a web browser that might mean ensuring that your mobile code cannot be abused by other mobile code. On the server it might mean differentiation between validated data and unvalidated data, between one user's data and another's, or between data users are allowed to see and data that they are not."

### Membership

HasMember	V	491	Public cloneable() Method Without Final ('Object Hijack')	700	1178
HasMember	V	492	Use of Inner Class Containing Sensitive Data	700	1180
HasMember	V	493	Critical Public Variable Without Final Modifier	700	1187
HasMember	V	495	Private Data Structure Returned From A Public Method	700	1194
HasMember	V	496	Public Data Assigned to Private Array-Typed Field	700	1196
HasMember	B	497	Exposure of Sensitive System Information to an Unauthorized Control Sphere	700	1198
HasMember	B	501	Trust Boundary Violation	700	1207

## Notes

### Other

The "encapsulation" term is used in multiple ways. Within some security sources, the term is used to describe the establishment of boundaries between different control spheres. Within general computing circles, it is more about hiding implementation details and maintainability than security. Even within the security usage, there is also a question of whether "encapsulation" encompasses the entire range of security problems.

## Category-725: OWASP Top Ten 2004 Category A4 - Cross-Site Scripting (XSS) Flaws

Category ID : 725

### Summary

Weaknesses in this category are related to the A4 category in the OWASP Top Ten 2004.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	711	Weaknesses in OWASP Top Ten (2004)	711	2571
HasMember	B	79	Improper Neutralization of Input During Web Page Generation ('Cross-site Scripting')	711	166
HasMember	V	644	Improper Neutralization of HTTP Headers for Scripting Syntax	711	1427

## References

[REF-584]OWASP. "A4 Cross-Site Scripting (XSS) Flaws". 2007. < [http://sourceforge.net/project/showfiles.php?group\\_id=64424&package\\_id=70827](http://sourceforge.net/project/showfiles.php?group_id=64424&package_id=70827) >.

## Category-726: OWASP Top Ten 2004 Category A5 - Buffer Overflows

Category ID : 726

### Summary

Weaknesses in this category are related to the A5 category in the OWASP Top Ten 2004.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	711	Weaknesses in OWASP Top Ten (2004)	711	2571
HasMember	G	119	Improper Restriction of Operations within the Bounds of a Memory Buffer	711	296
HasMember	B	120	Buffer Copy without Checking Size of Input ('Classic Buffer Overflow')	711	307

## Category-735: CERT C Secure Coding Standard (2008) Chapter 2 - Preprocessor (PRE)

Category ID : 735

## Summary

Weaknesses in this category are related to the rules and recommendations in the Preprocessor (PRE) chapter of the CERT C Secure Coding Standard (2008).

## Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	734	Weaknesses Addressed by the CERT C Secure Coding Standard (2008)	734	2572
HasMember	C	684	Incorrect Provision of Specified Functionality	734	1510

## Notes

## Relationship

In the 2008 version of the CERT C Secure Coding standard, the following rules were mapped to the following CWE IDs: CWE-684 PRE09-C Do not replace secure functions with less secure functions

## References

[REF-597]Robert C. Seacord. "The CERT C Secure Coding Standard". 1st Edition. 2008 October 4. Addison-Wesley Professional.

## Category-736: CERT C Secure Coding Standard (2008) Chapter 3 - Declarations and Initialization (DCL)

Category ID : 736

### Summary

Weaknesses in this category are related to the rules and recommendations in the Declarations and Initialization (DCL) chapter of the CERT C Secure Coding Standard (2008).

### Membership

Nature	Type	ID	Name	734	Page
MemberOf	V	734	Weaknesses Addressed by the CERT C Secure Coding Standard (2008)	734	2572
HasMember	B	547	Use of Hard-coded, Security-relevant Constants	734	1264
HasMember	B	628	Function Call with Incorrectly Specified Arguments	734	1403
HasMember	V	686	Function Call With Incorrect Argument Type	734	1513

### Notes

#### Relationship

In the 2008 version of the CERT C Secure Coding standard, the following rules were mapped to the following CWE IDs: CWE-547 DCL06-C Use meaningful symbolic constants to represent literal values in program logic CWE-628 DCL10-C Maintain the contract between the writer and caller of variadic functions CWE-686 DCL35-C Do not invoke a function using a type that does not match the function definition

## Category-737: CERT C Secure Coding Standard (2008) Chapter 4 - Expressions (EXP)

Category ID : 737

### Summary

Weaknesses in this category are related to the rules and recommendations in the Expressions (EXP) chapter of the CERT C Secure Coding Standard (2008).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	734	Weaknesses Addressed by the CERT C Secure Coding Standard (2008)	734	2572
HasMember	V	467	Use of sizeof() on a Pointer Type	734	1115
HasMember	B	468	Incorrect Pointer Scaling	734	1118
HasMember	B	476	NULL Pointer Dereference	734	1136
HasMember	B	628	Function Call with Incorrectly Specified Arguments	734	1403
HasMember	C	704	Incorrect Type Conversion or Cast	734	1543
HasMember	B	783	Operator Precedence Logic Error	734	1655

## Notes

### Relationship

In the 2008 version of the CERT C Secure Coding standard, the following rules were mapped to the following CWE IDs: CWE-467 EXP01-C Do not take the size of a pointer to determine the size of the pointed-to type CWE-468 EXP08-C Ensure pointer arithmetic is used correctly CWE-476 EXP34-C Ensure a null pointer is not dereferenced CWE-628 EXP37-C Call functions with the arguments intended by the API CWE-704 EXP05-C Do not cast away a const qualification CWE-783 EXP00-C Use parentheses for precedence of operation

## Category-738: CERT C Secure Coding Standard (2008) Chapter 5 - Integers (INT)

Category ID : 738

## Summary

Weaknesses in this category are related to the rules and recommendations in the Integers (INT) chapter of the CERT C Secure Coding Standard (2008).

## Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	734	Weaknesses Addressed by the CERT C Secure Coding Standard (2008)	734	2572
HasMember	C	20	Improper Input Validation	734	20
HasMember	V	129	Improper Validation of Array Index	734	344
HasMember	B	190	Integer Overflow or Wraparound	734	475
HasMember	V	192	Integer Coercion Error	734	486
HasMember	B	197	Numeric Truncation Error	734	504
HasMember	B	369	Divide By Zero	734	917
HasMember	B	466	Return of Pointer Value Outside of Expected Range	734	1114
HasMember	V	587	Assignment of a Fixed Address to a Pointer	734	1327
HasMember	B	606	Unchecked Input for Loop Condition	734	1363
HasMember	B	676	Use of Potentially Dangerous Function	734	1494
HasMember	B	681	Incorrect Conversion between Numeric Types	734	1500
HasMember	P	682	Incorrect Calculation	734	1504

## Notes

### Relationship

In the 2008 version of the CERT C Secure Coding standard, the following rules were mapped to the following CWE IDs: CWE-20 INT06-C Use strtol() or a related function to convert a string token to an integer CWE-129 INT32-C Ensure that operations on signed integers do not result in overflow CWE-190 INT03-C Use a secure integer library CWE-190 INT30-C Ensure that unsigned integer operations do not wrap CWE-190 INT32-C Ensure that operations on signed integers do not result in overflow CWE-190 INT35-C Evaluate integer expressions in a larger size before comparing or assigning to that size CWE-192 INT02-C Understand integer conversion rules CWE-192 INT05-C Do not use input functions to convert character data if they cannot handle all possible inputs CWE-192 INT31-C Ensure that integer conversions do not result in lost or misinterpreted data CWE-197 INT02-C Understand integer conversion rules CWE-197 INT05-C Do not use input functions to convert character data if they cannot handle all possible inputs CWE-197 INT31-C Ensure that integer conversions do not result in lost or misinterpreted data CWE-369 INT33-C Ensure that division and modulo operations do not result in divide-by-zero errors CWE-466 INT11-C Take care when converting from pointer to integer or integer to pointer CWE-587 INT11-C Take care when converting from pointer to integer or integer to pointer CWE-606 INT03-C Use a secure integer library CWE-676 INT06-C Use strtol() or a related function to convert a string token to an integer CWE-681 INT15-C Use intmax\_t or uintmax\_t for formatted IO on programmer-defined integer types CWE-681 INT31-C Ensure that integer conversions do not result in lost or misinterpreted data CWE-681 INT35-C Evaluate integer expressions in a larger size before comparing or assigning to that size CWE-682 INT07-C Use only explicitly signed or unsigned char type for numeric values CWE-682 INT13-C Use bitwise operators only on unsigned operands

## References

## Category-739: CERT C Secure Coding Standard (2008) Chapter 6 - Floating Point (FLP)

Category ID : 739

## Summary

Weaknesses in this category are related to the rules and recommendations in the Floating Point (FLP) chapter of the CERT C Secure Coding Standard (2008).

## Membership

Nature	Type	ID	Name	734	Page
MemberOf	W	734	Weaknesses Addressed by the CERT C Secure Coding Standard (2008)	734	2572
HasMember	B	369	Divide By Zero	734	917
HasMember	B	681	Incorrect Conversion between Numeric Types	734	1500
HasMember	P	682	Incorrect Calculation	734	1504
HasMember	V	686	Function Call With Incorrect Argument Type	734	1513

## Notes

### Relationship

In the 2008 version of the CERT C Secure Coding standard, the following rules were mapped to the following CWE IDs: CWE-369 FLP03-C Detect and handle floating point errors CWE-681 FLP33-C Convert integers to floating point for floating point operations CWE-681 FLP34-C Ensure that floating point conversions are within range of the new type CWE-682 FLP32-C Prevent or detect domain and range errors in math functions CWE-682 FLP33-C Convert

integers to floating point for floating point operations CWE-686 FLP31-C Do not call functions expecting real values with complex values

## Category-740: CERT C Secure Coding Standard (2008) Chapter 7 - Arrays (ARR)

Category ID : 740

### Summary

Weaknesses in this category are related to the rules and recommendations in the Arrays (ARR) chapter of the CERT C Secure Coding Standard (2008).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	734	Weaknesses Addressed by the CERT C Secure Coding Standard (2008)	734	2572
HasMember	G	119	Improper Restriction of Operations within the Bounds of a Memory Buffer	734	296
HasMember	V	129	Improper Validation of Array Index	734	344
HasMember	V	467	Use of sizeof() on a Pointer Type	734	1115
HasMember	B	469	Use of Pointer Subtraction to Determine Size	734	1120
HasMember	G	665	Improper Initialization	734	1462
HasMember	B	805	Buffer Access with Incorrect Length Value	734	1707

### Notes

#### Relationship

In the 2008 version of the CERT C Secure Coding standard, the following rules were mapped to the following CWE IDs: CWE-119 ARR00-C Understand how arrays work CWE-119 ARR33-C Guarantee that copies are made into storage of sufficient size CWE-119 ARR34-C Ensure that array types in expressions are compatible CWE-119 ARR35-C Do not allow loops to iterate beyond the end of an array CWE-129 ARR00-C Understand how arrays work CWE-129 ARR30-C Guarantee that array indices are within the valid range CWE-129 ARR38-C Do not add or subtract an integer to a pointer if the resulting value does not refer to a valid array element CWE-467 ARR01-C Do not apply the sizeof operator to a pointer when taking the size of an array CWE-469 ARR36-C Do not subtract or compare two pointers that do not refer to the same array CWE-469 ARR37-C Do not add or subtract an integer to a pointer to a non-array object CWE-665 ARR02-C Explicitly specify array bounds, even if implicitly defined by an initializer CWE-805 ARR33-C Guarantee that copies are made into storage of sufficient size

## References

## Category-741: CERT C Secure Coding Standard (2008) Chapter 8 - Characters and Strings (STR)

Category ID : 741

## Summary

Weaknesses in this category are related to the rules and recommendations in the Characters and Strings (STR) chapter of the CERT C Secure Coding Standard (2008).

## Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	734	Weaknesses Addressed by the CERT C Secure Coding Standard (2008)	734	2572
HasMember	B	78	Improper Neutralization of Special Elements used in an OS Command ('OS Command Injection')	734	153
HasMember	B	88	Improper Neutralization of Argument Delimiters in a Command ('Argument Injection')	734	196
HasMember	C	119	Improper Restriction of Operations within the Bounds of a Memory Buffer	734	296
HasMember	B	120	Buffer Copy without Checking Size of Input ('Classic Buffer Overflow')	734	307
HasMember	B	135	Incorrect Calculation of Multi-Byte String Length	734	374
HasMember	B	170	Improper Null Termination	734	431
HasMember	B	193	Off-by-one Error	734	490
HasMember	B	464	Addition of Data Structure Sentinel	734	1112
HasMember	V	686	Function Call With Incorrect Argument Type	734	1513
HasMember	C	704	Incorrect Type Conversion or Cast	734	1543

## Notes

### Relationship

In the 2008 version of the CERT C Secure Coding standard, the following rules were mapped to the following CWE IDs: CWE-78 STR02-C Sanitize data passed to complex subsystems CWE-88 STR02-C Sanitize data passed to complex subsystems CWE-119 STR31-C Guarantee that storage for strings has sufficient space for character data and the null terminator CWE-119 STR32-C Null-terminate byte strings as required CWE-119 STR33-C Size wide character strings correctly CWE-120 STR35-C Do not copy data from an unbounded source to a fixed-length array CWE-135 STR33-C Size wide character strings correctly CWE-170 STR03-C Do not inadvertently truncate a null-terminated byte string CWE-170 STR32-C Null-terminate byte strings as required CWE-193 STR31-C Guarantee that storage for strings has sufficient space for character data and the null terminator CWE-464 STR03-C Do not inadvertently truncate a null-terminated byte string CWE-464 STR06-C Do not assume that strtok() leaves the parse string unchanged CWE-686 STR37-C Arguments to character handling functions must be representable as an unsigned char CWE-704 STR34-C Cast characters to unsigned types before converting to larger integer sizes CWE-704 STR37-C Arguments to character handling functions must be representable as an unsigned char

HasMember	V	590	Free of Memory not on the Heap	734	1331
HasMember	V	591	Sensitive Data Storage in Improperly Locked Memory	734	1334
HasMember	B	628	Function Call with Incorrectly Specified Arguments	734	1403
HasMember	G	665	Improper Initialization	734	1462
HasMember	V	687	Function Call With Incorrectly Specified Argument Value	734	1515
HasMember	G	754	Improper Check for Unusual or Exceptional Conditions	734	1573

## Notes

### Relationship

In the 2008 version of the CERT C Secure Coding standard, the following rules were mapped to the following CWE IDs: CWE-20 MEM10-C Define and use a pointer validation function CWE-119 MEM09-C Do not assume memory allocation routines initialize memory CWE-128 MEM07-C Ensure that the arguments to `calloc()`, when multiplied, can be represented as a `size_t` CWE-131 MEM35-C Allocate sufficient memory for an object CWE-190 MEM07-C Ensure that the arguments to `calloc()`, when multiplied, can be represented as a `size_t` CWE-190 MEM35-C Allocate sufficient memory for an object CWE-226 MEM03-C Clear sensitive information stored in reusable resources returned for reuse CWE-244 MEM03-C Clear sensitive information stored in reusable resources returned for reuse CWE-252 MEM32-C Detect and handle memory allocation errors CWE-415 MEM00-C Allocate and free memory in the same module, at the same level of abstraction CWE-415 MEM01-C Store a new value in pointers immediately after `free()` CWE-415 MEM31-C Free dynamically allocated memory exactly once CWE-416 MEM00-C Allocate and free memory in the same module, at the same level of abstraction CWE-416 MEM01-C Store a new value in pointers immediately after `free()` CWE-416 MEM30-C Do not access freed memory CWE-476 MEM32-C Detect and handle memory allocation errors CWE-528 MEM06-C Ensure that sensitive data is not written out to disk CWE-590 MEM34-C Only free memory allocated dynamically CWE-591 MEM06-C Ensure that sensitive data is not written out to disk CWE-628 MEM08-C Use `realloc()` only to resize dynamically allocated arrays CWE-665 MEM09-C Do not assume memory allocation routines initialize memory CWE-687 MEM04-C Do not perform zero length allocations CWE-754 MEM32-C Detect and handle memory allocation errors

## Category-743: CERT C Secure Coding Standard (2008) Chapter 10 - Input Output (FIO)

Category ID : 743

### Summary

Weaknesses in this category are related to the rules and recommendations in the Input Output (FIO) chapter of the CERT C Secure Coding Standard (2008).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	734	Weaknesses Addressed by the CERT C Secure Coding Standard (2008)	734	2572
HasMember	B	22	Improper Limitation of a Pathname to a Restricted Directory ('Path Traversal')	734	33
HasMember	V	37	Path Traversal: '/absolute/pathname/here'	734	79
HasMember	V	38	Path Traversal: '\absolute\pathname\here'	734	81
HasMember	V	39	Path Traversal: 'C:dirname'	734	83
HasMember	B	41	Improper Resolution of Path Equivalence	734	87
HasMember	B	59	Improper Link Resolution Before File Access ('Link Following')	734	112
HasMember	V	62	UNIX Hard Link	734	120
HasMember	V	64	Windows Shortcut Following (.LNK)	734	122
HasMember	V	65	Windows Hard Link	734	124
HasMember	V	67	Improper Handling of Windows Device Names	734	127
HasMember	G	119	Improper Restriction of Operations within the Bounds of a Memory Buffer	734	296
HasMember	B	134	Use of Externally-Controlled Format String	734	368
HasMember	B	241	Improper Handling of Unexpected Data Type	734	588
HasMember	B	276	Incorrect Default Permissions	734	669
HasMember	V	279	Incorrect Execution-Assigned Permissions	734	675
HasMember	G	362	Concurrent Execution using Shared Resource with Improper Synchronization ('Race Condition')	734	892
HasMember	B	367	Time-of-check Time-of-use (TOCTOU) Race Condition	734	910
HasMember	B	379	Creation of Temporary File in Directory with Insecure Permissions	734	934
HasMember	B	391	Unchecked Error Condition	734	953
HasMember	B	403	Exposure of File Descriptor to Unintended Control Sphere ('File Descriptor Leak')	734	982
HasMember	G	404	Improper Resource Shutdown or Release	734	984
HasMember	B	552	Files or Directories Accessible to External Parties	734	1270
HasMember	G	675	Multiple Operations on Resource in Single-Operation Context	734	1492
HasMember	B	676	Use of Potentially Dangerous Function	734	1494
HasMember	V	686	Function Call With Incorrect Argument Type	734	1513
HasMember	G	732	Incorrect Permission Assignment for Critical Resource	734	1556

## Notes

### Relationship

In the 2008 version of the CERT C Secure Coding standard, the following rules were mapped to the following CWE IDs: CWE-22 FIO02-C Canonicalize path names originating from untrusted sources CWE-37 FIO05-C Identify files using multiple file attributes CWE-38 FIO05-C Identify files using multiple file attributes CWE-39 FIO05-C Identify files using multiple file attributes CWE-41 FIO02-C Canonicalize path names originating from untrusted sources CWE-59 FIO02-C Canonicalize path names originating from untrusted sources CWE-62 FIO05-C Identify files using multiple file attributes CWE-64 FIO05-C Identify files using multiple file attributes CWE-65 FIO05-C Identify files using multiple file attributes CWE-67 FIO32-C Do not perform operations on devices that are only appropriate for files CWE-119 FIO37-C Do not assume character data has been read CWE-134 FIO30-C Exclude user input from format strings CWE-134 FIO30-C Exclude user input from format strings CWE-241 FIO37-C Do not assume character data has been read CWE-276 FIO06-C Create files with appropriate access permissions CWE-279 FIO06-C Create files with appropriate access permissions CWE-362 FIO31-C Do not simultaneously open the same file multiple times CWE-367 FIO01-C Be careful using functions that use file names for identification CWE-379 FIO15-C Ensure that file operations are performed in a secure directory CWE-379 FIO43-C Do not create temporary files in shared directories CWE-391 FIO04-C Detect and handle input and output errors CWE-391 FIO33-C Detect and handle input output errors resulting in undefined behavior CWE-403 FIO42-C Ensure files are properly closed when they are no longer needed CWE-404 FIO42-C Ensure files are properly closed when they are no longer needed CWE-552 FIO15-C Ensure that file operations are performed in a secure directory CWE-675 FIO31-C Do not simultaneously open the same file multiple times CWE-676 FIO01-C Be careful using functions that use file names for identification CWE-686 FIO00-C Take care when creating format strings CWE-732 FIO06-C Create files with appropriate access permissions

## Category-744: CERT C Secure Coding Standard (2008) Chapter 11 - Environment (ENV)

Category ID : 744

### Summary

Weaknesses in this category are related to the rules and recommendations in the Environment (ENV) chapter of the CERT C Secure Coding Standard (2008).

### Membership

Nature	Type	ID	Name	W	Page
MemberOf	W	734	Weaknesses Addressed by the CERT C Secure Coding Standard (2008)	734	2572
HasMember	B	78	Improper Neutralization of Special Elements used in an OS Command ('OS Command Injection')	734	153
HasMember	B	88	Improper Neutralization of Argument Delimiters in a Command ('Argument Injection')	734	196
HasMember	G	119	Improper Restriction of Operations within the Bounds of a Memory Buffer	734	296
HasMember	B	426	Untrusted Search Path	734	1032
HasMember	V	462	Duplicate Key in Associative List (Alist)	734	1108

Nature	Type	ID	Name	V	Page
HasMember		705	Incorrect Control Flow Scoping	734	1547

## Notes

### Relationship

In the 2008 version of the CERT C Secure Coding standard, the following rules were mapped to the following CWE IDs: CWE-78 ENV03-C Sanitize the environment when invoking external programs CWE-78 ENV04-C Do not call system() if you do not need a command processor CWE-88 ENV03-C Sanitize the environment when invoking external programs CWE-88 ENV04-C Do not call system() if you do not need a command processor CWE-119 ENV01-C Do not make assumptions about the size of an environment variable CWE-426 ENV03-C Sanitize the environment when invoking external programs CWE-462 ENV02-C Beware of multiple environment variables with the same effective name CWE-705 ENV32-C All atexit handlers must return normally

## Category-745: CERT C Secure Coding Standard (2008) Chapter 12 - Signals (SIG)

Category ID : 745

### Summary

Weaknesses in this category are related to the rules and recommendations in the Signals (SIG) chapter of the CERT C Secure Coding Standard (2008).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf		734	Weaknesses Addressed by the CERT C Secure Coding Standard (2008)	734	2572
HasMember		479	Signal Handler Use of a Non-reentrant Function	734	1151
HasMember		662	Improper Synchronization	734	1454

## Notes

### Relationship

In the 2008 version of the CERT C Secure Coding standard, the following rules were mapped to the following CWE IDs: CWE-432 SIG00-C Mask signals handled by noninterruptible signal handlers CWE-479 SIG30-C Call only asynchronous-safe functions within signal handlers CWE-479 SIG32-C Do not call longjmp() from inside a signal handler CWE-479 SIG33-C Do not recursively invoke the raise() function CWE-479 SIG34-C Do not call signal() from within interruptible signal handlers CWE-662 SIG00-C Mask signals handled by noninterruptible signal handlers CWE-662 SIG31-C Do not access or modify shared objects in signal handlers CWE-828 SIG31-C Do not access or modify shared objects in signal handlers

## Category-746: CERT C Secure Coding Standard (2008) Chapter 13 - Error Handling (ERR)

Category ID : 746

### Summary

Weaknesses in this category are related to the rules and recommendations in the Error Handling (ERR) chapter of the CERT C Secure Coding Standard (2008).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	734	Weaknesses Addressed by the CERT C Secure Coding Standard (2008)	734	2572
HasMember	C	20	Improper Input Validation	734	20
HasMember	B	391	Unchecked Error Condition	734	953
HasMember	B	544	Missing Standardized Error Handling Mechanism	734	1262
HasMember	B	676	Use of Potentially Dangerous Function	734	1494
HasMember	C	705	Incorrect Control Flow Scoping	734	1547

### Notes

#### Relationship

In the 2008 version of the CERT C Secure Coding standard, the following rules were mapped to the following CWE IDs: CWE-20 ERR07-C Prefer functions that support error checking over equivalent functions that don't CWE-391 ERR00-C Adopt and implement a consistent and comprehensive error-handling policy CWE-544 ERR00-C Adopt and implement a consistent and comprehensive error-handling policy CWE-676 ERR07-C Prefer functions that support error checking over equivalent functions that don't CWE-705 ERR04-C Choose an appropriate termination strategy

## Category-747: CERT C Secure Coding Standard (2008) Chapter 14 - Miscellaneous (MSC)

Category ID : 747

### Summary

Weaknesses in this category are related to the rules and recommendations in the Miscellaneous (MSC) chapter of the CERT C Secure Coding Standard (2008).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	734	Weaknesses Addressed by the CERT C Secure Coding Standard (2008)	734	2572
HasMember	V	14	Compiler Removal of Code to Clear Buffers	734	14
HasMember	C	20	Improper Input Validation	734	20
HasMember	V	176	Improper Handling of Unicode Encoding	734	443
HasMember	C	330	Use of Insufficiently Random Values	734	818
HasMember	B	480	Use of Incorrect Operator	734	1154

Nature	Type	ID	Name	V	Page
HasMember	V	482	Comparing instead of Assigning	734	1162
HasMember	B	561	Dead Code	734	1280
HasMember	B	563	Assignment to Variable without Use	734	1285
HasMember	B	570	Expression is Always False	734	1297
HasMember	B	571	Expression is Always True	734	1300
HasMember	P	697	Incorrect Comparison	734	1535
HasMember	G	704	Incorrect Type Conversion or Cast	734	1543

## Notes

### Relationship

In the 2008 version of the CERT C Secure Coding standard, the following rules were mapped to the following CWE IDs: CWE-14 MSC06-C Be aware of compiler optimization when dealing with sensitive data CWE-20 MSC08-C Library functions should validate their parameters CWE-176 MSC10-C Character Encoding - UTF8 Related Issues CWE-330 MSC30-C Do not use the rand() function for generating pseudorandom numbers CWE-480 MSC02-C Avoid errors of omission CWE-480 MSC03-C Avoid errors of addition CWE-482 MSC02-C Avoid errors of omission CWE-561 MSC07-C Detect and remove dead code CWE-563 MSC00-C Compile cleanly at high warning levels CWE-570 MSC00-C Compile cleanly at high warning levels CWE-571 MSC00-C Compile cleanly at high warning levels CWE-697 MSC31-C Ensure that return values are compared against the proper type CWE-704 MSC31-C Ensure that return values are compared against the proper type CWE-758 MSC14-C Do not introduce unnecessary platform dependencies CWE-758 MSC15-C Do not depend on undefined behavior

## Category-748: CERT C Secure Coding Standard (2008) Appendix - POSIX (POS)

Category ID : 748

## Summary

Weaknesses in this category are related to the rules and recommendations in the POSIX (POS) appendix of the CERT C Secure Coding Standard (2008).

## Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	734	Weaknesses Addressed by the CERT C Secure Coding Standard (2008)	734	2572
HasMember	B	59	Improper Link Resolution Before File Access ('Link Following')	734	112
HasMember	B	170	Improper Null Termination	734	431
HasMember	B	242	Use of Inherently Dangerous Function	734	590
HasMember	B	272	Least Privilege Violation	734	660
HasMember	B	273	Improper Check for Dropped Privileges	734	664
HasMember	B	363	Race Condition Enabling Link Following	734	901
HasMember	B	366	Race Condition within a Thread	734	908
HasMember	B	562	Return of Stack Variable Address	734	1283
HasMember	G	667	Improper Locking	734	1469

Nature	Type	ID	Name	V	Page
HasMember	V	686	Function Call With Incorrect Argument Type	734	1513
HasMember	G	696	Incorrect Behavior Order	734	1532

## Notes

### Relationship

In the 2008 version of the CERT C Secure Coding standard, the following rules were mapped to the following CWE IDs: CWE-59 POS01-C Check for the existence of links when dealing with files CWE-170 POS30-C Use the readlink() function properly CWE-242 POS33-C Do not use vfork() CWE-272 POS02-C Follow the principle of least privilege CWE-273 POS37-C Ensure that privilege relinquishment is successful CWE-363 POS35-C Avoid race conditions while checking for the existence of a symbolic link CWE-366 POS00-C Avoid race conditions with multiple threads CWE-562 POS34-C Do not call putenv() with a pointer to an automatic variable as the argument CWE-667 POS31-C Do not unlock or destroy another thread's mutex CWE-686 POS34-C Do not call putenv() with a pointer to an automatic variable as the argument CWE-696 POS36-C Observe correct revocation order while relinquishing privileges

## Category-808: 2010 Top 25 - Weaknesses On the Cusp

Category ID : 808

### Summary

Weaknesses in this category are not part of the general Top 25, but they were part of the original nominee list from which the Top 25 was drawn.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	800	Weaknesses in the 2010 CWE/SANS Top 25 Most Dangerous Programming Errors	800	2575
HasMember	B	59	Improper Link Resolution Before File Access ('Link Following')	800	112
HasMember	B	134	Use of Externally-Controlled Format String	800	368
HasMember	B	212	Improper Removal of Sensitive Information Before Storage or Transfer	800	548
HasMember	B	307	Improper Restriction of Excessive Authentication Attempts	800	751
HasMember	C	330	Use of Insufficiently Random Values	800	818
HasMember	V	416	Use After Free	800	1016
HasMember	B	426	Untrusted Search Path	800	1032
HasMember	B	454	External Initialization of Trusted Variables or Data Stores	800	1089
HasMember	V	456	Missing Initialization of a Variable	800	1093
HasMember	B	476	NULL Pointer Dereference	800	1136
HasMember	C	672	Operation on a Resource after Expiration or Release	800	1485
HasMember	B	681	Incorrect Conversion between Numeric Types	800	1500
HasMember	B	749	Exposed Dangerous Method or Function	800	1569
HasMember	B	772	Missing Release of Resource after Effective Lifetime	800	1629
HasMember	C	799	Improper Control of Interaction Frequency	800	1704
HasMember	B	804	Guessable CAPTCHA	800	1706

## Category-840: Business Logic Errors

Category ID : 840

### Summary

Weaknesses in this category identify some of the underlying problems that commonly allow attackers to manipulate the business logic of an application. Errors in business logic can be devastating to an entire application. They can be difficult to find automatically, since they typically involve legitimate use of the application's functionality. However, many business logic errors can exhibit patterns that are similar to well-understood implementation and design weaknesses.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	699	Software Development	699	2567
MemberOf	C	1348	OWASP Top Ten 2021 Category A04:2021 - Insecure Design	1344	2503

HasMember	B	639	Authorization Bypass Through User-Controlled Key	699	1412
HasMember	B	640	Weak Password Recovery Mechanism for Forgotten Password	699	1415

Nature	Type	ID	Name	V	Page
HasMember	B	708	Incorrect Ownership Assignment	699	1553
HasMember	B	770	Allocation of Resources Without Limits or Throttling	699	1618
HasMember	B	826	Premature Release of Resource During Expected Lifetime	699	1739
HasMember	B	837	Improper Enforcement of a Single, Unique Action	699	1767
HasMember	B	841	Improper Enforcement of Behavioral Workflow	699	1777

## Notes

### Terminology

The "Business Logic" term is generally used to describe issues that require domain-specific knowledge or "business rules" to determine if they are weaknesses or vulnerabilities, instead of legitimate behavior. Such issues might not be easily detectable via automatic code analysis, because the associated operations do not produce clear errors or undefined behavior at the code level. However, many such "business logic" issues can be understood as instances of other weaknesses such as input validation, access control, numeric computation, order of operations, etc.

### Research Gap

The classification of business logic flaws has been under-studied, although exploitation of business flaws frequently happens in real-world systems, and many applied vulnerability researchers investigate them. The greatest focus is in web applications. There is debate within the community about whether these problems represent particularly new concepts, or if they are variations of well-known principles. Many business logic flaws appear to be oriented toward business processes, application flows, and sequences of behaviors, which are not as well-represented in CWE as weaknesses related to input validation, memory management, etc.

## Category-876: CERT C++ Secure Coding Section 08 - Memory Management (MEM)

Category ID : 876

## Summary

Weaknesses in this category are related to rules in the Memory Management (MEM) section of the CERT C++ Secure Coding Standard. Since not all rules map to specific weaknesses, this category may be incomplete.

## Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	868	Weaknesses Addressed by the SEI CERT C++ Coding Standard (2016 Version)	868	2578
HasMember	G	20	Improper Input Validation	868	20

## Category-885: SFP Primary Cluster: Risky Values

Category ID : 885

### Summary

This category identifies Software Fault Patterns (SFPs) within the Risky Values cluster (SFP1).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	888	Software Fault Pattern (SFP) Clusters	888	2583
HasMember	C	998	SFP Secondary Cluster: Glitch in Computation	888	2431

## Category-886: SFP Primary Cluster: Unused entities

Category ID : 886

### Summary

This category identifies Software Fault Patterns (SFPs) within the Unused entities cluster (SFP2).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	888	Software Fault Pattern (SFP) Clusters	888	2583
HasMember	V	482	Comparing instead of Assigning	888	1162
HasMember	B	561	Dead Code	888	1280
HasMember	B	563	Assignment to Variable without Use	888	1285

## Category-887: SFP Primary Cluster: API

Category ID : 887

### Summary

This category identifies Software Fault Patterns (SFPs) within the API cluster (SFP3).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	888	Software Fault Pattern (SFP) Clusters	888	2583
HasMember	C	1001	SFP Secondary Cluster: Use of an Improper API	888	2432

## Category-889: SFP Primary Cluster: Exception Management

Category ID : 889

### Summary

This category identifies Software Fault Patterns (SFPs) within the Exception Management cluster (SFP4, SFP5, SFP6).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	888	Software Fault Pattern (SFP) Clusters	888	2583

Nature	Type	ID	Name	V	Page
HasMember	C	960	SFP Secondary Cluster: Ambiguous Exception Type	888	2411
HasMember	C	961	SFP Secondary Cluster: Incorrect Exception Behavior	888	2411
HasMember	C	962	SFP Secondary Cluster: Unchecked Status Condition	888	2412

## Category-890: SFP Primary Cluster: Memory Access

Category ID : 890

### Summary

This category identifies Software Fault Patterns (SFPs) within the Memory Access cluster (SFP7, SFP8).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	888	Software Fault Pattern (SFP) Clusters	888	2583
HasMember	C	970	SFP Secondary Cluster: Faulty Buffer Access	888	2417
HasMember	C	971	SFP Secondary Cluster: Faulty Pointer Use	888	2417
HasMember	C	972	SFP Secondary Cluster: Faulty String Expansion	888	2417
HasMember	C	973	SFP Secondary Cluster: Improper NULL Termination	888	2418
HasMember	C	974	SFP Secondary Cluster: Incorrect Buffer Length Computation	888	2418

## Category-891: SFP Primary Cluster: Memory Management

Category ID : 891

### Summary

This category identifies Software Fault Patterns (SFPs) within the Memory Management cluster (SFP38).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	888	Software Fault Pattern (SFP) Clusters	888	2583
HasMember	C	969	SFP Secondary Cluster: Faulty Memory Release	888	2416

## Category-892: SFP Primary Cluster: Resource Management

Category ID : 892

### Summary

This category identifies Software Fault Patterns (SFPs) within the Resource Management cluster (SFP37).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	888	Software Fault Pattern (SFP) Clusters	888	2583
HasMember	C	982	SFP Secondary Cluster: Failure to Release Resource	888	2422

Nature	Type	ID	Name	V	Page
HasMember	C	983	SFP Secondary Cluster: Faulty Resource Use	888	2422
HasMember	C	984	SFP Secondary Cluster: Life Cycle	888	2423
HasMember	C	985	SFP Secondary Cluster: Unrestricted Consumption	888	2423

## Category-893: SFP Primary Cluster: Path Resolution

Category ID : 893

### Summary

This category identifies Software Fault Patterns (SFPs) within the Path Resolution cluster (SFP16, SFP17, SFP18).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	888	Software Fault Pattern (SFP) Clusters	888	2583
HasMember	C	979	SFP Secondary Cluster: Failed Chroot Jail	888	2420
HasMember	C	980	SFP Secondary Cluster: Link in Resource Name Resolution	888	2421
HasMember	C	981	SFP Secondary Cluster: Path Traversal	888	2421

## Category-894: SFP Primary Cluster: Synchronization

Category ID : 894

### Summary

This category identifies Software Fault Patterns (SFPs) within the Synchronization cluster (SFP19, SFP20, SFP21, SFP22).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	888	Software Fault Pattern (SFP) Clusters	888	2583
HasMember	C	986	SFP Secondary Cluster: Missing Lock	888	2423
HasMember	C	987	SFP Secondary Cluster: Multiple Locks/Unlocks	888	2424
HasMember	C	988	SFP Secondary Cluster: Race Condition Window	888	2424
HasMember	C	989	SFP Secondary Cluster: Unrestricted Lock	888	2425

## Category-895: SFP Primary Cluster: Information Leak

Category ID : 895

### Summary

This category identifies Software Fault Patterns (SFPs) within the Information Leak cluster (SFP23).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	888	Software Fault Pattern (SFP) Clusters	888	2583

Nature	Type	ID	Name	V	Page
HasMember	C	963	SFP Secondary Cluster: Exposed Data	888	2412
HasMember	C	964	SFP Secondary Cluster: Exposure Temporary File	888	2414
HasMember	C	965	SFP Secondary Cluster: Insecure Session Management	888	2415
HasMember	C	966	SFP Secondary Cluster: Other Exposures	888	2415
HasMember	C	967	SFP Secondary Cluster: State Disclosure	888	2415

## Category-896: SFP Primary Cluster: Tainted Input

Category ID : 896

### Summary

This category identifies Software Fault Patterns (SFPs) within the Tainted Input cluster (SFP24, SFP25, SFP26, SFP27).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	888	Software Fault Pattern (SFP) Clusters	888	2583
HasMember	C	990	SFP Secondary Cluster: Tainted Input to Command	888	2425
HasMember	C	991	SFP Secondary Cluster: Tainted Input to Environment	888	2428
HasMember	C	992	SFP Secondary Cluster: Faulty Input Transformation	888	2428
HasMember	C	993	SFP Secondary Cluster: Incorrect Input Handling	888	2429
HasMember	C	994	SFP Secondary Cluster: Tainted Input to Variable	888	2429

## Category-897: SFP Primary Cluster: Entry Points

Category ID : 897

### Summary

This category identifies Software Fault Patterns (SFPs) within the Entry Points cluster (SFP28).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	888	Software Fault Pattern (SFP) Clusters	888	2583
HasMember	C	1002	SFP Secondary Cluster: Unexpected Entry Points	888	2433

## Category-898: SFP Primary Cluster: Authentication

Category ID : 898

### Summary

This category identifies Software Fault Patterns (SFPs) within the Authentication cluster (SFP29, SFP30, SFP31, SFP32, SFP33, SFP34).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	888	Software Fault Pattern (SFP) Clusters	888	2583
HasMember	C	947	SFP Secondary Cluster: Authentication Bypass	888	2406

Nature	Type	ID	Name	V	Page
HasMember	C	948	SFP Secondary Cluster: Digital Certificate	888	2407
HasMember	C	949	SFP Secondary Cluster: Faulty Endpoint Authentication	888	2407
HasMember	C	950	SFP Secondary Cluster: Hardcoded Sensitive Data	888	2408
HasMember	C	951	SFP Secondary Cluster: Insecure Authentication Policy	888	2408
HasMember	C	952	SFP Secondary Cluster: Missing Authentication	888	2408
HasMember	C	953	SFP Secondary Cluster: Missing Endpoint Authentication	888	2409
HasMember	C	954	SFP Secondary Cluster: Multiple Binds to the Same Port	888	2409
HasMember	C	955	SFP Secondary Cluster: Unrestricted Authentication	888	2409

## Category-899: SFP Primary Cluster: Access Control

Category ID : 899

### Summary

This category identifies Software Fault Patterns (SFPs) within the Access Control cluster (SFP35).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	888	Software Fault Pattern (SFP) Clusters	888	2583
HasMember	C	944	SFP Secondary Cluster: Access Management	888	2405
HasMember	C	945	SFP Secondary Cluster: Insecure Resource Access	888	2406
HasMember	C	946	SFP Secondary Cluster: Insecure Resource Permissions	888	2406

## Category-901: SFP Primary Cluster: Privilege

Category ID : 901

### Summary

This category identifies Software Fault Patterns (SFPs) within the Privilege cluster (SFP36).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	888	Software Fault Pattern (SFP) Clusters	888	2583
HasMember	V	9	J2EE Misconfiguration: Weak Access Permissions for EJB Methods	888	8
HasMember	B	250	Execution with Unnecessary Privileges	888	603
HasMember	B	266	Incorrect Privilege Assignment	888	642
HasMember	B	267	Privilege Defined With Unsafe Actions	888	645
HasMember	B	268	Privilege Chaining	888	648
HasMember	G	269	Improper Privilege Management	888	650
HasMember	B	270	Privilege Context Switching Error	888	655
HasMember	G	271	Privilege Dropping / Lowering Errors	888	657
HasMember	B	272	Least Privilege Violation	888	660
HasMember	B	274	Improper Handling of Insufficient Privileges	888	667
HasMember	V	520	.NET Misconfiguration: Use of Impersonation	888	1227

Nature	Type	ID	Name	V	Page
HasMember		653	Improper Isolation or Compartmentalization	888	1442

### Category-902: SFP Primary Cluster: Channel

Category ID : 902

#### Summary

This category identifies Software Fault Patterns (SFPs) within the Channel cluster.

#### Membership

Nature	Type	ID	Name	V	Page
MemberOf		888	Software Fault Pattern (SFP) Clusters	888	2583
HasMember		956	SFP Secondary Cluster: Channel Attack	888	2409
HasMember		957	SFP Secondary Cluster: Protocol Error	888	2410

### Category-903: SFP Primary Cluster: Cryptography

Category ID : 903

#### Summary

This category identifies Software Fault Patterns (SFPs) within the Cryptography cluster.

#### Membership

Nature	Type	ID	Name	V	Page
MemberOf		888	Software Fault Pattern (SFP) Clusters	888	2583
HasMember		958	SFP Secondary Cluster: Broken Cryptography	888	2410
HasMember		959	SFP Secondary Cluster: Weak Cryptography	888	2410

### Category-904: SFP Primary Cluster: Malware

Category ID : 904

#### Summary

This category identifies Software Fault Patterns (SFPs) within the Malware cluster.

#### Membership

Nature	Type	ID	Name	V	Page
MemberOf		888	Software Fault Pattern (SFP) Clusters	888	2583
HasMember		69	Improper Handling of Windows ::DATA Alternate Data Stream	888	130
HasMember		506	Embedded Malicious Code	888	1214
HasMember		507	Trojan Horse	888	1216
HasMember		508	Non-Replicating Malicious Code	888	1218
HasMember		509	Replicating Malicious Code (Virus or Worm)	888	1219
HasMember		510	Trapdoor	888	1220
HasMember		511	Logic/Time Bomb	888	1221
HasMember		512	Spyware	888	1223

Nature	Type	ID	Name	V	Page
HasMember	C	968	SFP Secondary Cluster: Covert Channel	888	2416

## Category-905: SFP Primary Cluster: Predictability

Category ID : 905

### Summary

This category identifies Software Fault Patterns (SFPs) within the Predictability cluster.

### Membership

## Category-906: SFP Primary Cluster: UI

Category ID : 906

### Summary

This category identifies Software Fault Patterns (SFPs) within the UI cluster.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	888	Software Fault Pattern (SFP) Clusters	888	2583
HasMember	C	995	SFP Secondary Cluster: Feature	888	2430
HasMember	C	996	SFP Secondary Cluster: Security	888	2430
HasMember	C	997	SFP Secondary Cluster: Information Loss	888	2430

## Category-907: SFP Primary Cluster: Other

2400

Category ID : 907

### Summary

This category identifies Software Fault Patterns (SFPs) within the Other cluster.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	888	Software Fault Pattern (SFP) Clusters	888	2583
HasMember	C	975	SFP Secondary Cluster: Architecture	888	2418
HasMember	C	976	SFP Secondary Cluster: Compiler	888	2419
HasMember	C	977	SFP Secondary Cluster: Design	888	2419
HasMember	C	978	SFP Secondary Cluster: Implementation	888	2420

## Category-929: OWASP Top Ten 2013 Category A1 - Injection

Category ID : 929

### Summary

Weaknesses in this category are related to the A1 category in the OWASP Top Ten 2013.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	928	Weaknesses in OWASP Top Ten (2013)	928	2586
HasMember	C	74	Improper Neutralization of Special Elements in Output Used by a Downstream Component ('Injection')	928	138
HasMember	C	77	Improper Neutralization of Special Elements used in a Command ('Command Injection')	928	146
HasMember	B	78	Improper Neutralization of Special Elements used in an OS Command ('OS Command Injection')	928	153
HasMember	B	88	Improper Neutralization of Argument Delimiters in a Command ('Argument Injection')	928	196
HasMember	B	89	Improper Neutralization of Special Elements used in an SQL Command ('SQL Injection')	928	204
HasMember	B	90	Improper Neutralization of Special Elements used in an LDAP Query ('LDAP Injection')	928	215
HasMember	B	91	XML Injection (aka Blind XPath Injection)	928	218
HasMember	B	643	Improper Neutralization of Data within XPath Expressions ('XPath Injection')	928	1425
HasMember	B	652	Improper Neutralization of Data within XQuery Expressions ('XQuery Injection')	928	1440

## Category-937: OWASP Top Ten 2013 Category A9 - Using Components with Known Vulnerabilities

Category ID : 937

### Summary

Weaknesses in this category are related to the A9 category in the OWASP Top Ten 2013.

### Membership

2404

Nature	Type	ID	Name	V	Page
MemberOf	V	928	Weaknesses in OWASP Top Ten (2013)	928	2586
MemberOf	C	1352	OWASP Top Ten 2021 Category A06:2021 - Vulnerable and Outdated Components	1344	2506

## Notes

### Relationship

This is an unusual category. CWE does not cover the limitations of human processes and procedures that cannot be described in terms of a specific technical weakness as resident in the code, architecture, or configuration of the software. Since "known vulnerabilities" can arise from any kind of weakness, it is not possible to map this OWASP category to other CWE entries, since it would effectively require mapping this category to ALL weaknesses.

## Category-944: SFP Secondary Cluster: Access Management

Category ID : 944

### Summary

This category identifies Software Fault Patterns (SFPs) within the Access Management cluster.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	899	SFP Primary Cluster: Access Control	888	2398
HasMember	C	282	Improper Ownership Management	888	680
HasMember	B	283	Unverified Ownership	888	682
HasMember	P	284	Improper Access Control	888	684
HasMember	C	286	Incorrect User Management	888	695
HasMember	B	708	Incorrect Ownership Assignment	888	1553

## Category-945: SFP Secondary Cluster: Insecure Resource Access

Category ID : 945

### Summary

This category identifies Software Fault Patterns (SFPs) within the Insecure Resource Access cluster (SFP35).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	899	SFP Primary Cluster: Access Control	888	2398
HasMember	G	285	Improper Authorization	888	688
HasMember	G	424	Improper Protection of Alternate Path	888	1028
HasMember	B	639	Authorization Bypass Through User-Controlled Key	888	1412
HasMember	V	650	Trusting HTTP Permission Methods on the Server Side	888	1437

## Category-946: SFP Secondary Cluster: Insecure Resource Permissions

Category ID : 946

### Summary

This category identifies Software Fault Patterns (SFPs) within the Insecure Resource Permissions cluster.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	899	SFP Primary Cluster: Access Control	888	2398
HasMember	B	276	Incorrect Default Permissions	888	669
HasMember	V	277	Insecure Inherited Permissions	888	672
HasMember	V	278	Insecure Preserved Inherited Permissions	888	673
HasMember	V	279	Incorrect Execution-Assigned Permissions	888	675
HasMember	B	281	Improper Preservation of Permissions	888	678
HasMember	V	560	Use of umask() with chmod-style Argument	888	1279
HasMember	G	732	Incorrect Permission Assignment for Critical Resource	888	1556

## Category-947: SFP Secondary Cluster: Authentication Bypass

Category ID : 947

### Summary

This category identifies Software Fault Patterns (SFPs) within the Authentication Bypass cluster.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	898	SFP Primary Cluster: Authentication	888	2397
HasMember	G	287	Improper Authentication	888	696
HasMember	B	288	Authentication Bypass Using an Alternate Path or Channel	888	704
HasMember	B	289	Authentication Bypass by Alternate Name	888	707
HasMember	B	303	Incorrect Implementation of Authentication Algorithm	888	741

Nature	Type	ID	Name	V	Page
HasMember	B	304	Missing Critical Step in Authentication	888	742
HasMember	B	305	Authentication Bypass by Primary Weakness	888	744
HasMember	B	308	Use of Single-factor Authentication	888	756
HasMember	B	309	Use of Password System for Primary Authentication	888	758
HasMember	B	603	Use of Client-Side Authentication	888	1359

## Category-948: SFP Secondary Cluster: Digital Certificate

Category ID : 948

### Summary

This category identifies Software Fault Patterns (SFPs) within the Digital Certificate cluster.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	898	SFP Primary Cluster: Authentication	888	2397
HasMember	B	296	Improper Following of a Certificate's Chain of Trust	888	723
HasMember	V	297	Improper Validation of Certificate with Host Mismatch	888	726
HasMember	V	298	Improper Validation of Certificate Expiration	888	730
HasMember	B	299	Improper Check for Certificate Revocation	888	731
HasMember	V	593	Authentication Bypass: OpenSSL CTX Object Modified after SSL Objects are Created	888	1336
HasMember	V	599	Missing Validation of OpenSSL Certificate	888	1347

## Category-949: SFP Secondary Cluster: Faulty Endpoint Authentication

Category ID : 949

### Summary

This category identifies Software Fault Patterns (SFPs) within the Faulty Endpoint Authentication cluster (SFP29).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	898	SFP Primary Cluster: Authentication	888	2397
HasMember	V	293	Using Referer Field for Authentication	888	714
HasMember	B	302	Authentication Bypass by Assumed-Immutable Data	888	739
HasMember	C	345	Insufficient Verification of Data Authenticity	888	855
HasMember	C	346	Origin Validation Error	888	857
HasMember	V	350	Reliance on Reverse DNS Resolution for a Security-Critical Action	888	867
HasMember	B	360	Trust of System Event Data	888	891
HasMember	B	551	Incorrect Behavior Order: Authorization Before Parsing and Canonicalization	888	1269
HasMember	B	565	Reliance on Cookies without Validation and Integrity Checking	888	1289
HasMember	V	647	Use of Non-Canonical URL Paths for Authorization Decisions	888	1431

**Category-950: SFP Secondary Cluster: Hardcoded Sensitive Data**

Category ID : 950

**Summary**

This category identifies Software Fault Patterns (SFPs) within the Hardcoded Sensitive Data cluster (SFP33).

**Membership**

Nature	Type	ID	Name	V	Page
MemberOf	C	898	SFP Primary Cluster: Authentication	888	2397
HasMember	V	258	Empty Password in Configuration File	888	625
HasMember	V	259	Use of Hard-coded Password	888	627
HasMember	V	321	Use of Hard-coded Cryptographic Key	888	789
HasMember	B	547	Use of Hard-coded, Security-relevant Constants	888	1264

**Category-951: SFP Secondary Cluster: Insecure Authentication Policy**

Category ID : 951

**Summary**

This category identifies Software Fault Patterns (SFPs) within the Insecure Authentication Policy cluster.

**Membership**

Nature	Type	ID	Name	V	Page
MemberOf	C	898	SFP Primary Cluster: Authentication	888	2397
HasMember	B	262	Not Using Password Aging	888	637
HasMember	B	263	Password Aging with Long Expiration	888	640
HasMember	B	521	Weak Password Requirements	888	1228
HasMember	V	556	ASP.NET Misconfiguration: Use of Identity Impersonation	888	1277
HasMember	B	613	Insufficient Session Expiration	888	1377
HasMember	B	645	Overly Restrictive Account Lockout Mechanism	888	1429

**Category-952: SFP Secondary Cluster: Missing Authentication**

Category ID : 952

**Summary**

This category identifies Software Fault Patterns (SFPs) within the Missing Authentication cluster.

**Membership**

Nature	Type	ID	Name	V	Page
MemberOf	C	898	SFP Primary Cluster: Authentication	888	2397
HasMember	B	306	Missing Authentication for Critical Function	888	745
HasMember	B	620	Unverified Password Change	888	1389

## Category-953: SFP Secondary Cluster: Missing Endpoint Authentication

Category ID : 953

### Summary

This category identifies Software Fault Patterns (SFPs) within the Missing Endpoint Authentication cluster (SFP30).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	898	SFP Primary Cluster: Authentication	888	2397
HasMember	V	422	Unprotected Windows Messaging Channel ('Shatter')	888	1026
HasMember	B	425	Direct Request ('Forced Browsing')	888	1029

## Category-954: SFP Secondary Cluster: Multiple Binds to the Same Port

Category ID : 954

### Summary

This category identifies Software Fault Patterns (SFPs) within the Multiple Binds to the Same Port cluster (SFP32).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	898	SFP Primary Cluster: Authentication	888	2397
HasMember	V	605	Multiple Binds to the Same Port	888	1361

## Category-955: SFP Secondary Cluster: Unrestricted Authentication

Category ID : 955

### Summary

This category identifies Software Fault Patterns (SFPs) within the Unrestricted Authentication cluster (SFP34).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	898	SFP Primary Cluster: Authentication	888	2397
HasMember	B	307	Improper Restriction of Excessive Authentication Attempts	888	751

## Category-956: SFP Secondary Cluster: Channel Attack

Category ID : 956

### Summary

This category identifies Software Fault Patterns (SFPs) within the Channel Attack cluster.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	902	SFP Primary Cluster: Channel	888	2399
HasMember	B	290	Authentication Bypass by Spoofing	888	709
HasMember	B	294	Authentication Bypass by Capture-replay	888	716
HasMember	C	300	Channel Accessible by Non-Endpoint	888	734
HasMember	B	301	Reflection Attack in an Authentication Protocol	888	737
HasMember	B	419	Unprotected Primary Channel	888	1021
HasMember	B	420	Unprotected Alternate Channel	888	1022
HasMember	B	421	Race Condition During Access to Alternate Channel	888	1025
HasMember	C	441	Unintended Proxy or Intermediary ('Confused Deputy')	888	1069

## Category-957: SFP Secondary Cluster: Protocol Error

Category ID : 957

### Summary

This category identifies Software Fault Patterns (SFPs) within the Protocol Error cluster.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	902	SFP Primary Cluster: Channel	888	2399
HasMember	B	353	Missing Support for Integrity Check	888	878
HasMember	P	435	Improper Interaction Between Multiple Correctly-Behaving Entities	888	1060
HasMember	C	436	Interpretation Conflict	888	1062
HasMember	B	437	Incomplete Model of Endpoint Features	888	1064
HasMember	B	757	Selection of Less-Secure Algorithm During Negotiation ('Algorithm Downgrade')	888	1586

## Category-958: SFP Secondary Cluster: Broken Cryptography

Category ID : 958

### Summary

This category identifies Software Fault Patterns (SFPs) within the Broken Cryptography cluster.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	903	SFP Primary Cluster: Cryptography	888	2399
HasMember	B	325	Missing Cryptographic Step	888	798
HasMember	C	327	Use of a Broken or Risky Cryptographic Algorithm	888	803
HasMember	B	328	Use of Weak Hash	888	810
HasMember	V	759	Use of a One-Way Hash without a Salt	888	1590
HasMember	V	760	Use of a One-Way Hash with a Predictable Salt	888	1594

## Category-959: SFP Secondary Cluster: Weak Cryptography

Category ID : 959

## Summary

This category identifies Software Fault Patterns (SFPs) within the Weak Cryptography cluster.

## Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	903	SFP Primary Cluster: Cryptography	888	2399
HasMember	B	261	Weak Encoding for Password	888	635
HasMember	B	322	Key Exchange without Entity Authentication	888	792
HasMember	B	323	Reusing a Nonce, Key Pair in Encryption	888	794
HasMember	B	324	Use of a Key Past its Expiration Date	888	796
HasMember	G	326	Inadequate Encryption Strength	888	800
HasMember	V	329	Generation of Predictable IV with CBC Mode	888	815
HasMember	B	347	Improper Verification of Cryptographic Signature	888	861
HasMember	B	640	Weak Password Recovery Mechanism for Forgotten Password	888	1415

## Category-960: SFP Secondary Cluster: Ambiguous Exception Type

Category ID : 960

## Summary

This category identifies Software Fault Patterns (SFPs) within the Ambiguous Exception Type cluster (SFP5).

## Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	889	SFP Primary Cluster: Exception Management	888	2394
HasMember	B	396	Declaration of Catch for Generic Exception	888	963
HasMember	B	397	Declaration of Throws for Generic Exception	888	965

## Category-961: SFP Secondary Cluster: Incorrect Exception Behavior

Category ID : 961

## Summary

This category identifies Software Fault Patterns (SFPs) within the Incorrect Exception Behavior cluster (SFP6).

## Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	889	SFP Primary Cluster: Exception Management	888	2394
HasMember	B	392	Missing Report of Error Condition	888	956
HasMember	B	393	Return of Wrong Status Code	888	958
HasMember	B	455	Non-exit on Failed Initialization	888	1091
HasMember	B	460	Improper Cleanup on Thrown Exception	888	1106
HasMember	B	544	Missing Standardized Error Handling Mechanism	888	1262
HasMember	B	584	Return Inside Finally Block	888	1322
HasMember	G	636	Not Failing Securely ('Failing Open')	888	1406

Nature	Type	ID	Name	V	Page
HasMember	P	703	Improper Check or Handling of Exceptional Conditions	888	1540

## Category-962: SFP Secondary Cluster: Unchecked Status Condition

Category ID : 962

### Summary

This category identifies Software Fault Patterns (SFPs) within the Unchecked Status Condition cluster (SFP4).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	889	SFP Primary Cluster: Exception Management	888	2394
HasMember	B	248	Uncaught Exception	888	600
HasMember	B	252	Unchecked Return Value	888	610
HasMember	B	253	Incorrect Check of Function Return Value	888	617
HasMember	B	273	Improper Check for Dropped Privileges	888	664
HasMember	B	280	Improper Handling of Insufficient Permissions or Privileges	888	676
HasMember	B	372	Incomplete Internal State Distinction	888	923
HasMember	B	390	Detection of Error Condition Without Action	888	948
HasMember	B	391	Unchecked Error Condition	888	953
HasMember	B	394	Unexpected Status Code or Return Value	888	960
HasMember	B	395	Use of NullPointerException Catch to Detect NULL Pointer Dereference	888	961
HasMember	B	431	Missing Handler	888	1048
HasMember	B	478	Missing Default Case in Multiple Condition Expression	888	1146
HasMember	B	484	Omitted Break Statement in Switch	888	1166
HasMember	V	600	Uncaught Exception in Servlet	888	1348
HasMember	G	665	Improper Initialization	888	1462
HasMember	G	754	Improper Check for Unusual or Exceptional Conditions	888	1573
HasMember	G	755	Improper Handling of Exceptional Conditions	888	1581

## Category-963: SFP Secondary Cluster: Exposed Data

Category ID : 963

### Summary

This category identifies Software Fault Patterns (SFPs) within the Exposed Data cluster (SFP23).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	895	SFP Primary Cluster: Information Leak	888	2396
HasMember	V	5	J2EE Misconfiguration: Data Transmission Without Encryption	888	1
HasMember	V	7	J2EE Misconfiguration: Missing Custom Error Page	888	4
HasMember	V	8	J2EE Misconfiguration: Entity Bean Declared Remote	888	6
HasMember	V	11	ASP.NET Misconfiguration: Creating Debug Binary	888	9

Nature	Type	ID	Name	V	Page
HasMember	V	12	ASP.NET Misconfiguration: Missing Custom Error Page	888	11
HasMember	V	13	ASP.NET Misconfiguration: Password in Configuration File	888	13
HasMember	V	14	Compiler Removal of Code to Clear Buffers	888	14
HasMember	B	117	Improper Output Neutralization for Logs	888	291
HasMember	G	200	Exposure of Sensitive Information to an Unauthorized Actor	888	509
HasMember	B	201	Insertion of Sensitive Information Into Sent Data	888	518
HasMember	B	209	Generation of Error Message Containing Sensitive Information	888	537
HasMember	B	210	Self-generated Error Message Containing Sensitive Information	888	543
HasMember	B	211	Externally-Generated Error Message Containing Sensitive Information	888	545
HasMember	B	212	Improper Removal of Sensitive Information Before Storage or Transfer	888	548
HasMember	B	213	Exposure of Sensitive Information Due to Incompatible Policies	888	552
HasMember	B	214	Invocation of Process Using Visible Sensitive Information	888	553
HasMember	B	215	Insertion of Sensitive Information Into Debugging Code	888	555
HasMember	V	219	Storage of File with Sensitive Data Under Web Root	888	557
HasMember	V	220	Storage of File With Sensitive Data Under FTP Root	888	559
HasMember	B	226	Sensitive Information in Resource Not Removed Before Reuse	888	566
HasMember	V	244	Improper Clearing of Heap Memory Before Release ('Heap Inspection')	888	595
HasMember	B	256	Plaintext Storage of a Password	888	619
HasMember	B	257	Storing Passwords in a Recoverable Format	888	622
HasMember	B	260	Password in Configuration File	888	633
HasMember	G	311	Missing Encryption of Sensitive Data	888	761
HasMember	B	312	Cleartext Storage of Sensitive Information	888	768
HasMember	V	313	Cleartext Storage in a File or on Disk	888	774
HasMember	V	314	Cleartext Storage in the Registry	888	776
HasMember	V	315	Cleartext Storage of Sensitive Information in a Cookie	888	777
HasMember	V	316	Cleartext Storage of Sensitive Information in Memory	888	779
HasMember	V	317	Cleartext Storage of Sensitive Information in GUI	888	781
HasMember	V	318	Cleartext Storage of Sensitive Information in Executable	888	782
HasMember	B	319	Cleartext Transmission of Sensitive Information	888	783
HasMember	B	374	Passing Mutable Objects to an Untrusted Method	888	924
HasMember	B	375	Returning a Mutable Object to an Untrusted Caller	888	927
HasMember	G	402	Transmission of Private Resources into a New Sphere ('Resource Leak')	888	981
HasMember	B	403	Exposure of File Descriptor to Unintended Control Sphere ('File Descriptor Leak')	888	982
HasMember	V	433	Unparsed Raw Web Content Delivery	888	1050
HasMember	V	495	Private Data Structure Returned From A Public Method	888	1194
HasMember	B	497	Exposure of Sensitive System Information to an Unauthorized Control Sphere	888	1198
HasMember	V	498	Cloneable Class Containing Sensitive Information	888	1201
HasMember	V	499	Serializable Class Containing Sensitive Data	888	1203

Nature	Type	ID	Name	V	Page
HasMember	B	501	Trust Boundary Violation	888	1207
HasMember	G	522	Insufficiently Protected Credentials	888	1231
HasMember	B	523	Unprotected Transport of Credentials	888	1235
HasMember	V	526	Cleartext Storage of Sensitive Information in an Environment Variable	888	1239
HasMember	V	527	Exposure of Version-Control Repository to an Unauthorized Control Sphere	888	1241
HasMember	V	528	Exposure of Core Dump File to an Unauthorized Control Sphere	888	1242
HasMember	V	529	Exposure of Access Control List Files to an Unauthorized Control Sphere	888	1243
HasMember	V	530	Exposure of Backup File to an Unauthorized Control Sphere	888	1244
HasMember	B	532	Insertion of Sensitive Information into Log File	888	1246
HasMember	V	535	Exposure of Information Through Shell Error Message	888	1250
HasMember	V	536	Servlet Runtime Error Message Containing Sensitive Information	888	1250
HasMember	V	537	Java Runtime Error Message Containing Sensitive Information	888	1251
HasMember	B	538	Insertion of Sensitive Information into Externally-Accessible File or Directory	888	1254
HasMember	V	539	Use of Persistent Cookies Containing Sensitive Information	888	1255
HasMember	B	540	Inclusion of Sensitive Information in Source Code	888	1257
HasMember	V	541	Inclusion of Sensitive Information in an Include File	888	1258
HasMember	V	546	Suspicious Comment	888	1263
HasMember	V	548	Exposure of Information Through Directory Listing	888	1266
HasMember	V	550	Server-generated Error Message Containing Sensitive Information	888	1268
HasMember	B	552	Files or Directories Accessible to External Parties	888	1270
HasMember	V	555	J2EE Misconfiguration: Plaintext Password in Configuration File	888	1276
HasMember	V	591	Sensitive Data Storage in Improperly Locked Memory	888	1334
HasMember	V	598	Use of GET Request Method With Sensitive Query Strings	888	1345
HasMember	V	607	Public Static Final Field References Mutable Object	888	1365
HasMember	B	612	Improper Authorization of Index Containing Sensitive Information	888	1375
HasMember	V	615	Inclusion of Sensitive Information in Source Code Comments	888	1380
HasMember	G	642	External Control of Critical State Data	888	1419
HasMember	G	668	Exposure of Resource to Wrong Sphere	888	1474
HasMember	G	669	Incorrect Resource Transfer Between Spheres	888	1477
HasMember	B	756	Missing Custom Error Page	888	1584
HasMember	B	767	Access to Critical Private Variable via Public Method	888	1615

## Category-964: SFP Secondary Cluster: Exposure Temporary File

Category ID : 964

## Summary

This category identifies Software Fault Patterns (SFPs) within the Exposure Temporary File cluster.

## Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	895	SFP Primary Cluster: Information Leak	888	2396
HasMember	G	377	Insecure Temporary File	888	929
HasMember	B	378	Creation of Temporary File With Insecure Permissions	888	932
HasMember	B	379	Creation of Temporary File in Directory with Insecure Permissions	888	934

## Category-965: SFP Secondary Cluster: Insecure Session Management

Category ID : 965

## Summary

This category identifies Software Fault Patterns (SFPs) within the Insecure Session Management cluster.

## Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	895	SFP Primary Cluster: Information Leak	888	2396
HasMember	V	6	J2EE Misconfiguration: Insufficient Session-ID Length	888	2
HasMember	B	488	Exposure of Data Element to Wrong Session	888	1173
HasMember	B	524	Use of Cache Containing Sensitive Information	888	1237

## Category-966: SFP Secondary Cluster: Other Exposures

Category ID : 966

## Summary

This category identifies Software Fault Patterns (SFPs) within the Other Exposures cluster.

## Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	895	SFP Primary Cluster: Information Leak	888	2396
HasMember	V	453	Insecure Default Variable Initialization	888	1087
HasMember	B	487	Reliance on Package-level Scope	888	1172
HasMember	V	492	Use of Inner Class Containing Sensitive Data	888	1180
HasMember	V	525	Use of Web Browser Cache Containing Sensitive Information	888	1238
HasMember	V	614	Sensitive Cookie in HTTPS Session Without 'Secure' Attribute	888	1378
HasMember	V	651	Exposure of WSDL File Containing Sensitive Information	888	1439

## Category-967: SFP Secondary Cluster: State Disclosure

Category ID : 967

## Summary

This category identifies Software Fault Patterns (SFPs) within the State Disclosure cluster.

## Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	895	SFP Primary Cluster: Information Leak	888	2396
HasMember	B	202	Exposure of Sensitive Information Through Data Queries	888	520
HasMember	B	203	Observable Discrepancy	888	522
HasMember	B	204	Observable Response Discrepancy	888	527
HasMember	B	205	Observable Behavioral Discrepancy	888	530
HasMember	V	206	Observable Internal Behavioral Discrepancy	888	531
HasMember	V	207	Observable Behavioral Discrepancy With Equivalent Products	888	533
HasMember	B	208	Observable Timing Discrepancy	888	534

## Category-968: SFP Secondary Cluster: Covert Channel

Category ID : 968

## Summary

This category identifies Software Fault Patterns (SFPs) within the Covert Channel cluster.

## Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	904	SFP Primary Cluster: Malware	888	2399
HasMember	B	385	Covert Timing Channel	888	944
HasMember	G	514	Covert Channel	888	1223
HasMember	B	515	Covert Storage Channel	888	1225

## Category-969: SFP Secondary Cluster: Faulty Memory Release

Category ID : 969

## Summary

This category identifies Software Fault Patterns (SFPs) within the Faulty Memory Release cluster (SFP12).

## Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	891	SFP Primary Cluster: Memory Management	888	2395
HasMember	V	415	Double Free	888	1012
HasMember	V	590	Free of Memory not on the Heap	888	1331
HasMember	V	761	Free of Pointer not at Start of Buffer	888	1597
HasMember	B	763	Release of Invalid Pointer or Reference	888	1604

## Category-970: SFP Secondary Cluster: Faulty Buffer Access

Category ID : 970

### Summary

This category identifies Software Fault Patterns (SFPs) within the Faulty Buffer Access cluster (SFP8).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	890	SFP Primary Cluster: Memory Access	888	2395
HasMember	G	118	Incorrect Access of Indexable Resource ('Range Error')	888	295
HasMember	G	119	Improper Restriction of Operations within the Bounds of a Memory Buffer	888	296
HasMember	B	120	Buffer Copy without Checking Size of Input ('Classic Buffer Overflow')	888	307
HasMember	V	121	Stack-based Buffer Overflow	888	317
HasMember	V	122	Heap-based Buffer Overflow	888	322
HasMember	B	123	Write-what-where Condition	888	327
HasMember	B	124	Buffer Underwrite ('Buffer Underflow')	888	330
HasMember	B	125	Out-of-bounds Read	888	333
HasMember	V	126	Buffer Over-read	888	337
HasMember	V	127	Buffer Under-read	888	340
HasMember	V	129	Improper Validation of Array Index	888	344

## Category-971: SFP Secondary Cluster: Faulty Pointer Use

Category ID : 971

### Summary

This category identifies Software Fault Patterns (SFPs) within the Faulty Pointer Use cluster (SFP7).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	890	SFP Primary Cluster: Memory Access	888	2395
HasMember	B	469	Use of Pointer Subtraction to Determine Size	888	1120
HasMember	B	476	NULL Pointer Dereference	888	1136
HasMember	V	588	Attempt to Access Child of a Non-structure Pointer	888	1329

## Category-972: SFP Secondary Cluster: Faulty String Expansion

Category ID : 972

### Summary

This category identifies Software Fault Patterns (SFPs) within the Faulty String Expansion cluster (SFP9).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	890	SFP Primary Cluster: Memory Access	888	2395
HasMember	V	785	Use of Path Manipulation Function without Maximum-sized Buffer	888	1661

## Category-973: SFP Secondary Cluster: Improper NULL Termination

Category ID : 973

### Summary

This category identifies Software Fault Patterns (SFPs) within the Improper NULL Termination cluster (SFP11).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	890	SFP Primary Cluster: Memory Access	888	2395
HasMember	B	170	Improper Null Termination	888	431

## Category-974: SFP Secondary Cluster: Incorrect Buffer Length Computation

Category ID : 974

### Summary

This category identifies Software Fault Patterns (SFPs) within the Incorrect Buffer Length Computation cluster (SFP10).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	890	SFP Primary Cluster: Memory Access	888	2395
HasMember	B	131	Incorrect Calculation of Buffer Size	888	358
HasMember	B	135	Incorrect Calculation of Multi-Byte String Length	888	374
HasMember	C	251	Often Misused: String Management	888	2326
HasMember	V	467	Use of sizeof() on a Pointer Type	888	1115

## Category-975: SFP Secondary Cluster: Architecture

Category ID : 975

### Summary

This category identifies Software Fault Patterns (SFPs) within the Architecture cluster.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	907	SFP Primary Cluster: Other	888	2400
HasMember	B	348	Use of Less Trusted Source	888	863
HasMember	B	359	Exposure of Private Personal Information to an Unauthorized Actor	888	886
HasMember	G	602	Client-Side Enforcement of Server-Side Security	888	1355

Nature	Type	ID	Name	V	Page
HasMember		637	Unnecessary Complexity in Protection Mechanism (Not Using 'Economy of Mechanism')	888	1408
HasMember		649	Reliance on Obfuscation or Encryption of Security-Relevant Inputs without Integrity Checking	888	1435
HasMember		654	Reliance on a Single Factor in a Security Decision	888	1444
HasMember		656	Reliance on Security Through Obscurity	888	1449
HasMember		657	Violation of Secure Design Principles	888	1451
HasMember		671	Lack of Administrator Control over Security	888	1483
HasMember		693	Protection Mechanism Failure	888	1525
HasMember		749	Exposed Dangerous Method or Function	888	1569

## Category-976: SFP Secondary Cluster: Compiler

Category ID : 976

### Summary

This category identifies Software Fault Patterns (SFPs) within the Compiler cluster.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf		907	SFP Primary Cluster: Other	888	2400
HasMember		733	Compiler Optimization Removal or Modification of Security-critical Code	888	1567

## Category-977: SFP Secondary Cluster: Design

Category ID : 977

### Summary

This category identifies Software Fault Patterns (SFPs) within the Design cluster.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf		907	SFP Primary Cluster: Other	888	2400
HasMember		115	Misinterpretation of Input	888	283
HasMember		187	Partial String Comparison	888	471
HasMember		188	Reliance on Data/Memory Layout	888	473
HasMember		193	Off-by-one Error	888	490
HasMember		349	Acceptance of Extraneous Untrusted Data With Trusted Data	888	865
HasMember		405	Asymmetric Resource Consumption (Amplification)	888	990
HasMember		406	Insufficient Control of Network Message Volume (Network Amplification)	888	994
HasMember		407	Inefficient Algorithmic Complexity	888	996
HasMember		408	Incorrect Behavior Order: Early Amplification	888	999
HasMember		409	Improper Handling of Highly Compressed Data (Data Amplification)	888	1001
HasMember		410	Insufficient Resource Pool	888	1002

Nature	Type	ID	Name	V	Page
HasMember	B	430	Deployment of Wrong Handler	888	1046
HasMember	V	462	Duplicate Key in Associative List (Alist)	888	1108
HasMember	B	463	Deletion of Data Structure Sentinel	888	1110
HasMember	B	464	Addition of Data Structure Sentinel	888	1112
HasMember	B	483	Incorrect Block Delimitation	888	1164
HasMember	V	581	Object Model Violation: Just One of Equals and Hashcode Defined	888	1318
HasMember	V	595	Comparison of Object References Instead of Object Contents	888	1339
HasMember	V	618	Exposed Unsafe ActiveX Method	888	1386
HasMember	B	648	Incorrect Use of Privileged APIs	888	1433
HasMember	C	670	Always-Incorrect Control Flow Implementation	888	1480
HasMember	P	682	Incorrect Calculation	888	1504
HasMember	P	691	Insufficient Control Flow Management	888	1522
HasMember	C	696	Incorrect Behavior Order	888	1532
HasMember	P	697	Incorrect Comparison	888	1535
HasMember	B	698	Execution After Redirect (EAR)	888	1538
HasMember	C	705	Incorrect Control Flow Scoping	888	1547

## Category-978: SFP Secondary Cluster: Implementation

Category ID : 978

### Summary

This category identifies Software Fault Patterns (SFPs) within the Implementation cluster.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	907	SFP Primary Cluster: Other	888	2400
HasMember	B	358	Improperly Implemented Security Check for Standard	888	885
HasMember	C	398	7PK - Code Quality	888	2335
HasMember	V	623	Unsafe ActiveX Control Marked Safe For Scripting	888	1394
HasMember	P	710	Improper Adherence to Coding Standards	888	1554

## Category-979: SFP Secondary Cluster: Failed Chroot Jail

Category ID : 979

### Summary

This category identifies Software Fault Patterns (SFPs) within the Failed Chroot Jail cluster (SFP17).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	893	SFP Primary Cluster: Path Resolution	888	2396
HasMember	V	243	Creation of chroot Jail Without Changing Working Directory	888	593

## Category-980: SFP Secondary Cluster: Link in Resource Name Resolution

Category ID : 980

### Summary

This category identifies Software Fault Patterns (SFPs) within the Link in Resource Name Resolution cluster (SFP18).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	893	SFP Primary Cluster: Path Resolution	888	2396
HasMember	B	59	Improper Link Resolution Before File Access ('Link Following')	888	112
HasMember	V	62	UNIX Hard Link	888	120
HasMember	V	64	Windows Shortcut Following (.LNK)	888	122
HasMember	V	65	Windows Hard Link	888	124
HasMember	B	386	Symbolic Name not Mapping to Correct Object	888	946
HasMember	G	610	Externally Controlled Reference to a Resource in Another Sphere	888	1369

## Category-981: SFP Secondary Cluster: Path Traversal

Category ID : 981

### Summary

This category identifies Software Fault Patterns (SFPs) within the Path Traversal cluster (SFP16).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	893	SFP Primary Cluster: Path Resolution	888	2396
HasMember	B	22	Improper Limitation of a Pathname to a Restricted Directory ('Path Traversal')	888	33
HasMember	B	23	Relative Path Traversal	888	46
HasMember	V	24	Path Traversal: './filedir'	888	53
HasMember	V	25	Path Traversal: '/../filedir'	888	55
HasMember	V	26	Path Traversal: '/dir../filename'	888	57
HasMember	V	27	Path Traversal: 'dir../filename'	888	58
HasMember	V	28	Path Traversal: './filedir'	888	60
HasMember	V	29	Path Traversal: '\.filename'	888	62
HasMember	V	30	Path Traversal: 'dir\..filename'	888	64
HasMember	V	31	Path Traversal: 'dir\..\filename'	888	65
HasMember	V	32	Path Traversal: '...' (Triple Dot)	888	67
HasMember	V	33	Path Traversal: '....' (Multiple Dot)	888	69
HasMember	V	34	Path Traversal: '....//'	888	71
HasMember	V	35	Path Traversal: '.../...//'	888	73
HasMember	B	36	Absolute Path Traversal	888	75
HasMember	V	37	Path Traversal: '/absolute/pathname/here'	888	79
HasMember	V	38	Path Traversal: '\absolute\pathname\here'	888	81
HasMember	V	39	Path Traversal: 'C:dirname'	888	83
HasMember	V	40	Path Traversal: '\\UNC\share\name' (Windows UNC Share)	888	86

Nature	Type	ID	Name	V	Page
HasMember	B	41	Improper Resolution of Path Equivalence	888	87
HasMember	V	42	Path Equivalence: 'filename.' (Trailing Dot)	888	93
HasMember	V	43	Path Equivalence: 'filename....' (Multiple Trailing Dot)	888	94
HasMember	V	44	Path Equivalence: 'file.name' (Internal Dot)	888	95
HasMember	V	45	Path Equivalence: 'file...name' (Multiple Internal Dot)	888	96
HasMember	V	46	Path Equivalence: 'filename ' (Trailing Space)	888	97
HasMember	V	47	Path Equivalence: ' filename' (Leading Space)	888	98
HasMember	V	48	Path Equivalence: 'file name' (Internal Whitespace)	888	99
HasMember	V	49	Path Equivalence: 'filename/' (Trailing Slash)	888	100
HasMember	V	50	Path Equivalence: '//multiple/leading/slash'	888	101
HasMember	V	51	Path Equivalence: '/multiple//internal/slash'	888	103
HasMember	V	52	Path Equivalence: '/multiple/trailing/slash/'	888	104
HasMember	V	53	Path Equivalence: '\multiple\\internal\\backslash'	888	105
HasMember	V	54	Path Equivalence: 'filedir\' (Trailing Backslash)	888	106
HasMember	V	55	Path Equivalence: './.' (Single Dot Directory)	888	107
HasMember	V	56	Path Equivalence: 'filedir*' (Wildcard)	888	108
HasMember	V	57	Path Equivalence: 'fakedir../readdir/filename'	888	109
HasMember	V	58	Path Equivalence: Windows 8.3 Filename	888	111
HasMember	B	66	Improper Handling of File Names that Identify Virtual Resources	888	125
HasMember	V	67	Improper Handling of Windows Device Names	888	127
HasMember	V	72	Improper Handling of Apple HFS+ Alternate Data Stream Path	888	131
HasMember	B	73	External Control of File Name or Path	888	133
HasMember	B	428	Unquoted Search Path or Element	888	1044
HasMember	C	706	Use of Incorrectly-Resolved Name or Reference	888	1549

## Category-982: SFP Secondary Cluster: Failure to Release Resource

Category ID : 982

### Summary

This category identifies Software Fault Patterns (SFPs) within the Failure to Release Resource cluster (SFP14).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	892	SFP Primary Cluster: Resource Management	888	2395
HasMember	C	404	Improper Resource Shutdown or Release	888	984
HasMember	B	459	Incomplete Cleanup	888	1103
HasMember	B	771	Missing Reference to Active Allocated Resource	888	1627
HasMember	B	772	Missing Release of Resource after Effective Lifetime	888	1629
HasMember	V	773	Missing Reference to Active File Descriptor or Handle	888	1634
HasMember	V	775	Missing Release of File Descriptor or Handle after Effective Lifetime	888	1636

## Category-983: SFP Secondary Cluster: Faulty Resource Use

Category ID : 983

### Summary

This category identifies Software Fault Patterns (SFPs) within the Faulty Resource Use cluster (SFP15).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	892	SFP Primary Cluster: Resource Management	888	2395
HasMember	V	416	Use After Free	888	1016
HasMember	G	672	Operation on a Resource after Expiration or Release	888	1485

## Category-984: SFP Secondary Cluster: Life Cycle

Category ID : 984

### Summary

This category identifies Software Fault Patterns (SFPs) within the Life Cycle cluster.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	892	SFP Primary Cluster: Resource Management	888	2395
HasMember	P	664	Improper Control of a Resource Through its Lifetime	888	1460
HasMember	G	666	Operation on Resource in Wrong Phase of Lifetime	888	1467
HasMember	G	675	Multiple Operations on Resource in Single-Operation Context	888	1492
HasMember	B	694	Use of Multiple Resources with Duplicate Identifier	888	1528

## Category-985: SFP Secondary Cluster: Unrestricted Consumption

Category ID : 985

### Summary

This category identifies Software Fault Patterns (SFPs) within the Unrestricted Consumption cluster (SFP13).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	892	SFP Primary Cluster: Resource Management	888	2395
HasMember	G	400	Uncontrolled Resource Consumption	888	968
HasMember	G	674	Uncontrolled Recursion	888	1490
HasMember	B	770	Allocation of Resources Without Limits or Throttling	888	1618
HasMember	V	774	Allocation of File Descriptors or Handles Without Limits or Throttling	888	1635

## Category-986: SFP Secondary Cluster: Missing Lock

Category ID : 986

## Summary

This category identifies Software Fault Patterns (SFPs) within the Missing Lock cluster (SFP19).

## Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	894	SFP Primary Cluster: Synchronization	888	2396
HasMember	B	364	Signal Handler Race Condition	888	903
HasMember	B	366	Race Condition within a Thread	888	908
HasMember	B	368	Context Switching Race Condition	888	916
HasMember	B	413	Improper Resource Locking	888	1007
HasMember	B	414	Missing Lock Check	888	1011
HasMember	V	543	Use of Singleton Pattern Without Synchronization in a Multithreaded Context	888	1260
HasMember	B	567	Unsynchronized Access to Shared Data in a Multithreaded Context	888	1293
HasMember	B	609	Double-Checked Locking	888	1368
HasMember	G	662	Improper Synchronization	888	1454
HasMember	B	663	Use of a Non-reentrant Function in a Concurrent Context	888	1458
HasMember	G	667	Improper Locking	888	1469

## Category-987: SFP Secondary Cluster: Multiple Locks/Unlocks

Category ID : 987

## Summary

This category identifies Software Fault Patterns (SFPs) within the Multiple Locks/Unlocks cluster (SFP21).

## Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	894	SFP Primary Cluster: Synchronization	888	2396
HasMember	V	585	Empty Synchronized Block	888	1323
HasMember	B	764	Multiple Locks of a Critical Resource	888	1609
HasMember	B	765	Multiple Unlocks of a Critical Resource	888	1610

## Category-988: SFP Secondary Cluster: Race Condition Window

Category ID : 988

## Summary

This category identifies Software Fault Patterns (SFPs) within the Race Condition Window cluster (SFP20).

## Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	894	SFP Primary Cluster: Synchronization	888	2396

Nature	Type	ID	Name	V	Page
HasMember		362	Concurrent Execution using Shared Resource with Improper Synchronization ('Race Condition')	888	892
HasMember		363	Race Condition Enabling Link Following	888	901
HasMember		367	Time-of-check Time-of-use (TOCTOU) Race Condition	888	910
HasMember		370	Missing Check for Certificate Revocation after Initial Check	888	921
HasMember		638	Not Using Complete Mediation	888	1410

## Category-989: SFP Secondary Cluster: Unrestricted Lock

Category ID : 989

### Summary

This category identifies Software Fault Patterns (SFPs) within the Unrestricted Lock cluster (SFP22).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf		894	SFP Primary Cluster: Synchronization	888	2396
HasMember		412	Unrestricted Externally Accessible Lock	888	1004

## Category-990: SFP Secondary Cluster: Tainted Input to Command

Category ID : 990

### Summary

This category identifies Software Fault Patterns (SFPs) within the Tainted Input to Command cluster (SFP24).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf		896	SFP Primary Cluster: Tainted Input	888	2397
HasMember		74	Improper Neutralization of Special Elements in Output Used by a Downstream Component ('Injection')	888	138
HasMember		75	Failure to Sanitize Special Elements into a Different Plane (Special Element Injection)	888	143
HasMember		76	Improper Neutralization of Equivalent Special Elements	888	145
HasMember		77	Improper Neutralization of Special Elements used in a Command ('Command Injection')	888	146
HasMember		78	Improper Neutralization of Special Elements used in an OS Command ('OS Command Injection')	888	153
HasMember		79	Improper Neutralization of Input During Web Page Generation ('Cross-site Scripting')	888	166
HasMember		80	Improper Neutralization of Script-Related HTML Tags in a Web Page (Basic XSS)	888	179
HasMember		81	Improper Neutralization of Script in an Error Message Web Page	888	182
HasMember		82	Improper Neutralization of Script in Attributes of IMG Tags in a Web Page	888	184

Nature	Type	ID	Name	V	Page
HasMember	V	83	Improper Neutralization of Script in Attributes in a Web Page	888	186
HasMember	V	84	Improper Neutralization of Encoded URI Schemes in a Web Page	888	188
HasMember	V	85	Doubled Character XSS Manipulations	888	190
HasMember	V	86	Improper Neutralization of Invalid Characters in Identifiers in Web Pages	888	192
HasMember	V	87	Improper Neutralization of Alternate XSS Syntax	888	194
HasMember	B	88	Improper Neutralization of Argument Delimiters in a Command ('Argument Injection')	888	196
HasMember	B	89	Improper Neutralization of Special Elements used in an SQL Command ('SQL Injection')	888	204
HasMember	B	90	Improper Neutralization of Special Elements used in an LDAP Query ('LDAP Injection')	888	215
HasMember	B	91	XML Injection (aka Blind XPath Injection)	888	218
HasMember	B	93	Improper Neutralization of CRLF Sequences ('CRLF Injection')	888	220
HasMember	V	95	Improper Neutralization of Directives in Dynamically Evaluated Code ('Eval Injection')	888	230
HasMember	B	96	Improper Neutralization of Directives in Statically Saved Code ('Static Code Injection')	888	235
HasMember	V	97	Improper Neutralization of Server-Side Includes (SSI) Within a Web Page	888	238
HasMember	G	99	Improper Control of Resource Identifiers ('Resource Injection')	888	246
HasMember	V	102	Struts: Duplicate Validation Forms	888	249
HasMember	V	103	Struts: Incomplete validate() Method Definition	888	251
HasMember	V	104	Struts: Form Bean Does Not Extend Validation Class	888	254
HasMember	V	105	Struts: Form Field Without Validator	888	256
HasMember	V	106	Struts: Plug-in Framework not in Use	888	259
HasMember	V	107	Struts: Unused Validation Form	888	262
HasMember	V	108	Struts: Unvalidated Action Form	888	264
HasMember	V	109	Struts: Validator Turned Off	888	266
HasMember	V	110	Struts: Validator Without Form Field	888	267
HasMember	B	112	Missing XML Validation	888	272
HasMember	V	113	Improper Neutralization of CRLF Sequences in HTTP Headers ('HTTP Request/Response Splitting')	888	274
HasMember	B	130	Improper Handling of Length Parameter Inconsistency	888	354
HasMember	B	134	Use of Externally-Controlled Format String	888	368
HasMember	G	138	Improper Neutralization of Special Elements	888	376
HasMember	B	140	Improper Neutralization of Delimiters	888	379
HasMember	V	141	Improper Neutralization of Parameter/Argument Delimiters	888	381
HasMember	V	142	Improper Neutralization of Value Delimiters	888	383
HasMember	V	143	Improper Neutralization of Record Delimiters	888	385
HasMember	V	144	Improper Neutralization of Line Delimiters	888	386
HasMember	V	145	Improper Neutralization of Section Delimiters	888	388
HasMember	V	146	Improper Neutralization of Expression/Command Delimiters	888	390
HasMember	V	147	Improper Neutralization of Input Terminators	888	392
HasMember	V	148	Improper Neutralization of Input Leaders	888	394

Nature	Type	ID	Name	V	Page
HasMember	V	149	Improper Neutralization of Quoting Syntax	888	395
HasMember	V	150	Improper Neutralization of Escape, Meta, or Control Sequences	888	397
HasMember	V	151	Improper Neutralization of Comment Delimiters	888	399
HasMember	V	152	Improper Neutralization of Macro Symbols	888	401
HasMember	V	153	Improper Neutralization of Substitution Characters	888	403
HasMember	V	154	Improper Neutralization of Variable Name Delimiters	888	405
HasMember	V	155	Improper Neutralization of Wildcards or Matching Symbols	888	406
HasMember	V	156	Improper Neutralization of Whitespace	888	408
HasMember	V	157	Failure to Sanitize Paired Delimiters	888	410
HasMember	V	158	Improper Neutralization of Null Byte or NUL Character	888	412
HasMember	G	159	Improper Handling of Invalid Use of Special Elements	888	414
HasMember	V	160	Improper Neutralization of Leading Special Elements	888	416
HasMember	V	161	Improper Neutralization of Multiple Leading Special Elements	888	418
HasMember	V	162	Improper Neutralization of Trailing Special Elements	888	420
HasMember	V	163	Improper Neutralization of Multiple Trailing Special Elements	888	422
HasMember	V	164	Improper Neutralization of Internal Special Elements	888	423
HasMember	V	165	Improper Neutralization of Multiple Internal Special Elements	888	425
HasMember	B	183	Permissive List of Allowed Inputs	888	461
HasMember	B	184	Incomplete List of Disallowed Inputs	888	463
HasMember	G	185	Incorrect Regular Expression	888	466
HasMember	B	186	Overly Restrictive Regular Expression	888	469
HasMember	B	444	Inconsistent Interpretation of HTTP Requests ('HTTP Request/Response Smuggling')	888	1072
HasMember	V	553	Command Shell in Externally Accessible Directory	888	1274
HasMember	V	554	ASP.NET Misconfiguration: Not Using Input Validation Framework	888	1275
HasMember	V	564	SQL Injection: Hibernate	888	1287
HasMember	B	601	URL Redirection to Untrusted Site ('Open Redirect')	888	1350
HasMember	B	611	Improper Restriction of XML External Entity Reference	888	1372
HasMember	B	619	Dangling Database Cursor ('Cursor Injection')	888	1387
HasMember	V	621	Variable Extraction Error	888	1390
HasMember	B	624	Executable Regular Expression Error	888	1395
HasMember	B	625	Permissive Regular Expression	888	1397
HasMember	V	626	Null Byte Interaction Error (Poison Null Byte)	888	1400
HasMember	V	627	Dynamic Variable Evaluation	888	1401
HasMember	B	641	Improper Restriction of Names for Files and Other Resources	888	1417
HasMember	B	643	Improper Neutralization of Data within XPath Expressions ('XPath Injection')	888	1425
HasMember	V	644	Improper Neutralization of HTTP Headers for Scripting Syntax	888	1427
HasMember	V	646	Reliance on File Name or Extension of Externally-Supplied File	888	1430
HasMember	B	652	Improper Neutralization of Data within XQuery Expressions ('XQuery Injection')	888	1440

Nature	Type	ID	Name	V	Page
HasMember	V	687	Function Call With Incorrectly Specified Argument Value	888	1515
HasMember	P	707	Improper Neutralization	888	1551

## Category-991: SFP Secondary Cluster: Tainted Input to Environment

Category ID : 991

### Summary

This category identifies Software Fault Patterns (SFPs) within the Tainted Input to Environment cluster (SFP27).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	896	SFP Primary Cluster: Tainted Input	888	2397
HasMember	B	94	Improper Control of Generation of Code ('Code Injection')	888	222
HasMember	G	114	Process Control	888	280
HasMember	B	427	Uncontrolled Search Path Element	888	1037
HasMember	B	470	Use of Externally-Controlled Input to Select Classes or Code ('Unsafe Reflection')	888	1122
HasMember	B	471	Modification of Assumed-Immutable Data (MAID)	888	1126
HasMember	B	472	External Control of Assumed-Immutable Web Parameter	888	1128
HasMember	V	473	PHP External Variable Modification	888	1131
HasMember	B	494	Download of Code Without Integrity Check	888	1189
HasMember	V	622	Improper Validation of Function Hook Arguments	888	1393
HasMember	G	673	External Influence of Sphere Definition	888	1488

## Category-992: SFP Secondary Cluster: Faulty Input Transformation

Category ID : 992

### Summary

This category identifies Software Fault Patterns (SFPs) within the Faulty Input Transformation cluster.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	896	SFP Primary Cluster: Tainted Input	888	2397
HasMember	G	116	Improper Encoding or Escaping of Output	888	284
HasMember	B	166	Improper Handling of Missing Special Element	888	426
HasMember	B	167	Improper Handling of Additional Special Element	888	428
HasMember	B	168	Improper Handling of Inconsistent Special Elements	888	430
HasMember	G	172	Encoding Error	888	436
HasMember	V	173	Improper Handling of Alternate Encoding	888	438
HasMember	V	174	Double Decoding of the Same Data	888	440
HasMember	V	175	Improper Handling of Mixed Encoding	888	442
HasMember	V	176	Improper Handling of Unicode Encoding	888	443

Nature	Type	ID	Name	V	Page
HasMember	V	177	Improper Handling of URL Encoding (Hex Encoding)	888	446
HasMember	B	178	Improper Handling of Case Sensitivity	888	448
HasMember	B	179	Incorrect Behavior Order: Early Validation	888	451
HasMember	V	180	Incorrect Behavior Order: Validate Before Canonicalize	888	454
HasMember	V	181	Incorrect Behavior Order: Validate Before Filter	888	457
HasMember	B	182	Collapse of Data into Unsafe Value	888	459

## Category-993: SFP Secondary Cluster: Incorrect Input Handling

Category ID : 993

### Summary

This category identifies Software Fault Patterns (SFPs) within the Incorrect Input Handling cluster.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	896	SFP Primary Cluster: Tainted Input	888	2397
HasMember	V	198	Use of Incorrect Byte Ordering	888	508
HasMember	G	228	Improper Handling of Syntactically Invalid Structure	888	572
HasMember	B	229	Improper Handling of Values	888	574
HasMember	V	230	Improper Handling of Missing Values	888	575
HasMember	V	231	Improper Handling of Extra Values	888	576
HasMember	V	232	Improper Handling of Undefined Values	888	577
HasMember	B	233	Improper Handling of Parameters	888	578
HasMember	V	234	Failure to Handle Missing Parameter	888	580
HasMember	V	235	Improper Handling of Extra Parameters	888	582
HasMember	V	236	Improper Handling of Undefined Parameters	888	583
HasMember	B	237	Improper Handling of Structural Elements	888	584
HasMember	V	238	Improper Handling of Incomplete Structural Elements	888	585
HasMember	V	239	Failure to Handle Incomplete Element	888	586
HasMember	B	240	Improper Handling of Inconsistent Structural Elements	888	587
HasMember	B	241	Improper Handling of Unexpected Data Type	888	588
HasMember	B	351	Insufficient Type Distinction	888	870
HasMember	B	354	Improper Validation of Integrity Check Value	888	880

## Category-994: SFP Secondary Cluster: Tainted Input to Variable

Category ID : 994

### Summary

This category identifies Software Fault Patterns (SFPs) within the Tainted Input to Variable cluster (SFP25).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	896	SFP Primary Cluster: Tainted Input	888	2397
HasMember	B	15	External Control of System or Configuration Setting	888	17
HasMember	G	20	Improper Input Validation	888	20

Nature	Type	ID	Name	V	Page
HasMember	B	454	External Initialization of Trusted Variables or Data Stores	888	1089
HasMember	V	496	Public Data Assigned to Private Array-Typed Field	888	1196
HasMember	B	502	Deserialization of Untrusted Data	888	1209
HasMember	V	566	Authorization Bypass Through User-Controlled SQL Primary Key	888	1291
HasMember	B	606	Unchecked Input for Loop Condition	888	1363
HasMember	V	616	Incomplete Identification of Uploaded File Variables (PHP)	888	1381

## Category-995: SFP Secondary Cluster: Feature

Category ID : 995

### Summary

This category identifies Software Fault Patterns (SFPs) within the Feature cluster.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	906	SFP Primary Cluster: UI	888	2400
HasMember	B	447	Unimplemented or Unsupported Feature in UI	888	1079
HasMember	B	448	Obsolete Feature in UI	888	1080
HasMember	B	449	The UI Performs the Wrong Action	888	1081
HasMember	B	450	Multiple Interpretations of UI Input	888	1082
HasMember	G	451	User Interface (UI) Misrepresentation of Critical Information	888	1084
HasMember	B	549	Missing Password Field Masking	888	1267
HasMember	G	655	Insufficient Psychological Acceptability	888	1447

## Category-996: SFP Secondary Cluster: Security

Category ID : 996

### Summary

This category identifies Software Fault Patterns (SFPs) within the Security cluster.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	906	SFP Primary Cluster: UI	888	2400
HasMember	B	356	Product UI does not Warn User of Unsafe Actions	888	883
HasMember	B	357	Insufficient UI Warning of Dangerous Operations	888	884
HasMember	G	446	UI Discrepancy for Security Feature	888	1078

## Category-997: SFP Secondary Cluster: Information Loss

Category ID : 997

## Summary

This category identifies Software Fault Patterns (SFPs) within the Information Loss cluster.

## Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	906	SFP Primary Cluster: UI	888	2400
HasMember	G	221	Information Loss or Omission	888	560
HasMember	B	222	Truncation of Security-relevant Information	888	562
HasMember	B	223	Omission of Security-relevant Information	888	563
HasMember	B	224	Obscured Security-relevant Information by Alternate Name	888	565

## Category-998: SFP Secondary Cluster: Glitch in Computation

Category ID : 998

## Summary

This category identifies Software Fault Patterns (SFPs) within the Glitch in Computation cluster (SFP1).

## Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	885	SFP Primary Cluster: Risky Values	888	2394
HasMember	B	128	Wrap-around Error	888	342
HasMember	B	190	Integer Overflow or Wraparound	888	475
HasMember	B	191	Integer Underflow (Wrap or Wraparound)	888	484
HasMember	V	194	Unexpected Sign Extension	888	495
HasMember	V	195	Signed to Unsigned Conversion Error	888	498
HasMember	V	196	Unsigned to Signed Conversion Error	888	502
HasMember	B	197	Numeric Truncation Error	888	504
HasMember	B	369	Divide By Zero	888	917
HasMember	V	456	Missing Initialization of a Variable	888	1093
HasMember	V	457	Use of Uninitialized Variable	888	1098
HasMember	B	466	Return of Pointer Value Outside of Expected Range	888	1114
HasMember	B	468	Incorrect Pointer Scaling	888	1118
HasMember	B	475	Undefined Behavior for Input to API	888	1135
HasMember	B	480	Use of Incorrect Operator	888	1154
HasMember	V	481	Assigning instead of Comparing	888	1158
HasMember	V	486	Comparison of Classes by Name	888	1169
HasMember	B	562	Return of Stack Variable Address	888	1283
HasMember	B	570	Expression is Always False	888	1297
HasMember	B	571	Expression is Always True	888	1300
HasMember	V	579	J2EE Bad Practices: Non-serializable Object Stored in Session	888	1314
HasMember	V	587	Assignment of a Fixed Address to a Pointer	888	1327
HasMember	V	594	J2EE Framework: Saving Unserializable Objects to Disk	888	1337
HasMember	V	597	Use of Wrong Operator in String Comparison	888	1342
HasMember	B	628	Function Call with Incorrectly Specified Arguments	888	1403
HasMember	B	681	Incorrect Conversion between Numeric Types	888	1500
HasMember	V	683	Function Call With Incorrect Order of Arguments	888	1509

Nature	Type	ID	Name	V	Page
HasMember	V	685	Function Call With Incorrect Number of Arguments	888	1512
HasMember	V	686	Function Call With Incorrect Argument Type	888	1513
HasMember	V	688	Function Call With Incorrect Variable or Reference as Argument	888	1516
HasMember	G	704	Incorrect Type Conversion or Cast	888	1543
HasMember	V	768	Incorrect Short Circuit Evaluation	888	1617

## Category-1001: SFP Secondary Cluster: Use of an Improper API

Category ID : 1001

### Summary

This category identifies Software Fault Patterns (SFPs) within the Use of an Improper API cluster (SFP3).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	C	887	SFP Primary Cluster: API	888	2394
HasMember	V	111	Direct Use of Unsafe JNI	888	269
HasMember	C	227	7PK - API Abuse	888	2325
HasMember	B	242	Use of Inherently Dangerous Function	888	590
HasMember	V	245	J2EE Bad Practices: Direct Management of Connections	888	596
HasMember	V	246	J2EE Bad Practices: Direct Use of Sockets	888	598

HasMember	B	766	Critical Data Element Declared Public	888	1612

## Category-1005: 7PK - Input Validation and Representation

Category ID : 1005

### Summary

This category represents one of the phyla in the Seven Pernicious Kingdoms vulnerability classification. It includes weaknesses that exist when an application does not properly validate or represent input. According to the authors of the Seven Pernicious Kingdoms, "Input validation and representation problems are caused by metacharacters, alternate encodings and numeric representations. Security problems result from trusting input."

### Membership

Nature	Type	ID	Name	V	Page

## Category-1006: Bad Coding Practices

Category ID : 1006

### Summary

Weaknesses in this category are related to coding practices that are deemed unsafe and increase the chances that an exploitable vulnerability will be present in the application. These weaknesses do not directly introduce a vulnerability, but indicate that the product has not been carefully developed or maintained. If a program is complex, difficult to maintain, not portable, or shows evidence of neglect, then there is a higher likelihood that weaknesses are buried in the code.

## Category-1009: Audit

Category ID : 1009

### Summary

Weaknesses in this category are related to the design and architecture of audit-based components of the system. Frequently these deal with logging user activities in order to identify attackers and modifications to the system. The weaknesses in this category could lead to a degradation of the quality of the audit capability if they are not addressed when designing or implementing a secure architecture.

## Category-1010: Authenticate Actors

Category ID : 1010

### Summary

Weaknesses in this category are related to the design and architecture of authentication components of the system. Frequently these deal with verifying the entity is indeed who it claims to be. The weaknesses in this category could lead to a degradation of the quality of authentication if they are not addressed when designing or implementing a secure architecture.

## Category-1011: Authorize Actors

Category ID : 1011

### Summary

Weaknesses in this category are related to the design and architecture of a system's authorization components. Frequently these deal with enforcing that agents have the required permissions before performing certain operations, such as modifying data. The weaknesses in this category could lead to a degradation of quality of the authorization capability if they are not addressed when designing or implementing a secure architecture.

## Category-1012: Cross Cutting

Category ID : 1012

### Summary

Weaknesses in this category are related to the design and architecture of multiple security tactics and how they affect a system. For example, information exposure can impact the Limit Access and Limit Exposure security tactics. The weaknesses in this category could lead to a degradation of the quality of many capabilities if they are not addressed when designing or implementing a secure architecture.

## Category-1013: Encrypt Data

Category ID : 1013

### Summary

Weaknesses in this category are related to the design and architecture of data confidentiality in a system. Frequently these deal with the use of encryption libraries. The weaknesses in this category could lead to a degradation of the quality data encryption if they are not addressed when designing or implementing a secure architecture.

## Category-1014: Identify Actors

Category ID : 1014

### Summary

Weaknesses in this category are related to the design and architecture of a system's identification management components. Frequently these deal with verifying that external agents provide inputs into the system. The weaknesses in this category could lead to a degradation of the quality of identification management if they are not addressed when designing or implementing a secure architecture.

## Category-1015: Limit Access

Category ID : 1015

## Summary

Weaknesses in this category are related to the design and architecture of system resources. Frequently these deal with restricting the amount of resources that are accessed by actors, such as memory, network connections, CPU or access points. The weaknesses in this category could lead to a degradation of the quality of authentication if they are not addressed when designing or implementing a secure architecture.

## Category-1016: Limit Exposure

Category ID : 1016

### Summary

Weaknesses in this category are related to the design and architecture of the entry points to a system. Frequently these deal with minimizing the attack surface through designing the system with the least needed amount of entry points. The weaknesses in this category could lead to a degradation of a system's defenses if they are not addressed when designing or implementing a secure architecture.

## Category-1017: Lock Computer

Category ID : 1017

### Summary

Weaknesses in this category are related to the design and architecture of a system's lockout mechanism. Frequently these deal with scenarios that take effect in case of multiple failed attempts to access a given resource. The weaknesses in this category could lead to a degradation of access to system assets if they are not addressed when designing or implementing a secure architecture.

## Category-1018: Manage User Sessions

Category ID : 1018

### Summary

Weaknesses in this category are related to the design and architecture of session management. Frequently these deal with the information or status about each user and their access rights for the duration of multiple requests. The weaknesses in this category could lead to a degradation of the quality of session management if they are not addressed when designing or implementing a secure architecture.

## Category-1019: Validate Inputs

Category ID : 1019

### Summary

Weaknesses in this category are related to the design and architecture of a system's input validation components. Frequently these deal with sanitizing, neutralizing and validating any externally provided inputs to minimize malformed data from entering the system and preventing code injection in the input data. The weaknesses in this category could lead to a degradation of the quality of data flow in a system if they are not addressed when designing or implementing a secure architecture.

## Category-1020: Verify Message Integrity

Category ID : 1020

### Summary

Weaknesses in this category are related to the design and architecture of a system's data integrity components. Frequently these deal with ensuring integrity of data, such as messages, resource files, deployment files, and configuration files. The weaknesses in this category could lead to a

degradation of data integrity quality if they are not addressed when designing or implementing a secure architecture.

## Category-1035: OWASP Top Ten 2017 Category A9 - Using Components with Known Vulnerabilities

Category ID : 1035

### Summary

Weaknesses in this category are related to the A9 category in the OWASP Top Ten 2017.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	1026	Weaknesses in OWASP Top Ten (2017)	1026	2590
MemberOf	C	1352	OWASP Top Ten 2021 Category A06:2021 - Vulnerable and Outdated Components	1344	2506

### Notes

#### Relationship

This is an unusual category. CWE does not cover the limitations of human processes and procedures that cannot be described in terms of a specific technical weakness as resident in the code, architecture, or configuration of the software. Since "known vulnerabilities" can arise from any kind of weakness, it is not possible to map this OWASP category to other CWE entries, since it would effectively require mapping this category to ALL weaknesses.

## Category-1163: SEI CERT C Coding Standard - Guidelines 09. Input Output (FIO)

Category ID : 1163

### Summary

Weaknesses in this category are related to the rules and recommendations in the Input Output (FIO) section of the SEI CERT C Coding Standard.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	1154	Weaknesses Addressed by the SEI CERT C Coding Standard	1154	2595
HasMember	G	20	Improper Input Validation	1154	20
HasMember	V	67	Improper Handling of Windows Device Names	1154	127
HasMember	B	134	Use of Externally-Controlled Format String	1154	368
HasMember	B	197	Numeric Truncation Error	1154	504
HasMember	B	241	Improper Handling of Unexpected Data Type	1154	588
HasMember	G	404	Improper Resource Shutdown or Release	1154	984
HasMember	B	459	Incomplete Cleanup	1154	1103
HasMember	P	664	Improper Control of a Resource Through its Lifetime	1154	1460

Nature	Type	ID	Name	V	Page
HasMember		666	Operation on Resource in Wrong Phase of Lifetime	1154	1467
HasMember		672	Operation on a Resource after Expiration or Release	1154	1485
HasMember		685	Function Call With Incorrect Number of Arguments	1154	1512
HasMember		686	Function Call With Incorrect Argument Type	1154	1513
HasMember		758	Reliance on Undefined, Unspecified, or Implementation-Defined Behavior	1154	1587
HasMember		771	Missing Reference to Active Allocated Resource	1154	1627
HasMember		772	Missing Release of Resource after Effective Lifetime	1154	1629
HasMember		773	Missing Reference to Active File Descriptor or Handle	1154	1634
HasMember		775	Missing Release of File Descriptor or Handle after Effective Lifetime	1154	1636
HasMember		910	Use of Expired File Descriptor	1154	1805

## Category-1195: Manufacturing and Life Cycle Management Concerns

Category ID : 1195

### Summary

Weaknesses in this category are root-caused to defects that arise in the semiconductor-manufacturing process or during the life cycle and supply chain.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	1194	Hardware Design	1194	2598
HasMember	C	1059	Insufficient Technical Documentation	1194	1900
HasMember	B	1248	Semiconductor Defects in Hardware Logic with Security-Sensitive Implications	1194	2056
HasMember	B	1266	Improper Scrubbing of Sensitive Data from Decommissioned Device	1194	2100
HasMember	B	1269	Product Released in Non-Release Configuration	1194	2106
HasMember	B	1273	Device Unlock Credential Sharing	1194	2115
HasMember	B	1297	Unprotected Confidential Information on Device is Accessible by OSAT Vendors	1194	2164

## Category-1196: Security Flow Issues

Category ID : 1196

### Summary

Weaknesses in this category are related to improper design of full-system security flows, including but not limited to secure boot, secure update, and hardware-device attestation.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	1194	Hardware Design	1194	2598
HasMember	B	1190	DMA Device Enabled Too Early in Boot Phase	1194	1983
HasMember	B	1193	Power-On of Untrusted Execution Core Before Enabling Fabric Access Control	1194	1991
HasMember	B	1264	Hardware Logic with Insecure De-Synchronization between Control and Data Channels	1194	2095
HasMember	B	1274	Improper Access Control for Volatile Memory Containing Boot Code	1194	2117
HasMember	B	1283	Mutable Attestation or Measurement Reporting Data	1194	2137
HasMember	B	1310	Missing Ability to Patch ROM Code	1194	2187
HasMember	B	1326	Missing Immutable Root of Trust in Hardware	1194	2221
HasMember	B	1328	Security Version Number Mutable to Older Versions	1194	2225

## Category-1197: Integration Issues

Category ID : 1197

### Summary

Weaknesses in this category are those that arise due to integration of multiple hardware Intellectual Property (IP) cores, from System-on-a-Chip (SoC) subsystem interactions, or from hardware platform subsystem interactions.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	1194	Hardware Design	1194	2598
HasMember	B	1276	Hardware Child Block Incorrectly Connected to Parent System	1194	2121

## Category-1198: Privilege Separation and Access Control Issues

Category ID : 1198

### Summary

Weaknesses in this category are related to features and mechanisms providing hardware-based isolation and access control (e.g., identity, policy, locking control) of sensitive shared hardware resources such as registers and fuses.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	1194	Hardware Design	1194	2598
MemberOf	C	1372	ICS Supply Chain: OT Counterfeit and Malicious Corruption	1358	2521
HasMember	B	276	Incorrect Default Permissions	1194	669
HasMember	C	441	Unintended Proxy or Intermediary ('Confused Deputy')	1194	1069
HasMember	B	1189	Improper Isolation of Shared Resources on System-on-a-Chip (SoC)	1194	1981
HasMember	B	1192	Improper Identifier for IP Block used in System-On-Chip (SOC)	1194	1990

## Category-1199: General Circuit and Logic Design Concerns

Category ID : 1199

### Summary

Weaknesses in this category are related to hardware-circuit design and logic (e.g., CMOS transistors, finite state machines, and registers) as well as issues related to hardware description languages such as System Verilog and VHDL.

### Membership

Nature	Type	ID	Name	V	Page

## Category-1203: Peripherals, On-chip Fabric, and Interface/IO Problems

Category ID : 1203

### Summary

Weaknesses in this category are related to hardware security problems that apply to peripheral devices, IO interfaces, on-chip interconnects, network-on-chip (NoC), and buses. For example, this category includes issues related to design of hardware interconnect and/or protocols such as PCIe, USB, SMBUS, general-purpose IO pins, and user-input peripherals such as mouse and keyboard.

## Category-1210: Audit / Logging Errors

Category ID : 1210

### Summary

Weaknesses in this category are related to audit-based components of a software system. Frequently these deal with logging user activities in order to identify undesired access and modifications to the system. The weaknesses in this category could lead to a degradation of the quality of the audit capability if they are not addressed.

### Membership

Nature	Type	ID	Name	V	Page

HasMember	B	779	Logging of Excessive Data	699	1647

## Category-1211: Authentication Errors

Category ID : 1211

### Summary

Weaknesses in this category are related to authentication components of a system. Frequently these deal with the ability to verify that an entity is indeed who it claims to be. If not addressed when designing or implementing a software system, these weaknesses could lead to a degradation of the quality of the authentication capability.

HasMember	B	836	Use of Password Hash Instead of Password for Authentication	699	1766

## Category-1212: Authorization Errors

Category ID : 1212

### Summary

Weaknesses in this category are related to authorization components of a system. Frequently these deal with the ability to enforce that agents have the required permissions before performing certain operations, such as modifying data. If not addressed when designing or implementing a software system, these weaknesses could lead to a degradation of the quality of the authorization capability.

## Category-1214: Data Integrity Issues

Category ID : 1214

### Summary

Weaknesses in this category are related to a software system's data integrity components. Frequently these deal with the ability to ensure the integrity of data, such as messages, resource files, deployment files, and configuration files. The weaknesses in this category could lead to a degradation of data integrity quality if they are not addressed.

HasMember	B	924	Improper Enforcement of Message Integrity During Transmission in a Communication Channel	699	1835

## Category-1215: Data Validation Issues

Category ID : 1215

### Summary

Weaknesses in this category are related to a software system's components for input validation, output validation, or other kinds of validation. Validation is a frequently-used technique for ensuring that data conforms to expectations before it is further processed as input or output. There are many varieties of validation (see CWE-20, which is just for input validation). Validation is distinct from other techniques that attempt to modify data before processing it, although developers may consider all attempts to product "safe" inputs or outputs as some kind of validation. Regardless, validation is a powerful tool that is often used to minimize malformed data from entering the system, or indirectly avoid code injection or other potentially-malicious patterns when generating output. The weaknesses in this category could lead to a degradation of the quality of data flow in a system if they are not addressed.

HasMember	B	1289	Improper Validation of Unsafe Equivalence in Input	699	2149

### Notes

#### Relationship

CWE-20 (Improper Input Validation) is not included in this category because it is a Class level, and this category focuses more on Base level weaknesses. Also note that other kinds of weaknesses besides improper validation are included as members of this category.

## Category-1216: Lockout Mechanism Errors

Category ID : 1216

### Summary

2490

Weaknesses in this category are related to a software system's lockout mechanism. Frequently these deal with scenarios that take effect in case of multiple failed attempts to access a given resource. The weaknesses in this category could lead to a degradation of access to system assets if they are not addressed.

### Membership

## Category-1217: User Session Errors

Category ID : 1217

### Summary

Weaknesses in this category are related to session management. Frequently these deal with the information or status about each user and their access rights for the duration of multiple requests. The weaknesses in this category could lead to a degradation of the quality of session management if they are not addressed.

### Membership

## Category-1219: File Handling Issues

Category ID : 1219

### Summary

Weaknesses in this category are related to the handling of files within a software system. Files, directories, and folders are so central to information technology that many different weaknesses and variants have been discovered.

### Membership

Nature	Type	ID	Name	V	Page

## Category-1228: API / Function Errors

Category ID : 1228

### Summary

Weaknesses in this category are related to the use of built-in functions or external APIs.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	699	Software Development	699	2567
HasMember	B	242	Use of Inherently Dangerous Function	699	590
HasMember	B	474	Use of Function with Inconsistent Implementations	699	1133
HasMember	B	475	Undefined Behavior for Input to API	699	1135
HasMember	B	477	Use of Obsolete Function	699	1143
HasMember	B	676	Use of Potentially Dangerous Function	699	1494
HasMember	B	695	Use of Low-Level Functionality	699	1529
HasMember	B	749	Exposed Dangerous Method or Function	699	1569

## Category-1237: SFP Primary Cluster: Faulty Resource Release

Category ID : 1237

### Summary

This category identifies Software Fault Patterns (SFPs) within the Faulty Resource Release cluster (SFP37).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	888	Software Fault Pattern (SFP) Clusters	888	2583
HasMember	V	415	Double Free	888	1012
HasMember	V	762	Mismatched Memory Management Routines	888	1601
HasMember	B	763	Release of Invalid Pointer or Reference	888	1604

## Category-1238: SFP Primary Cluster: Failure to Release Memory

Category ID : 1238

### Summary

This category identifies Software Fault Patterns (SFPs) within the Failure to Release Memory cluster (SFP38).

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	888	Software Fault Pattern (SFP) Clusters	888	2583
HasMember	V	401	Missing Release of Memory after Effective Lifetime	888	977

## Category-1306: CISQ Quality Measures - Reliability

Category ID : 1306

### Summary

Weaknesses in this category are related to the CISQ Quality Measures for Reliability. Presence of these weaknesses could reduce the reliability of the software.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	1305	CISQ Quality Measures (2020)	1305	2600

## Notes

### Maintenance

As of CWE 4.6, the relationships in this category were pulled directly from the CWE mappings cited in the 2021 OWASP Top Ten. These mappings include categories, which are discouraged for mapping, as well as high-level weaknesses such as Pillars. The CWE Program will work with OWASP to improve these mappings, possibly requiring modifications to CWE itself.

## Notes

### Maintenance

As of CWE 4.6, the relationships in this category were pulled directly from the CWE mappings cited in the 2021 OWASP Top Ten. These mappings include high-level Class and/or Pillar weaknesses. The CWE Program will work with OWASP to improve these mappings, possibly including modifications to CWE itself.

## Category-1359: ICS Communications

Category ID : 1359

### Summary

Weaknesses in this category are related to the "ICS Communications" super category from the SEI ETF "Categories of Security Vulnerabilities in ICS" as published in March 2022.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	1358	Weaknesses in SEI ETF Categories of Security Vulnerabilities in ICS	1358	2608
HasMember	C	1364	ICS Communications: Zone Boundary Failures	1358	2513
HasMember	C	1365	ICS Communications: Unreliability	1358	2514
HasMember	C	1366	ICS Communications: Frail Security in Protocols	1358	2515

### Notes

#### Relationship

Relationships in this category are not authoritative and subject to change. See Maintenance notes.

### Maintenance

This category was created in CWE 4.7 to facilitate and illuminate discussion about weaknesses in ICS with [REF-1248] as a starting point. After the release of CWE 4.9 in October 2022, this has been under active review by members of the "Boosting CWE" subgroup of the CWE-CAPEC ICS/OT Special Interest Group (SIG). Relationships are still subject to change. In addition, there may be some issues in [REF-1248] that are outside of the current scope of CWE, which will require consultation with many CWE stakeholders to resolve.

## Category-1363: ICS Operations (& Maintenance)

Category ID : 1363

## Summary

Weaknesses in this category are related to the "ICS Operations (& Maintenance)" super category from the SEI ETF "Categories of Security Vulnerabilities in ICS" as published in March 2022.

## Membership

Nature	Type	ID	Name	V	Page
MemberOf	V	1358	Weaknesses in SEI ETF Categories of Security Vulnerabilities in ICS	1358	2608

HasMember	C	1383	ICS Operations (& Maintenance): Compliance/Conformance with Regulatory Requirements	1358	2529

## Notes

### Relationship

Relationships in this category are not authoritative and subject to change. See Maintenance notes.

### Maintenance

This category was created in CWE 4.7 to facilitate and illuminate discussion about weaknesses in ICS with [REF-1248] as a starting point. After the release of CWE 4.9 in October 2022, this has been under active review by members of the "Boosting CWE" subgroup of the CWE-CAPEC ICS/OT Special Interest Group (SIG). Relationships are still subject to change. In addition, there may be some issues in [REF-1248] that are outside of the current scope of CWE, which will require consultation with many CWE stakeholders to resolve.

## Category-1364: ICS Communications: Zone Boundary Failures

Category ID : 1364

## Summary

Weaknesses in this category are related to the "Zone Boundary Failures" category from the SEI ETF "Categories of Security Vulnerabilities in ICS" as published in March 2022: "Within an ICS system, for traffic that crosses through network zone boundaries, vulnerabilities arise when those boundaries were designed for safety or other purposes but are being repurposed for security."

Note: members of this category include "Nearest IT Neighbor" recommendations from the report, as well as suggestions by the CWE team. These relationships are likely to change in future CWE versions.

## Category-1365: ICS Communications: Unreliability

Category ID : 1365

### Summary

Weaknesses in this category are related to the "Unreliability" category from the SEI ETF "Categories of Security Vulnerabilities in ICS" as published in March 2022: "Vulnerabilities arise in reaction to disruptions in the physical layer (e.g. creating electrical noise) used to carry the traffic." Note: members of this category include "Nearest IT Neighbor" recommendations from the report, as well as suggestions by the CWE team. These relationships are likely to change in future CWE versions.

## Category-1366: ICS Communications: Frail Security in Protocols

Category ID : 1366

## Summary

Weaknesses in this category are related to the "Frail Security in Protocols" category from the SEI ETF "Categories of Security Vulnerabilities in ICS" as published in March 2022: "Vulnerabilities arise as a result of mis-implementation or incomplete implementation of security in ICS implementations of communication protocols." Note: members of this category include "Nearest IT Neighbor" recommendations from the report, as well as suggestions by the CWE team. These relationships are likely to change in future CWE versions.

## Category-1367: ICS Dependencies (& Architecture): External Physical Systems

Category ID : 1367

## Summary

Weaknesses in this category are related to the "External Physical Systems" category from the SEI ETF "Categories of Security Vulnerabilities in ICS" as published in March 2022: "Due to the highly interconnected technologies in use, an external dependency on another physical system could cause an availability interruption for the protected system." Note: members of this category include "Nearest IT Neighbor" recommendations from the report, as well as suggestions by the CWE team. These relationships are likely to change in future CWE versions.

## Category-1369: ICS Supply Chain: IT/OT Convergence/Expansion

Category ID : 1369

## Summary

Weaknesses in this category are related to the "IT/OT Convergence/Expansion" category from the SEI ETF "Categories of Security Vulnerabilities in ICS" as published in March 2022: "The increased penetration of DER devices and smart loads make emerging ICS networks more like IT networks and thus susceptible to vulnerabilities similar to those of IT networks." Note: members of this category include "Nearest IT Neighbor" recommendations from the report, as well as suggestions by the CWE team. These relationships are likely to change in future CWE versions.

## Category-1370: ICS Supply Chain: Common Mode Frailties

Category ID : 1370

## Summary

Weaknesses in this category are related to the "Common Mode Frailties" category from the SEI ETF "Categories of Security Vulnerabilities in ICS" as published in March 2022: "At the component level, most ICS systems are assembled from common parts made by other companies. One or more of these common parts might contain a vulnerability that could result in a wide-spread incident." Note: members of this category include "Nearest IT Neighbor" recommendations from the report, as well as suggestions by the CWE team. These relationships are likely to change in future CWE versions.

## Category-1371: ICS Supply Chain: Poorly Documented or Undocumented Features

Category ID : 1371

## Summary

Weaknesses in this category are related to the "Poorly Documented or Undocumented Features" category from the SEI ETF "Categories of Security Vulnerabilities in ICS" as published in March 2022: "Undocumented capabilities and configurations pose a risk by not having a clear understanding of what the device is specifically supposed to do and only do. Therefore possibly opening up the attack surface and vulnerabilities." Note: members of this category include "Nearest IT Neighbor" recommendations from the report, as well as suggestions by the CWE team. These relationships are likely to change in future CWE versions.

## Category-1372: ICS Supply Chain: OT Counterfeit and Malicious Corruption

Category ID : 1372

### Summary

Weaknesses in this category are related to the "OT Counterfeit and Malicious Corruption" category from the SEI ETF "Categories of Security Vulnerabilities in ICS" as published in March 2022: "In ICS, when this procurement process results in a vulnerability or component damage, it can have grid impacts or cause physical harm." Note: members of this category include "Nearest IT Neighbor" recommendations from the report, as well as suggestions by the CWE team. These relationships are likely to change in future CWE versions.

## Category-1373: ICS Engineering (Construction/Deployment): Trust Model Problems

Category ID : 1373

### Summary

Weaknesses in this category are related to the "Trust Model Problems" category from the SEI ETF "Categories of Security Vulnerabilities in ICS" as published in March 2022: "Assumptions made about the user during the design or construction phase may result in vulnerabilities after the system is installed if the user operates it using a different security approach or process than what was designed or built." Note: members of this category include "Nearest IT Neighbor" recommendations from the report, as well as suggestions by the CWE team. These relationships are likely to change in future CWE versions.

### Membership

Nature	Type	ID	Name	V	Page
MemberOf		1362	ICS Engineering (Constructions/Deployment)	1358	2511
HasMember		269	Improper Privilege Management	1358	650
HasMember		349	Acceptance of Extraneous Untrusted Data With Trusted Data	1358	865
HasMember		807	Reliance on Untrusted Inputs in a Security Decision	1358	1719

### Notes

#### Relationship

Relationships in this category are not authoritative and subject to change. See Maintenance notes.

#### Maintenance

This category was created in CWE 4.7 to facilitate and illuminate discussion about weaknesses in ICS with [REF-1248] as a starting point. After the release of CWE 4.9 in October 2022, this has been under active review by members of the "Boosting CWE" subgroup of the CWE-CAPEC ICS/OT Special Interest Group (SIG). Relationships are still subject to change. In addition, there may be some issues in [REF-1248] that are outside of the current scope of CWE, which will require consultation with many CWE stakeholders to resolve.

## Category-1374: ICS Engineering (Construction/Deployment): Maker Breaker Blindness

Category ID : 1374

### Summary

Weaknesses in this category are related to the "Maker Breaker Blindness" category from the SEI ETF "Categories of Security Vulnerabilities in ICS" as published in March 2022: "Lack of awareness of deliberate attack techniques by people (vs failure modes from natural causes like weather or metal fatigue) may lead to insufficient security controls being built into ICS systems." Note: members of this category include "Nearest IT Neighbor" recommendations from the report, as well as suggestions by the CWE team. These relationships are likely to change in future CWE versions.

## Category-1375: ICS Engineering (Construction/Deployment): Gaps in Details/Data

Category ID : 1375

## Summary

Weaknesses in this category are related to the "Gaps in Details/Data" category from the SEI ETF "Categories of Security Vulnerabilities in ICS" as published in March 2022: "Highly complex systems are often operated by personnel who have years of experience in managing that particular facility or plant. Much of their knowledge is passed along through verbal or hands-on training but may not be fully documented in written practices and procedures." Note: members of this category include "Nearest IT Neighbor" recommendations from the report, as well as suggestions by the CWE team. These relationships are likely to change in future CWE versions.

## Category-1376: ICS Engineering (Construction/Deployment): Security Gaps in Commissioning

Category ID : 1376

### Summary

Weaknesses in this category are related to the "Security Gaps in Commissioning" category from the SEI ETF "Categories of Security Vulnerabilities in ICS" as published in March 2022: "As a large system is brought online components of the system may remain vulnerable until the entire system is operating and functional and security controls are put in place. This creates a window of opportunity for an adversary during the commissioning process." Note: members of this category include "Nearest IT Neighbor" recommendations from the report, as well as suggestions by the CWE team. These relationships are likely to change in future CWE versions.

## Category-1377: ICS Engineering (Construction/Deployment): Inherent Predictability in Design

Category ID : 1377

### Summary

Weaknesses in this category are related to the "Inherent Predictability in Design" category from the SEI ETF "Categories of Security Vulnerabilities in ICS" as published in March 2022: "The commonality of design (in ICS/SCADA architectures) for energy systems and environments opens up the possibility of scaled compromise by leveraging the inherent predictability in the design." Note: members of this category include "Nearest IT Neighbor" recommendations from the report, as well as suggestions by the CWE team. These relationships are likely to change in future CWE versions.

## Category-1378: ICS Operations (& Maintenance): Gaps in obligations and training

Category ID : 1378

### Summary

Weaknesses in this category are related to the "Gaps in obligations and training" category from the SEI ETF "Categories of Security Vulnerabilities in ICS" as published in March 2022: "OT

ownership and responsibility for identifying and mitigating vulnerabilities are not clearly defined or communicated within an organization, leaving environments unpatched, exploitable, and with a broader attack surface." Note: members of this category include "Nearest IT Neighbor" recommendations from the report, as well as suggestions by the CWE team. These relationships are likely to change in future CWE versions.

### Membership

Nature	Type	ID	Name	V	Page

## Category-1379: ICS Operations (& Maintenance): Human factors in ICS environments

Category ID : 1379

### Summary

Weaknesses in this category are related to the "Human factors in ICS environments" category from the SEI ETF "Categories of Security Vulnerabilities in ICS" as published in March 2022: "Environmental factors in ICS including physical duress, system complexities, and isolation may result in security gaps or inadequacies in the performance of individual duties and responsibilities." Note: members of this category include "Nearest IT Neighbor" recommendations from the report, as well as suggestions by the CWE team. These relationships are likely to change in future CWE versions.

## Category-1380: ICS Operations (& Maintenance): Post-analysis changes

Category ID : 1380

## Summary

Weaknesses in this category are related to the "Post-analysis changes" category from the SEI ETF "Categories of Security Vulnerabilities in ICS" as published in March 2022: "Changes made to a previously analyzed and approved ICS environment can introduce new security vulnerabilities (as opposed to safety)." Note: members of this category include "Nearest IT Neighbor" recommendations from the report, as well as suggestions by the CWE team. These relationships are likely to change in future CWE versions.

## Category-1381: ICS Operations (& Maintenance): Exploitable Standard Operational Procedures

Category ID : 1381

### Summary

Weaknesses in this category are related to the "Exploitable Standard Operational Procedures" category from the SEI ETF "Categories of Security Vulnerabilities in ICS" as published in March 2022: "Standard ICS Operational Procedures developed for safety and operational functionality in a closed, controlled communications environment can introduce vulnerabilities in a more connected environment." Note: members of this category include "Nearest IT Neighbor" recommendations from the report, as well as suggestions by the CWE team. These relationships are likely to change in future CWE versions.

## Category-1382: ICS Operations (& Maintenance): Emerging Energy Technologies

Category ID : 1382

### Summary

Weaknesses in this category are related to the "Emerging Energy Technologies" category from the SEI ETF "Categories of Security Vulnerabilities in ICS" as published in March 2022: "With the rapid evolution of the energy system accelerated by the emergence of new technologies such as DERs, electric vehicles, advanced communications (5G+), novel and diverse challenges arise for secure and resilient operation of the system." Note: members of this category include "Nearest IT Neighbor" recommendations from the report, as well as suggestions by the CWE team. These relationships are likely to change in future CWE versions.

## Category-1383: ICS Operations (& Maintenance): Compliance/Conformance with Regulatory Requirements

Category ID : 1383

## Summary

Weaknesses in this category are related to the "Compliance/Conformance with Regulatory Requirements" category from the SEI ETF "Categories of Security Vulnerabilities in ICS" as published in March 2022: "The ICS environment faces overlapping regulatory regimes and authorities with multiple focus areas (e.g., operational resiliency, physical safety, interoperability, and security) which can result in cyber security vulnerabilities when implemented as written due to gaps in considerations, outdatedness, or conflicting requirements." Note: members of this category include "Nearest IT Neighbor" recommendations from the report, as well as suggestions by the CWE team. These relationships are likely to change in future CWE versions.

## View-629: Weaknesses in OWASP Top Ten (2007)

**View ID :** 629

**Type :** Graph

### Objective

CWE nodes in this view (graph) are associated with the OWASP Top Ten, as released in 2007. This view is considered obsolete as a newer version of the OWASP Top Ten is available.

### Audience

#### Software Developers

This view outlines the most important issues as identified by the OWASP Top Ten (2007 version), providing a good starting point for web application developers who want to code more securely.

#### Product Customers

This view outlines the most important issues as identified by the OWASP Top Ten (2007 version), providing customers with a way of asking their software developers to follow minimum expectations for secure code.

#### Educators

Since the OWASP Top Ten covers the most frequently encountered issues, this view can be used by educators as training material for students.

### Membership

HasMember	<b>C</b>	719	OWASP Top Ten 2007 Category A8 - Insecure Cryptographic Storage	2345
HasMember	<b>C</b>	720	OWASP Top Ten 2007 Category A9 - Insecure Communications	2345
HasMember	<b>C</b>	721	OWASP Top Ten 2007 Category A10 - Failure to Restrict URL Access	2345

### Notes

#### Relationship

The relationships in this view are a direct extraction of the CWE mappings that are in the 2007 OWASP document. CWE has changed since the release of that document.

## View-635: Weaknesses Originally Used by NVD from 2008 to 2016

View ID : 635

Type : Explicit

### Objective

CWE nodes in this view (slice) were used by NIST to categorize vulnerabilities within NVD, from 2008 to 2016. This original version has been used by many other projects.

### Membership

Nature	Type	ID	Name	Page
HasMember	C	16	Configuration	2320
HasMember	G	20	Improper Input Validation	20
HasMember	B	22	Improper Limitation of a Pathname to a Restricted Directory ('Path Traversal')	33
HasMember	B	59	Improper Link Resolution Before File Access ('Link Following')	112
HasMember	B	78	Improper Neutralization of Special Elements used in an OS Command ('OS Command Injection')	153
HasMember	B	79	Improper Neutralization of Input During Web Page Generation ('Cross-site Scripting')	166
HasMember	B	89	Improper Neutralization of Special Elements used in an SQL Command ('SQL Injection')	204
HasMember	B	94	Improper Control of Generation of Code ('Code Injection')	222
HasMember	G	119	Improper Restriction of Operations within the Bounds of a Memory Buffer	296
HasMember	B	134	Use of Externally-Controlled Format String	368

HasMember	G	362	Concurrent Execution using Shared Resource with Improper Synchronization ('Race Condition')	892
HasMember	C	399	Resource Management Errors	2336

### Notes

#### Maintenance

In Summer 2007, NIST began using this set of CWE elements to classify CVE entries within the National Vulnerability Database (NVD). The data was made publicly available beginning in 2008. In 2016, NIST began using a different list as derived from the "Weaknesses for Simplified Mapping of Published Vulnerabilities" view (CWE-1003).

## View-699: Software Development

View ID : 699  
Type : Graph

### Objective

This view organizes weaknesses around concepts that are frequently used or encountered in software development. This includes all aspects of the software development lifecycle including both architecture and implementation. Accordingly, this view can align closely with the perspectives of architects, developers, educators, and assessment vendors. It provides a variety of categories that are intended to simplify navigation, browsing, and mapping.

### Audience

#### Software Developers

Software developers (including architects, designers, coders, and testers) use this view to better understand potential mistakes that can be made in specific areas of their software application. The use of concepts that developers are familiar with makes it easier to navigate this view,

and filtering by Modes of Introduction can enable focus on a specific phase of the development lifecycle.

### Educators

Educators use this view to teach future developers about the types of mistakes that are commonly made within specific parts of a codebase.

### Notes

### Other

The top level categories in this view represent commonly understood areas/terms within software development, and are meant to aid the user in identifying potential related weaknesses. It is possible for the same weakness to exist within multiple different categories.

### Other

This view attempts to present weaknesses in a simple and intuitive way. As such it targets a single level of abstraction. It is important to realize that not every CWE will be represented in this view. High-level class weaknesses and low-level variant weaknesses are mostly ignored. However, by exploring the weaknesses that are included, and following the defined relationships, one can find these higher and lower level weaknesses.

## View-700: Seven Pernicious Kingdoms

**View ID :** 700

**Type :** Graph

### Objective

This view (graph) organizes weaknesses using a hierarchical structure that is similar to that used by Seven Pernicious Kingdoms.

### Audience

#### Software Developers

This view is useful for developers because it is organized around concepts with which developers are familiar, and it focuses on weaknesses that can be detected using source code analysis tools.

### Membership

## View-711: Weaknesses in OWASP Top Ten (2004)

**View ID :** 711  
**Type :** Graph

### Objective

CWE entries in this view (graph) are associated with the OWASP Top Ten, as released in 2004, and as required for compliance with PCI DSS version 1.1. This view is considered obsolete as a newer version of the OWASP Top Ten is available.

### Audience

#### Software Developers

This view outlines the most important issues as identified by the OWASP Top Ten (2004 version), providing a good starting point for web application developers who want to code more securely, as well as complying with PCI DSS 1.1.

#### Product Customers

This view outlines the most important issues as identified by the OWASP Top Ten, providing customers with a way of asking their software developers to follow minimum expectations for secure code, in compliance with PCI-DSS 1.1.

#### Educators

Since the OWASP Top Ten covers the most frequently encountered issues, this view can be used by educators as training material for students. However, the 2007 version (CWE-629) might be more appropriate.

### Membership

HasMember	C	731	OWASP Top Ten 2004 Category A10 - Insecure Configuration Management	2351

## Notes

### Relationship

CWE relationships for this view were obtained by examining the OWASP document and mapping to any items that were specifically mentioned within the text of a category. As a result, this mapping is not complete with respect to all of CWE. In addition, some concepts were mentioned in multiple Top Ten items, which caused them to be mapped to multiple CWE categories. For example, SQL injection is mentioned in both A1 (CWE-722) and A6 (CWE-727) categories.

### Relationship

As of 2008, some parts of CWE were not fully clarified out in terms of weaknesses. When these areas were mentioned in the OWASP Top Ten, category entries were mapped, although general mapping practice would usually favor mapping only to weaknesses.

## View-734: Weaknesses Addressed by the CERT C Secure Coding Standard (2008)

View ID : 734

Type : Graph

### Objective

CWE entries in this view (graph) are fully or partially eliminated by following the guidance presented in the book "The CERT C Secure Coding Standard" published in 2008. This view is considered obsolete, as a newer version of the coding standard is available. This view statically represents the coding rules as they were in 2008.

## Audience

### Software Developers

By following the CERT C Secure Coding Standard, developers will be able to fully or partially prevent the weaknesses that are identified in this view. In addition, developers can use a CWE coverage graph to determine which weaknesses are not directly addressed by the standard, which will help identify and resolve remaining gaps in training, tool acquisition, or other approaches for reducing weaknesses.

### Product Customers

If a software developer claims to be following the CERT C Secure Coding standard, then customers can search for the weaknesses in this view in order to formulate independent evidence of that claim.

### Educators

Educators can use this view in multiple ways. For example, if there is a focus on teaching weaknesses, the educator could link them to the relevant Secure Coding Standard.

## View-750: Weaknesses in the 2009 CWE/SANS Top 25 Most Dangerous Programming Errors

View ID : 750

Type : Graph

### Objective

CWE entries in this view (graph) are listed in the 2009 CWE/SANS Top 25 Programming Errors. This view is considered obsolete as a newer version of the Top 25 is available.

### Audience

#### Software Developers

By following the Top 25, developers will be able to significantly reduce the number of weaknesses that occur in their software.

#### Product Customers

If a software developer claims to be following the Top 25, then customers can search for the weaknesses in this view in order to formulate independent evidence of that claim.

#### Educators

Educators can use this view in multiple ways. For example, if there is a focus on teaching weaknesses, the educator could focus on the Top 25.

## View-868: Weaknesses Addressed by the SEI CERT C++ Coding Standard (2016 Version)

View ID : 868

Type : Graph

### Objective

CWE entries in this view (graph) are fully or partially eliminated by following the SEI CERT C++ Coding Standard, as published in 2016. This view is no longer being actively maintained, since it statically represents the coding rules as they were in 2016.

### Audience

#### Software Developers

By following the CERT C++ Secure Coding Standard, developers will be able to fully or partially prevent the weaknesses that are identified in this view. In addition, developers can use a CWE coverage graph to determine which weaknesses are not directly addressed by the standard, which will help identify and resolve remaining gaps in training, tool acquisition, or other approaches for reducing weaknesses.

#### Product Customers

If a software developer claims to be following the CERT C++ Secure Coding Standard, then customers can search for the weaknesses in this view in order to formulate independent evidence of that claim.

#### Educators

Educators can use this view in multiple ways. For example, if there is a focus on teaching weaknesses, the educator could link them to the relevant Secure Coding Standard.

## Notes

### Relationship

The relationships in this view were determined based on specific statements within the rules from the standard. Not all rules have direct relationships to individual weaknesses, although they likely have chaining relationships in specific circumstances.

## View-884: CWE Cross-section

**View ID** : 884

**Type** : Explicit

### Objective

This view contains a selection of weaknesses that represent the variety of weaknesses that are captured in CWE, at a level of abstraction that is likely to be useful to most audiences. It can be used by researchers to determine how broad their theories, models, or tools are. It will also be used by the CWE content team in 2012 to focus quality improvement efforts for individual CWE entries.

**View-900: Weaknesses in the 2011 CWE/SANS Top 25 Most Dangerous Software Errors**

View ID : 900

Type : Graph

**Objective**

CWE entries in this view (graph) are listed in the 2011 CWE/SANS Top 25 Most Dangerous Software Errors.

### Audience

#### Software Developers

By following the Top 25, developers will be able to significantly reduce the number of weaknesses that occur in their software.

#### Product Customers

If a software developer claims to be following the Top 25, then customers can use the weaknesses in this view in order to formulate independent evidence of that claim.

#### Educators

Educators can use this view in multiple ways. For example, if there is a focus on teaching weaknesses, the educator could focus on the Top 25.

## View-928: Weaknesses in OWASP Top Ten (2013)

View ID : 928

Type : Graph

### Objective

CWE nodes in this view (graph) are associated with the OWASP Top Ten, as released in 2013. This view is considered obsolete as a newer version of the OWASP Top Ten is available.

### Audience

#### Software Developers

This view outlines the most important issues as identified by the OWASP Top Ten (2013 version), providing a good starting point for web application developers who want to code more securely.

#### Product Customers

This view outlines the most important issues as identified by the OWASP Top Ten (2013 version), providing customers with a way of asking their software developers to follow minimum expectations for secure code.

#### Educators

Since the OWASP Top Ten covers the most frequently encountered issues, this view can be used by educators as training material for students.

### Membership

HasMember		938	OWASP Top Ten 2013 Category A10 - Unvalidated Redirects and Forwards	2405

### Notes

#### Relationship

The relationships in this view have been pulled directly from the 2013 OWASP Top 10 document, either from the explicit mapping section, or from weakness types alluded to in the written sections.

## View-1000: Research Concepts

**View ID :** 1000

**Type :** Graph

### Objective

This view is intended to facilitate research into weaknesses, including their inter-dependencies, and can be leveraged to systematically identify theoretical gaps within CWE. It is mainly organized according to abstractions of behaviors instead of how they can be detected, where they appear in code, or when they are introduced in the development life cycle. By design, this view is expected to include every weakness within CWE.

### Audience

#### Academic Researchers

Academic researchers can use the high-level classes that lack a significant number of children to identify potential areas for future research.

#### Vulnerability Analysts

Those who perform vulnerability discovery/analysis use this view to identify related weaknesses that might be leveraged by following relationships between higher-level classes and bases.

#### Assessment Tool Vendors

Assessment vendors often use this view to help identify additional weaknesses that a tool may be able to detect as the relationships are more aligned with a tool's technical capabilities.

### Membership

Nature	Type	ID	Name	Page
HasMember	P	284	Improper Access Control	684
HasMember	P	435	Improper Interaction Between Multiple Correctly-Behaving Entities	1060
HasMember	P	664	Improper Control of a Resource Through its Lifetime	1460
HasMember	P	682	Incorrect Calculation	1504

HasMember	P	703	Improper Check or Handling of Exceptional Conditions	1540
HasMember	P	707	Improper Neutralization	1551
HasMember	P	710	Improper Adherence to Coding Standards	1554

### Notes

**Other**

This view uses a deep hierarchical organization, with more levels of abstraction than other classification schemes. The top-level entries are called Pillars. Where possible, this view uses abstractions that do not consider particular languages, frameworks, technologies, life cycle development phases, frequency of occurrence, or types of resources. It explicitly identifies relationships that form chains and composites, which have not been a formal part of past classification efforts. Chains and composites might help explain why mutual exclusivity is difficult to achieve within security error taxonomies. This view is roughly aligned with MITRE's research into vulnerability theory, especially with respect to behaviors and resources. Ideally, this view will only cover weakness-to-weakness relationships, with minimal overlap and zero categories. It is expected to include at least one parent/child relationship for every weakness within CWE.

## View-1003: Weaknesses for Simplified Mapping of Published Vulnerabilities

View ID : 1003

Type : Graph

### Objective

CWE entries in this view (graph) may be used to categorize potential weaknesses within sources that handle public, third-party vulnerability information, such as the National Vulnerability Database (NVD). By design, this view is incomplete. It is limited to a small number of the most commonly-seen weaknesses, so that it is easier for humans to use. This view uses a shallow hierarchy of two levels in order to simplify the complex navigation of the entire CWE corpus.

## Notes

### Maintenance

This view may change in any upcoming CWE version based on the experience of NVD analysts, public feedback, and the CWE Team - especially with respect to the CWE Top 25 analysis.

### Maintenance

This view has been modified significantly since its last major revision in 2016 (CWE-635 was used before 2016).

## View-1008: Architectural Concepts

**View ID :** 1008

**Type :** Graph

### Objective

This view organizes weaknesses according to common architectural security tactics. It is intended to assist architects in identifying potential mistakes that can be made when designing software.

### Audience

## Software Developers

Architects that are part of a software development team may find this view useful as the weaknesses are organized by known security tactics, aiding the architect in embedding security throughout the design process instead of discovering weaknesses after the software has been built.

## Educators

Educators may use this view as reference material when discussing security by design or architectural weaknesses, and the types of mistakes that can be made.

## Membership

HasMember		1020	Verify Message Integrity	2446

## Notes

### Other

The top level categories in this view represent the individual tactics that are part of a secure-by-design approach to software development. The weaknesses that are members of each category contain information about how each is introduced relative to the software's architecture. Three different modes of introduction are used: Omission - caused by missing a security tactic when it is necessary. Commission - refers to incorrect choice of tactics which could result in undesirable consequences. Realization - appropriate security tactics are adopted but are incorrectly implemented.

## View-1026: Weaknesses in OWASP Top Ten (2017)

**View ID** : 1026**Type** : Graph

## Objective

CWE nodes in this view (graph) are associated with the OWASP Top Ten, as released in 2017.

## Audience

### Software Developers

This view outlines the most important issues as identified by the OWASP Top Ten (2017 version), providing a good starting point for web application developers who want to code more securely.

### Product Customers

This view outlines the most important issues as identified by the OWASP Top Ten (2017 version), providing product customers with a way of asking their software development teams to follow minimum expectations for secure code.

### Educators

Since the OWASP Top Ten covers the most frequently encountered issues, this view can be used by educators as training material for students.

## View-1040: Quality Weaknesses with Indirect Security Impacts

View ID : 1040

Type : Implicit

### Objective

CWE identifiers in this view (slice) are quality issues that only indirectly make it easier to introduce a vulnerability and/or make the vulnerability more difficult to detect or mitigate.

### Audience

#### Assessment Tool Vendors

This view makes it easier for assessment vendors to identify and improve coverage for quality-related weaknesses.

#### Software Developers

This view makes it easier for developers to identify and learn about issues that might make their code more difficult to maintain, perform efficiently or reliably, or secure.

#### Product Vendors

This view makes it easier for software vendors to identify important issues that may make their software more difficult to maintain, perform efficiently or reliably, or secure.

## View-1081: Entries with Maintenance Notes

View ID : 1081

Type : Implicit

### Objective

CWE entries in this view have maintenance notes. Maintenance notes are an indicator that an entry might change significantly in future versions. This view was created due to feedback from the CWE Board and participants in the CWE Compatibility Summit in March 2021.

### Audience

#### Assessment Tool Vendors

Assessment vendors may use this view to anticipate future changes to CWE that will help them to better prepare customers for important changes in CWE.

## View-1128: CISQ Quality Measures (2016)

**View ID :** 1128

**Type :** Graph

### Objective

This view outlines the most important software quality issues as identified by the Consortium for Information & Software Quality (CISQ) Automated Quality Characteristic Measures, released in 2016. These measures are derived from Object Management Group (OMG) standards.

### Audience

#### Software Developers

This view provides a good starting point for anyone involved in software development (including architects, designers, coders, and testers) to ensure that code quality issues are considered during the development process.

#### Product Vendors

This view can help product vendors understand code quality issues and convey an overall status of their software.

#### Assessment Tool Vendors

This view provides a good starting point for assessment tool vendors (e.g., vendors selling static analysis tools) who wish to understand what constitutes software with good code quality, and which quality issues may be of concern.

## View-1133: Weaknesses Addressed by the SEI CERT Oracle Coding Standard for Java

View ID : 1133

Type : Graph

### Objective

CWE entries in this view (graph) are fully or partially eliminated by following the guidance presented in the online wiki that reflects that current rules and recommendations of the SEI CERT Oracle Coding Standard for Java.

### Audience

#### Software Developers

By following the SEI CERT Oracle Coding Standard for Java, developers will be able to fully or partially prevent the weaknesses that are identified in this view. In addition, developers can use a CWE coverage graph to determine which weaknesses are not directly addressed by the standard, which will help identify and resolve remaining gaps in training, tool acquisition, or other approaches for reducing weaknesses.

#### Product Customers

If a software developer claims to be following the SEI CERT Oracle Secure Coding Standard for Java, then customers can search for the weaknesses in this view in order to formulate independent evidence of that claim.

#### Educators

Educators can use this view in multiple ways. For example, if there is a focus on teaching weaknesses, the educator could link them to the relevant Secure Coding Standard.

## View-1194: Hardware Design

View ID : 1194

Type : Graph

## Objective

This view organizes weaknesses around concepts that are frequently used or encountered in hardware design. Accordingly, this view can align closely with the perspectives of designers, manufacturers, educators, and assessment vendors. It provides a variety of categories that are intended to simplify navigation, browsing, and mapping.

## Audience

### Hardware Designers

Hardware Designers use this view to better understand potential mistakes that can be made in specific areas of their IP design. The use of concepts with which hardware designers are familiar makes it easier to navigate.

### Educators

Educators use this view to teach future professionals about the types of mistakes that are commonly made in hardware design.

## Notes

### Other

The top level categories in this view represent commonly understood areas/terms within hardware design, and are meant to aid the user in identifying potential related weaknesses. It is possible for the same weakness to exist within multiple different categories.

### Other

This view attempts to present weaknesses in a simple and intuitive way. As such it targets a single level of abstraction. It is important to realize that not every CWE will be represented in this view. High-level class weaknesses and low-level variant weaknesses are mostly ignored. However, by exploring the weaknesses that are included, and following the defined relationships, one can find these higher and lower level weaknesses.

## View-1200: Weaknesses in the 2019 CWE Top 25 Most Dangerous Software Errors

**View ID :** 1200

**Type :** Graph

### Objective

CWE entries in this view are listed in the 2019 CWE Top 25 Most Dangerous Software Errors.

### Audience

#### Software Developers

By following the Top 25, developers will be able to significantly reduce the number of weaknesses that occur in their software.

#### Product Customers

If a software developer claims to be following the Top 25, then customers can use the weaknesses in this view in order to formulate independent evidence of that claim.

#### Educators

Educators can use this view in multiple ways. For example, if there is a focus on teaching weaknesses, the educator could focus on the Top 25.

## View-1337: Weaknesses in the 2021 CWE Top 25 Most Dangerous Software Weaknesses

View ID : 1337

Type : Graph

### Objective

CWE entries in this view are listed in the 2021 CWE Top 25 Most Dangerous Software Weaknesses.

### Audience

#### Software Developers

By following the CWE Top 25, developers are able to significantly reduce the number of weaknesses that occur in their software.

#### Product Customers

Customers can use the weaknesses in this view in order to formulate independent evidence of a claim by a product vendor to have eliminated / mitigated the most dangerous weaknesses.

#### Educators

Educators can use this view to focus curriculum and teachings on the most dangerous weaknesses.

### Membership

## View-1340: CISQ Data Protection Measures

View ID : 1340

Type : Graph

## Objective

This view outlines the SMM representation of the Automated Source Code Data Protection Measurement specifications, as identified by the Consortium for Information & Software Quality (CISQ) Working Group.

## Audience

### Software Developers

This view provides a good starting point for anyone involved in software development (including architects, designers, coders, and testers) to ensure that code quality issues are considered during the development process.

### Product Vendors

This view can help product vendors understand code quality issues and convey an overall status of their software.

### Assessment Tool Vendors

This view provides a good starting point for assessment tool vendors (e.g., vendors selling static analysis tools) who wish to understand what constitutes software with good code quality, and which quality issues may be of concern.

## View-1343: Weaknesses in the 2021 CWE Most Important Hardware Weaknesses List

View ID : 1343

Type : Explicit

### Objective

CWE entries in this view are listed in the 2021 CWE Most Important Hardware Weaknesses List, as determined by the Hardware CWE Special Interest Group (HW CWE SIG).

### Audience

#### Hardware Designers

By following this list, hardware designers and implementers are able to significantly reduce the number of weaknesses that occur in their products.

#### Product Customers

Customers can use the weaknesses in this view in order to formulate independent evidence of a claim by a product vendor to have eliminated / mitigated the most dangerous weaknesses.

#### Educators

Educators can use this view to focus curriculum on the most important hardware weaknesses.

## View-1344: Weaknesses in OWASP Top Ten (2021)

**View ID :** 1344

**Type :** Graph

### Objective

CWE entries in this view (graph) are associated with the OWASP Top Ten, as released in 2021.

### Audience

#### Software Developers

This view outlines the most important issues as identified by the OWASP Top Ten (2021 version), providing a good starting point for web application developers who want to code more securely.

#### Product Customers

This view outlines the most important issues as identified by the OWASP Top Ten (2021 version), providing product customers with a way of asking their software development teams to follow minimum expectations for secure code.

## Educators

Since the OWASP Top Ten covers the most frequently encountered issues, this view can be used by educators as training material for students.

## Membership

## Notes

### Maintenance

As of CWE 4.6, the relationships in this view were pulled directly from the CWE mappings cited in the 2021 OWASP Top Ten. These mappings include categories and high-level weaknesses. One mapping to a deprecated entry was removed. The CWE Program will work with OWASP to improve these mappings, possibly requiring modifications to CWE itself.

## View-1358: Weaknesses in SEI ETF Categories of Security Vulnerabilities in ICS

**View ID** : 1358

**Type** : Graph

### Objective

CWE entries in this view (graph) are associated with the Categories of Security Vulnerabilities in ICS, as published by the Securing Energy Infrastructure Executive Task Force (SEI ETF) in March 2022. Weaknesses and categories in this view are focused on issues that affect ICS (Industrial Control Systems) but have not been traditionally covered by CWE in the past due to its earlier emphasis on enterprise IT software. Note: weaknesses in this view are based on "Nearest IT Neighbor" recommendations and other suggestions by the CWE team. These relationships are likely to change in future CWE versions.

### Audience

#### Hardware Designers

ICS/OT hardware designers can use this view to ensure a minimal set of weaknesses that should be avoided or mitigated during the design process.

#### Product Vendors

Product vendors can use this view to ensure that all aspects of the product lifecycle address these weaknesses.

#### Assessment Tool Vendors

Assessment tool vendors that help to assess potential weaknesses, or avoid them, can use this view to improve their tool's coverage to address more weaknesses.

#### Academic Researchers

Academic researchers can use this view to identify potential research opportunities that could produce better methods for detection or avoidance of weaknesses in ICS/OT products.

### Membership

Nature	Type	ID	Name	Page
HasMember		1359	ICS Communications	2509
HasMember		1360	ICS Dependencies (& Architecture)	2510
HasMember		1361	ICS Supply Chain	2511
HasMember		1362	ICS Engineering (Constructions/Deployment)	2511
HasMember		1363	ICS Operations (& Maintenance)	2512

### Notes

#### Relationship

Relationships in this view are not authoritative and subject to change. See Maintenance notes.

#### Maintenance

This view was created in CWE 4.7 to facilitate and illuminate discussion about weaknesses in ICS with [REF-1248] as a starting point. After the release of CWE 4.9 in October 2022, this has been under active review by members of the "Boosting CWE" subgroup of the CWE-CAPEC ICS/OT Special Interest Group (SIG). Relationships are still subject to change. In addition, there may

be some issues in [REF-1248] that are outside of the current scope of CWE, which will require consultation with many CWE stakeholders to resolve.

## View-1400: Comprehensive Categorization for Software Assurance Trends

**View ID** : 1400

**Type** : Graph

### Objective

This view organizes weaknesses around categories that are of interest to large-scale software assurance research to support the elimination of weaknesses using tactics such as secure language development. It is also intended to help tracking weakness trends in publicly disclosed vulnerability data. This view is comprehensive in that every weakness must be contained in it, unlike most other views that only use a subset of weaknesses. This view is structured with categories at the top level, with a second level of only weaknesses. Relationships among the weaknesses presented under the research view (CWE-1000) are not shown.

Each weakness is added to only one category. All categories are mutually exclusive; that is, no weakness can be a member of more than one category. While weaknesses defy strict categorization along only one characteristic, the forced bucketing into a single category can simplify certain kinds of analysis.

Note that the size of each category can vary widely because (1) CWE is not as well fleshed-out in some areas compared to others; (2) abstraction of the CWEs in the grouping might go down to Variant level for some buckets, versus others.

## Audience

### Academic Researchers

Researchers can use this view to evaluate the breadth and depth of software assurance with respect to mitigating and managing weaknesses before they become vulnerabilities.

## Membership

HasMember	C	1416	Comprehensive Categorization: Resource Lifecycle Management	2557
HasMember	C	1417	Comprehensive Categorization: Sensitive Information Exposure	2560
HasMember	C	1418	Comprehensive Categorization: Violation of Secure Design Principles	2561

## Notes

### Relationship

This view is different than the software development view (CWE-699) because this view is expected to include all weaknesses regardless of abstraction, while view 699 uses a largely-fixed Base level of abstraction related only to software weaknesses. It is different from the Research view (CWE-1000) because while comprehensive for all weaknesses, the view uses a deep hierarchical structure and excludes categories.

## View-1424: Weaknesses Addressed by ISA/IEC 62443 Requirements

View ID : 1424

Type : Implicit

### Objective

This view (slice) covers weaknesses that are addressed by following requirements in the ISA/IEC 62443 series of standards for industrial automation and control systems (IACS). Members of the CWE ICS/OT SIG analyzed a set of CWEs and mapped them to specific requirements covered by ISA/IEC 62443. These mappings are recorded in Taxonomy\_Mapping elements.

### Filter

HasMember	<input checked="" type="checkbox"/>	1424	Weaknesses Addressed by ISA/IEC 62443 Requirements	2612

### Notes

#### Maintenance

The Taxonomy\_Mappings to ISA/IEC 62443 were added between CWE 4.9 and CWE 4.14, but some mappings are still under review and might change in future CWE versions. These draft mappings were performed by members of the "Mapping CWE to 62443" subgroup of the CWE ICS/OT Special Interest Group (SIG).

## Graph View: CWE-629: Weaknesses in OWASP Top Ten (2007)

- C** CWE-712: OWASP Top Ten 2007 Category A1 - Cross Site Scripting (XSS) (p.2342)
  - B** CWE-79: Improper Neutralization of Input During Web Page Generation ('Cross-site Scripting') (p.166)
- C** CWE-713: OWASP Top Ten 2007 Category A2 - Injection Flaws (p.2342)
  - C** CWE-77: Improper Neutralization of Special Elements used in a Command ('Command Injection') (p.146)
  - B** CWE-89: Improper Neutralization of Special Elements used in an SQL Command ('SQL Injection') (p.204)
  - B** CWE-90: Improper Neutralization of Special Elements used in an LDAP Query ('LDAP Injection') (p.215)
  - B** CWE-91: XML Injection (aka Blind XPath Injection) (p.218)
  - B** CWE-93: Improper Neutralization of CRLF Sequences ('CRLF Injection') (p.220)
- C** CWE-714: OWASP Top Ten 2007 Category A3 - Malicious File Execution (p.2343)
  - B** CWE-434: Unrestricted Upload of File with Dangerous Type (p.1052)
  - B** CWE-78: Improper Neutralization of Special Elements used in an OS Command ('OS Command Injection') (p.153)
  - V** CWE-95: Improper Neutralization of Directives in Dynamically Evaluated Code ('Eval Injection') (p.230)
  - V** CWE-98: Improper Control of Filename for Include/Require Statement in PHP Program ('PHP Remote File Inclusion') (p.239)
- C** CWE-715: OWASP Top Ten 2007 Category A4 - Insecure Direct Object Reference (p.2343)
  - B** CWE-22: Improper Limitation of a Pathname to a Restricted Directory ('Path Traversal') (p.33)
  - B** CWE-472: External Control of Assumed-Immutable Web Parameter (p.1128)
  - B** CWE-639: Authorization Bypass Through User-Controlled Key (p.1412)
- C** CWE-716: OWASP Top Ten 2007 Category A5 - Cross Site Request Forgery (CSRF) (p.2343)
  - B** CWE-352: Cross-Site Request Forgery (CSRF) (p.872)
- C** CWE-717: OWASP Top Ten 2007 Category A6 - Information Leakage and Improper Error Handling (p.2344)
  - C** CWE-200: Exposure of Sensitive Information to an Unauthorized Actor (p.509)
  - B** CWE-203: Observable Discrepancy (p.522)
  - B** CWE-209: Generation of Error Message Containing Sensitive Information (p.537)
  - B** CWE-215: Insertion of Sensitive Information Into Debugging Code (p.555)
- C** CWE-718: OWASP Top Ten 2007 Category A7 - Broken Authentication and Session Management (p.2344)
  - C** CWE-287: Improper Authentication (p.696)
  - B** CWE-301: Reflection Attack in an Authentication Protocol (p.737)
  - C** CWE-522: Insufficiently Protected Credentials (p.1231)
- C** CWE-719: OWASP Top Ten 2007 Category A8 - Insecure Cryptographic Storage (p.2345)
  - C** CWE-311: Missing Encryption of Sensitive Data (p.761)
  - V** CWE-321: Use of Hard-coded Cryptographic Key (p.789)
  - B** CWE-325: Missing Cryptographic Step (p.798)
  - C** CWE-326: Inadequate Encryption Strength (p.800)
- C** CWE-720: OWASP Top Ten 2007 Category A9 - Insecure Communications (p.2345)
  - C** CWE-311: Missing Encryption of Sensitive Data (p.761)
  - V** CWE-321: Use of Hard-coded Cryptographic Key (p.789)
  - B** CWE-325: Missing Cryptographic Step (p.798)
  - C** CWE-326: Inadequate Encryption Strength (p.800)
- C** CWE-721: OWASP Top Ten 2007 Category A10 - Failure to Restrict URL Access (p.2345)
  - C** CWE-285: Improper Authorization (p.688)
  - B** CWE-288: Authentication Bypass Using an Alternate Path or Channel (p.704)
  - B** CWE-425: Direct Request ('Forced Browsing') (p.1029)

## Graph View: **CWE-631: DEPRECATED: Resource-specific Weaknesses**

## Graph View: CWE-699: Software Development

- C** CWE-1228: API / Function Errors (*p.2494*)
  - B** CWE-242: Use of Inherently Dangerous Function (*p.590*)
  - B** CWE-474: Use of Function with Inconsistent Implementations (*p.1133*)
  - B** CWE-475: Undefined Behavior for Input to API (*p.1135*)
  - B** CWE-477: Use of Obsolete Function (*p.1143*)
  - B** CWE-676: Use of Potentially Dangerous Function (*p.1494*)
  - B** CWE-695: Use of Low-Level Functionality (*p.1529*)
  - B** CWE-749: Exposed Dangerous Method or Function (*p.1569*)
- C** CWE-1210: Audit / Logging Errors (*p.2487*)
  - B** CWE-117: Improper Output Neutralization for Logs (*p.291*)
  - B** CWE-222: Truncation of Security-relevant Information (*p.562*)
  - B** CWE-223: Omission of Security-relevant Information (*p.563*)
  - B** CWE-224: Obscured Security-relevant Information by Alternate Name (*p.565*)
  - B** CWE-778: Insufficient Logging (*p.1643*)
  - B** CWE-779: Logging of Excessive Data (*p.1647*)
- C** CWE-1211: Authentication Errors (*p.2487*)
  - B** CWE-289: Authentication Bypass by Alternate Name (*p.707*)
  - B** CWE-290: Authentication Bypass by Spoofing (*p.709*)
  - B** CWE-294: Authentication Bypass by Capture-replay (*p.716*)
  - B** CWE-295: Improper Certificate Validation (*p.718*)
  - B** CWE-301: Reflection Attack in an Authentication Protocol (*p.737*)
  - B** CWE-303: Incorrect Implementation of Authentication Algorithm (*p.741*)
  - B** CWE-305: Authentication Bypass by Primary Weakness (*p.744*)
  - B** CWE-306: Missing Authentication for Critical Function (*p.745*)
  - B** CWE-307: Improper Restriction of Excessive Authentication Attempts (*p.751*)
  - B** CWE-308: Use of Single-factor Authentication (*p.756*)
  - B** CWE-309: Use of Password System for Primary Authentication (*p.758*)
  - B** CWE-322: Key Exchange without Entity Authentication (*p.792*)
  - B** CWE-603: Use of Client-Side Authentication (*p.1359*)
  - B** CWE-645: Overly Restrictive Account Lockout Mechanism (*p.1429*)
  - B** CWE-804: Guessable CAPTCHA (*p.1706*)
  - B** CWE-836: Use of Password Hash Instead of Password for Authentication (*p.1766*)
- C** CWE-1212: Authorization Errors (*p.2488*)
  - B** CWE-425: Direct Request ('Forced Browsing') (*p.1029*)
  - B** CWE-551: Incorrect Behavior Order: Authorization Before Parsing and Canonicalization (*p.1269*)
  - B** CWE-552: Files or Directories Accessible to External Parties (*p.1270*)
  - B** CWE-639: Authorization Bypass Through User-Controlled Key (*p.1412*)
  - C** CWE-653: Improper Isolation or Compartmentalization (*p.1442*)
  - B** CWE-939: Improper Authorization in Handler for Custom URL Scheme (*p.1845*)
  - B** CWE-842: Placement of User into Incorrect Group (*p.1780*)
  - B** CWE-1220: Insufficient Granularity of Access Control (*p.1997*)
  - B** CWE-1230: Exposure of Sensitive Information Through Metadata (*p.2012*)
- C** CWE-1006: Bad Coding Practices (*p.2434*)
  - B** CWE-358: Improperly Implemented Security Check for Standard (*p.885*)
  - B** CWE-360: Trust of System Event Data (*p.891*)
  - B** CWE-478: Missing Default Case in Multiple Condition Expression (*p.1146*)
  - B** CWE-487: Reliance on Package-level Scope (*p.1172*)
  - B** CWE-489: Active Debug Code (*p.1175*)
  - B** CWE-547: Use of Hard-coded, Security-relevant Constants (*p.1264*)
  - B** CWE-561: Dead Code (*p.1280*)
  - B** CWE-562: Return of Stack Variable Address (*p.1283*)
  - B** CWE-563: Assignment to Variable without Use (*p.1285*)
  - V** CWE-581: Object Model Violation: Just One of Equals and Hashcode Defined (*p.1318*)

- B CWE-586: Explicit Call to Finalize() (p.1325)
- V CWE-605: Multiple Binds to the Same Port (p.1361)
- B CWE-628: Function Call with Incorrectly Specified Arguments (p.1403)
- B CWE-654: Reliance on a Single Factor in a Security Decision (p.1444)
- C CWE-656: Reliance on Security Through Obscurity (p.1449)
- B CWE-694: Use of Multiple Resources with Duplicate Identifier (p.1528)
- B CWE-807: Reliance on Untrusted Inputs in a Security Decision (p.1719)
- B CWE-1041: Use of Redundant Code (p.1880)
- B CWE-1043: Data Element Aggregating an Excessively Large Number of Non-Primitive Elements (p.1883)
- B CWE-1044: Architecture with Number of Horizontal Layers Outside of Expected Range (p.1884)
- B CWE-1045: Parent Class with a Virtual Destructor and a Child Class without a Virtual Destructor (p.1885)
- B CWE-1046: Creation of Immutable Text Using String Concatenation (p.1886)
- B CWE-1048: Invokable Control Element with Large Number of Outward Calls (p.1888)
- B CWE-1049: Excessive Data Query Operations in a Large Data Table (p.1889)
- B CWE-1050: Excessive Platform Resource Consumption within a Loop (p.1890)
- B CWE-1063: Creation of Class Instance within a Static Code Block (p.1906)
- B CWE-1065: Runtime Resource Management Control Element in a Component Built to Run on Application Servers (p.1908)
- B CWE-1066: Missing Serialization Control Element (p.1909)
- B CWE-1067: Excessive Execution of Sequential Searches of Data Resource (p.1910)
- B CWE-1070: Serializable Data Element Containing non-Serializable Item Elements (p.1914)
- B CWE-1071: Empty Code Block (p.1915)
- B CWE-1072: Data Resource Access without Use of Connection Pooling (p.1917)
- B CWE-1073: Non-SQL Invokable Control Element with Excessive Number of Data Resource Accesses (p.1918)
- B CWE-1079: Parent Class without Virtual Destructor Method (p.1924)
- B CWE-1082: Class Instance Self Destruction Control Element (p.1926)
- B CWE-1084: Invokable Control Element with Excessive File or Data Access Operations (p.1929)
- B CWE-1085: Invokable Control Element with Excessive Volume of Commented-out Code (p.1930)
- B CWE-1087: Class with Virtual Method without a Virtual Destructor (p.1932)
- B CWE-1089: Large Data Table with Excessive Number of Indices (p.1934)
- B CWE-1092: Use of Same Invokable Control Element in Multiple Architectural Layers (p.1937)
- B CWE-1094: Excessive Index Range Scan for a Data Resource (p.1939)
- B CWE-1097: Persistent Storable Data Element without Associated Comparison Control Element (p.1942)
- B CWE-1098: Data Element containing Pointer Item without Proper Copy Control Element (p.1943)
- B CWE-1099: Inconsistent Naming Conventions for Identifiers (p.1944)
- B CWE-1101: Reliance on Runtime Component in Generated Code (p.1946)
- B CWE-1102: Reliance on Machine-Dependent Data Representation (p.1947)
- B CWE-1103: Use of Platform-Dependent Third Party Components (p.1948)
- B CWE-1104: Use of Unmaintained Third Party Components (p.1949)
- B CWE-1106: Insufficient Use of Symbolic Constants (p.1951)
- B CWE-1107: Insufficient Isolation of Symbolic Constant Definitions (p.1952)
- B CWE-1108: Excessive Reliance on Global Variables (p.1953)
- B CWE-1109: Use of Same Variable for Multiple Purposes (p.1954)
- B CWE-1113: Inappropriate Comment Style (p.1958)
- B CWE-1114: Inappropriate Whitespace Style (p.1958)
- B CWE-1115: Source Code Element without Standard Prologue (p.1959)
- B CWE-1116: Inaccurate Comments (p.1960)
- B CWE-1117: Callable with Insufficient Behavioral Summary (p.1962)
- B CWE-1126: Declaration of Variable with Unnecessarily Wide Scope (p.1971)
- B CWE-1127: Compilation with Insufficient Warnings or Errors (p.1971)
- B CWE-1235: Incorrect Use of Autoboxing and Unboxing for Performance Critical Operations (p.2024)

- C** CWE-438: Behavioral Problems (*p.2338*)
  - B** CWE-115: Misinterpretation of Input (*p.283*)
  - B** CWE-179: Incorrect Behavior Order: Early Validation (*p.451*)
  - B** CWE-408: Incorrect Behavior Order: Early Amplification (*p.999*)
  - B** CWE-437: Incomplete Model of Endpoint Features (*p.1064*)
  - B** CWE-439: Behavioral Change in New Version or Environment (*p.1065*)
  - B** CWE-440: Expected Behavior Violation (*p.1066*)
  - B** CWE-444: Inconsistent Interpretation of HTTP Requests ('HTTP Request/Response Smuggling') (*p.1072*)
  - B** CWE-480: Use of Incorrect Operator (*p.1154*)
  - B** CWE-483: Incorrect Block Delimitation (*p.1164*)
  - B** CWE-484: Omitted Break Statement in Switch (*p.1166*)
  - B** CWE-551: Incorrect Behavior Order: Authorization Before Parsing and Canonicalization (*p.1269*)
  - B** CWE-698: Execution After Redirect (EAR) (*p.1538*)
  - B** CWE-733: Compiler Optimization Removal or Modification of Security-critical Code (*p.1567*)
  - B** CWE-783: Operator Precedence Logic Error (*p.1655*)
  - B** CWE-835: Loop with Unreachable Exit Condition ('Infinite Loop') (*p.1762*)
  - B** CWE-837: Improper Enforcement of a Single, Unique Action (*p.1767*)
  - B** CWE-841: Improper Enforcement of Behavioral Workflow (*p.1777*)
  - B** CWE-1025: Comparison Using Wrong Factors (*p.1873*)
  - B** CWE-1037: Processor Optimization Removal or Modification of Security-critical Code (*p.1875*)
- C** CWE-840: Business Logic Errors (*p.2372*)
  - B** CWE-283: Unverified Ownership (*p.682*)
  - B** CWE-639: Authorization Bypass Through User-Controlled Key (*p.1412*)
  - B** CWE-640: Weak Password Recovery Mechanism for Forgotten Password (*p.1415*)
  - B** CWE-708: Incorrect Ownership Assignment (*p.1553*)
  - B** CWE-770: Allocation of Resources Without Limits or Throttling (*p.1618*)
  - B** CWE-826: Premature Release of Resource During Expected Lifetime (*p.1739*)
  - B** CWE-837: Improper Enforcement of a Single, Unique Action (*p.1767*)
  - B** CWE-841: Improper Enforcement of Behavioral Workflow (*p.1777*)
- C** CWE-417: Communication Channel Errors (*p.2337*)
  - B** CWE-322: Key Exchange without Entity Authentication (*p.792*)
  - C** CWE-346: Origin Validation Error (*p.857*)
  - B** CWE-385: Covert Timing Channel (*p.944*)
  - B** CWE-419: Unprotected Primary Channel (*p.1021*)
  - B** CWE-420: Unprotected Alternate Channel (*p.1022*)
  - B** CWE-425: Direct Request ('Forced Browsing') (*p.1029*)
  - B** CWE-515: Covert Storage Channel (*p.1225*)
  - B** CWE-918: Server-Side Request Forgery (SSRF) (*p.1825*)
  - B** CWE-924: Improper Enforcement of Message Integrity During Transmission in a Communication Channel (*p.1835*)
  - B** CWE-940: Improper Verification of Source of a Communication Channel (*p.1847*)
  - B** CWE-941: Incorrectly Specified Destination in a Communication Channel (*p.1850*)
  - B** CWE-1327: Binding to an Unrestricted IP Address (*p.2223*)
- C** CWE-1226: Complexity Issues (*p.2493*)
  - B** CWE-1043: Data Element Aggregating an Excessively Large Number of Non-Primitive Elements (*p.1883*)
  - B** CWE-1047: Modules with Circular Dependencies (*p.1887*)
  - B** CWE-1055: Multiple Inheritance from Concrete Classes (*p.1895*)
  - B** CWE-1056: Invokable Control Element with Variadic Parameters (*p.1896*)
  - B** CWE-1060: Excessive Number of Inefficient Server-Side Data Accesses (*p.1902*)
  - B** CWE-1064: Invokable Control Element with Signature Containing an Excessive Number of Parameters (*p.1907*)
  - B** CWE-1074: Class with Excessively Deep Inheritance (*p.1919*)
  - B** CWE-1075: Unconditional Control Flow Transfer outside of Switch Block (*p.1920*)

- B CWE-1080: Source Code File with Excessive Number of Lines of Code (p.1925)
- B CWE-1086: Class with Excessive Number of Child Classes (p.1931)
- B CWE-1095: Loop Condition Value Update within the Loop (p.1940)
- B CWE-1119: Excessive Use of Unconditional Branching (p.1964)
- B CWE-1121: Excessive McCabe Cyclomatic Complexity (p.1966)
- B CWE-1122: Excessive Halstead Complexity (p.1967)
- B CWE-1123: Excessive Use of Self-Modifying Code (p.1968)
- B CWE-1124: Excessively Deep Nesting (p.1969)
- B CWE-1125: Excessive Attack Surface (p.1970)
- B CWE-1333: Inefficient Regular Expression Complexity (p.2239)
- C CWE-557: Concurrency Issues (p.2341)
  - B CWE-364: Signal Handler Race Condition (p.903)
  - B CWE-366: Race Condition within a Thread (p.908)
  - B CWE-367: Time-of-check Time-of-use (TOCTOU) Race Condition (p.910)
  - B CWE-368: Context Switching Race Condition (p.916)
  - B CWE-386: Symbolic Name not Mapping to Correct Object (p.946)
  - B CWE-421: Race Condition During Access to Alternate Channel (p.1025)
  - B CWE-663: Use of a Non-reentrant Function in a Concurrent Context (p.1458)
  - B CWE-820: Missing Synchronization (p.1725)
  - B CWE-821: Incorrect Synchronization (p.1727)
  - B CWE-1058: Invokable Control Element in Multi-Thread Context with non-Final Static Storable or Member Element (p.1898)
  - B CWE-1322: Use of Blocking Code in Single-threaded, Non-blocking Context (p.2216)
- C CWE-255: Credentials Management Errors (p.2327)
  - B CWE-256: Plaintext Storage of a Password (p.619)
  - B CWE-257: Storing Passwords in a Recoverable Format (p.622)
  - B CWE-260: Password in Configuration File (p.633)
  - B CWE-261: Weak Encoding for Password (p.635)
  - B CWE-262: Not Using Password Aging (p.637)
  - B CWE-263: Password Aging with Long Expiration (p.640)
  - B CWE-324: Use of a Key Past its Expiration Date (p.796)
  - B CWE-521: Weak Password Requirements (p.1228)
  - B CWE-523: Unprotected Transport of Credentials (p.1235)
  - B CWE-549: Missing Password Field Masking (p.1267)
  - B CWE-620: Unverified Password Change (p.1389)
  - B CWE-640: Weak Password Recovery Mechanism for Forgotten Password (p.1415)
  - B CWE-798: Use of Hard-coded Credentials (p.1695)
  - B CWE-916: Use of Password Hash With Insufficient Computational Effort (p.1818)
  - B CWE-1392: Use of Default Credentials (p.2280)
- C CWE-310: Cryptographic Issues (p.2330)
  - B CWE-261: Weak Encoding for Password (p.635)
  - B CWE-324: Use of a Key Past its Expiration Date (p.796)
  - B CWE-325: Missing Cryptographic Step (p.798)
  - B CWE-328: Use of Weak Hash (p.810)
  - B CWE-331: Insufficient Entropy (p.825)
  - B CWE-334: Small Space of Random Values (p.831)
  - B CWE-335: Incorrect Usage of Seeds in Pseudo-Random Number Generator (PRNG) (p.833)
  - B CWE-338: Use of Cryptographically Weak Pseudo-Random Number Generator (PRNG) (p.841)
  - B CWE-347: Improper Verification of Cryptographic Signature (p.861)
  - B CWE-916: Use of Password Hash With Insufficient Computational Effort (p.1818)
  - B CWE-1204: Generation of Weak Initialization Vector (IV) (p.1992)
  - B CWE-1240: Use of a Cryptographic Primitive with a Risky Implementation (p.2032)
- C CWE-320: Key Management Errors (p.2331)
  - B CWE-322: Key Exchange without Entity Authentication (p.792)

- B CWE-323: Reusing a Nonce, Key Pair in Encryption (p.794)
- B CWE-324: Use of a Key Past its Expiration Date (p.796)
- B CWE-798: Use of Hard-coded Credentials (p.1695)
- C CWE-1214: Data Integrity Issues (p.2489)
- B CWE-322: Key Exchange without Entity Authentication (p.792)
- C CWE-346: Origin Validation Error (p.857)
- B CWE-347: Improper Verification of Cryptographic Signature (p.861)
- B CWE-348: Use of Less Trusted Source (p.863)
- B CWE-349: Acceptance of Extraneous Untrusted Data With Trusted Data (p.865)
- B CWE-351: Insufficient Type Distinction (p.870)
- B CWE-353: Missing Support for Integrity Check (p.878)
- B CWE-354: Improper Validation of Integrity Check Value (p.880)
- B CWE-494: Download of Code Without Integrity Check (p.1189)
- B CWE-565: Reliance on Cookies without Validation and Integrity Checking (p.1289)
- B CWE-649: Reliance on Obfuscation or Encryption of Security-Relevant Inputs without Integrity Checking (p.1435)
- B CWE-829: Inclusion of Functionality from Untrusted Control Sphere (p.1746)
- B CWE-924: Improper Enforcement of Message Integrity During Transmission in a Communication Channel (p.1835)
- C CWE-19: Data Processing Errors (p.2321)
- B CWE-130: Improper Handling of Length Parameter Inconsistency (p.354)
- B CWE-166: Improper Handling of Missing Special Element (p.426)
- B CWE-167: Improper Handling of Additional Special Element (p.428)
- B CWE-168: Improper Handling of Inconsistent Special Elements (p.430)
- B CWE-178: Improper Handling of Case Sensitivity (p.448)
- B CWE-182: Collapse of Data into Unsafe Value (p.459)
- B CWE-186: Overly Restrictive Regular Expression (p.469)
- B CWE-229: Improper Handling of Values (p.574)
- B CWE-233: Improper Handling of Parameters (p.578)
- B CWE-237: Improper Handling of Structural Elements (p.584)
- B CWE-241: Improper Handling of Unexpected Data Type (p.588)
- B CWE-409: Improper Handling of Highly Compressed Data (Data Amplification) (p.1001)
- B CWE-472: External Control of Assumed-Immutable Web Parameter (p.1128)
- B CWE-601: URL Redirection to Untrusted Site ('Open Redirect') (p.1350)
- B CWE-611: Improper Restriction of XML External Entity Reference (p.1372)
- B CWE-624: Executable Regular Expression Error (p.1395)
- B CWE-625: Permissive Regular Expression (p.1397)
- B CWE-776: Improper Restriction of Recursive Entity References in DTDs ('XML Entity Expansion') (p.1638)
- B CWE-1024: Comparison of Incompatible Types (p.1872)
- C CWE-137: Data Neutralization Issues (p.2323)
- B CWE-76: Improper Neutralization of Equivalent Special Elements (p.145)
- B CWE-78: Improper Neutralization of Special Elements used in an OS Command ('OS Command Injection') (p.153)
- B CWE-79: Improper Neutralization of Input During Web Page Generation ('Cross-site Scripting') (p.166)
- B CWE-88: Improper Neutralization of Argument Delimiters in a Command ('Argument Injection') (p.196)
- B CWE-89: Improper Neutralization of Special Elements used in an SQL Command ('SQL Injection') (p.204)
- B CWE-90: Improper Neutralization of Special Elements used in an LDAP Query ('LDAP Injection') (p.215)
- B CWE-91: XML Injection (aka Blind XPath Injection) (p.218)
- B CWE-93: Improper Neutralization of CRLF Sequences ('CRLF Injection') (p.220)
- B CWE-94: Improper Control of Generation of Code ('Code Injection') (p.222)
- B CWE-117: Improper Output Neutralization for Logs (p.291)
- B CWE-140: Improper Neutralization of Delimiters (p.379)

- B CWE-170: Improper Null Termination (p.431)
- B CWE-463: Deletion of Data Structure Sentinel (p.1110)
- B CWE-464: Addition of Data Structure Sentinel (p.1112)
- B CWE-641: Improper Restriction of Names for Files and Other Resources (p.1417)
- B CWE-694: Use of Multiple Resources with Duplicate Identifier (p.1528)
- B CWE-791: Incomplete Filtering of Special Elements (p.1685)
- B CWE-838: Inappropriate Encoding for Output Context (p.1769)
- B CWE-917: Improper Neutralization of Special Elements used in an Expression Language Statement ('Expression Language Injection') (p.1823)
- B CWE-1236: Improper Neutralization of Formula Elements in a CSV File (p.2027)
- C CWE-1225: Documentation Issues (p.2492)
  - B CWE-1053: Missing Documentation for Design (p.1893)
  - B CWE-1068: Inconsistency Between Implementation and Documented Design (p.1911)
  - B CWE-1110: Incomplete Design Documentation (p.1955)
  - B CWE-1111: Incomplete I/O Documentation (p.1956)
  - B CWE-1112: Incomplete Documentation of Program Execution (p.1957)
  - B CWE-1118: Insufficient Documentation of Error Handling Techniques (p.1963)
- C CWE-1219: File Handling Issues (p.2492)
  - B CWE-22: Improper Limitation of a Pathname to a Restricted Directory ('Path Traversal') (p.33)
  - B CWE-41: Improper Resolution of Path Equivalence (p.87)
  - B CWE-59: Improper Link Resolution Before File Access ('Link Following') (p.112)
  - B CWE-66: Improper Handling of File Names that Identify Virtual Resources (p.125)
  - B CWE-378: Creation of Temporary File With Insecure Permissions (p.932)
  - B CWE-379: Creation of Temporary File in Directory with Insecure Permissions (p.934)
  - B CWE-426: Untrusted Search Path (p.1032)
  - B CWE-427: Uncontrolled Search Path Element (p.1037)
  - B CWE-428: Unquoted Search Path or Element (p.1044)
- C CWE-1227: Encapsulation Issues (p.2493)
  - B CWE-1054: Invocation of a Control Element at an Unnecessarily Deep Horizontal Layer (p.1894)
  - B CWE-1057: Data Access Operations Outside of Expected Data Manager Component (p.1897)
  - B CWE-1062: Parent Class with References to Child Class (p.1905)
  - B CWE-1083: Data Access from Outside Expected Data Manager Component (p.1927)
  - B CWE-1090: Method Containing Access of a Member Element from Another Class (p.1935)
  - B CWE-1100: Insufficient Isolation of System-Dependent Functions (p.1945)
  - B CWE-1105: Insufficient Encapsulation of Machine-Dependent Functionality (p.1950)
- C CWE-389: Error Conditions, Return Values, Status Codes (p.2334)
  - B CWE-209: Generation of Error Message Containing Sensitive Information (p.537)
  - B CWE-248: Uncaught Exception (p.600)
  - B CWE-252: Unchecked Return Value (p.610)
  - B CWE-253: Incorrect Check of Function Return Value (p.617)
  - B CWE-390: Detection of Error Condition Without Action (p.948)
  - B CWE-391: Unchecked Error Condition (p.953)
  - B CWE-392: Missing Report of Error Condition (p.956)
  - B CWE-393: Return of Wrong Status Code (p.958)
  - B CWE-394: Unexpected Status Code or Return Value (p.960)
  - B CWE-395: Use of NullPointerException Catch to Detect NULL Pointer Dereference (p.961)
  - B CWE-396: Declaration of Catch for Generic Exception (p.963)
  - B CWE-397: Declaration of Throws for Generic Exception (p.965)
  - B CWE-544: Missing Standardized Error Handling Mechanism (p.1262)
  - B CWE-584: Return Inside Finally Block (p.1322)
  - B CWE-617: Reachable Assertion (p.1383)
  - B CWE-756: Missing Custom Error Page (p.1584)
- C CWE-569: Expression Issues (p.2342)
  - B CWE-480: Use of Incorrect Operator (p.1154)

- B CWE-570: Expression is Always False (p.1297)
- B CWE-571: Expression is Always True (p.1300)
- B CWE-783: Operator Precedence Logic Error (p.1655)
- C CWE-429: Handler Errors (p.2338)
  - B CWE-430: Deployment of Wrong Handler (p.1046)
  - B CWE-431: Missing Handler (p.1048)
  - B CWE-434: Unrestricted Upload of File with Dangerous Type (p.1052)
- C CWE-199: Information Management Errors (p.2324)
  - B CWE-201: Insertion of Sensitive Information Into Sent Data (p.518)
  - B CWE-204: Observable Response Discrepancy (p.527)
  - B CWE-205: Observable Behavioral Discrepancy (p.530)
  - B CWE-208: Observable Timing Discrepancy (p.534)
  - B CWE-209: Generation of Error Message Containing Sensitive Information (p.537)
  - B CWE-212: Improper Removal of Sensitive Information Before Storage or Transfer (p.548)
  - B CWE-213: Exposure of Sensitive Information Due to Incompatible Policies (p.552)
  - B CWE-214: Invocation of Process Using Visible Sensitive Information (p.553)
  - B CWE-215: Insertion of Sensitive Information Into Debugging Code (p.555)
  - B CWE-312: Cleartext Storage of Sensitive Information (p.768)
  - B CWE-319: Cleartext Transmission of Sensitive Information (p.783)
  - B CWE-359: Exposure of Private Personal Information to an Unauthorized Actor (p.886)
  - B CWE-497: Exposure of Sensitive System Information to an Unauthorized Control Sphere (p.1198)
  - B CWE-524: Use of Cache Containing Sensitive Information (p.1237)
  - B CWE-538: Insertion of Sensitive Information into Externally-Accessible File or Directory (p.1254)
  - B CWE-921: Storage of Sensitive Data in a Mechanism without Access Control (p.1829)
  - B CWE-1230: Exposure of Sensitive Information Through Metadata (p.2012)
- C CWE-452: Initialization and Cleanup Errors (p.2339)
  - B CWE-212: Improper Removal of Sensitive Information Before Storage or Transfer (p.548)
  - B CWE-454: External Initialization of Trusted Variables or Data Stores (p.1089)
  - B CWE-455: Non-exit on Failed Initialization (p.1091)
  - B CWE-459: Incomplete Cleanup (p.1103)
  - B CWE-1051: Initialization with Hard-Coded Network Resource Configuration Data (p.1891)
  - B CWE-1052: Excessive Use of Hard-Coded Literals in Initialization (p.1892)
  - B CWE-1188: Initialization of a Resource with an Insecure Default (p.1979)
- C CWE-1215: Data Validation Issues (p.2490)
  - B CWE-112: Missing XML Validation (p.272)
  - B CWE-179: Incorrect Behavior Order: Early Validation (p.451)
  - B CWE-183: Permissive List of Allowed Inputs (p.461)
  - B CWE-184: Incomplete List of Disallowed Inputs (p.463)
  - B CWE-606: Unchecked Input for Loop Condition (p.1363)
  - B CWE-641: Improper Restriction of Names for Files and Other Resources (p.1417)
  - B CWE-1173: Improper Use of Validation Framework (p.1974)
  - B CWE-1284: Improper Validation of Specified Quantity in Input (p.2138)
  - B CWE-1285: Improper Validation of Specified Index, Position, or Offset in Input (p.2141)
  - B CWE-1286: Improper Validation of Syntactic Correctness of Input (p.2144)
  - B CWE-1287: Improper Validation of Specified Type of Input (p.2146)
  - B CWE-1288: Improper Validation of Consistency within Input (p.2148)
  - B CWE-1289: Improper Validation of Unsafe Equivalence in Input (p.2149)
- C CWE-1216: Lockout Mechanism Errors (p.2490)
  - B CWE-645: Overly Restrictive Account Lockout Mechanism (p.1429)
- C CWE-1218: Memory Buffer Errors (p.2491)
  - B CWE-120: Buffer Copy without Checking Size of Input ('Classic Buffer Overflow') (p.307)
  - B CWE-124: Buffer Underwrite ('Buffer Underflow') (p.330)
  - B CWE-125: Out-of-bounds Read (p.333)
  - B CWE-131: Incorrect Calculation of Buffer Size (p.358)

- B CWE-786: Access of Memory Location Before Start of Buffer (p.1663)
- B CWE-787: Out-of-bounds Write (p.1666)
- B CWE-788: Access of Memory Location After End of Buffer (p.1674)
- B CWE-805: Buffer Access with Incorrect Length Value (p.1707)
- B CWE-1284: Improper Validation of Specified Quantity in Input (p.2138)
- C CWE-189: Numeric Errors (p.2323)
  - B CWE-128: Wrap-around Error (p.342)
  - B CWE-190: Integer Overflow or Wraparound (p.475)
  - B CWE-191: Integer Underflow (Wrap or Wraparound) (p.484)
  - B CWE-193: Off-by-one Error (p.490)
  - B CWE-369: Divide By Zero (p.917)
  - B CWE-681: Incorrect Conversion between Numeric Types (p.1500)
  - B CWE-839: Numeric Range Comparison Without Minimum Check (p.1772)
  - B CWE-1335: Incorrect Bitwise Shift of Integer (p.2244)
  - B CWE-1339: Insufficient Precision or Accuracy of a Real Number (p.2251)
  - B CWE-1389: Incorrect Parsing of Numbers with Different Radices (p.2272)
- C CWE-275: Permission Issues (p.2329)
  - B CWE-276: Incorrect Default Permissions (p.669)
  - V CWE-277: Insecure Inherited Permissions (p.672)
  - V CWE-278: Insecure Preserved Inherited Permissions (p.673)
  - V CWE-279: Incorrect Execution-Assigned Permissions (p.675)
  - B CWE-280: Improper Handling of Insufficient Permissions or Privileges (p.676)
  - B CWE-281: Improper Preservation of Permissions (p.678)
  - V CWE-618: Exposed Unsafe ActiveX Method (p.1386)
  - B CWE-766: Critical Data Element Declared Public (p.1612)
  - B CWE-767: Access to Critical Private Variable via Public Method (p.1615)
- C CWE-465: Pointer Issues (p.2340)
  - B CWE-466: Return of Pointer Value Outside of Expected Range (p.1114)
  - B CWE-468: Incorrect Pointer Scaling (p.1118)
  - B CWE-469: Use of Pointer Subtraction to Determine Size (p.1120)
  - B CWE-476: NULL Pointer Dereference (p.1136)
  - V CWE-587: Assignment of a Fixed Address to a Pointer (p.1327)
  - B CWE-763: Release of Invalid Pointer or Reference (p.1604)
  - B CWE-822: Untrusted Pointer Dereference (p.1728)
  - B CWE-823: Use of Out-of-range Pointer Offset (p.1731)
  - B CWE-824: Access of Uninitialized Pointer (p.1734)
  - B CWE-825: Expired Pointer Dereference (p.1737)
- C CWE-265: Privilege Issues (p.2328)
  - V CWE-243: Creation of chroot Jail Without Changing Working Directory (p.593)
  - B CWE-250: Execution with Unnecessary Privileges (p.603)
  - B CWE-266: Incorrect Privilege Assignment (p.642)
  - B CWE-267: Privilege Defined With Unsafe Actions (p.645)
  - B CWE-268: Privilege Chaining (p.648)
  - B CWE-270: Privilege Context Switching Error (p.655)
  - B CWE-272: Least Privilege Violation (p.660)
  - B CWE-273: Improper Check for Dropped Privileges (p.664)
  - B CWE-274: Improper Handling of Insufficient Privileges (p.667)
  - B CWE-280: Improper Handling of Insufficient Permissions or Privileges (p.676)
  - B CWE-501: Trust Boundary Violation (p.1207)
  - V CWE-580: clone() Method Without super.clone() (p.1316)
  - B CWE-648: Incorrect Use of Privileged APIs (p.1433)
- C CWE-1213: Random Number Issues (p.2489)
  - B CWE-331: Insufficient Entropy (p.825)
  - B CWE-334: Small Space of Random Values (p.831)

- B CWE-335: Incorrect Usage of Seeds in Pseudo-Random Number Generator (PRNG) (p.833)
- B CWE-338: Use of Cryptographically Weak Pseudo-Random Number Generator (PRNG) (p.841)
- B CWE-341: Predictable from Observable State (p.847)
- B CWE-342: Predictable Exact Value from Previous Values (p.849)
- B CWE-343: Predictable Value Range from Previous Values (p.851)
- B CWE-344: Use of Invariant Value in Dynamically Changing Context (p.853)
- B CWE-1241: Use of Predictable Algorithm in Random Number Generator (p.2038)
- C CWE-411: Resource Locking Problems (p.2337)
  - B CWE-412: Unrestricted Externally Accessible Lock (p.1004)
  - B CWE-413: Improper Resource Locking (p.1007)
  - B CWE-414: Missing Lock Check (p.1011)
  - B CWE-609: Double-Checked Locking (p.1368)
  - B CWE-764: Multiple Locks of a Critical Resource (p.1609)
  - B CWE-765: Multiple Unlocks of a Critical Resource (p.1610)
  - B CWE-832: Unlock of a Resource that is not Locked (p.1757)
  - B CWE-833: Deadlock (p.1758)
- C CWE-399: Resource Management Errors (p.2336)
  - B CWE-73: External Control of File Name or Path (p.133)
  - B CWE-403: Exposure of File Descriptor to Unintended Control Sphere ('File Descriptor Leak') (p.982)
  - B CWE-410: Insufficient Resource Pool (p.1002)
  - B CWE-470: Use of Externally-Controlled Input to Select Classes or Code ('Unsafe Reflection') (p.1122)
  - B CWE-502: Deserialization of Untrusted Data (p.1209)
  - B CWE-619: Dangling Database Cursor ('Cursor Injection') (p.1387)
  - B CWE-641: Improper Restriction of Names for Files and Other Resources (p.1417)
  - B CWE-694: Use of Multiple Resources with Duplicate Identifier (p.1528)
  - B CWE-763: Release of Invalid Pointer or Reference (p.1604)
  - B CWE-770: Allocation of Resources Without Limits or Throttling (p.1618)
  - B CWE-771: Missing Reference to Active Allocated Resource (p.1627)
  - B CWE-772: Missing Release of Resource after Effective Lifetime (p.1629)
  - B CWE-826: Premature Release of Resource During Expected Lifetime (p.1739)
  - B CWE-908: Use of Uninitialized Resource (p.1797)
  - C CWE-909: Missing Initialization of Resource (p.1802)
  - B CWE-910: Use of Expired File Descriptor (p.1805)
  - B CWE-911: Improper Update of Reference Count (p.1806)
  - B CWE-914: Improper Control of Dynamically-Identified Variables (p.1812)
  - B CWE-915: Improperly Controlled Modification of Dynamically-Determined Object Attributes (p.1814)
  - B CWE-920: Improper Restriction of Power Consumption (p.1828)
  - B CWE-1188: Initialization of a Resource with an Insecure Default (p.1979)
  - B CWE-1341: Multiple Releases of Same Resource or Handle (p.2254)
- C CWE-387: Signal Errors (p.2333)
  - B CWE-364: Signal Handler Race Condition (p.903)
- C CWE-371: State Issues (p.2333)
  - B CWE-15: External Control of System or Configuration Setting (p.17)
  - B CWE-372: Incomplete Internal State Distinction (p.923)
  - B CWE-374: Passing Mutable Objects to an Untrusted Method (p.924)
  - B CWE-375: Returning a Mutable Object to an Untrusted Caller (p.927)
  - B CWE-1265: Unintended Reentrant Invocation of Non-reentrant Code Via Nested Calls (p.2097)
- C CWE-133: String Errors (p.2322)
  - B CWE-134: Use of Externally-Controlled Format String (p.368)
  - B CWE-135: Incorrect Calculation of Multi-Byte String Length (p.374)
  - B CWE-480: Use of Incorrect Operator (p.1154)
- C CWE-136: Type Errors (p.2322)
  - B CWE-681: Incorrect Conversion between Numeric Types (p.1500)
  - B CWE-843: Access of Resource Using Incompatible Type ('Type Confusion') (p.1781)

- B CWE-1287: Improper Validation of Specified Type of Input (p.2146)
- C CWE-355: User Interface Security Issues (p.2332)
- B CWE-356: Product UI does not Warn User of Unsafe Actions (p.883)
- B CWE-357: Insufficient UI Warning of Dangerous Operations (p.884)
- B CWE-447: Unimplemented or Unsupported Feature in UI (p.1079)
- B CWE-448: Obsolete Feature in UI (p.1080)
- B CWE-449: The UI Performs the Wrong Action (p.1081)
- B CWE-549: Missing Password Field Masking (p.1267)
- B CWE-1007: Insufficient Visual Distinction of Homoglyphs Presented to User (p.1862)
- B CWE-1021: Improper Restriction of Rendered UI Layers or Frames (p.1865)
- C CWE-1217: User Session Errors (p.2491)
- B CWE-488: Exposure of Data Element to Wrong Session (p.1173)
- B CWE-613: Insufficient Session Expiration (p.1377)
- B CWE-841: Improper Enforcement of Behavioral Workflow (p.1777)

## Graph View: CWE-700: Seven Pernicious Kingdoms

- C** CWE-254: 7PK - Security Features (*p.2326*)

    - CWE-366: Race Condition within a Thread (p.908)
    - CWE-368: Context Switching Race Condition (p.916)
    - CWE-413: Improper Resource Locking (p.1007)
    - CWE-414: Missing Lock Check (p.1011)
    - CWE-543: Use of Singleton Pattern Without Synchronization in a Multithreaded Context (p.1260)
    - CWE-567: Unsynchronized Access to Shared Data in a Multithreaded Context (p.1293)

- B CWE-609: Double-Checked Locking (p.1368)
- G CWE-662: Improper Synchronization (p.1454)
- B CWE-663: Use of a Non-reentrant Function in a Concurrent Context (p.1458)
- G CWE-667: Improper Locking (p.1469)
- C CWE-987: SFP Secondary Cluster: Multiple Locks/Unlocks (p.2424)
  - V CWE-585: Empty Synchronized Block (p.1323)
  - B CWE-764: Multiple Locks of a Critical Resource (p.1609)
  - B CWE-765: Multiple Unlocks of a Critical Resource (p.1610)
- C CWE-988: SFP Secondary Cluster: Race Condition Window (p.2424)
  - G CWE-362: Concurrent Execution using Shared Resource with Improper Synchronization ('Race Condition') (p.892)
  - B CWE-363: Race Condition Enabling Link Following (p.901)
  - B CWE-367: Time-of-check Time-of-use (TOCTOU) Race Condition (p.910)
  - V CWE-370: Missing Check for Certificate Revocation after Initial Check (p.921)
  - G CWE-638: Not Using Complete Mediation (p.1410)
- C CWE-989: SFP Secondary Cluster: Unrestricted Lock (p.2425)
  - B CWE-412: Unrestricted Externally Accessible Lock (p.1004)
- C CWE-895: SFP Primary Cluster: Information Leak (p.2396)
  - C CWE-963: SFP Secondary Cluster: Exposed Data (p.2412)
    - V CWE-11: ASP.NET Misconfiguration: Creating Debug Binary (p.9)
    - B CWE-117: Improper Output Neutralization for Logs (p.291)
    - V CWE-12: ASP.NET Misconfiguration: Missing Custom Error Page (p.11)
    - V CWE-13: ASP.NET Misconfiguration: Password in Configuration File (p.13)
    - V CWE-14: Compiler Removal of Code to Clear Buffers (p.14)
    - G CWE-200: Exposure of Sensitive Information to an Unauthorized Actor (p.509)
    - B CWE-201: Insertion of Sensitive Information Into Sent Data (p.518)
    - B CWE-209: Generation of Error Message Containing Sensitive Information (p.537)
    - B CWE-210: Self-generated Error Message Containing Sensitive Information (p.543)
    - B CWE-211: Externally-Generated Error Message Containing Sensitive Information (p.545)
    - B CWE-212: Improper Removal of Sensitive Information Before Storage or Transfer (p.548)
    - B CWE-213: Exposure of Sensitive Information Due to Incompatible Policies (p.552)
    - B CWE-214: Invocation of Process Using Visible Sensitive Information (p.553)
    - B CWE-215: Insertion of Sensitive Information Into Debugging Code (p.555)
    - V CWE-219: Storage of File with Sensitive Data Under Web Root (p.557)
    - V CWE-220: Storage of File With Sensitive Data Under FTP Root (p.559)
    - B CWE-226: Sensitive Information in Resource Not Removed Before Reuse (p.566)
    - V CWE-244: Improper Clearing of Heap Memory Before Release ('Heap Inspection') (p.595)
    - B CWE-256: Plaintext Storage of a Password (p.619)
    - B CWE-257: Storing Passwords in a Recoverable Format (p.622)
    - B CWE-260: Password in Configuration File (p.633)
    - G CWE-311: Missing Encryption of Sensitive Data (p.761)
    - B CWE-312: Cleartext Storage of Sensitive Information (p.768)
    - V CWE-313: Cleartext Storage in a File or on Disk (p.774)
    - V CWE-314: Cleartext Storage in the Registry (p.776)
    - V CWE-315: Cleartext Storage of Sensitive Information in a Cookie (p.777)
    - V CWE-316: Cleartext Storage of Sensitive Information in Memory (p.779)
    - V CWE-317: Cleartext Storage of Sensitive Information in GUI (p.781)
    - V CWE-318: Cleartext Storage of Sensitive Information in Executable (p.782)
    - B CWE-319: Cleartext Transmission of Sensitive Information (p.783)
    - B CWE-374: Passing Mutable Objects to an Untrusted Method (p.924)
    - B CWE-375: Returning a Mutable Object to an Untrusted Caller (p.927)
    - G CWE-402: Transmission of Private Resources into a New Sphere ('Resource Leak') (p.981)
    - B CWE-403: Exposure of File Descriptor to Unintended Control Sphere ('File Descriptor Leak') (p.982)
    - V CWE-433: Unparsed Raw Web Content Delivery (p.1050)

- V CWE-495: Private Data Structure Returned From A Public Method (p.1194)
- B CWE-497: Exposure of Sensitive System Information to an Unauthorized Control Sphere (p.1198)
- V CWE-498: Cloneable Class Containing Sensitive Information (p.1201)
- V CWE-499: Serializable Class Containing Sensitive Data (p.1203)
- V CWE-5: J2EE Misconfiguration: Data Transmission Without Encryption (p.1)
- B CWE-501: Trust Boundary Violation (p.1207)
- C CWE-522: Insufficiently Protected Credentials (p.1231)
- B CWE-523: Unprotected Transport of Credentials (p.1235)
- V CWE-526: Cleartext Storage of Sensitive Information in an Environment Variable (p.1239)
- V CWE-527: Exposure of Version-Control Repository to an Unauthorized Control Sphere (p.1241)
- V CWE-528: Exposure of Core Dump File to an Unauthorized Control Sphere (p.1242)
- V CWE-529: Exposure of Access Control List Files to an Unauthorized Control Sphere (p.1243)
- V CWE-530: Exposure of Backup File to an Unauthorized Control Sphere (p.1244)
- B CWE-532: Insertion of Sensitive Information into Log File (p.1246)
- V CWE-535: Exposure of Information Through Shell Error Message (p.1250)
- V CWE-536: Servlet Runtime Error Message Containing Sensitive Information (p.1250)
- V CWE-537: Java Runtime Error Message Containing Sensitive Information (p.1251)
- B CWE-538: Insertion of Sensitive Information into Externally-Accessible File or Directory (p.1254)
- V CWE-539: Use of Persistent Cookies Containing Sensitive Information (p.1255)
- B CWE-540: Inclusion of Sensitive Information in Source Code (p.1257)
- V CWE-541: Inclusion of Sensitive Information in an Include File (p.1258)
- V CWE-546: Suspicious Comment (p.1263)
- V CWE-548: Exposure of Information Through Directory Listing (p.1266)
- V CWE-550: Server-generated Error Message Containing Sensitive Information (p.1268)
- B CWE-552: Files or Directories Accessible to External Parties (p.1270)
- V CWE-555: J2EE Misconfiguration: Plaintext Password in Configuration File (p.1276)
- V CWE-591: Sensitive Data Storage in Improperly Locked Memory (p.1334)
- V CWE-598: Use of GET Request Method With Sensitive Query Strings (p.1345)
- V CWE-607: Public Static Final Field References Mutable Object (p.1365)
- B CWE-612: Improper Authorization of Index Containing Sensitive Information (p.1375)
- V CWE-615: Inclusion of Sensitive Information in Source Code Comments (p.1380)
- C CWE-642: External Control of Critical State Data (p.1419)
- C CWE-668: Exposure of Resource to Wrong Sphere (p.1474)
- C CWE-669: Incorrect Resource Transfer Between Spheres (p.1477)
- V CWE-7: J2EE Misconfiguration: Missing Custom Error Page (p.4)
- B CWE-756: Missing Custom Error Page (p.1584)
- B CWE-767: Access to Critical Private Variable via Public Method (p.1615)
- V CWE-8: J2EE Misconfiguration: Entity Bean Declared Remote (p.6)
- C CWE-964: SFP Secondary Cluster: Exposure Temporary File (p.2414)
- C CWE-377: Insecure Temporary File (p.929)
- B CWE-378: Creation of Temporary File With Insecure Permissions (p.932)
- B CWE-379: Creation of Temporary File in Directory with Insecure Permissions (p.934)
- C CWE-965: SFP Secondary Cluster: Insecure Session Management (p.2415)
- B CWE-488: Exposure of Data Element to Wrong Session (p.1173)
- B CWE-524: Use of Cache Containing Sensitive Information (p.1237)
- V CWE-6: J2EE Misconfiguration: Insufficient Session-ID Length (p.2)
- C CWE-966: SFP Secondary Cluster: Other Exposures (p.2415)
- V CWE-453: Insecure Default Variable Initialization (p.1087)
- B CWE-487: Reliance on Package-level Scope (p.1172)
- V CWE-492: Use of Inner Class Containing Sensitive Data (p.1180)
- V CWE-525: Use of Web Browser Cache Containing Sensitive Information (p.1238)
- V CWE-614: Sensitive Cookie in HTTPS Session Without 'Secure' Attribute (p.1378)
- V CWE-651: Exposure of WSDL File Containing Sensitive Information (p.1439)
- C CWE-967: SFP Secondary Cluster: State Disclosure (p.2415)

- B CWE-202: Exposure of Sensitive Information Through Data Queries (p.520)
- B CWE-203: Observable Discrepancy (p.522)
- B CWE-204: Observable Response Discrepancy (p.527)
- B CWE-205: Observable Behavioral Discrepancy (p.530)
- V CWE-206: Observable Internal Behavioral Discrepancy (p.531)
- V CWE-207: Observable Behavioral Discrepancy With Equivalent Products (p.533)
- B CWE-208: Observable Timing Discrepancy (p.534)
- C CWE-896: SFP Primary Cluster: Tainted Input (p.2397)
- C CWE-990: SFP Secondary Cluster: Tainted Input to Command (p.2425)
- V CWE-102: Struts: Duplicate Validation Forms (p.249)
- V CWE-103: Struts: Incomplete validate() Method Definition (p.251)
- V CWE-104: Struts: Form Bean Does Not Extend Validation Class (p.254)
- V CWE-105: Struts: Form Field Without Validator (p.256)
- V CWE-106: Struts: Plug-in Framework not in Use (p.259)
- V CWE-107: Struts: Unused Validation Form (p.262)
- V CWE-108: Struts: Unvalidated Action Form (p.264)
- V CWE-109: Struts: Validator Turned Off (p.266)
- V CWE-110: Struts: Validator Without Form Field (p.267)
- B CWE-112: Missing XML Validation (p.272)
- V CWE-113: Improper Neutralization of CRLF Sequences in HTTP Headers ('HTTP Request/Response Splitting') (p.274)
- B CWE-130: Improper Handling of Length Parameter Inconsistency (p.354)
- B CWE-134: Use of Externally-Controlled Format String (p.368)
- G CWE-138: Improper Neutralization of Special Elements (p.376)
- B CWE-140: Improper Neutralization of Delimiters (p.379)
- V CWE-141: Improper Neutralization of Parameter/Argument Delimiters (p.381)
- V CWE-142: Improper Neutralization of Value Delimiters (p.383)
- V CWE-143: Improper Neutralization of Record Delimiters (p.385)
- V CWE-144: Improper Neutralization of Line Delimiters (p.386)
- V CWE-145: Improper Neutralization of Section Delimiters (p.388)
- V CWE-146: Improper Neutralization of Expression/Command Delimiters (p.390)
- V CWE-147: Improper Neutralization of Input Terminators (p.392)
- V CWE-148: Improper Neutralization of Input Leaders (p.394)
- V CWE-149: Improper Neutralization of Quoting Syntax (p.395)
- V CWE-150: Improper Neutralization of Escape, Meta, or Control Sequences (p.397)
- V CWE-151: Improper Neutralization of Comment Delimiters (p.399)
- V CWE-152: Improper Neutralization of Macro Symbols (p.401)
- V CWE-153: Improper Neutralization of Substitution Characters (p.403)
- V CWE-154: Improper Neutralization of Variable Name Delimiters (p.405)
- V CWE-155: Improper Neutralization of Wildcards or Matching Symbols (p.406)
- V CWE-156: Improper Neutralization of Whitespace (p.408)
- V CWE-157: Failure to Sanitize Paired Delimiters (p.410)
- V CWE-158: Improper Neutralization of Null Byte or NUL Character (p.412)
- G CWE-159: Improper Handling of Invalid Use of Special Elements (p.414)
- V CWE-160: Improper Neutralization of Leading Special Elements (p.416)
- V CWE-161: Improper Neutralization of Multiple Leading Special Elements (p.418)
- V CWE-162: Improper Neutralization of Trailing Special Elements (p.420)
- V CWE-163: Improper Neutralization of Multiple Trailing Special Elements (p.422)
- V CWE-164: Improper Neutralization of Internal Special Elements (p.423)
- V CWE-165: Improper Neutralization of Multiple Internal Special Elements (p.425)
- B CWE-183: Permissive List of Allowed Inputs (p.461)
- B CWE-184: Incomplete List of Disallowed Inputs (p.463)
- G CWE-185: Incorrect Regular Expression (p.466)
- B CWE-186: Overly Restrictive Regular Expression (p.469)

- ⓑ CWE-444: Inconsistent Interpretation of HTTP Requests ('HTTP Request/Response Smuggling') (p.1072)
- Ⓧ CWE-553: Command Shell in Externally Accessible Directory (p.1274)
- Ⓧ CWE-554: ASP.NET Misconfiguration: Not Using Input Validation Framework (p.1275)
- Ⓧ CWE-564: SQL Injection: Hibernate (p.1287)
- ⓑ CWE-601: URL Redirection to Untrusted Site ('Open Redirect') (p.1350)
- ⓑ CWE-611: Improper Restriction of XML External Entity Reference (p.1372)
- ⓑ CWE-619: Dangling Database Cursor ('Cursor Injection') (p.1387)
- Ⓧ CWE-621: Variable Extraction Error (p.1390)
- ⓑ CWE-624: Executable Regular Expression Error (p.1395)
- ⓑ CWE-625: Permissive Regular Expression (p.1397)
- Ⓧ CWE-626: Null Byte Interaction Error (Poison Null Byte) (p.1400)
- Ⓧ CWE-627: Dynamic Variable Evaluation (p.1401)
- ⓑ CWE-641: Improper Restriction of Names for Files and Other Resources (p.1417)
- ⓑ CWE-643: Improper Neutralization of Data within XPath Expressions ('XPath Injection') (p.1425)
- Ⓧ CWE-644: Improper Neutralization of HTTP Headers for Scripting Syntax (p.1427)
- Ⓧ CWE-646: Reliance on File Name or Extension of Externally-Supplied File (p.1430)
- ⓑ CWE-652: Improper Neutralization of Data within XQuery Expressions ('XQuery Injection') (p.1440)
- Ⓧ CWE-687: Function Call With Incorrectly Specified Argument Value (p.1515)
- Ⓧ|ⓑ CWE-707: Improper Neutralization (p.1551)
- ⓐ CWE-74: Improper Neutralization of Special Elements in Output Used by a Downstream Component ('Injection') (p.138)
- ⓐ CWE-75: Failure to Sanitize Special Elements into a Different Plane (Special Element Injection) (p.143)
- ⓑ CWE-76: Improper Neutralization of Equivalent Special Elements (p.145)
- ⓐ CWE-77: Improper Neutralization of Special Elements used in a Command ('Command Injection') (p.146)
- ⓑ CWE-78: Improper Neutralization of Special Elements used in an OS Command ('OS Command Injection') (p.153)
- ⓑ CWE-79: Improper Neutralization of Input During Web Page Generation ('Cross-site Scripting') (p.166)
- Ⓧ CWE-80: Improper Neutralization of Script-Related HTML Tags in a Web Page (Basic XSS) (p.179)
- Ⓧ CWE-81: Improper Neutralization of Script in an Error Message Web Page (p.182)
- Ⓧ CWE-82: Improper Neutralization of Script in Attributes of IMG Tags in a Web Page (p.184)
- Ⓧ CWE-83: Improper Neutralization of Script in Attributes in a Web Page (p.186)
- Ⓧ CWE-84: Improper Neutralization of Encoded URI Schemes in a Web Page (p.188)
- Ⓧ CWE-85: Doubled Character XSS Manipulations (p.190)
- Ⓧ CWE-86: Improper Neutralization of Invalid Characters in Identifiers in Web Pages (p.192)
- Ⓧ CWE-87: Improper Neutralization of Alternate XSS Syntax (p.194)
- ⓑ CWE-88: Improper Neutralization of Argument Delimiters in a Command ('Argument Injection') (p.196)
- ⓑ CWE-89: Improper Neutralization of Special Elements used in an SQL Command ('SQL Injection') (p.204)
- ⓑ CWE-90: Improper Neutralization of Special Elements used in an LDAP Query ('LDAP Injection') (p.215)
- ⓑ CWE-91: XML Injection (aka Blind XPath Injection) (p.218)
- ⓑ CWE-93: Improper Neutralization of CRLF Sequences ('CRLF Injection') (p.220)
- Ⓧ CWE-95: Improper Neutralization of Directives in Dynamically Evaluated Code ('Eval Injection') (p.230)
- ⓑ CWE-96: Improper Neutralization of Directives in Statically Saved Code ('Static Code Injection') (p.235)
- Ⓧ CWE-97: Improper Neutralization of Server-Side Includes (SSI) Within a Web Page (p.238)
- ⓐ CWE-99: Improper Control of Resource Identifiers ('Resource Injection') (p.246)
- ⓐ CWE-991: SFP Secondary Cluster: Tainted Input to Environment (p.2428)
- ⓐ CWE-114: Process Control (p.280)

- B CWE-427: Uncontrolled Search Path Element (*p.1037*)
- B CWE-470: Use of Externally-Controlled Input to Select Classes or Code ('Unsafe Reflection') (*p.1122*)

    - B CWE-385: Covert Timing Channel (p.944)
    - C CWE-514: Covert Channel (p.1223)
    - B CWE-515: Covert Storage Channel (p.1225)
- C CWE-905: SFP Primary Cluster: Predictability (p.2400)
  - C CWE-330: Use of Insufficiently Random Values (p.818)
  - B CWE-331: Insufficient Entropy (p.825)
  - V CWE-332: Insufficient Entropy in PRNG (p.827)
  - V CWE-333: Improper Handling of Insufficient Entropy in TRNG (p.829)
  - B CWE-334: Small Space of Random Values (p.831)
  - B CWE-335: Incorrect Usage of Seeds in Pseudo-Random Number Generator (PRNG) (p.833)
  - V CWE-336: Same Seed in Pseudo-Random Number Generator (PRNG) (p.836)
  - V CWE-337: Predictable Seed in Pseudo-Random Number Generator (PRNG) (p.838)
  - B CWE-338: Use of Cryptographically Weak Pseudo-Random Number Generator (PRNG) (p.841)
  - V CWE-339: Small Seed Space in PRNG (p.844)
  - C CWE-340: Generation of Predictable Numbers or Identifiers (p.846)
  - B CWE-341: Predictable from Observable State (p.847)
  - B CWE-342: Predictable Exact Value from Previous Values (p.849)
  - B CWE-343: Predictable Value Range from Previous Values (p.851)
  - B CWE-344: Use of Invariant Value in Dynamically Changing Context (p.853)
- C CWE-906: SFP Primary Cluster: UI (p.2400)
  - C CWE-995: SFP Secondary Cluster: Feature (p.2430)
    - B CWE-447: Unimplemented or Unsupported Feature in UI (p.1079)
    - B CWE-448: Obsolete Feature in UI (p.1080)
    - B CWE-449: The UI Performs the Wrong Action (p.1081)
    - B CWE-450: Multiple Interpretations of UI Input (p.1082)
    - C CWE-451: User Interface (UI) Misrepresentation of Critical Information (p.1084)

- B CWE-549: Missing Password Field Masking (p.1267)
- C CWE-655: Insufficient Psychological Acceptability (p.1447)
- C CWE-996: SFP Secondary Cluster: Security (p.2430)
  - B CWE-356: Product UI does not Warn User of Unsafe Actions (p.883)
  - B CWE-357: Insufficient UI Warning of Dangerous Operations (p.884)
  - C CWE-446: UI Discrepancy for Security Feature (p.1078)
- C CWE-997: SFP Secondary Cluster: Information Loss (p.2430)
  - C CWE-221: Information Loss or Omission (p.560)
  - B CWE-222: Truncation of Security-relevant Information (p.562)
  - B CWE-223: Omission of Security-relevant Information (p.563)
  - B CWE-224: Obscured Security-relevant Information by Alternate Name (p.565)
- C CWE-907: SFP Primary Cluster: Other (p.2400)
  - C CWE-975: SFP Secondary Cluster: Architecture (p.2418)
    - B CWE-348: Use of Less Trusted Source (p.863)
    - B CWE-359: Exposure of Private Personal Information to an Unauthorized Actor (p.886)
    - C CWE-602: Client-Side Enforcement of Server-Side Security (p.1355)
    - C CWE-637: Unnecessary Complexity in Protection Mechanism (Not Using 'Economy of Mechanism') (p.1408)
    - B CWE-649: Reliance on Obfuscation or Encryption of Security-Relevant Inputs without Integrity Checking (p.1435)
    - B CWE-654: Reliance on a Single Factor in a Security Decision (p.1444)
    - C CWE-656: Reliance on Security Through Obscurity (p.1449)
    - C CWE-657: Violation of Secure Design Principles (p.1451)
    - C CWE-671: Lack of Administrator Control over Security (p.1483)
    - P CWE-693: Protection Mechanism Failure (p.1525)
    - B CWE-749: Exposed Dangerous Method or Function (p.1569)
  - C CWE-976: SFP Secondary Cluster: Compiler (p.2419)
    - B CWE-733: Compiler Optimization Removal or Modification of Security-critical Code (p.1567)
  - C CWE-977: SFP Secondary Cluster: Design (p.2419)
    - B CWE-115: Misinterpretation of Input (p.283)
    - V CWE-187: Partial String Comparison (p.471)
    - B CWE-188: Reliance on Data/Memory Layout (p.473)
    - B CWE-193: Off-by-one Error (p.490)
    - B CWE-349: Acceptance of Extraneous Untrusted Data With Trusted Data (p.865)
    - C CWE-405: Asymmetric Resource Consumption (Amplification) (p.990)
    - C CWE-406: Insufficient Control of Network Message Volume (Network Amplification) (p.994)
    - C CWE-407: Inefficient Algorithmic Complexity (p.996)
    - B CWE-408: Incorrect Behavior Order: Early Amplification (p.999)
    - B CWE-409: Improper Handling of Highly Compressed Data (Data Amplification) (p.1001)
    - B CWE-410: Insufficient Resource Pool (p.1002)
    - B CWE-430: Deployment of Wrong Handler (p.1046)
    - V CWE-462: Duplicate Key in Associative List (Alist) (p.1108)
    - B CWE-463: Deletion of Data Structure Sentinel (p.1110)
    - B CWE-464: Addition of Data Structure Sentinel (p.1112)
    - B CWE-483: Incorrect Block Delimitation (p.1164)
    - V CWE-581: Object Model Violation: Just One of Equals and Hashcode Defined (p.1318)
    - V CWE-595: Comparison of Object References Instead of Object Contents (p.1339)
    - V CWE-618: Exposed Unsafe ActiveX Method (p.1386)
    - B CWE-648: Incorrect Use of Privileged APIs (p.1433)
    - C CWE-670: Always-Incorrect Control Flow Implementation (p.1480)
    - P CWE-682: Incorrect Calculation (p.1504)
    - P CWE-691: Insufficient Control Flow Management (p.1522)
    - C CWE-696: Incorrect Behavior Order (p.1532)
    - P CWE-697: Incorrect Comparison (p.1535)
    - B CWE-698: Execution After Redirect (EAR) (p.1538)

- CWE-705: Incorrect Control Flow Scoping (p.1547)
- CWE-978: SFP Secondary Cluster: Implementation (p.2420)
- CWE-358: Improperly Implemented Security Check for Standard (p.885)
- CWE-398: 7PK - Code Quality (p.2335)
- CWE-623: Unsafe ActiveX Control Marked Safe For Scripting (p.1394)
- CWE-710: Improper Adherence to Coding Standards (p.1554)
- CWE-1237: SFP Primary Cluster: Faulty Resource Release (p.2494)
- CWE-415: Double Free (p.1012)
- CWE-762: Mismatched Memory Management Routines (p.1601)
- CWE-763: Release of Invalid Pointer or Reference (p.1604)
- CWE-1238: SFP Primary Cluster: Failure to Release Memory (p.2494)
- CWE-401: Missing Release of Memory after Effective Lifetime (p.977)

## Graph View: CWE-900: Weaknesses in the 2011 CWE/SANS Top 25 Most Dangerous Software Errors

- C** CWE-867: 2011 Top 25 - Weaknesses On the Cusp (p.2384)
  - V** CWE-129: Improper Validation of Array Index (p.344)
  - B** CWE-209: Generation of Error Message Containing Sensitive Information (p.537)
  - B** CWE-212: Improper Removal of Sensitive Information Before Storage or Transfer (p.548)
  - G** CWE-330: Use of Insufficiently Random Values (p.818)
  - G** CWE-362: Concurrent Execution using Shared Resource with Improper Synchronization ('Race Condition') (p.892)
  - V** CWE-456: Missing Initialization of a Variable (p.1093)
  - B** CWE-476: NULL Pointer Dereference (p.1136)
  - B** CWE-681: Incorrect Conversion between Numeric Types (p.1500)
  - G** CWE-754: Improper Check for Unusual or Exceptional Conditions (p.1573)
  - B** CWE-770: Allocation of Resources Without Limits or Throttling (p.1618)
  - B** CWE-772: Missing Release of Resource after Effective Lifetime (p.1629)
  - B** CWE-805: Buffer Access with Incorrect Length Value (p.1707)
  - B** CWE-822: Untrusted Pointer Dereference (p.1728)
  - B** CWE-825: Expired Pointer Dereference (p.1737)
  - B** CWE-838: Inappropriate Encoding for Output Context (p.1769)
  - B** CWE-841: Improper Enforcement of Behavioral Workflow (p.1777)
- C** CWE-866: 2011 Top 25 - Porous Defenses (p.2384)
  - B** CWE-250: Execution with Unnecessary Privileges (p.603)
  - B** CWE-306: Missing Authentication for Critical Function (p.745)
  - B** CWE-307: Improper Restriction of Excessive Authentication Attempts (p.751)
  - G** CWE-311: Missing Encryption of Sensitive Data (p.761)
  - G** CWE-327: Use of a Broken or Risky Cryptographic Algorithm (p.803)
  - G** CWE-732: Incorrect Permission Assignment for Critical Resource (p.1556)
  - V** CWE-759: Use of a One-Way Hash without a Salt (p.1590)
  - B** CWE-798: Use of Hard-coded Credentials (p.1695)
  - B** CWE-807: Reliance on Untrusted Inputs in a Security Decision (p.1719)
  - G** CWE-862: Missing Authorization (p.1785)
  - G** CWE-863: Incorrect Authorization (p.1792)
- C** CWE-865: 2011 Top 25 - Risky Resource Management (p.2383)
  - B** CWE-120: Buffer Copy without Checking Size of Input ('Classic Buffer Overflow') (p.307)
  - B** CWE-131: Incorrect Calculation of Buffer Size (p.358)
  - B** CWE-134: Use of Externally-Controlled Format String (p.368)
  - B** CWE-190: Integer Overflow or Wraparound (p.475)
  - B** CWE-22: Improper Limitation of a Pathname to a Restricted Directory ('Path Traversal') (p.33)
  - B** CWE-494: Download of Code Without Integrity Check (p.1189)
  - B** CWE-676: Use of Potentially Dangerous Function (p.1494)
- C** CWE-864: 2011 Top 25 - Insecure Interaction Between Components (p.2383)
  - B** CWE-352: Cross-Site Request Forgery (CSRF) (p.872)
  - B** CWE-434: Unrestricted Upload of File with Dangerous Type (p.1052)
  - B** CWE-601: URL Redirection to Untrusted Site ('Open Redirect') (p.1350)
  - B** CWE-78: Improper Neutralization of Special Elements used in an OS Command ('OS Command Injection') (p.153)
  - B** CWE-79: Improper Neutralization of Input During Web Page Generation ('Cross-site Scripting') (p.166)
  - B** CWE-829: Inclusion of Functionality from Untrusted Control Sphere (p.1746)
  - B** CWE-89: Improper Neutralization of Special Elements used in an SQL Command ('SQL Injection') (p.204)

## Graph View: CWE-928: Weaknesses in OWASP Top Ten (2013)

- C** CWE-929: OWASP Top Ten 2013 Category A1 - Injection (p.2401)
  - G** CWE-74: Improper Neutralization of Special Elements in Output Used by a Downstream Component ('Injection') (p.138)
  - G** CWE-77: Improper Neutralization of Special Elements used in a Command ('Command Injection') (p.146)
  - B** CWE-78: Improper Neutralization of Special Elements used in an OS Command ('OS Command Injection') (p.153)
  - B** CWE-88: Improper Neutralization of Argument Delimiters in a Command ('Argument Injection') (p.196)
  - B** CWE-89: Improper Neutralization of Special Elements used in an SQL Command ('SQL Injection') (p.204)
  - V** CWE-564: SQL Injection: Hibernate (p.1287)
  - B** CWE-90: Improper Neutralization of Special Elements used in an LDAP Query ('LDAP Injection') (p.215)
  - B** CWE-91: XML Injection (aka Blind XPath Injection) (p.218)
  - B** CWE-643: Improper Neutralization of Data within XPath Expressions ('XPath Injection') (p.1425)
  - B** CWE-652: Improper Neutralization of Data within XQuery Expressions ('XQuery Injection') (p.1440)
- C** CWE-930: OWASP Top Ten 2013 Category A2 - Broken Authentication and Session Management (p.2401)
  - B** CWE-256: Plaintext Storage of a Password (p.619)

- B CWE-1088: Synchronous Access of Remote Resource without Timeout (p.1933)
- B CWE-1264: Hardware Logic with Insecure De-Synchronization between Control and Data Channels (p.2095)
- V CWE-572: Call to Thread run() instead of start() (p.1302)
- V CWE-574: EJB Bad Practices: Use of Synchronization Primitives (p.1305)
- C CWE-665: Improper Initialization (p.1462)
- B CWE-1279: Cryptographic Operations are run Before Supporting Units are Ready (p.2129)
- C CWE-1419: Incorrect Initialization of Resource (p.2289)
- B CWE-1051: Initialization with Hard-Coded Network Resource Configuration Data (p.1891)
- B CWE-1052: Excessive Use of Hard-Coded Literals in Initialization (p.1892)
- B CWE-1188: Initialization of a Resource with an Insecure Default (p.1979)
- V CWE-453: Insecure Default Variable Initialization (p.1087)
- B CWE-1221: Incorrect Register Defaults or Module Parameters (p.2001)
- B CWE-454: External Initialization of Trusted Variables or Data Stores (p.1089)
- B CWE-455: Non-exit on Failed Initialization (p.1091)
- B CWE-770: Allocation of Resources Without Limits or Throttling (p.1618)
- B CWE-1325: Improperly Controlled Sequential Memory Allocation (p.2219)
- V CWE-774: Allocation of File Descriptors or Handles Without Limits or Throttling (p.1635)
- V CWE-789: Memory Allocation with Excessive Size Value (p.1679)
- B CWE-908: Use of Uninitialized Resource (p.1797)
- V CWE-457: Use of Uninitialized Variable (p.1098)
- C CWE-909: Missing Initialization of Resource (p.1802)

- B CWE-1271: Uninitialized Value on Reset for Registers Holding Security Settings (p.2111)
- V CWE-456: Missing Initialization of a Variable (p.1093)
- G CWE-666: Operation on Resource in Wrong Phase of Lifetime (p.1467)
  - V CWE-415: Double Free (p.1012)
  - V CWE-593: Authentication Bypass: OpenSSL CTX Object Modified after SSL Objects are Created (p.1336)
  - V CWE-605: Multiple Binds to the Same Port (p.1361)
  - G CWE-672: Operation on a Resource after Expiration or Release (p.1485)
    - V CWE-298: Improper Validation of Certificate Expiration (p.730)
    - B CWE-324: Use of a Key Past its Expiration Date (p.796)
    - B CWE-613: Insufficient Session Expiration (p.1377)
    - B CWE-825: Expired Pointer Dereference (p.1737)
      - V CWE-415: Double Free (p.1012)
      - V CWE-416: Use After Free (p.1016)
    - B CWE-910: Use of Expired File Descriptor (p.1805)
  - B CWE-826: Premature Release of Resource During Expected Lifetime (p.1739)
- G CWE-668: Exposure of Resource to Wrong Sphere (p.1474)
  - B CWE-1189: Improper Isolation of Shared Resources on System-on-a-Chip (SoC) (p.1981)
  - B CWE-1303: Non-Transparent Sharing of Microarchitectural Resources (p.2183)
  - B CWE-1282: Assumed-Immutable Data is Stored in Writable Memory (p.2135)
  - B CWE-1327: Binding to an Unrestricted IP Address (p.2223)
  - B CWE-1331: Improper Isolation of Shared Resources in Network On Chip (NoC) (p.2233)
  - B CWE-134: Use of Externally-Controlled Format String (p.368)
  - G CWE-200: Exposure of Sensitive Information to an Unauthorized Actor (p.509)
    - B CWE-1258: Exposure of Sensitive System Information Due to Uncleared Debug Information (p.2078)
    - B CWE-1273: Device Unlock Credential Sharing (p.2115)
    - B CWE-1295: Debug Messages Revealing Unnecessary Information (p.2160)
    - B CWE-201: Insertion of Sensitive Information Into Sent Data (p.518)
      - V CWE-598: Use of GET Request Method With Sensitive Query Strings (p.1345)
    - B CWE-203: Observable Discrepancy (p.522)
      - B CWE-1300: Improper Protection of Physical Side Channels (p.2174)
        - V CWE-1255: Comparison Logic is Vulnerable to Power Side-Channel Attacks (p.2069)
      - B CWE-1303: Non-Transparent Sharing of Microarchitectural Resources (p.2183)
      - B CWE-204: Observable Response Discrepancy (p.527)
      - B CWE-205: Observable Behavioral Discrepancy (p.530)
        - V CWE-206: Observable Internal Behavioral Discrepancy (p.531)
        - V CWE-207: Observable Behavioral Discrepancy With Equivalent Products (p.533)
      - B CWE-208: Observable Timing Discrepancy (p.534)
        - B CWE-1254: Incorrect Comparison Logic Granularity (p.2067)
    - B CWE-209: Generation of Error Message Containing Sensitive Information (p.537)
    - B CWE-210: Self-generated Error Message Containing Sensitive Information (p.543)
    - B CWE-211: Externally-Generated Error Message Containing Sensitive Information (p.545)
      - V CWE-535: Exposure of Information Through Shell Error Message (p.1250)
      - V CWE-536: Servlet Runtime Error Message Containing Sensitive Information (p.1250)
      - V CWE-537: Java Runtime Error Message Containing Sensitive Information (p.1251)
    - V CWE-550: Server-generated Error Message Containing Sensitive Information (p.1268)
  - B CWE-213: Exposure of Sensitive Information Due to Incompatible Policies (p.552)
  - B CWE-215: Insertion of Sensitive Information Into Debugging Code (p.555)
  - B CWE-359: Exposure of Private Personal Information to an Unauthorized Actor (p.886)
  - B CWE-497: Exposure of Sensitive System Information to an Unauthorized Control Sphere (p.1198)
    - B CWE-214: Invocation of Process Using Visible Sensitive Information (p.553)

- V CWE-548: Exposure of Information Through Directory Listing (p.1266)
- B CWE-538: Insertion of Sensitive Information into Externally-Accessible File or Directory (p.1254)
- B CWE-532: Insertion of Sensitive Information into Log File (p.1246)
- B CWE-540: Inclusion of Sensitive Information in Source Code (p.1257)
  - V CWE-531: Inclusion of Sensitive Information in Test Code (p.1245)
  - V CWE-541: Inclusion of Sensitive Information in an Include File (p.1258)
  - V CWE-615: Inclusion of Sensitive Information in Source Code Comments (p.1380)
  - V CWE-651: Exposure of WSDL File Containing Sensitive Information (p.1439)
- B CWE-22: Improper Limitation of a Pathname to a Restricted Directory ('Path Traversal') (p.33)
  - B CWE-23: Relative Path Traversal (p.46)
    - V CWE-24: Path Traversal: '../filedir' (p.53)
    - V CWE-25: Path Traversal: '/../filedir' (p.55)
    - V CWE-26: Path Traversal: '/dir../filename' (p.57)
    - V CWE-27: Path Traversal: 'dir../filename' (p.58)
    - V CWE-28: Path Traversal: '..filedir' (p.60)
    - V CWE-29: Path Traversal: '\.filename' (p.62)
    - V CWE-30: Path Traversal: 'dir\.filename' (p.64)
    - V CWE-31: Path Traversal: 'dir\.\filename' (p.65)
    - V CWE-32: Path Traversal: '...' (Triple Dot) (p.67)
    - V CWE-33: Path Traversal: '....' (Multiple Dot) (p.69)
    - V CWE-34: Path Traversal: '.../' (p.71)
    - V CWE-35: Path Traversal: '.../.../' (p.73)
  - B CWE-36: Absolute Path Traversal (p.75)
    - V CWE-37: Path Traversal: '/absolute/pathname/here' (p.79)
    - V CWE-38: Path Traversal: '\absolute\pathname\here' (p.81)
    - V CWE-39: Path Traversal: 'C:dirname' (p.83)
    - V CWE-40: Path Traversal: '\\UNC\share\name\' (Windows UNC Share) (p.86)
- B CWE-374: Passing Mutable Objects to an Untrusted Method (p.924)
- B CWE-375: Returning a Mutable Object to an Untrusted Caller (p.927)
- C CWE-377: Insecure Temporary File (p.929)
  - B CWE-378: Creation of Temporary File With Insecure Permissions (p.932)
  - B CWE-379: Creation of Temporary File in Directory with Insecure Permissions (p.934)
- C CWE-402: Transmission of Private Resources into a New Sphere ('Resource Leak') (p.981)
- B CWE-403: Exposure of File Descriptor to Unintended Control Sphere ('File Descriptor Leak') (p.982)
  - B CWE-619: Dangling Database Cursor ('Cursor Injection') (p.1387)
- B CWE-427: Uncontrolled Search Path Element (p.1037)
- B CWE-428: Unquoted Search Path or Element (p.1044)
- B CWE-488: Exposure of Data Element to Wrong Session (p.1173)
- V CWE-491: Public cloneable() Method Without Final ('Object Hijack') (p.1178)
- V CWE-492: Use of Inner Class Containing Sensitive Data (p.1180)
- V CWE-493: Critical Public Variable Without Final Modifier (p.1187)
- V CWE-500: Public Static Field Not Marked Final (p.1205)
- V CWE-498: Cloneable Class Containing Sensitive Information (p.1201)
- V CWE-499: Serializable Class Containing Sensitive Data (p.1203)
- C CWE-522: Insufficiently Protected Credentials (p.1231)
  - B CWE-256: Plaintext Storage of a Password (p.619)
  - B CWE-257: Storing Passwords in a Recoverable Format (p.622)
  - B CWE-260: Password in Configuration File (p.633)
    - V CWE-13: ASP.NET Misconfiguration: Password in Configuration File (p.13)
    - V CWE-258: Empty Password in Configuration File (p.625)
    - V CWE-555: J2EE Misconfiguration: Plaintext Password in Configuration File (p.1276)
  - B CWE-261: Weak Encoding for Password (p.635)
  - B CWE-523: Unprotected Transport of Credentials (p.1235)

- B CWE-549: Missing Password Field Masking (p.1267)
- B CWE-524: Use of Cache Containing Sensitive Information (p.1237)
- V CWE-525: Use of Web Browser Cache Containing Sensitive Information (p.1238)
- B CWE-552: Files or Directories Accessible to External Parties (p.1270)
  - V CWE-219: Storage of File with Sensitive Data Under Web Root (p.557)
  - V CWE-433: Unparsed Raw Web Content Delivery (p.1050)
  - V CWE-220: Storage of File With Sensitive Data Under FTP Root (p.559)
  - V CWE-527: Exposure of Version-Control Repository to an Unauthorized Control Sphere (p.1241)
  - V CWE-528: Exposure of Core Dump File to an Unauthorized Control Sphere (p.1242)
  - V CWE-529: Exposure of Access Control List Files to an Unauthorized Control Sphere (p.1243)
  - V CWE-530: Exposure of Backup File to an Unauthorized Control Sphere (p.1244)
  - V CWE-539: Use of Persistent Cookies Containing Sensitive Information (p.1255)
  - V CWE-553: Command Shell in Externally Accessible Directory (p.1274)
- V CWE-582: Array Declared Public, Final, and Static (p.1319)
- V CWE-583: finalize() Method Declared Public (p.1320)
- V CWE-608: Struts: Non-private Field in ActionForm Class (p.1366)
- G CWE-642: External Control of Critical State Data (p.1419)
  - B CWE-15: External Control of System or Configuration Setting (p.17)
  - B CWE-426: Untrusted Search Path (p.1032)
  - B CWE-472: External Control of Assumed-Immutable Web Parameter (p.1128)
  - B CWE-565: Reliance on Cookies without Validation and Integrity Checking (p.1289)
  - V CWE-784: Reliance on Cookies without Validation and Integrity Checking in a Security Decision (p.1658)
  - B CWE-73: External Control of File Name or Path (p.133)
  - G CWE-114: Process Control (p.280)
- G CWE-732: Incorrect Permission Assignment for Critical Resource (p.1556)
  - V CWE-1004: Sensitive Cookie Without 'HttpOnly' Flag (p.1859)
  - B CWE-276: Incorrect Default Permissions (p.669)
  - V CWE-277: Insecure Inherited Permissions (p.672)
  - V CWE-278: Insecure Preserved Inherited Permissions (p.673)
  - V CWE-279: Incorrect Execution-Assigned Permissions (p.675)
  - B CWE-281: Improper Preservation of Permissions (p.678)
  - B CWE-766: Critical Data Element Declared Public (p.1612)
- B CWE-767: Access to Critical Private Variable via Public Method (p.1615)
- V CWE-8: J2EE Misconfiguration: Entity Bean Declared Remote (p.6)
- V CWE-927: Use of Implicit Intent for Sensitive Communication (p.1841)
- G CWE-669: Incorrect Resource Transfer Between Spheres (p.1477)
  - B CWE-1420: Exposure of Sensitive Information during Transient Execution (p.2293)
    - B CWE-1421: Exposure of Sensitive Information in Shared Microarchitectural Structures during Transient Execution (p.2300)
    - B CWE-1422: Exposure of Sensitive Information caused by Incorrect Data Forwarding during Transient Execution (p.2307)
    - B CWE-1423: Exposure of Sensitive Information caused by Shared Microarchitectural Predictor State that Influences Transient Execution (p.2312)
  - B CWE-212: Improper Removal of Sensitive Information Before Storage or Transfer (p.548)
    - B CWE-1258: Exposure of Sensitive System Information Due to Uncleared Debug Information (p.2078)
    - B CWE-226: Sensitive Information in Resource Not Removed Before Reuse (p.566)
      - V CWE-1239: Improper Zeroization of Hardware Register (p.2029)
      - B CWE-1272: Sensitive Information Uncleared Before Debug/Power State Transition (p.2112)
      - B CWE-1301: Insufficient or Incomplete Data Removal within Hardware Component (p.2179)
        - V CWE-1330: Remanent Data Readable after Memory Erase (p.2231)

- B CWE-1342: Information Exposure through Microarchitectural State after Transient Execution (p.2258)
- V CWE-244: Improper Clearing of Heap Memory Before Release ('Heap Inspection') (p.595)
- V CWE-243: Creation of chroot Jail Without Changing Working Directory (p.593)
- B CWE-434: Unrestricted Upload of File with Dangerous Type (p.1052)
- B CWE-494: Download of Code Without Integrity Check (p.1189)
- B CWE-829: Inclusion of Functionality from Untrusted Control Sphere (p.1746)
  - V CWE-827: Improper Control of Document Type Definition (p.1741)
  - V CWE-830: Inclusion of Web Functionality from an Untrusted Source (p.1752)
  - V CWE-98: Improper Control of Filename for Include/Require Statement in PHP Program ('PHP Remote File Inclusion') (p.239)
- C CWE-673: External Influence of Sphere Definition (p.1488)
- B CWE-426: Untrusted Search Path (p.1032)
- C CWE-704: Incorrect Type Conversion or Cast (p.1543)
  - B CWE-1389: Incorrect Parsing of Numbers with Different Radices (p.2272)
  - V CWE-588: Attempt to Access Child of a Non-structure Pointer (p.1329)
  - B CWE-681: Incorrect Conversion between Numeric Types (p.1500)
    - V CWE-192: Integer Coercion Error (p.486)
    - V CWE-194: Unexpected Sign Extension (p.495)
    - V CWE-195: Signed to Unsigned Conversion Error (p.498)
    - V CWE-196: Unsigned to Signed Conversion Error (p.502)
    - B CWE-197: Numeric Truncation Error (p.504)
  - B CWE-843: Access of Resource Using Incompatible Type ('Type Confusion') (p.1781)
- C CWE-706: Use of Incorrectly-Resolved Name or Reference (p.1549)
- B CWE-178: Improper Handling of Case Sensitivity (p.448)
- B CWE-22: Improper Limitation of a Pathname to a Restricted Directory ('Path Traversal') (p.33)
  - B CWE-23: Relative Path Traversal (p.46)
    - V CWE-24: Path Traversal: '../filedir' (p.53)
    - V CWE-25: Path Traversal: '/../filedir' (p.55)
    - V CWE-26: Path Traversal: '/dir../filename' (p.57)
    - V CWE-27: Path Traversal: 'dir/../filename' (p.58)
    - V CWE-28: Path Traversal: '..filedir' (p.60)

- G CWE-20: Improper Input Validation (p.20)
  - B CWE-1173: Improper Use of Validation Framework (p.1974)
    - V CWE-102: Struts: Duplicate Validation Forms (p.249)
    - V CWE-105: Struts: Form Field Without Validator (p.256)
    - V CWE-106: Struts: Plug-in Framework not in Use (p.259)
    - V CWE-108: Struts: Unvalidated Action Form (p.264)
    - V CWE-109: Struts: Validator Turned Off (p.266)
    - V CWE-1174: ASP.NET Misconfiguration: Improper Model Validation (p.1975)
    - V CWE-554: ASP.NET Misconfiguration: Not Using Input Validation Framework (p.1275)
  - B CWE-1284: Improper Validation of Specified Quantity in Input (p.2138)
    - B CWE-606: Unchecked Input for Loop Condition (p.1363)
  - B CWE-1285: Improper Validation of Specified Index, Position, or Offset in Input (p.2141)
    - V CWE-129: Improper Validation of Array Index (p.344)
    - V CWE-781: Improper Address Validation in IOCTL with METHOD\_NEITHER I/O Control Code (p.1651)
  - B CWE-1286: Improper Validation of Syntactic Correctness of Input (p.2144)
    - B CWE-112: Missing XML Validation (p.272)
  - B CWE-1287: Improper Validation of Specified Type of Input (p.2146)
  - B CWE-1288: Improper Validation of Consistency within Input (p.2148)
  - B CWE-1289: Improper Validation of Unsafe Equivalence in Input (p.2149)
  - B CWE-179: Incorrect Behavior Order: Early Validation (p.451)
    - V CWE-180: Incorrect Behavior Order: Validate Before Canonicalize (p.454)
    - V CWE-181: Incorrect Behavior Order: Validate Before Filter (p.457)
  - V CWE-622: Improper Validation of Function Hook Arguments (p.1393)
- G CWE-228: Improper Handling of Syntactically Invalid Structure (p.572)
  - B CWE-166: Improper Handling of Missing Special Element (p.426)
  - B CWE-167: Improper Handling of Additional Special Element (p.428)
  - B CWE-168: Improper Handling of Inconsistent Special Elements (p.430)
  - B CWE-229: Improper Handling of Values (p.574)
  - V CWE-230: Improper Handling of Missing Values (p.575)

- V CWE-231: Improper Handling of Extra Values (p.576)
- V CWE-232: Improper Handling of Undefined Values (p.577)
- B CWE-233: Improper Handling of Parameters (p.578)
- V CWE-234: Failure to Handle Missing Parameter (p.580)
- V CWE-235: Improper Handling of Extra Parameters (p.582)
- V CWE-236: Improper Handling of Undefined Parameters (p.583)
- B CWE-237: Improper Handling of Structural Elements (p.584)
- V CWE-238: Improper Handling of Incomplete Structural Elements (p.585)
- V CWE-239: Failure to Handle Incomplete Element (p.586)
- B CWE-240: Improper Handling of Inconsistent Structural Elements (p.587)
- B CWE-130: Improper Handling of Length Parameter Inconsistency (p.354)
- B CWE-241: Improper Handling of Unexpected Data Type (p.588)
- B CWE-240: Improper Handling of Inconsistent Structural Elements (p.587)
- B CWE-130: Improper Handling of Length Parameter Inconsistency (p.354)
- B CWE-463: Deletion of Data Structure Sentinel (p.1110)
- C CWE-74: Improper Neutralization of Special Elements in Output Used by a Downstream Component ('Injection') (p.138)
- B CWE-1236: Improper Neutralization of Formula Elements in a CSV File (p.2027)
- C CWE-75: Failure to Sanitize Special Elements into a Different Plane (Special Element Injection) (p.143)
- B CWE-76: Improper Neutralization of Equivalent Special Elements (p.145)
- C CWE-77: Improper Neutralization of Special Elements used in a Command ('Command Injection') (p.146)
- B CWE-624: Executable Regular Expression Error (p.1395)
- B CWE-78: Improper Neutralization of Special Elements used in an OS Command ('OS Command Injection') (p.153)
- B CWE-88: Improper Neutralization of Argument Delimiters in a Command ('Argument Injection') (p.196)
- B CWE-917: Improper Neutralization of Special Elements used in an Expression Language Statement ('Expression Language Injection') (p.1823)
- B CWE-79: Improper Neutralization of Input During Web Page Generation ('Cross-site Scripting') (p.166)
- V CWE-80: Improper Neutralization of Script-Related HTML Tags in a Web Page (Basic XSS) (p.179)
- V CWE-81: Improper Neutralization of Script in an Error Message Web Page (p.182)
- V CWE-83: Improper Neutralization of Script in Attributes in a Web Page (p.186)
- V CWE-82: Improper Neutralization of Script in Attributes of IMG Tags in a Web Page (p.184)
- V CWE-84: Improper Neutralization of Encoded URI Schemes in a Web Page (p.188)
- V CWE-85: Doubled Character XSS Manipulations (p.190)
- V CWE-86: Improper Neutralization of Invalid Characters in Identifiers in Web Pages (p.192)
- V CWE-87: Improper Neutralization of Alternate XSS Syntax (p.194)
- B CWE-91: XML Injection (aka Blind XPath Injection) (p.218)
- B CWE-643: Improper Neutralization of Data within XPath Expressions ('XPath Injection') (p.1425)
- B CWE-652: Improper Neutralization of Data within XQuery Expressions ('XQuery Injection') (p.1440)
- B CWE-93: Improper Neutralization of CRLF Sequences ('CRLF Injection') (p.220)
- V CWE-113: Improper Neutralization of CRLF Sequences in HTTP Headers ('HTTP Request/Response Splitting') (p.274)
- B CWE-94: Improper Control of Generation of Code ('Code Injection') (p.222)
- B CWE-1336: Improper Neutralization of Special Elements Used in a Template Engine (p.2246)
- V CWE-95: Improper Neutralization of Directives in Dynamically Evaluated Code ('Eval Injection') (p.230)
- B CWE-96: Improper Neutralization of Directives in Statically Saved Code ('Static Code Injection') (p.235)

- V CWE-97: Improper Neutralization of Server-Side Includes (SSI) Within a Web Page (p.238)
- C CWE-943: Improper Neutralization of Special Elements in Data Query Logic (p.1855)
- B CWE-643: Improper Neutralization of Data within XPath Expressions ('XPath Injection') (p.1425)
- B CWE-652: Improper Neutralization of Data within XQuery Expressions ('XQuery Injection') (p.1440)
- B CWE-89: Improper Neutralization of Special Elements used in an SQL Command ('SQL Injection') (p.204)
- V CWE-564: SQL Injection: Hibernate (p.1287)
- B CWE-90: Improper Neutralization of Special Elements used in an LDAP Query ('LDAP Injection') (p.215)
- C CWE-99: Improper Control of Resource Identifiers ('Resource Injection') (p.246)
- B CWE-641: Improper Restriction of Names for Files and Other Resources (p.1417)
- B CWE-694: Use of Multiple Resources with Duplicate Identifier (p.1528)
- V CWE-102: Struts: Duplicate Validation Forms (p.249)
- V CWE-462: Duplicate Key in Associative List (Alist) (p.1108)
- B CWE-914: Improper Control of Dynamically-Identified Variables (p.1812)
- V CWE-621: Variable Extraction Error (p.1390)
- V CWE-627: Dynamic Variable Evaluation (p.1401)
- P CWE-710: Improper Adherence to Coding Standards (p.1554)
- B CWE-1041: Use of Redundant Code (p.1880)
- B CWE-1044: Architecture with Number of Horizontal Layers Outside of Expected Range (p.1884)
- B CWE-1048: Invokable Control Element with Large Number of Outward Calls (p.1888)
- C CWE-1059: Insufficient Technical Documentation (p.1900)
- B CWE-1053: Missing Documentation for Design (p.1893)
- B CWE-1110: Incomplete Design Documentation (p.1955)
- B CWE-1111: Incomplete I/O Documentation (p.1956)
- B CWE-1112: Incomplete Documentation of Program Execution (p.1957)
- B CWE-1118: Insufficient Documentation of Error Handling Techniques (p.1963)
- C CWE-1061: Insufficient Encapsulation (p.1903)
- B CWE-1054: Invocation of a Control Element at an Unnecessarily Deep Horizontal Layer (p.1894)
- B CWE-1057: Data Access Operations Outside of Expected Data Manager Component (p.1897)
- B CWE-1062: Parent Class with References to Child Class (p.1905)
- B CWE-1083: Data Access from Outside Expected Data Manager Component (p.1927)
- B CWE-1090: Method Containing Access of a Member Element from Another Class (p.1935)
- B CWE-1100: Insufficient Isolation of System-Dependent Functions (p.1945)
- B CWE-1105: Insufficient Encapsulation of Machine-Dependent Functionality (p.1950)
- B CWE-188: Reliance on Data/Memory Layout (p.473)
- V CWE-198: Use of Incorrect Byte Ordering (p.508)
- B CWE-766: Critical Data Element Declared Public (p.1612)
- B CWE-1065: Runtime Resource Management Control Element in a Component Built to Run on Application Servers (p.1908)
- B CWE-1066: Missing Serialization Control Element (p.1909)
- B CWE-1068: Inconsistency Between Implementation and Documented Design (p.1911)
- C CWE-1076: Insufficient Adherence to Expected Conventions (p.1921)
- B CWE-1045: Parent Class with a Virtual Destructor and a Child Class without a Virtual Destructor (p.1885)
- B CWE-1070: Serializable Data Element Containing non-Serializable Item Elements (p.1914)
- C CWE-1078: Inappropriate Source Code Style or Formatting (p.1923)
- B CWE-1085: Invokable Control Element with Excessive Volume of Commented-out Code (p.1930)
- B CWE-1099: Inconsistent Naming Conventions for Identifiers (p.1944)
- B CWE-1106: Insufficient Use of Symbolic Constants (p.1951)
- B CWE-1107: Insufficient Isolation of Symbolic Constant Definitions (p.1952)
- B CWE-1109: Use of Same Variable for Multiple Purposes (p.1954)
- B CWE-1113: Inappropriate Comment Style (p.1958)

- B CWE-1114: Inappropriate Whitespace Style (p.1958)
- B CWE-1115: Source Code Element without Standard Prologue (p.1959)
- B CWE-1116: Inaccurate Comments (p.1960)
- B CWE-1117: Callable with Insufficient Behavioral Summary (p.1962)
- V CWE-546: Suspicious Comment (p.1263)
- B CWE-547: Use of Hard-coded, Security-relevant Constants (p.1264)
- B CWE-1079: Parent Class without Virtual Destructor Method (p.1924)
- B CWE-1082: Class Instance Self Destruction Control Element (p.1926)
- B CWE-1087: Class with Virtual Method without a Virtual Destructor (p.1932)
- B CWE-1091: Use of Object without Invoking Destructor Method (p.1936)
- B CWE-1097: Persistent Storable Data Element without Associated Comparison Control Element (p.1942)
- B CWE-1098: Data Element containing Pointer Item without Proper Copy Control Element (p.1943)
- B CWE-1108: Excessive Reliance on Global Variables (p.1953)
- B CWE-586: Explicit Call to Finalize() (p.1325)
- V CWE-594: J2EE Framework: Saving Unserializable Objects to Disk (p.1337)
- B CWE-1092: Use of Same Invokable Control Element in Multiple Architectural Layers (p.1937)
- G CWE-1093: Excessively Complex Data Representation (p.1938)
- B CWE-1043: Data Element Aggregating an Excessively Large Number of Non-Primitive Elements (p.1883)
- B CWE-1055: Multiple Inheritance from Concrete Classes (p.1895)
- B CWE-1074: Class with Excessively Deep Inheritance (p.1919)
- B CWE-1086: Class with Excessive Number of Child Classes (p.1931)
- B CWE-1101: Reliance on Runtime Component in Generated Code (p.1946)
- G CWE-1120: Excessive Code Complexity (p.1965)
- B CWE-1047: Modules with Circular Dependencies (p.1887)
- B CWE-1056: Invokable Control Element with Variadic Parameters (p.1896)
- B CWE-1060: Excessive Number of Inefficient Server-Side Data Accesses (p.1902)
- B CWE-1064: Invokable Control Element with Signature Containing an Excessive Number of Parameters (p.1907)
- B CWE-1075: Unconditional Control Flow Transfer outside of Switch Block (p.1920)
- B CWE-1080: Source Code File with Excessive Number of Lines of Code (p.1925)
- B CWE-1095: Loop Condition Value Update within the Loop (p.1940)
- B CWE-1119: Excessive Use of Unconditional Branching (p.1964)
- B CWE-1121: Excessive McCabe Cyclomatic Complexity (p.1966)
- B CWE-1122: Excessive Halstead Complexity (p.1967)
- B CWE-1123: Excessive Use of Self-Modifying Code (p.1968)
- B CWE-1124: Excessively Deep Nesting (p.1969)
- B CWE-1125: Excessive Attack Surface (p.1970)
- B CWE-1126: Declaration of Variable with Unnecessarily Wide Scope (p.1971)
- B CWE-1127: Compilation with Insufficient Warnings or Errors (p.1971)
- G CWE-1164: Irrelevant Code (p.1972)
- V CWE-107: Struts: Unused Validation Form (p.262)
- B CWE-1071: Empty Code Block (p.1915)
- V CWE-1069: Empty Exception Block (p.1912)
- V CWE-585: Empty Synchronized Block (p.1323)
- V CWE-110: Struts: Validator Without Form Field (p.267)
- B CWE-561: Dead Code (p.1280)
- B CWE-563: Assignment to Variable without Use (p.1285)
- G CWE-1177: Use of Prohibited Code (p.1977)
- B CWE-242: Use of Inherently Dangerous Function (p.590)
- B CWE-676: Use of Potentially Dangerous Function (p.1494)
- V CWE-785: Use of Path Manipulation Function without Maximum-sized Buffer (p.1661)
- B CWE-1209: Failure to Disable Reserved Bits (p.1996)
- G CWE-1357: Reliance on Insufficiently Trustworthy Component (p.2263)

- B CWE-1104: Use of Unmaintained Third Party Components (p.1949)
- B CWE-1329: Reliance on Component That is Not Updateable (p.2227)
  - B CWE-1277: Firmware Not Updateable (p.2124)
  - B CWE-1310: Missing Ability to Patch ROM Code (p.2187)
- B CWE-476: NULL Pointer Dereference (p.1136)
- B CWE-477: Use of Obsolete Function (p.1143)
- B CWE-484: Omitted Break Statement in Switch (p.1166)
- B CWE-489: Active Debug Code (p.1175)
  - V CWE-11: ASP.NET Misconfiguration: Creating Debug Binary (p.9)
- B CWE-570: Expression is Always False (p.1297)
- B CWE-571: Expression is Always True (p.1300)
- G CWE-573: Improper Following of Specification by Caller (p.1303)
  - V CWE-103: Struts: Incomplete validate() Method Definition (p.251)
  - V CWE-104: Struts: Form Bean Does Not Extend Validation Class (p.254)
  - V CWE-243: Creation of chroot Jail Without Changing Working Directory (p.593)
- B CWE-253: Incorrect Check of Function Return Value (p.617)
- B CWE-296: Improper Following of a Certificate's Chain of Trust (p.723)
- B CWE-304: Missing Critical Step in Authentication (p.742)
- B CWE-325: Missing Cryptographic Step (p.798)
- V CWE-329: Generation of Predictable IV with CBC Mode (p.815)
- B CWE-358: Improperly Implemented Security Check for Standard (p.885)
- B CWE-475: Undefined Behavior for Input to API (p.1135)
- V CWE-568: finalize() Method Without super.finalize() (p.1295)
- V CWE-577: EJB Bad Practices: Use of Sockets (p.1311)
- V CWE-578: EJB Bad Practices: Use of Class Loader (p.1313)
- V CWE-579: J2EE Bad Practices: Non-serializable Object Stored in Session (p.1314)
- V CWE-580: clone() Method Without super.clone() (p.1316)
- V CWE-581: Object Model Violation: Just One of Equals and Hashcode Defined (p.1318)
- B CWE-628: Function Call with Incorrectly Specified Arguments (p.1403)
  - V CWE-683: Function Call With Incorrect Order of Arguments (p.1509)
  - V CWE-685: Function Call With Incorrect Number of Arguments (p.1512)
  - V CWE-686: Function Call With Incorrect Argument Type (p.1513)
  - V CWE-687: Function Call With Incorrectly Specified Argument Value (p.1515)
    - V CWE-560: Use of umask() with chmod-style Argument (p.1279)
  - V CWE-688: Function Call With Incorrect Variable or Reference as Argument (p.1516)
- G CWE-675: Multiple Operations on Resource in Single-Operation Context (p.1492)
  - B CWE-1341: Multiple Releases of Same Resource or Handle (p.2254)
    - V CWE-415: Double Free (p.1012)
  - V CWE-174: Double Decoding of the Same Data (p.440)
  - V CWE-605: Multiple Binds to the Same Port (p.1361)
  - B CWE-764: Multiple Locks of a Critical Resource (p.1609)
  - B CWE-765: Multiple Unlocks of a Critical Resource (p.1610)
- B CWE-694: Use of Multiple Resources with Duplicate Identifier (p.1528)
  - V CWE-102: Struts: Duplicate Validation Forms (p.249)
  - V CWE-462: Duplicate Key in Associative List (Alist) (p.1108)
- B CWE-695: Use of Low-Level Functionality (p.1529)
  - V CWE-111: Direct Use of Unsafe JNI (p.269)
  - V CWE-245: J2EE Bad Practices: Direct Management of Connections (p.596)
  - V CWE-246: J2EE Bad Practices: Direct Use of Sockets (p.598)
  - V CWE-383: J2EE Bad Practices: Direct Use of Threads (p.939)
  - V CWE-574: EJB Bad Practices: Use of Synchronization Primitives (p.1305)
  - V CWE-575: EJB Bad Practices: Use of AWT Swing (p.1306)
  - V CWE-576: EJB Bad Practices: Use of Java I/O (p.1309)
- G CWE-657: Violation of Secure Design Principles (p.1451)
  - B CWE-1192: Improper Identifier for IP Block used in System-On-Chip (SOC) (p.1990)

- C CWE-1395: Dependency on Vulnerable Third-Party Component (p.2285)
- B CWE-250: Execution with Unnecessary Privileges (p.603)
- C CWE-636: Not Failing Securely ('Failing Open') (p.1406)
- B CWE-455: Non-exit on Failed Initialization (p.1091)
- C CWE-637: Unnecessary Complexity in Protection Mechanism (Not Using 'Economy of Mechanism') (p.1408)
- C CWE-638: Not Using Complete Mediation (p.1410)
  - C CWE-424: Improper Protection of Alternate Path (p.1028)
    - B CWE-425: Direct Request ('Forced Browsing') (p.1029)
- C CWE-653: Improper Isolation or Compartmentalization (p.1442)
  - B CWE-1189: Improper Isolation of Shared Resources on System-on-a-Chip (SoC) (p.1981)
    - B CWE-1303: Non-Transparent Sharing of Microarchitectural Resources (p.2183)
  - B CWE-1331: Improper Isolation of Shared Resources in Network On Chip (NoC) (p.2233)
- B CWE-654: Reliance on a Single Factor in a Security Decision (p.1444)
  - B CWE-308: Use of Single-factor Authentication (p.756)
  - B CWE-309: Use of Password System for Primary Authentication (p.758)
- C CWE-655: Insufficient Psychological Acceptability (p.1447)
- C CWE-656: Reliance on Security Through Obscurity (p.1449)
- C CWE-671: Lack of Administrator Control over Security (p.1483)
  - B CWE-447: Unimplemented or Unsupported Feature in UI (p.1079)
  - B CWE-798: Use of Hard-coded Credentials (p.1695)
    - V CWE-259: Use of Hard-coded Password (p.627)
    - V CWE-321: Use of Hard-coded Cryptographic Key (p.789)
- C CWE-684: Incorrect Provision of Specified Functionality (p.1510)
  - B CWE-1245: Improper Finite State Machines (FSMs) in Hardware Logic (p.2048)
  - B CWE-392: Missing Report of Error Condition (p.956)
  - B CWE-393: Return of Wrong Status Code (p.958)
  - B CWE-440: Expected Behavior Violation (p.1066)
  - C CWE-446: UI Discrepancy for Security Feature (p.1078)
    - B CWE-447: Unimplemented or Unsupported Feature in UI (p.1079)
    - B CWE-448: Obsolete Feature in UI (p.1080)
    - B CWE-449: The UI Performs the Wrong Action (p.1081)
  - C CWE-451: User Interface (UI) Misrepresentation of Critical Information (p.1084)
    - B CWE-1007: Insufficient Visual Distinction of Homoglyphs Presented to User (p.1862)
    - B CWE-1021: Improper Restriction of Rendered UI Layers or Frames (p.1865)
  - C CWE-912: Hidden Functionality (p.1808)
    - C CWE-506: Embedded Malicious Code (p.1214)
      - B CWE-507: Trojan Horse (p.1216)
        - B CWE-508: Non-Replicating Malicious Code (p.1218)
        - B CWE-509: Replicating Malicious Code (Virus or Worm) (p.1219)
      - B CWE-510: Trapdoor (p.1220)
      - B CWE-511: Logic/Time Bomb (p.1221)
      - B CWE-512: Spyware (p.1223)
- C CWE-758: Reliance on Undefined, Unspecified, or Implementation-Defined Behavior (p.1587)
  - C CWE-1038: Insecure Automated Optimizations (p.1877)
    - B CWE-1037: Processor Optimization Removal or Modification of Security-critical Code (p.1875)
    - B CWE-733: Compiler Optimization Removal or Modification of Security-critical Code (p.1567)
      - V CWE-14: Compiler Removal of Code to Clear Buffers (p.14)
  - B CWE-1102: Reliance on Machine-Dependent Data Representation (p.1947)
  - B CWE-1103: Use of Platform-Dependent Third Party Components (p.1948)
  - B CWE-1105: Insufficient Encapsulation of Machine-Dependent Functionality (p.1950)
    - B CWE-188: Reliance on Data/Memory Layout (p.473)
      - V CWE-198: Use of Incorrect Byte Ordering (p.508)
  - B CWE-474: Use of Function with Inconsistent Implementations (p.1133)
    - V CWE-589: Call to Non-ubiquitous API (p.1330)

-  CWE-562: Return of Stack Variable Address (*p. 1283*)
-  CWE-587: Assignment of a Fixed Address to a Pointer (*p. 1327*)
-  CWE-588: Attempt to Access Child of a Non-structure Pointer (*p. 1329*)

## Graph View: CWE-1003: Weaknesses for Simplified Mapping of Published Vulnerabilities

- C CWE-20: Improper Input Validation (p.20)
  - B CWE-1284: Improper Validation of Specified Quantity in Input (p.2138)
  - V CWE-129: Improper Validation of Array Index (p.344)
- C CWE-74: Improper Neutralization of Special Elements in Output Used by a Downstream Component ('Injection') (p.138)
  - B CWE-1236: Improper Neutralization of Formula Elements in a CSV File (p.2027)
  - C CWE-77: Improper Neutralization of Special Elements used in a Command ('Command Injection') (p.146)
  - B CWE-78: Improper Neutralization of Special Elements used in an OS Command ('OS Command Injection') (p.153)

- B CWE-369: Divide By Zero (p.917)
- P CWE-697: Incorrect Comparison (p.1535)
- G CWE-704: Incorrect Type Conversion or Cast (p.1543)
- B CWE-681: Incorrect Conversion between Numeric Types (p.1500)
- B CWE-843: Access of Resource Using Incompatible Type ('Type Confusion') (p.1781)
- G CWE-706: Use of Incorrectly-Resolved Name or Reference (p.1549)
- B CWE-178: Improper Handling of Case Sensitivity (p.448)
- B CWE-22: Improper Limitation of a Pathname to a Restricted Directory ('Path Traversal') (p.33)
- B CWE-59: Improper Link Resolution Before File Access ('Link Following') (p.112)
- G CWE-732: Incorrect Permission Assignment for Critical Resource (p.1556)
- B CWE-276: Incorrect Default Permissions (p.669)
- B CWE-281: Improper Preservation of Permissions (p.678)
- G CWE-754: Improper Check for Unusual or Exceptional Conditions (p.1573)
- B CWE-252: Unchecked Return Value (p.610)
- B CWE-273: Improper Check for Dropped Privileges (p.664)
- B CWE-476: NULL Pointer Dereference (p.1136)
- G CWE-755: Improper Handling of Exceptional Conditions (p.1581)
- G CWE-834: Excessive Iteration (p.1759)
- B CWE-835: Loop with Unreachable Exit Condition ('Infinite Loop') (p.1762)
- G CWE-862: Missing Authorization (p.1785)
- B CWE-425: Direct Request ('Forced Browsing') (p.1029)
- G CWE-863: Incorrect Authorization (p.1792)
- B CWE-639: Authorization Bypass Through User-Controlled Key (p.1412)
- G CWE-913: Improper Control of Dynamically-Managed Code Resources (p.1810)
- V CWE-1321: Improperly Controlled Modification of Object Prototype Attributes ('Prototype Pollution') (p.2213)
- B CWE-470: Use of Externally-Controlled Input to Select Classes or Code ('Unsafe Reflection') (p.1122)
- B CWE-502: Deserialization of Untrusted Data (p.1209)
- G CWE-922: Insecure Storage of Sensitive Information (p.1830)

## Graph View: CWE-1008: Architectural Concepts

- C** CWE-1009: Audit (*p.2436*)
  - B** CWE-117: Improper Output Neutralization for Logs (*p.291*)
  - B** CWE-223: Omission of Security-relevant Information (*p.563*)
  - B** CWE-224: Obscured Security-relevant Information by Alternate Name (*p.565*)
  - B** CWE-532: Insertion of Sensitive Information into Log File (*p.1246*)
  - B** CWE-778: Insufficient Logging (*p.1643*)
  - B** CWE-779: Logging of Excessive Data (*p.1647*)
- C** CWE-1010: Authenticate Actors (*p.2436*)
  - V** CWE-258: Empty Password in Configuration File (*p.625*)
  - V** CWE-259: Use of Hard-coded Password (*p.627*)
  - B** CWE-262: Not Using Password Aging (*p.637*)
  - B** CWE-263: Password Aging with Long Expiration (*p.640*)
  - G** CWE-287: Improper Authentication (*p.696*)
  - B** CWE-288: Authentication Bypass Using an Alternate Path or Channel (*p.704*)
  - B** CWE-289: Authentication Bypass by Alternate Name (*p.707*)
  - B** CWE-290: Authentication Bypass by Spoofing (*p.709*)
  - V** CWE-291: Reliance on IP Address for Authentication (*p.712*)
  - V** CWE-293: Using Referer Field for Authentication (*p.714*)
  - B** CWE-294: Authentication Bypass by Capture-replay (*p.716*)
  - B** CWE-301: Reflection Attack in an Authentication Protocol (*p.737*)
  - B** CWE-302: Authentication Bypass by Assumed-Immutable Data (*p.739*)
  - B** CWE-303: Incorrect Implementation of Authentication Algorithm (*p.741*)
  - B** CWE-304: Missing Critical Step in Authentication (*p.742*)
  - B** CWE-305: Authentication Bypass by Primary Weakness (*p.744*)
  - B** CWE-306: Missing Authentication for Critical Function (*p.745*)
  - B** CWE-307: Improper Restriction of Excessive Authentication Attempts (*p.751*)
  - B** CWE-308: Use of Single-factor Authentication (*p.756*)
  - B** CWE-322: Key Exchange without Entity Authentication (*p.792*)
  - B** CWE-521: Weak Password Requirements (*p.1228*)
  - V** CWE-593: Authentication Bypass: OpenSSL CTX Object Modified after SSL Objects are Created (*p.1336*)
  - B** CWE-603: Use of Client-Side Authentication (*p.1359*)
  - B** CWE-620: Unverified Password Change (*p.1389*)
  - B** CWE-640: Weak Password Recovery Mechanism for Forgotten Password (*p.1415*)
  - B** CWE-798: Use of Hard-coded Credentials (*p.1695*)
  - B** CWE-836: Use of Password Hash Instead of Password for Authentication (*p.1766*)
  - B** CWE-916: Use of Password Hash With Insufficient Computational Effort (*p.1818*)
- C** CWE-1011: Authorize Actors (*p.2437*)
  - G** CWE-114: Process Control (*p.280*)
  - B** CWE-15: External Control of System or Configuration Setting (*p.17*)
  - V** CWE-219: Storage of File with Sensitive Data Under Web Root (*p.557*)
  - V** CWE-220: Storage of File With Sensitive Data Under FTP Root (*p.559*)
  - B** CWE-266: Incorrect Privilege Assignment (*p.642*)
  - B** CWE-267: Privilege Defined With Unsafe Actions (*p.645*)
  - B** CWE-268: Privilege Chaining (*p.648*)
  - G** CWE-269: Improper Privilege Management (*p.650*)
  - B** CWE-270: Privilege Context Switching Error (*p.655*)
  - G** CWE-271: Privilege Dropping / Lowering Errors (*p.657*)
  - B** CWE-272: Least Privilege Violation (*p.660*)
  - B** CWE-273: Improper Check for Dropped Privileges (*p.664*)
  - B** CWE-274: Improper Handling of Insufficient Privileges (*p.667*)
  - B** CWE-276: Incorrect Default Permissions (*p.669*)
  - V** CWE-277: Insecure Inherited Permissions (*p.672*)

- V CWE-279: Incorrect Execution-Assigned Permissions (p.675)
- B CWE-280: Improper Handling of Insufficient Permissions or Privileges (p.676)
- B CWE-281: Improper Preservation of Permissions (p.678)
- C CWE-282: Improper Ownership Management (p.680)
- B CWE-283: Unverified Ownership (p.682)
- P CWE-284: Improper Access Control (p.684)
- C CWE-285: Improper Authorization (p.688)
- C CWE-286: Incorrect User Management (p.695)
- C CWE-300: Channel Accessible by Non-Endpoint (p.734)
- B CWE-341: Predictable from Observable State (p.847)
- B CWE-359: Exposure of Private Personal Information to an Unauthorized Actor (p.886)
- B CWE-403: Exposure of File Descriptor to Unintended Control Sphere ('File Descriptor Leak') (p.982)
- B CWE-419: Unprotected Primary Channel (p.1021)
- B CWE-420: Unprotected Alternate Channel (p.1022)
- B CWE-425: Direct Request ('Forced Browsing') (p.1029)
- B CWE-426: Untrusted Search Path (p.1032)
- B CWE-434: Unrestricted Upload of File with Dangerous Type (p.1052)
- V CWE-527: Exposure of Version-Control Repository to an Unauthorized Control Sphere (p.1241)
- V CWE-528: Exposure of Core Dump File to an Unauthorized Control Sphere (p.1242)
- V CWE-529: Exposure of Access Control List Files to an Unauthorized Control Sphere (p.1243)
- V CWE-530: Exposure of Backup File to an Unauthorized Control Sphere (p.1244)
- B CWE-538: Insertion of Sensitive Information into Externally-Accessible File or Directory (p.1254)
- B CWE-551: Incorrect Behavior Order: Authorization Before Parsing and Canonicalization (p.1269)
- B CWE-552: Files or Directories Accessible to External Parties (p.1270)
- V CWE-566: Authorization Bypass Through User-Controlled SQL Primary Key (p.1291)
- B CWE-639: Authorization Bypass Through User-Controlled Key (p.1412)
- C CWE-642: External Control of Critical State Data (p.1419)
- V CWE-647: Use of Non-Canonical URL Paths for Authorization Decisions (p.1431)
- C CWE-653: Improper Isolation or Compartmentalization (p.1442)
- C CWE-656: Reliance on Security Through Obscurity (p.1449)
- C CWE-668: Exposure of Resource to Wrong Sphere (p.1474)
- C CWE-669: Incorrect Resource Transfer Between Spheres (p.1477)
- C CWE-671: Lack of Administrator Control over Security (p.1483)
- C CWE-673: External Influence of Sphere Definition (p.1488)
- B CWE-708: Incorrect Ownership Assignment (p.1553)
- C CWE-732: Incorrect Permission Assignment for Critical Resource (p.1556)
- B CWE-770: Allocation of Resources Without Limits or Throttling (p.1618)
- V CWE-782: Exposed IOCTL with Insufficient Access Control (p.1653)
- V CWE-827: Improper Control of Document Type Definition (p.1741)
- C CWE-862: Missing Authorization (p.1785)
- C CWE-863: Incorrect Authorization (p.1792)
- B CWE-921: Storage of Sensitive Data in a Mechanism without Access Control (p.1829)
- C CWE-923: Improper Restriction of Communication Channel to Intended Endpoints (p.1832)
- B CWE-939: Improper Authorization in Handler for Custom URL Scheme (p.1845)
- V CWE-942: Permissive Cross-domain Policy with Untrusted Domains (p.1852)
- C CWE-1012: Cross Cutting (p.2439)
- B CWE-208: Observable Timing Discrepancy (p.534)
- B CWE-392: Missing Report of Error Condition (p.956)
- B CWE-460: Improper Cleanup on Thrown Exception (p.1106)
- B CWE-544: Missing Standardized Error Handling Mechanism (p.1262)
- C CWE-602: Client-Side Enforcement of Server-Side Security (p.1355)
- P CWE-703: Improper Check or Handling of Exceptional Conditions (p.1540)
- C CWE-754: Improper Check for Unusual or Exceptional Conditions (p.1573)

- V CWE-784: Reliance on Cookies without Validation and Integrity Checking in a Security Decision (p.1658)
- B CWE-807: Reliance on Untrusted Inputs in a Security Decision (p.1719)
- C CWE-1013: Encrypt Data (p.2440)
  - B CWE-256: Plaintext Storage of a Password (p.619)
  - B CWE-257: Storing Passwords in a Recoverable Format (p.622)
  - B CWE-260: Password in Configuration File (p.633)
  - B CWE-261: Weak Encoding for Password (p.635)
  - G CWE-311: Missing Encryption of Sensitive Data (p.761)
  - B CWE-312: Cleartext Storage of Sensitive Information (p.768)
  - V CWE-313: Cleartext Storage in a File or on Disk (p.774)
  - V CWE-314: Cleartext Storage in the Registry (p.776)
  - V CWE-315: Cleartext Storage of Sensitive Information in a Cookie (p.777)
  - V CWE-316: Cleartext Storage of Sensitive Information in Memory (p.779)
  - V CWE-317: Cleartext Storage of Sensitive Information in GUI (p.781)
  - V CWE-318: Cleartext Storage of Sensitive Information in Executable (p.782)
  - B CWE-319: Cleartext Transmission of Sensitive Information (p.783)
  - V CWE-321: Use of Hard-coded Cryptographic Key (p.789)
  - B CWE-323: Reusing a Nonce, Key Pair in Encryption (p.794)
  - B CWE-324: Use of a Key Past its Expiration Date (p.796)
  - B CWE-325: Missing Cryptographic Step (p.798)
  - G CWE-326: Inadequate Encryption Strength (p.800)
  - G CWE-327: Use of a Broken or Risky Cryptographic Algorithm (p.803)
  - B CWE-328: Use of Weak Hash (p.810)
  - G CWE-330: Use of Insufficiently Random Values (p.818)
  - B CWE-331: Insufficient Entropy (p.825)
  - V CWE-332: Insufficient Entropy in PRNG (p.827)
  - V CWE-333: Improper Handling of Insufficient Entropy in TRNG (p.829)
  - B CWE-334: Small Space of Random Values (p.831)
  - B CWE-335: Incorrect Usage of Seeds in Pseudo-Random Number Generator (PRNG) (p.833)
  - V CWE-336: Same Seed in Pseudo-Random Number Generator (PRNG) (p.836)
  - V CWE-337: Predictable Seed in Pseudo-Random Number Generator (PRNG) (p.838)
  - B CWE-338: Use of Cryptographically Weak Pseudo-Random Number Generator (PRNG) (p.841)
  - V CWE-339: Small Seed Space in PRNG (p.844)
  - B CWE-347: Improper Verification of Cryptographic Signature (p.861)
  - G CWE-522: Insufficiently Protected Credentials (p.1231)
  - B CWE-523: Unprotected Transport of Credentials (p.1235)
  - B CWE-757: Selection of Less-Secure Algorithm During Negotiation ('Algorithm Downgrade') (p.1586)
  - V CWE-759: Use of a One-Way Hash without a Salt (p.1590)
  - V CWE-760: Use of a One-Way Hash with a Predictable Salt (p.1594)
  - V CWE-780: Use of RSA Algorithm without OAEP (p.1649)
  - G CWE-922: Insecure Storage of Sensitive Information (p.1830)
- C CWE-1014: Identify Actors (p.2441)
  - B CWE-295: Improper Certificate Validation (p.718)
  - B CWE-296: Improper Following of a Certificate's Chain of Trust (p.723)
  - V CWE-297: Improper Validation of Certificate with Host Mismatch (p.726)
  - V CWE-298: Improper Validation of Certificate Expiration (p.730)
  - B CWE-299: Improper Check for Certificate Revocation (p.731)
  - G CWE-345: Insufficient Verification of Data Authenticity (p.855)
  - G CWE-346: Origin Validation Error (p.857)
  - V CWE-370: Missing Check for Certificate Revocation after Initial Check (p.921)
  - G CWE-441: Unintended Proxy or Intermediary ('Confused Deputy') (p.1069)
  - V CWE-599: Missing Validation of OpenSSL Certificate (p.1347)
  - B CWE-940: Improper Verification of Source of a Communication Channel (p.1847)

- B CWE-941: Incorrectly Specified Destination in a Communication Channel (p.1850)
- C CWE-1015: Limit Access (p.2442)
  - B CWE-201: Insertion of Sensitive Information Into Sent Data (p.518)
  - B CWE-209: Generation of Error Message Containing Sensitive Information (p.537)
  - B CWE-212: Improper Removal of Sensitive Information Before Storage or Transfer (p.548)
  - V CWE-243: Creation of chroot Jail Without Changing Working Directory (p.593)
  - B CWE-250: Execution with Unnecessary Privileges (p.603)
  - C CWE-610: Externally Controlled Reference to a Resource in Another Sphere (p.1369)
  - B CWE-611: Improper Restriction of XML External Entity Reference (p.1372)
  - B CWE-73: External Control of File Name or Path (p.133)
- C CWE-1016: Limit Exposure (p.2443)
  - B CWE-210: Self-generated Error Message Containing Sensitive Information (p.543)
  - B CWE-211: Externally-Generated Error Message Containing Sensitive Information (p.545)
  - B CWE-214: Invocation of Process Using Visible Sensitive Information (p.553)
  - V CWE-550: Server-generated Error Message Containing Sensitive Information (p.1268)
  - B CWE-829: Inclusion of Functionality from Untrusted Control Sphere (p.1746)
  - V CWE-830: Inclusion of Web Functionality from an Untrusted Source (p.1752)
- C CWE-1017: Lock Computer (p.2443)
  - B CWE-645: Overly Restrictive Account Lockout Mechanism (p.1429)
- C CWE-1018: Manage User Sessions (p.2444)
  - B CWE-384: Session Fixation (p.941)
  - B CWE-488: Exposure of Data Element to Wrong Session (p.1173)
  - V CWE-579: J2EE Bad Practices: Non-serializable Object Stored in Session (p.1314)
  - V CWE-6: J2EE Misconfiguration: Insufficient Session-ID Length (p.2)
  - B CWE-613: Insufficient Session Expiration (p.1377)
  - B CWE-841: Improper Enforcement of Behavioral Workflow (p.1777)
- C CWE-1019: Validate Inputs (p.2445)
  - C CWE-138: Improper Neutralization of Special Elements (p.376)
  - V CWE-150: Improper Neutralization of Escape, Meta, or Control Sequences (p.397)
  - C CWE-20: Improper Input Validation (p.20)
  - B CWE-349: Acceptance of Extraneous Untrusted Data With Trusted Data (p.865)
  - B CWE-352: Cross-Site Request Forgery (CSRF) (p.872)
  - B CWE-472: External Control of Assumed-Immutable Web Parameter (p.1128)
  - V CWE-473: PHP External Variable Modification (p.1131)
  - B CWE-502: Deserialization of Untrusted Data (p.1209)
  - B CWE-59: Improper Link Resolution Before File Access ('Link Following') (p.112)
  - B CWE-601: URL Redirection to Untrusted Site ('Open Redirect') (p.1350)
  - B CWE-641: Improper Restriction of Names for Files and Other Resources (p.1417)
  - B CWE-643: Improper Neutralization of Data within XPath Expressions ('XPath Injection') (p.1425)
  - B CWE-652: Improper Neutralization of Data within XQuery Expressions ('XQuery Injection') (p.1440)
  - C CWE-74: Improper Neutralization of Special Elements in Output Used by a Downstream Component ('Injection') (p.138)
  - C CWE-75: Failure to Sanitize Special Elements into a Different Plane (Special Element Injection) (p.143)
  - B CWE-76: Improper Neutralization of Equivalent Special Elements (p.145)
  - C CWE-77: Improper Neutralization of Special Elements used in a Command ('Command Injection') (p.146)
  - B CWE-78: Improper Neutralization of Special Elements used in an OS Command ('OS Command Injection') (p.153)
  - B CWE-79: Improper Neutralization of Input During Web Page Generation ('Cross-site Scripting') (p.166)
  - C CWE-790: Improper Filtering of Special Elements (p.1684)
  - B CWE-791: Incomplete Filtering of Special Elements (p.1685)
  - V CWE-792: Incomplete Filtering of One or More Instances of Special Elements (p.1686)
  - V CWE-793: Only Filtering One Instance of a Special Element (p.1688)
  - V CWE-794: Incomplete Filtering of Multiple Instances of Special Elements (p.1689)

- B CWE-795: Only Filtering Special Elements at a Specified Location (p.1690)
- V CWE-796: Only Filtering Special Elements Relative to a Marker (p.1692)
- V CWE-797: Only Filtering Special Elements at an Absolute Position (p.1694)
- B CWE-88: Improper Neutralization of Argument Delimiters in a Command ('Argument Injection') (p.196)
- B CWE-89: Improper Neutralization of Special Elements used in an SQL Command ('SQL Injection') (p.204)
- B CWE-90: Improper Neutralization of Special Elements used in an LDAP Query ('LDAP Injection') (p.215)
- B CWE-91: XML Injection (aka Blind XPath Injection) (p.218)
- B CWE-93: Improper Neutralization of CRLF Sequences ('CRLF Injection') (p.220)
- B CWE-94: Improper Control of Generation of Code ('Code Injection') (p.222)
- G CWE-943: Improper Neutralization of Special Elements in Data Query Logic (p.1855)
- V CWE-95: Improper Neutralization of Directives in Dynamically Evaluated Code ('Eval Injection') (p.230)
- B CWE-96: Improper Neutralization of Directives in Statically Saved Code ('Static Code Injection') (p.235)
- V CWE-97: Improper Neutralization of Server-Side Includes (SSI) Within a Web Page (p.238)
- V CWE-98: Improper Control of Filename for Include/Require Statement in PHP Program ('PHP Remote File Inclusion') (p.239)
- G CWE-99: Improper Control of Resource Identifiers ('Resource Injection') (p.246)
- C CWE-1020: Verify Message Integrity (p.2446)
- B CWE-353: Missing Support for Integrity Check (p.878)
- B CWE-354: Improper Validation of Integrity Check Value (p.880)
- B CWE-390: Detection of Error Condition Without Action (p.948)
- B CWE-391: Unchecked Error Condition (p.953)
- B CWE-494: Download of Code Without Integrity Check (p.1189)
- B CWE-565: Reliance on Cookies without Validation and Integrity Checking (p.1289)
- B CWE-649: Reliance on Obfuscation or Encryption of Security-Relevant Inputs without Integrity Checking (p.1435)
- P CWE-707: Improper Neutralization (p.1551)
- G CWE-755: Improper Handling of Exceptional Conditions (p.1581)
- B CWE-924: Improper Enforcement of Message Integrity During Transmission in a Communication Channel (p.1835)

## Graph View: CWE-1026: Weaknesses in OWASP Top Ten (2017)

- C** CWE-1027: OWASP Top Ten 2017 Category A1 - Injection (p.2447)
  - G** CWE-77: Improper Neutralization of Special Elements used in a Command ('Command Injection') (p.146)
  - B** CWE-78: Improper Neutralization of Special Elements used in an OS Command ('OS Command Injection') (p.153)
  - B** CWE-88: Improper Neutralization of Argument Delimiters in a Command ('Argument Injection') (p.196)
  - B** CWE-89: Improper Neutralization of Special Elements used in an SQL Command ('SQL Injection') (p.204)
  - B** CWE-90: Improper Neutralization of Special Elements used in an LDAP Query ('LDAP Injection') (p.215)
  - B** CWE-91: XML Injection (aka Blind XPath Injection) (p.218)
  - V** CWE-564: SQL Injection: Hibernate (p.1287)
  - B** CWE-917: Improper Neutralization of Special Elements used in an Expression Language Statement ('Expression Language Injection') (p.1823)
  - G** CWE-943: Improper Neutralization of Special Elements in Data Query Logic (p.1855)
- C** CWE-1028: OWASP Top Ten 2017 Category A2 - Broken Authentication (p.2448)
  - G** CWE-287: Improper Authentication (p.696)
  - B** CWE-256: Plaintext Storage of a Password (p.619)
  - B** CWE-308: Use of Single-factor Authentication (p.756)
  - A** CWE-384: Session Fixation (p.941)
  - G** CWE-522: Insufficiently Protected Credentials (p.1231)
  - B** CWE-523: Unprotected Transport of Credentials (p.1235)
  - B** CWE-613: Insufficient Session Expiration (p.1377)
  - B** CWE-620: Unverified Password Change (p.1389)
  - B** CWE-640: Weak Password Recovery Mechanism for Forgotten Password (p.1415)
- C** CWE-1029: OWASP Top Ten 2017 Category A3 - Sensitive Data Exposure (p.2448)
  - V** CWE-220: Storage of File With Sensitive Data Under FTP Root (p.559)
  - B** CWE-295: Improper Certificate Validation (p.718)
  - G** CWE-311: Missing Encryption of Sensitive Data (p.761)
  - B** CWE-312: Cleartext Storage of Sensitive Information (p.768)
  - B** CWE-319: Cleartext Transmission of Sensitive Information (p.783)
  - C** CWE-320: Key Management Errors (p.2331)
  - B** CWE-325: Missing Cryptographic Step (p.798)
  - G** CWE-326: Inadequate Encryption Strength (p.800)
  - G** CWE-327: Use of a Broken or Risky Cryptographic Algorithm (p.803)
  - B** CWE-328: Use of Weak Hash (p.810)

  - V** CWE-1077: Floating Point Comparison with Incorrect Operator (p.1922)
  - B** CWE-1079: Parent Class without Virtual Destructor Method (p.1924)
  - B** CWE-1082: Class Instance Self Destruction Control Element (p.1926)
  - B** CWE-1083: Data Access from Outside Expected Data Manager Component (p.1927)
  - B** CWE-1087: Class with Virtual Method without a Virtual Destructor (p.1932)
  - B** CWE-1088: Synchronous Access of Remote Resource without Timeout (p.1933)
  - B** CWE-1097: Persistent Storable Data Element without Associated Comparison Control Element (p.1942)
  - V** CWE-1096: Singleton Class Instance Creation without Proper Locking or Synchronization (p.1941)
  - B** CWE-1098: Data Element containing Pointer Item without Proper Copy Control Element (p.1943)
- C** CWE-1130: CISQ Quality Measures (2016) - Maintainability (p.2453)
  - B** CWE-561: Dead Code (p.1280)
  - B** CWE-1041: Use of Redundant Code (p.1880)
  - B** CWE-1044: Architecture with Number of Horizontal Layers Outside of Expected Range (p.1884)
  - B** CWE-1047: Modules with Circular Dependencies (p.1887)
  - B** CWE-1048: Invokable Control Element with Large Number of Outward Calls (p.1888)
  - B** CWE-1052: Excessive Use of Hard-Coded Literals in Initialization (p.1892)
  - B** CWE-1054: Invocation of a Control Element at an Unnecessarily Deep Horizontal Layer (p.1894)
  - B** CWE-1055: Multiple Inheritance from Concrete Classes (p.1895)
  - B** CWE-1064: Invokable Control Element with Signature Containing an Excessive Number of Parameters (p.1907)
  - B** CWE-1074: Class with Excessively Deep Inheritance (p.1919)
  - B** CWE-1075: Unconditional Control Flow Transfer outside of Switch Block (p.1920)
  - B** CWE-1080: Source Code File with Excessive Number of Lines of Code (p.1925)
  - B** CWE-766: Critical Data Element Declared Public (p.1612)
  - B** CWE-1084: Invokable Control Element with Excessive File or Data Access Operations (p.1929)
  - B** CWE-1085: Invokable Control Element with Excessive Volume of Commented-out Code (p.1930)
  - B** CWE-1086: Class with Excessive Number of Child Classes (p.1931)
  - B** CWE-1090: Method Containing Access of a Member Element from Another Class (p.1935)
  - B** CWE-1092: Use of Same Invokable Control Element in Multiple Architectural Layers (p.1937)

- B CWE-1095: Loop Condition Value Update within the Loop (p.1940)
- B CWE-1121: Excessive McCabe Cyclomatic Complexity (p.1966)
- C CWE-1131: CISQ Quality Measures (2016) - Security (p.2454)
- B CWE-22: Improper Limitation of a Pathname to a Restricted Directory ('Path Traversal') (p.33)
- B CWE-78: Improper Neutralization of Special Elements used in an OS Command ('OS Command Injection') (p.153)
- B CWE-79: Improper Neutralization of Input During Web Page Generation ('Cross-site Scripting') (p.166)
- B CWE-89: Improper Neutralization of Special Elements used in an SQL Command ('SQL Injection') (p.204)
- C CWE-99: Improper Control of Resource Identifiers ('Resource Injection') (p.246)
- B CWE-120: Buffer Copy without Checking Size of Input ('Classic Buffer Overflow') (p.307)
- V CWE-129: Improper Validation of Array Index (p.344)
- B CWE-134: Use of Externally-Controlled Format String (p.368)
- B CWE-252: Unchecked Return Value (p.610)
- C CWE-327: Use of a Broken or Risky Cryptographic Algorithm (p.803)
- B CWE-396: Declaration of Catch for Generic Exception (p.963)
- B CWE-397: Declaration of Throws for Generic Exception (p.965)
- B CWE-434: Unrestricted Upload of File with Dangerous Type (p.1052)
- V CWE-456: Missing Initialization of a Variable (p.1093)
- B CWE-606: Unchecked Input for Loop Condition (p.1363)
- C CWE-667: Improper Locking (p.1469)
- C CWE-672: Operation on a Resource after Expiration or Release (p.1485)
- B CWE-681: Incorrect Conversion between Numeric Types (p.1500)
- B CWE-772: Missing Release of Resource after Effective Lifetime (p.1629)
- V CWE-789: Memory Allocation with Excessive Size Value (p.1679)
- B CWE-798: Use of Hard-coded Credentials (p.1695)
- B CWE-835: Loop with Unreachable Exit Condition ('Infinite Loop') (p.1762)
- C CWE-1132: CISQ Quality Measures (2016) - Performance Efficiency (p.2455)
- V CWE-1042: Static Member Data Element outside of a Singleton Class Element (p.1882)
- B CWE-1043: Data Element Aggregating an Excessively Large Number of Non-Primitive Elements (p.1883)
- B CWE-1046: Creation of Immutable Text Using String Concatenation (p.1886)
- B CWE-1049: Excessive Data Query Operations in a Large Data Table (p.1889)
- B CWE-1050: Excessive Platform Resource Consumption within a Loop (p.1890)
- B CWE-1057: Data Access Operations Outside of Expected Data Manager Component (p.1897)
- B CWE-1060: Excessive Number of Inefficient Server-Side Data Accesses (p.1902)
- B CWE-1063: Creation of Class Instance within a Static Code Block (p.1906)
- B CWE-1067: Excessive Execution of Sequential Searches of Data Resource (p.1910)
- B CWE-1072: Data Resource Access without Use of Connection Pooling (p.1917)
- B CWE-1073: Non-SQL Invokable Control Element with Excessive Number of Data Resource Accesses (p.1918)
- B CWE-1089: Large Data Table with Excessive Number of Indices (p.1934)
- B CWE-1091: Use of Object without Invoking Destructor Method (p.1936)
- B CWE-1094: Excessive Index Range Scan for a Data Resource (p.1939)

## Graph View: CWE-1133: Weaknesses Addressed by the SEI CERT Oracle Coding Standard for Java

    - B CWE-1261: Improper Handling of Single Event Upsets (p.2087)
    - B CWE-1332: Improper Handling of Faults that Lead to Instruction Skips (p.2236)
    - B CWE-1351: Improper Handling of Hardware Behavior in Exceptionally Cold Environments (p.2261)
    - C CWE-1384: Improper Handling of Physical or Environmental Conditions (p.2265)
  - C CWE-1366: ICS Communications: Frail Security in Protocols (p.2515)
    - V CWE-121: Stack-based Buffer Overflow (p.317)
    - B CWE-125: Out-of-bounds Read (p.333)
    - B CWE-268: Privilege Chaining (p.648)
    - C CWE-269: Improper Privilege Management (p.650)
    - B CWE-276: Incorrect Default Permissions (p.669)
    - B CWE-290: Authentication Bypass by Spoofing (p.709)
    - B CWE-306: Missing Authentication for Critical Function (p.745)
    - C CWE-311: Missing Encryption of Sensitive Data (p.761)
    - B CWE-312: Cleartext Storage of Sensitive Information (p.768)
    - B CWE-319: Cleartext Transmission of Sensitive Information (p.783)
    - B CWE-325: Missing Cryptographic Step (p.798)
    - C CWE-327: Use of a Broken or Risky Cryptographic Algorithm (p.803)
    - C CWE-330: Use of Insufficiently Random Values (p.818)
    - V CWE-336: Same Seed in Pseudo-Random Number Generator (PRNG) (p.836)
    - V CWE-337: Predictable Seed in Pseudo-Random Number Generator (PRNG) (p.838)

- B CWE-341: Predictable from Observable State (p.847)
- B CWE-349: Acceptance of Extraneous Untrusted Data With Trusted Data (p.865)
- B CWE-358: Improperly Implemented Security Check for Standard (p.885)
- C CWE-362: Concurrent Execution using Shared Resource with Improper Synchronization ('Race Condition') (p.892)
- C CWE-377: Insecure Temporary File (p.929)
- B CWE-384: Session Fixation (p.941)
- B CWE-648: Incorrect Use of Privileged APIs (p.1433)
- B CWE-787: Out-of-bounds Write (p.1666)
- B CWE-1189: Improper Isolation of Shared Resources on System-on-a-Chip (SoC) (p.1981)
- B CWE-1303: Non-Transparent Sharing of Microarchitectural Resources (p.2183)
- B CWE-1393: Use of Default Password (p.2282)
- C CWE-1360: ICS Dependencies (& Architecture) (p.2510)
- C CWE-1367: ICS Dependencies (& Architecture): External Physical Systems (p.2516)
  - B CWE-1247: Improper Protection Against Voltage and Clock Glitches (p.2052)
  - B CWE-1338: Improper Protections Against Hardware Overheating (p.2249)
  - C CWE-1357: Reliance on Insufficiently Trustworthy Component (p.2263)
  - C CWE-1384: Improper Handling of Physical or Environmental Conditions (p.2265)
- C CWE-1368: ICS Dependencies (& Architecture): External Digital Systems (p.2517)
  - B CWE-15: External Control of System or Configuration Setting (p.17)
  - C CWE-287: Improper Authentication (p.696)
  - B CWE-306: Missing Authentication for Critical Function (p.745)
  - B CWE-308: Use of Single-factor Authentication (p.756)
  - B CWE-312: Cleartext Storage of Sensitive Information (p.768)
  - B CWE-440: Expected Behavior Violation (p.1066)
  - B CWE-470: Use of Externally-Controlled Input to Select Classes or Code ('Unsafe Reflection') (p.1122)
  - B CWE-603: Use of Client-Side Authentication (p.1359)
  - C CWE-610: Externally Controlled Reference to a Resource in Another Sphere (p.1369)
  - C CWE-638: Not Using Complete Mediation (p.1410)
  - C CWE-1059: Insufficient Technical Documentation (p.1900)
  - B CWE-1068: Inconsistency Between Implementation and Documented Design (p.1911)
  - B CWE-1104: Use of Unmaintained Third Party Components (p.1949)
  - B CWE-1329: Reliance on Component That is Not Updateable (p.2227)
  - C CWE-1357: Reliance on Insufficiently Trustworthy Component (p.2263)
  - B CWE-1393: Use of Default Password (p.2282)
- C CWE-1361: ICS Supply Chain (p.2511)
- C CWE-1369: ICS Supply Chain: IT/OT Convergence/Expansion (p.2518)
  - C CWE-636: Not Failing Securely ('Failing Open') (p.1406)
  - P CWE-284: Improper Access Control (p.684)
- C CWE-1370: ICS Supply Chain: Common Mode Frailties (p.2519)
  - P CWE-664: Improper Control of a Resource Through its Lifetime (p.1460)
  - P CWE-707: Improper Neutralization (p.1551)
  - P CWE-710: Improper Adherence to Coding Standards (p.1554)
  - C CWE-1357: Reliance on Insufficiently Trustworthy Component (p.2263)
  - V CWE-329: Generation of Predictable IV with CBC Mode (p.815)
  - P CWE-693: Protection Mechanism Failure (p.1525)
- C CWE-1371: ICS Supply Chain: Poorly Documented or Undocumented Features (p.2520)
  - B CWE-489: Active Debug Code (p.1175)
  - C CWE-912: Hidden Functionality (p.1808)
  - C CWE-1059: Insufficient Technical Documentation (p.1900)
  - B CWE-1242: Inclusion of Undocumented Features or Chicken Bits (p.2040)
- C CWE-1372: ICS Supply Chain: OT Counterfeit and Malicious Corruption (p.2521)
  - B CWE-1278: Missing Protection Against Hardware Reverse Engineering Using Integrated Circuit (IC) Imaging Techniques (p.2127)

- C CWE-1198: Privilege Separation and Access Control Issues (p.2482)
- B CWE-1231: Improper Prevention of Lock Bit Modification (p.2013)
- B CWE-1233: Security-Sensitive Hardware Controls with Missing Lock Bit Protection (p.2019)
- P CWE-284: Improper Access Control (p.684)
- C CWE-1362: ICS Engineering (Constructions/Deployment) (p.2511)
- C CWE-1373: ICS Engineering (Construction/Deployment): Trust Model Problems (p.2522)
  - G CWE-269: Improper Privilege Management (p.650)
  - B CWE-807: Reliance on Untrusted Inputs in a Security Decision (p.1719)
  - B CWE-349: Acceptance of Extraneous Untrusted Data With Trusted Data (p.865)
- C CWE-1374: ICS Engineering (Construction/Deployment): Maker Breaker Blindness (p.2522)
- C CWE-1375: ICS Engineering (Construction/Deployment): Gaps in Details/Data (p.2523)
  - G CWE-1059: Insufficient Technical Documentation (p.1900)
  - B CWE-1110: Incomplete Design Documentation (p.1955)
- P CWE-710: Improper Adherence to Coding Standards (p.1554)
- B CWE-1053: Missing Documentation for Design (p.1893)
- B CWE-1111: Incomplete I/O Documentation (p.1956)
- C CWE-1376: ICS Engineering (Construction/Deployment): Security Gaps in Commissioning (p.2524)
  - B CWE-276: Incorrect Default Permissions (p.669)
  - G CWE-362: Concurrent Execution using Shared Resource with Improper Synchronization ('Race Condition') (p.892)
  - B CWE-1393: Use of Default Password (p.2282)
- C CWE-1377: ICS Engineering (Construction/Deployment): Inherent Predictability in Design (p.2525)
  - B CWE-1278: Missing Protection Against Hardware Reverse Engineering Using Integrated Circuit (IC) Imaging Techniques (p.2127)
- C CWE-1363: ICS Operations (& Maintenance) (p.2512)
  - C CWE-1378: ICS Operations (& Maintenance): Gaps in obligations and training (p.2525)
  - C CWE-1379: ICS Operations (& Maintenance): Human factors in ICS environments (p.2526)
    - G CWE-655: Insufficient Psychological Acceptability (p.1447)
    - G CWE-451: User Interface (UI) Misrepresentation of Critical Information (p.1084)
  - C CWE-1380: ICS Operations (& Maintenance): Post-analysis changes (p.2527)
  - C CWE-1381: ICS Operations (& Maintenance): Exploitable Standard Operational Procedures (p.2528)
  - C CWE-1382: ICS Operations (& Maintenance): Emerging Energy Technologies (p.2529)
    - G CWE-20: Improper Input Validation (p.20)
    - G CWE-285: Improper Authorization (p.688)
    - B CWE-295: Improper Certificate Validation (p.718)
    - B CWE-296: Improper Following of a Certificate's Chain of Trust (p.723)
    - G CWE-346: Origin Validation Error (p.857)
    - G CWE-406: Insufficient Control of Network Message Volume (Network Amplification) (p.994)
    - B CWE-601: URL Redirection to Untrusted Site ('Open Redirect') (p.1350)
- C CWE-1383: ICS Operations (& Maintenance): Compliance/Conformance with Regulatory Requirements (p.2529)
  - P CWE-710: Improper Adherence to Coding Standards (p.1554)

## Graph View: CWE-1387: Weaknesses in the 2022 CWE Top 25 Most Dangerous Software Weaknesses

-  CWE-787: Out-of-bounds Write (p.1666)
-  CWE-79: Improper Neutralization of Input During Web Page Generation ('Cross-site Scripting') (p.166)
-  CWE-89: Improper Neutralization of Special Elements used in an SQL Command ('SQL Injection') (p.204)
-  CWE-20: Improper Input Validation (p.20)
-  CWE-125: Out-of-bounds Read (p.333)
-  CWE-78: Improper Neutralization of Special Elements used in an OS Command ('OS Command Injection') (p.153)
-  CWE-416: Use After Free (p.1016)
-  CWE-22: Improper Limitation of a Pathname to a Restricted Directory ('Path Traversal') (p.33)
-  CWE-352: Cross-Site Request Forgery (CSRF) (p.872)
-  CWE-434: Unrestricted Upload of File with Dangerous Type (p.1052)
-  CWE-476: NULL Pointer Dereference (p.1136)
-  CWE-502: Deserialization of Untrusted Data (p.1209)
-  CWE-190: Integer Overflow or Wraparound (p.475)
-  CWE-287: Improper Authentication (p.696)
-  CWE-798: Use of Hard-coded Credentials (p.1695)
-  CWE-862: Missing Authorization (p.1785)
-  CWE-77: Improper Neutralization of Special Elements used in a Command ('Command Injection') (p.146)
-  CWE-306: Missing Authentication for Critical Function (p.745)
-  CWE-119: Improper Restriction of Operations within the Bounds of a Memory Buffer (p.296)
-  CWE-276: Incorrect Default Permissions (p.669)
-  CWE-918: Server-Side Request Forgery (SSRF) (p.1825)
-  CWE-362: Concurrent Execution using Shared Resource with Improper Synchronization ('Race Condition') (p.892)
-  CWE-400: Uncontrolled Resource Consumption (p.968)
-  CWE-611: Improper Restriction of XML External Entity Reference (p.1372)
-  CWE-94: Improper Control of Generation of Code ('Code Injection') (p.222)

## Graph View: CWE-1400: Comprehensive Categorization for Software Assurance Trends

- [-] CWE-1396: Comprehensive Categorization: Access Control (p.2531)
  - [-V] CWE-9: J2EE Misconfiguration: Weak Access Permissions for EJB Methods (p.8)

  - [-G] CWE-300: Channel Accessible by Non-Endpoint (p.734)
  - [-B] CWE-301: Reflection Attack in an Authentication Protocol (p.737)
  - [-B] CWE-302: Authentication Bypass by Assumed-Immutable Data (p.739)
  - [-B] CWE-303: Incorrect Implementation of Authentication Algorithm (p.741)
  - [-B] CWE-304: Missing Critical Step in Authentication (p.742)
  - [-B] CWE-305: Authentication Bypass by Primary Weakness (p.744)

-  CWE-306: Missing Authentication for Critical Function (p.745)
-  CWE-307: Improper Restriction of Excessive Authentication Attempts (p.751)
-  CWE-308: Use of Single-factor Authentication (p.756)
-  CWE-309: Use of Password System for Primary Authentication (p.758)
-  CWE-321: Use of Hard-coded Cryptographic Key (p.789)
-  CWE-322: Key Exchange without Entity Authentication (p.792)
-  CWE-350: Reliance on Reverse DNS Resolution for a Security-Critical Action (p.867)
-  CWE-370: Missing Check for Certificate Revocation after Initial Check (p.921)
-  CWE-384: Session Fixation (p.941)
-  CWE-419: Unprotected Primary Channel (p.1021)
-  CWE-420: Unprotected Alternate Channel (p.1022)
-  CWE-421: Race Condition During Access to Alternate Channel (p.1025)
-  CWE-422: Unprotected Windows Messaging Channel ('Shatter') (p.1026)
-  CWE-425: Direct Request ('Forced Browsing') (p.1029)
-  CWE-441: Unintended Proxy or Intermediary ('Confused Deputy') (p.1069)
-  CWE-520: .NET Misconfiguration: Use of Impersonation (p.1227)
-  CWE-521: Weak Password Requirements (p.1228)
-  CWE-522: Insufficiently Protected Credentials (p.1231)
-  CWE-523: Unprotected Transport of Credentials (p.1235)
-  CWE-549: Missing Password Field Masking (p.1267)
-  CWE-551: Incorrect Behavior Order: Authorization Before Parsing and Canonicalization (p.1269)
-  CWE-555: J2EE Misconfiguration: Plaintext Password in Configuration File (p.1276)
-  CWE-556: ASP.NET Misconfiguration: Use of Identity Impersonation (p.1277)
-  CWE-566: Authorization Bypass Through User-Controlled SQL Primary Key (p.1291)
-  CWE-593: Authentication Bypass: OpenSSL CTX Object Modified after SSL Objects are Created (p.1336)
-  CWE-599: Missing Validation of OpenSSL Certificate (p.1347)
-  CWE-601: URL Redirection to Untrusted Site ('Open Redirect') (p.1350)
-  CWE-603: Use of Client-Side Authentication (p.1359)
-  CWE-611: Improper Restriction of XML External Entity Reference (p.1372)
-  CWE-612: Improper Authorization of Index Containing Sensitive Information (p.1375)
-  CWE-613: Insufficient Session Expiration (p.1377)
-  CWE-620: Unverified Password Change (p.1389)
-  CWE-623: Unsafe ActiveX Control Marked Safe For Scripting (p.1394)
-  CWE-639: Authorization Bypass Through User-Controlled Key (p.1412)
-  CWE-640: Weak Password Recovery Mechanism for Forgotten Password (p.1415)
-  CWE-645: Overly Restrictive Account Lockout Mechanism (p.1429)
-  CWE-647: Use of Non-Canonical URL Paths for Authorization Decisions (p.1431)
-  CWE-648: Incorrect Use of Privileged APIs (p.1433)
-  CWE-708: Incorrect Ownership Assignment (p.1553)
-  CWE-732: Incorrect Permission Assignment for Critical Resource (p.1556)
-  CWE-798: Use of Hard-coded Credentials (p.1695)
-  CWE-804: Guessable CAPTCHA (p.1706)
-  CWE-836: Use of Password Hash Instead of Password for Authentication (p.1766)
-  CWE-842: Placement of User into Incorrect Group (p.1780)
-  CWE-862: Missing Authorization (p.1785)
-  CWE-863: Incorrect Authorization (p.1792)
-  CWE-918: Server-Side Request Forgery (SSRF) (p.1825)
-  CWE-921: Storage of Sensitive Data in a Mechanism without Access Control (p.1829)
-  CWE-923: Improper Restriction of Communication Channel to Intended Endpoints (p.1832)
-  CWE-925: Improper Verification of Intent by Broadcast Receiver (p.1836)
-  CWE-926: Improper Export of Android Application Components (p.1838)
-  CWE-927: Use of Implicit Intent for Sensitive Communication (p.1841)
-  CWE-939: Improper Authorization in Handler for Custom URL Scheme (p.1845)

- B CWE-940: Improper Verification of Source of a Communication Channel (p.1847)
- B CWE-941: Incorrectly Specified Destination in a Communication Channel (p.1850)
- V CWE-942: Permissive Cross-domain Policy with Untrusted Domains (p.1852)
- V CWE-1004: Sensitive Cookie Without 'HttpOnly' Flag (p.1859)
- B CWE-1021: Improper Restriction of Rendered UI Layers or Frames (p.1865)
- V CWE-1022: Use of Web Link to Untrusted Target with window.opener Access (p.1867)
- B CWE-1191: On-Chip Debug and Test Interface With Improper Access Control (p.1985)
- B CWE-1220: Insufficient Granularity of Access Control (p.1997)
- V CWE-1222: Insufficient Granularity of Address Regions Protected by Register Locks (p.2005)
- B CWE-1224: Improper Restriction of Write-Once Bit Fields (p.2009)
- B CWE-1230: Exposure of Sensitive Information Through Metadata (p.2012)
- B CWE-1231: Improper Prevention of Lock Bit Modification (p.2013)
- B CWE-1233: Security-Sensitive Hardware Controls with Missing Lock Bit Protection (p.2019)
- B CWE-1242: Inclusion of Undocumented Features or Chicken Bits (p.2040)
- B CWE-1243: Sensitive Non-Volatile Information Not Protected During Debug (p.2042)
- B CWE-1244: Internal Asset Exposed to Unsafe Debug Access Level or State (p.2044)
- B CWE-1252: CPU Hardware Not Configured to Support Exclusivity of Write and Execute Operations (p.2063)
- B CWE-1256: Improper Restriction of Software Interfaces to Hardware Features (p.2072)
- B CWE-1257: Improper Access Control Applied to Mirrored or Aliased Memory Regions (p.2075)
- B CWE-1259: Improper Restriction of Security Token Assignment (p.2081)
- B CWE-1260: Improper Handling of Overlap Between Protected Memory Ranges (p.2083)
- B CWE-1262: Improper Access Control for Register Interface (p.2089)
- C CWE-1263: Improper Physical Access Control (p.2093)
- B CWE-1267: Policy Uses Obsolete Encoding (p.2101)
- B CWE-1268: Policy Privileges are not Assigned Consistently Between Control and Data Agents (p.2104)
- B CWE-1270: Generation of Incorrect Security Tokens (p.2109)
- B CWE-1274: Improper Access Control for Volatile Memory Containing Boot Code (p.2117)
- V CWE-1275: Sensitive Cookie with Improper SameSite Attribute (p.2119)
- B CWE-1276: Hardware Child Block Incorrectly Connected to Parent System (p.2121)
- B CWE-1283: Mutable Attestation or Measurement Reporting Data (p.2137)
- B CWE-1290: Incorrect Decoding of Security Identifiers (p.2151)
- B CWE-1292: Incorrect Conversion of Security Identifiers (p.2155)
- C CWE-1294: Insecure Security Identifier Mechanism (p.2159)
- B CWE-1296: Incorrect Chaining or Granularity of Debug Components (p.2162)
- B CWE-1297: Unprotected Confidential Information on Device is Accessible by OSAT Vendors (p.2164)
- B CWE-1299: Missing Protection Mechanism for Alternate Hardware Interface (p.2171)
- B CWE-1302: Missing Source Identifier in Entity Transactions on a System-On-Chip (SOC) (p.2181)
- B CWE-1304: Improperly Preserved Integrity of Hardware Configuration State During a Power Save/Restore Operation (p.2185)
- B CWE-1311: Improper Translation of Security Attributes by Fabric Bridge (p.2190)
- B CWE-1312: Missing Protection for Mirrored Regions in On-Chip Fabric Firewall (p.2192)
- B CWE-1313: Hardware Allows Activation of Test or Debug Logic at Runtime (p.2194)
- B CWE-1314: Missing Write Protection for Parametric Data Values (p.2196)
- B CWE-1315: Improper Setting of Bus Controlling Capability in Fabric End-point (p.2198)
- B CWE-1316: Fabric-Address Map Allows Programming of Unwarranted Overlaps of Protected and Unprotected Ranges (p.2200)
- B CWE-1317: Improper Access Control in Fabric Bridge (p.2203)
- B CWE-1320: Improper Protection for Outbound Error Messages and Alert Signals (p.2211)
- B CWE-1323: Improper Management of Sensitive Trace Data (p.2217)
- B CWE-1328: Security Version Number Mutable to Older Versions (p.2225)
- B CWE-1334: Unauthorized Error Injection Can Degrade Hardware Redundancy (p.2242)
- C CWE-1390: Weak Authentication (p.2275)

- CWE-1391: Use of Weak Credentials (p.2277)
- B CWE-1392: Use of Default Credentials (p.2280)
- B CWE-1393: Use of Default Password (p.2282)
- B CWE-1394: Use of Default Cryptographic Key (p.2284)
- C CWE-1397: Comprehensive Categorization: Comparison (p.2535)
- B CWE-183: Permissive List of Allowed Inputs (p.461)
- C CWE-185: Incorrect Regular Expression (p.466)
- B CWE-186: Overly Restrictive Regular Expression (p.469)
- V CWE-187: Partial String Comparison (p.471)
- B CWE-478: Missing Default Case in Multiple Condition Expression (p.1146)
- V CWE-486: Comparison of Classes by Name (p.1169)
- V CWE-595: Comparison of Object References Instead of Object Contents (p.1339)
- V CWE-597: Use of Wrong Operator in String Comparison (p.1342)
- B CWE-625: Permissive Regular Expression (p.1397)
- P| CWE-697: Incorrect Comparison (p.1535)
- V CWE-777: Regular Expression without Anchors (p.1641)
- B CWE-839: Numeric Range Comparison Without Minimum Check (p.1772)
- C CWE-1023: Incomplete Comparison with Missing Factors (p.1870)
- B CWE-1024: Comparison of Incompatible Types (p.1872)
- B CWE-1025: Comparison Using Wrong Factors (p.1873)
- V CWE-1077: Floating Point Comparison with Incorrect Operator (p.1922)
- C CWE-1398: Comprehensive Categorization: Component Interaction (p.2536)
- V CWE-14: Compiler Removal of Code to Clear Buffers (p.14)
- B CWE-115: Misinterpretation of Input (p.283)
- P| CWE-435: Improper Interaction Between Multiple Correctly-Behaving Entities (p.1060)
- C CWE-436: Interpretation Conflict (p.1062)
- B CWE-437: Incomplete Model of Endpoint Features (p.1064)
- B CWE-439: Behavioral Change in New Version or Environment (p.1065)
- B CWE-444: Inconsistent Interpretation of HTTP Requests ('HTTP Request/Response Smuggling') (p.1072)
- V CWE-650: Trusting HTTP Permission Methods on the Server Side (p.1437)
- B CWE-733: Compiler Optimization Removal or Modification of Security-critical Code (p.1567)
- B CWE-1037: Processor Optimization Removal or Modification of Security-critical Code (p.1875)
- C CWE-1038: Insecure Automated Optimizations (p.1877)
- C CWE-1401: Comprehensive Categorization: Concurrency (p.2538)
- C CWE-362: Concurrent Execution using Shared Resource with Improper Synchronization ('Race Condition') (p.892)
- B CWE-363: Race Condition Enabling Link Following (p.901)
- B CWE-364: Signal Handler Race Condition (p.903)
- B CWE-366: Race Condition within a Thread (p.908)
- B CWE-367: Time-of-check Time-of-use (TOCTOU) Race Condition (p.910)
- B CWE-368: Context Switching Race Condition (p.916)
- B CWE-412: Unrestricted Externally Accessible Lock (p.1004)
- B CWE-413: Improper Resource Locking (p.1007)
- B CWE-414: Missing Lock Check (p.1011)
- B CWE-432: Dangerous Signal Handler not Disabled During Sensitive Operations (p.1049)
- V CWE-479: Signal Handler Use of a Non-reentrant Function (p.1151)
- V CWE-543: Use of Singleton Pattern Without Synchronization in a Multithreaded Context (p.1260)
- V CWE-558: Use of getlogin() in Multithreaded Application (p.1278)
- B CWE-567: Unsynchronized Access to Shared Data in a Multithreaded Context (p.1293)
- V CWE-572: Call to Thread run() instead of start() (p.1302)
- V CWE-574: EJB Bad Practices: Use of Synchronization Primitives (p.1305)
- V CWE-591: Sensitive Data Storage in Improperly Locked Memory (p.1334)
- B CWE-609: Double-Checked Locking (p.1368)

-  CWE-663: Use of a Non-reentrant Function in a Concurrent Context (p.1458)
-  CWE-667: Improper Locking (p.1469)
-  CWE-689: Permission Race Condition During Resource Copy (p.1518)
-  CWE-764: Multiple Locks of a Critical Resource (p.1609)
-  CWE-765: Multiple Unlocks of a Critical Resource (p.1610)
-  CWE-820: Missing Synchronization (p.1725)
-  CWE-821: Incorrect Synchronization (p.1727)
-  CWE-828: Signal Handler with Functionality that is not Asynchronous-Safe (p.1742)
-  CWE-831: Signal Handler Function Associated with Multiple Signals (p.1754)
-  CWE-832: Unlock of a Resource that is not Locked (p.1757)
-  CWE-833: Deadlock (p.1758)
-  CWE-1058: Invokable Control Element in Multi-Thread Context with non-Final Static Storable or Member Element (p.1898)
-  CWE-1088: Synchronous Access of Remote Resource without Timeout (p.1933)
-  CWE-1096: Singleton Class Instance Creation without Proper Locking or Synchronization (p.1941)
-  CWE-1223: Race Condition for Write-Once Attributes (p.2007)
-  CWE-1232: Improper Lock Behavior After Power State Transition (p.2016)
-  CWE-1234: Hardware Internal or Debug Modes Allow Override of Locks (p.2021)
-  CWE-1264: Hardware Logic with Insecure De-Synchronization between Control and Data Channels (p.2095)
-  CWE-1298: Hardware Logic Contains Race Conditions (p.2167)
-  CWE-1402: Comprehensive Categorization: Encryption (p.2539)
  -  CWE-5: J2EE Misconfiguration: Data Transmission Without Encryption (p.1)
  -  CWE-311: Missing Encryption of Sensitive Data (p.761)
  -  CWE-312: Cleartext Storage of Sensitive Information (p.768)
  -  CWE-313: Cleartext Storage in a File or on Disk (p.774)
  -  CWE-314: Cleartext Storage in the Registry (p.776)
  -  CWE-315: Cleartext Storage of Sensitive Information in a Cookie (p.777)
  -  CWE-316: Cleartext Storage of Sensitive Information in Memory (p.779)
  -  CWE-317: Cleartext Storage of Sensitive Information in GUI (p.781)
  -  CWE-318: Cleartext Storage of Sensitive Information in Executable (p.782)
  -  CWE-319: Cleartext Transmission of Sensitive Information (p.783)
  -  CWE-324: Use of a Key Past its Expiration Date (p.796)
  -  CWE-325: Missing Cryptographic Step (p.798)
  -  CWE-326: Inadequate Encryption Strength (p.800)
  -  CWE-327: Use of a Broken or Risky Cryptographic Algorithm (p.803)
  -  CWE-328: Use of Weak Hash (p.810)
  -  CWE-347: Improper Verification of Cryptographic Signature (p.861)
  -  CWE-614: Sensitive Cookie in HTTPS Session Without 'Secure' Attribute (p.1378)
  -  CWE-759: Use of a One-Way Hash without a Salt (p.1590)
  -  CWE-760: Use of a One-Way Hash with a Predictable Salt (p.1594)
  -  CWE-780: Use of RSA Algorithm without OAEP (p.1649)
  -  CWE-916: Use of Password Hash With Insufficient Computational Effort (p.1818)
  -  CWE-1240: Use of a Cryptographic Primitive with a Risky Implementation (p.2032)
-  CWE-1403: Comprehensive Categorization: Exposed Resource (p.2540)
  -  CWE-8: J2EE Misconfiguration: Entity Bean Declared Remote (p.6)
  -  CWE-15: External Control of System or Configuration Setting (p.17)
  -  CWE-73: External Control of File Name or Path (p.133)
  -  CWE-114: Process Control (p.280)
  -  CWE-219: Storage of File with Sensitive Data Under Web Root (p.557)
  -  CWE-220: Storage of File With Sensitive Data Under FTP Root (p.559)
  -  CWE-374: Passing Mutable Objects to an Untrusted Method (p.924)
  -  CWE-375: Returning a Mutable Object to an Untrusted Caller (p.927)
  -  CWE-377: Insecure Temporary File (p.929)

- B CWE-378: Creation of Temporary File With Insecure Permissions (p.932)
- B CWE-379: Creation of Temporary File in Directory with Insecure Permissions (p.934)
- C CWE-402: Transmission of Private Resources into a New Sphere ('Resource Leak') (p.981)
- B CWE-403: Exposure of File Descriptor to Unintended Control Sphere ('File Descriptor Leak') (p.982)
- B CWE-426: Untrusted Search Path (p.1032)
- B CWE-427: Uncontrolled Search Path Element (p.1037)
- B CWE-428: Unquoted Search Path or Element (p.1044)
- V CWE-433: Unparsed Raw Web Content Delivery (p.1050)
- B CWE-472: External Control of Assumed-Immutable Web Parameter (p.1128)
- B CWE-488: Exposure of Data Element to Wrong Session (p.1173)
- V CWE-491: Public cloneable() Method Without Final ('Object Hijack') (p.1178)
- V CWE-492: Use of Inner Class Containing Sensitive Data (p.1180)
- V CWE-493: Critical Public Variable Without Final Modifier (p.1187)
- V CWE-498: Cloneable Class Containing Sensitive Information (p.1201)
- V CWE-499: Serializable Class Containing Sensitive Data (p.1203)
- V CWE-500: Public Static Field Not Marked Final (p.1205)
- B CWE-524: Use of Cache Containing Sensitive Information (p.1237)
- V CWE-525: Use of Web Browser Cache Containing Sensitive Information (p.1238)
- V CWE-527: Exposure of Version-Control Repository to an Unauthorized Control Sphere (p.1241)
- V CWE-528: Exposure of Core Dump File to an Unauthorized Control Sphere (p.1242)
- V CWE-529: Exposure of Access Control List Files to an Unauthorized Control Sphere (p.1243)
- V CWE-530: Exposure of Backup File to an Unauthorized Control Sphere (p.1244)
- V CWE-539: Use of Persistent Cookies Containing Sensitive Information (p.1255)
- B CWE-552: Files or Directories Accessible to External Parties (p.1270)
- V CWE-553: Command Shell in Externally Accessible Directory (p.1274)
- B CWE-565: Reliance on Cookies without Validation and Integrity Checking (p.1289)
- V CWE-582: Array Declared Public, Final, and Static (p.1319)
- V CWE-583: finalize() Method Declared Public (p.1320)
- V CWE-608: Struts: Non-private Field in ActionForm Class (p.1366)
- B CWE-619: Dangling Database Cursor ('Cursor Injection') (p.1387)
- C CWE-642: External Control of Critical State Data (p.1419)
- C CWE-668: Exposure of Resource to Wrong Sphere (p.1474)
- B CWE-767: Access to Critical Private Variable via Public Method (p.1615)
- V CWE-784: Reliance on Cookies without Validation and Integrity Checking in a Security Decision (p.1658)
- B CWE-1282: Assumed-Immutable Data is Stored in Writable Memory (p.2135)
- B CWE-1327: Binding to an Unrestricted IP Address (p.2223)
- C CWE-1404: Comprehensive Categorization: File Handling (p.2541)
- B CWE-22: Improper Limitation of a Pathname to a Restricted Directory ('Path Traversal') (p.33)
- B CWE-23: Relative Path Traversal (p.46)
- V CWE-24: Path Traversal: '../filedir' (p.53)
- V CWE-25: Path Traversal: '/../filedir' (p.55)
- V CWE-26: Path Traversal: '/dir/../filename' (p.57)
- V CWE-27: Path Traversal: 'dir/../filename' (p.58)
- V CWE-28: Path Traversal: '..\filedir' (p.60)
- V CWE-29: Path Traversal: '\..\filename' (p.62)
- V CWE-30: Path Traversal: 'dir\..\filename' (p.64)
- V CWE-31: Path Traversal: 'dir\..\filename' (p.65)
- V CWE-32: Path Traversal: '...' (Triple Dot) (p.67)
- V CWE-33: Path Traversal: '....' (Multiple Dot) (p.69)
- V CWE-34: Path Traversal: '.../' (p.71)

- C CWE-405: Asymmetric Resource Consumption (Amplification) (p.990)
- C CWE-406: Insufficient Control of Network Message Volume (Network Amplification) (p.994)
- C CWE-407: Inefficient Algorithmic Complexity (p.996)
- B CWE-409: Improper Handling of Highly Compressed Data (Data Amplification) (p.1001)
- B CWE-410: Insufficient Resource Pool (p.1002)
- B CWE-434: Unrestricted Upload of File with Dangerous Type (p.1052)
- V CWE-453: Insecure Default Variable Initialization (p.1087)
- B CWE-454: External Initialization of Trusted Variables or Data Stores (p.1089)
- V CWE-456: Missing Initialization of a Variable (p.1093)
- V CWE-457: Use of Uninitialized Variable (p.1098)
- B CWE-459: Incomplete Cleanup (p.1103)
- B CWE-460: Improper Cleanup on Thrown Exception (p.1106)
- B CWE-471: Modification of Assumed-Immutable Data (MAID) (p.1126)
- B CWE-487: Reliance on Package-level Scope (p.1172)

- V CWE-495: Private Data Structure Returned From A Public Method (p.1194)
- V CWE-496: Public Data Assigned to Private Array-Typed Field (p.1196)
- B CWE-501: Trust Boundary Violation (p.1207)
- V CWE-568: finalize() Method Without super.finalize() (p.1295)
- V CWE-580: clone() Method Without super.clone() (p.1316)
- V CWE-588: Attempt to Access Child of a Non-structure Pointer (p.1329)
- V CWE-607: Public Static Final Field References Mutable Object (p.1365)
- G CWE-610: Externally Controlled Reference to a Resource in Another Sphere (p.1369)
- V CWE-618: Exposed Unsafe ActiveX Method (p.1386)
- G CWE-662: Improper Synchronization (p.1454)
- |P| CWE-664: Improper Control of a Resource Through its Lifetime (p.1460)
- G CWE-665: Improper Initialization (p.1462)
- G CWE-666: Operation on Resource in Wrong Phase of Lifetime (p.1467)
- G CWE-669: Incorrect Resource Transfer Between Spheres (p.1477)
- G CWE-673: External Influence of Sphere Definition (p.1488)
- B CWE-681: Incorrect Conversion between Numeric Types (p.1500)
- G CWE-704: Incorrect Type Conversion or Cast (p.1543)
- G CWE-706: Use of Incorrectly-Resolved Name or Reference (p.1549)
- B CWE-749: Exposed Dangerous Method or Function (p.1569)
- B CWE-770: Allocation of Resources Without Limits or Throttling (p.1618)
- B CWE-771: Missing Reference to Active Allocated Resource (p.1627)
- B CWE-772: Missing Release of Resource after Effective Lifetime (p.1629)
- V CWE-773: Missing Reference to Active File Descriptor or Handle (p.1634)
- V CWE-774: Allocation of File Descriptors or Handles Without Limits or Throttling (p.1635)
- V CWE-775: Missing Release of File Descriptor or Handle after Effective Lifetime (p.1636)
- B CWE-776: Improper Restriction of Recursive Entity References in DTDs ('XML Entity Expansion') (p.1638)
- B CWE-779: Logging of Excessive Data (p.1647)
- V CWE-782: Exposed IOCTL with Insufficient Access Control (p.1653)
- V CWE-827: Improper Control of Document Type Definition (p.1741)
- B CWE-829: Inclusion of Functionality from Untrusted Control Sphere (p.1746)
- V CWE-830: Inclusion of Web Functionality from an Untrusted Source (p.1752)
- B CWE-843: Access of Resource Using Incompatible Type ('Type Confusion') (p.1781)
- B CWE-908: Use of Uninitialized Resource (p.1797)
- G CWE-909: Missing Initialization of Resource (p.1802)
- B CWE-911: Improper Update of Reference Count (p.1806)
- G CWE-913: Improper Control of Dynamically-Managed Code Resources (p.1810)
- B CWE-920: Improper Restriction of Power Consumption (p.1828)
- G CWE-922: Insecure Storage of Sensitive Information (p.1830)
- V CWE-1042: Static Member Data Element outside of a Singleton Class Element (p.1882)
- B CWE-1046: Creation of Immutable Text Using String Concatenation (p.1886)
- B CWE-1049: Excessive Data Query Operations in a Large Data Table (p.1889)
- B CWE-1050: Excessive Platform Resource Consumption within a Loop (p.1890)
- B CWE-1051: Initialization with Hard-Coded Network Resource Configuration Data (p.1891)
- B CWE-1052: Excessive Use of Hard-Coded Literals in Initialization (p.1892)
- B CWE-1063: Creation of Class Instance within a Static Code Block (p.1906)
- B CWE-1067: Excessive Execution of Sequential Searches of Data Resource (p.1910)
- B CWE-1072: Data Resource Access without Use of Connection Pooling (p.1917)
- B CWE-1073: Non-SQL Invokable Control Element with Excessive Number of Data Resource Accesses (p.1918)
- B CWE-1084: Invokable Control Element with Excessive File or Data Access Operations (p.1929)
- B CWE-1089: Large Data Table with Excessive Number of Indices (p.1934)
- B CWE-1091: Use of Object without Invoking Destructor Method (p.1936)
- B CWE-1094: Excessive Index Range Scan for a Data Resource (p.1939)

- C CWE-1176: Inefficient CPU Computation (p.1976)
- B CWE-1188: Initialization of a Resource with an Insecure Default (p.1979)
- B CWE-1221: Incorrect Register Defaults or Module Parameters (p.2001)
- C CWE-1229: Creation of Emergent Resource (p.2012)
- B CWE-1235: Incorrect Use of Autoboxing and Unboxing for Performance Critical Operations (p.2024)
- V CWE-1239: Improper Zeroization of Hardware Register (p.2029)
- B CWE-1246: Improper Write Handling in Limited-write Non-Volatile Memories (p.2050)
- B CWE-1250: Improper Preservation of Consistency Between Independent Representations of Shared State (p.2059)
- B CWE-1258: Exposure of Sensitive System Information Due to Uncleared Debug Information (p.2078)
- B CWE-1266: Improper Scrubbing of Sensitive Data from Decommissioned Device (p.2100)
- B CWE-1271: Uninitialized Value on Reset for Registers Holding Security Settings (p.2111)
- B CWE-1272: Sensitive Information Uncleared Before Debug/Power State Transition (p.2112)
- B CWE-1279: Cryptographic Operations are run Before Supporting Units are Ready (p.2129)
- B CWE-1301: Insufficient or Incomplete Data Removal within Hardware Component (p.2179)
- B CWE-1325: Improperly Controlled Sequential Memory Allocation (p.2219)
- V CWE-1330: Remanent Data Readable after Memory Erase (p.2231)
- B CWE-1333: Inefficient Regular Expression Complexity (p.2239)
- B CWE-1342: Information Exposure through Microarchitectural State after Transient Execution (p.2258)
- B CWE-1386: Insecure Operation on Windows Junction / Mount Point (p.2270)
- B CWE-1389: Incorrect Parsing of Numbers with Different Radices (p.2272)
- C CWE-1419: Incorrect Initialization of Resource (p.2289)
- B CWE-1420: Exposure of Sensitive Information during Transient Execution (p.2293)
- B CWE-1421: Exposure of Sensitive Information in Shared Microarchitectural Structures during Transient Execution (p.2300)
- B CWE-1422: Exposure of Sensitive Information caused by Incorrect Data Forwarding during Transient Execution (p.2307)
- B CWE-1423: Exposure of Sensitive Information caused by Shared Microarchitectural Predictor State that Influences Transient Execution (p.2312)
- C CWE-1417: Comprehensive Categorization: Sensitive Information Exposure (p.2560)
- C CWE-200: Exposure of Sensitive Information to an Unauthorized Actor (p.509)
- B CWE-201: Insertion of Sensitive Information Into Sent Data (p.518)
- B CWE-203: Observable Discrepancy (p.522)
- B CWE-204: Observable Response Discrepancy (p.527)
- B CWE-205: Observable Behavioral Discrepancy (p.530)
- V CWE-206: Observable Internal Behavioral Discrepancy (p.531)
- V CWE-207: Observable Behavioral Discrepancy With Equivalent Products (p.533)
- B CWE-208: Observable Timing Discrepancy (p.534)
- B CWE-209: Generation of Error Message Containing Sensitive Information (p.537)
- B CWE-210: Self-generated Error Message Containing Sensitive Information (p.543)
- B CWE-211: Externally-Generated Error Message Containing Sensitive Information (p.545)
- B CWE-213: Exposure of Sensitive Information Due to Incompatible Policies (p.552)
- B CWE-214: Invocation of Process Using Visible Sensitive Information (p.553)
- B CWE-215: Insertion of Sensitive Information Into Debugging Code (p.555)
- B CWE-359: Exposure of Private Personal Information to an Unauthorized Actor (p.886)
- B CWE-497: Exposure of Sensitive System Information to an Unauthorized Control Sphere (p.1198)
- V CWE-526: Cleartext Storage of Sensitive Information in an Environment Variable (p.1239)
- V CWE-531: Inclusion of Sensitive Information in Test Code (p.1245)
- B CWE-532: Insertion of Sensitive Information into Log File (p.1246)
- V CWE-535: Exposure of Information Through Shell Error Message (p.1250)
- V CWE-536: Servlet Runtime Error Message Containing Sensitive Information (p.1250)
- V CWE-537: Java Runtime Error Message Containing Sensitive Information (p.1251)
- B CWE-538: Insertion of Sensitive Information into Externally-Accessible File or Directory (p.1254)
- B CWE-540: Inclusion of Sensitive Information in Source Code (p.1257)
- V CWE-541: Inclusion of Sensitive Information in an Include File (p.1258)

- V CWE-548: Exposure of Information Through Directory Listing (p.1266)
- V CWE-550: Server-generated Error Message Containing Sensitive Information (p.1268)
- V CWE-598: Use of GET Request Method With Sensitive Query Strings (p.1345)
- V CWE-615: Inclusion of Sensitive Information in Source Code Comments (p.1380)
- V CWE-651: Exposure of WSDL File Containing Sensitive Information (p.1439)
- B CWE-1254: Incorrect Comparison Logic Granularity (p.2067)
- V CWE-1255: Comparison Logic is Vulnerable to Power Side-Channel Attacks (p.2069)
- B CWE-1273: Device Unlock Credential Sharing (p.2115)
- B CWE-1295: Debug Messages Revealing Unnecessary Information (p.2160)
- B CWE-1300: Improper Protection of Physical Side Channels (p.2174)
- C CWE-1418: Comprehensive Categorization: Violation of Secure Design Principles (p.2561)
- B CWE-250: Execution with Unnecessary Privileges (p.603)
- G CWE-424: Improper Protection of Alternate Path (p.1028)
- B CWE-447: Unimplemented or Unsupported Feature in UI (p.1079)
- G CWE-636: Not Failing Securely ('Failing Open') (p.1406)
- G CWE-637: Unnecessary Complexity in Protection Mechanism (Not Using 'Economy of Mechanism') (p.1408)
- G CWE-638: Not Using Complete Mediation (p.1410)
- G CWE-653: Improper Isolation or Compartmentalization (p.1442)
- B CWE-654: Reliance on a Single Factor in a Security Decision (p.1444)
- G CWE-655: Insufficient Psychological Acceptability (p.1447)
- G CWE-656: Reliance on Security Through Obscurity (p.1449)
- G CWE-657: Violation of Secure Design Principles (p.1451)
- G CWE-671: Lack of Administrator Control over Security (p.1483)
- B CWE-1189: Improper Isolation of Shared Resources on System-on-a-Chip (SoC) (p.1981)
- B CWE-1192: Improper Identifier for IP Block used in System-On-Chip (SOC) (p.1990)
- B CWE-1303: Non-Transparent Sharing of Microarchitectural Resources (p.2183)
- B CWE-1331: Improper Isolation of Shared Resources in Network On Chip (NoC) (p.2233)
- G CWE-1395: Dependency on Vulnerable Third-Party Component (p.2285)

## Graph View: CWE-1425: Weaknesses in the 2023 CWE Top 25 Most Dangerous Software Weaknesses

-  CWE-787: Out-of-bounds Write (p.1666)
-  CWE-79: Improper Neutralization of Input During Web Page Generation ('Cross-site Scripting') (p.166)
-  CWE-89: Improper Neutralization of Special Elements used in an SQL Command ('SQL Injection') (p.204)
-  CWE-416: Use After Free (p.1016)
-  CWE-78: Improper Neutralization of Special Elements used in an OS Command ('OS Command Injection') (p.153)
-  CWE-20: Improper Input Validation (p.20)
-  CWE-125: Out-of-bounds Read (p.333)
-  CWE-22: Improper Limitation of a Pathname to a Restricted Directory ('Path Traversal') (p.33)
-  CWE-352: Cross-Site Request Forgery (CSRF) (p.872)
-  CWE-434: Unrestricted Upload of File with Dangerous Type (p.1052)
-  CWE-862: Missing Authorization (p.1785)
-  CWE-476: NULL Pointer Dereference (p.1136)
-  CWE-287: Improper Authentication (p.696)
-  CWE-190: Integer Overflow or Wraparound (p.475)
-  CWE-502: Deserialization of Untrusted Data (p.1209)
-  CWE-77: Improper Neutralization of Special Elements used in a Command ('Command Injection') (p.146)
-  CWE-119: Improper Restriction of Operations within the Bounds of a Memory Buffer (p.296)
-  CWE-798: Use of Hard-coded Credentials (p.1695)
-  CWE-918: Server-Side Request Forgery (SSRF) (p.1825)
-  CWE-306: Missing Authentication for Critical Function (p.745)
-  CWE-362: Concurrent Execution using Shared Resource with Improper Synchronization ('Race Condition') (p.892)
-  CWE-269: Improper Privilege Management (p.650)
-  CWE-94: Improper Control of Generation of Code ('Code Injection') (p.222)
-  CWE-863: Incorrect Authorization (p.1792)
-  CWE-276: Incorrect Default Permissions (p.669)

## Deprecated

---

### **CWE-1: DEPRECATED: Location**

CWE ID : 1

#### Summary

This category has been deprecated. It was originally used for organizing the Development View (CWE-699), but it introduced unnecessary complexity and depth to the resulting tree.

---

### **CWE-3: DEPRECATED: Technology-specific Environment Issues**

CWE ID : 3

#### Summary

This category has been deprecated. It was originally intended as a "catch-all" for environment issues for technologies that did not have their own CWE, but it introduced unnecessary depth and complexity to the Development View (CWE-699).

---

### **CWE-4: DEPRECATED: J2EE Environment Issues**

CWE ID : 4

#### Summary

This entry has been deprecated. It was originally used for organizing the Development View (CWE-699) and some other views, but it introduced unnecessary complexity and depth to the resulting tree.

---

### **CWE-10: DEPRECATED: ASP.NET Environment Issues**

CWE ID : 10

#### Summary

This category has been deprecated. It added unnecessary depth and complexity to its associated views.

---

### **CWE-17: DEPRECATED: Code**

CWE ID : 17

#### Summary

This entry has been deprecated. It was originally used for organizing the Development View (CWE-699) and some other views, but it introduced unnecessary complexity and depth to the resulting tree.

---

---

## **CWE-18: DEPRECATED: Source Code**

CWE ID : 18

### **Summary**

This entry has been deprecated. It was originally used for organizing the Development View (CWE-699) and some other views, but it introduced unnecessary complexity and depth to the resulting tree.

---

---

## **CWE-21: DEPRECATED: Pathname Traversal and Equivalence Errors**

CWE ID : 21

### **Summary**

This category has been deprecated. It was originally used for organizing weaknesses involving file names, which enabled access to files outside of a restricted directory (path traversal) or to perform operations on files that would otherwise be restricted (path equivalence). Consider using either the File Handling Issues category (CWE-1219) or the class Use of Incorrectly-Resolved Name or Reference (CWE-706).

---

---

## **CWE-60: DEPRECATED: UNIX Path Link Problems**

CWE ID : 60

### **Summary**

This category has been deprecated. It covered a very low level of abstraction based on operating system, which was not useful for any existing view.

---

---

## **CWE-63: DEPRECATED: Windows Path Link Problems**

CWE ID : 63

### **Summary**

This category has been deprecated. It covered a very low level of abstraction based on operating system, which was not useful for any existing view.

---

---

## **CWE-68: DEPRECATED: Windows Virtual File Problems**

CWE ID : 68

### **Summary**

This category has been deprecated as it was found to be an unnecessary abstraction of platform specific details. Please refer to the category CWE-632 and weakness CWE-66 for relevant relationships.

---

---

## **CWE-70: DEPRECATED: Mac Virtual File Problems**

**CWE ID : 70**

---

**Summary**

This category has been deprecated as it was found to be an unnecessary abstraction of platform specific details. Please refer to the category CWE-632 and weakness CWE-66 for relevant relationships.

---

**CWE-71: DEPRECATED: Apple '.DS\_Store'****CWE ID : 71**

---

**Description**

This entry has been deprecated as it represents a specific observed example of a UNIX Hard Link weakness type rather than its own individual weakness type. Please refer to CWE-62.

---

**CWE-92: DEPRECATED: Improper Sanitization of Custom Special Characters****CWE ID : 92**

---

**Description**

This entry has been deprecated. It originally came from PLOVER, which sometimes defined "other" and "miscellaneous" categories in order to satisfy exhaustiveness requirements for taxonomies. Within the context of CWE, the use of a more abstract entry is preferred in mapping situations. CWE-75 is a more appropriate mapping.

---

**CWE-100: DEPRECATED: Technology-Specific Input Validation Problems****CWE ID : 100**

---

**Summary**

This category has been deprecated. It was originally intended as a "catch-all" for input validation problems in technologies that did not have their own CWE, but introduces unnecessary depth to the hierarchy.

---

**CWE-101: DEPRECATED: Struts Validation Problems****CWE ID : 101**

---

**Summary**

This category has been deprecated. It was originally used for organizing the Development View (CWE-699), but it introduced unnecessary complexity and depth to the resulting tree.

---

**CWE-132: DEPRECATED: Miscalculated Null Termination****CWE ID : 132**

---

## Description

This entry has been deprecated because it was a duplicate of CWE-170. All content has been transferred to CWE-170.

## CWE-139: DEPRECATED: General Special Element Problems

CWE ID : 139

### Summary

This entry has been deprecated. It is a leftover from PLOVER, but CWE-138 is a more appropriate mapping.

## CWE-169: DEPRECATED: Technology-Specific Special Elements

CWE ID : 169

### Summary

This category has been deprecated. It was originally intended as a "catch-all" for input validation problems in technologies that did not have their own CWE, but introduces unnecessary depth to the hierarchy.

## CWE-171: DEPRECATED: Cleansing, Canonicalization, and Comparison Errors

CWE ID : 171

### Summary

This entry has been deprecated. It was originally used for organizing the Development View (CWE-699) and some other views, but it introduced unnecessary complexity and depth to the resulting tree. Weaknesses in this category were related to improper handling of data within protection mechanisms that attempt to perform neutralization for untrusted data. These weaknesses can be found in other similar categories.

## CWE-216: DEPRECATED: Containment Errors (Container Errors)

CWE ID : 216

### Description

This entry has been deprecated, as it was not effective as a weakness and was structured more like a category. In addition, the name is inappropriate, since the "container" term is widely understood by developers in different ways than originally intended by PLOVER, the original source for this entry.

## CWE-217: DEPRECATED: Failure to Protect Stored Data from Modification

CWE ID : 217

**Description**

This entry has been deprecated because it incorporated and confused multiple weaknesses. The issues formerly covered in this entry can be found at CWE-766 and CWE-767.

---

**CWE-218: DEPRECATED: Failure to provide confidentiality for stored data****CWE ID** : 218

---

**Description**

This weakness has been deprecated because it was a duplicate of CWE-493. All content has been transferred to CWE-493.

---

**CWE-225: DEPRECATED: General Information Management Problems****CWE ID** : 225

---

**Description**

This weakness can be found at CWE-199.

---

**CWE-247: DEPRECATED: Reliance on DNS Lookups in a Security Decision****CWE ID** : 247

---

**Description**

This entry has been deprecated because it was a duplicate of CWE-350. All content has been transferred to CWE-350.

---

**CWE-249: DEPRECATED: Often Misused: Path Manipulation****CWE ID** : 249

---

**Description**

This entry has been deprecated because of name confusion and an accidental combination of multiple weaknesses. Most of its content has been transferred to CWE-785.

---

**CWE-292: DEPRECATED: Trusting Self-reported DNS Name****CWE ID** : 292

---

**Description**

This entry has been deprecated because it was a duplicate of CWE-350. All content has been transferred to CWE-350.

---

**CWE-365: DEPRECATED: Race Condition in Switch****2750**

---

---

**CWE ID : 365**

---

**Description**

This entry has been deprecated. There are no documented cases in which a switch's control expression is evaluated more than once.

---

**CWE-373: DEPRECATED: State Synchronization Error**

**CWE ID : 373**

---

**Description**

This entry was deprecated because it overlapped the same concepts as race condition (CWE-362) and Improper Synchronization (CWE-662).

---

**CWE-376: DEPRECATED: Temporary File Issues**

**CWE ID : 376**

---

**Summary**

This category has been deprecated. It was originally used for organizing the Development View (CWE-699), but it introduced unnecessary complexity and depth to the resulting tree. Consider using the File Handling Issues category (CWE-1219).

---

**CWE-380: DEPRECATED: Technology-Specific Time and State Issues**

**CWE ID : 380**

---

**Summary**

This entry has been deprecated. It was originally used for organizing the Development View (CWE-699) and some other views, but it introduced unnecessary complexity and depth to the resulting tree.

---

**CWE-381: DEPRECATED: J2EE Time and State Issues**

**CWE ID : 381**

---

**Summary**

This entry has been deprecated. It was originally used for organizing the Development View (CWE-699) and some other views, but it introduced unnecessary complexity and depth to the resulting tree.

---

**CWE-418: DEPRECATED: Channel Errors**

**CWE ID : 418**

---

**Summary**

---

This category has been deprecated because it is redundant with the grouping provided by CWE-417.

---

## **CWE-423: DEPRECATED: Proxied Trusted Channel**

CWE ID : 423

### **Description**

This entry has been deprecated because it was a duplicate of CWE-441. All content has been transferred to CWE-441.

---

## **CWE-442: DEPRECATED: Web Problems**

CWE ID : 442

### **Summary**

This entry has been deprecated. It was originally used for organizing the Development View (CWE-699) and some other views, but it introduced unnecessary complexity and depth to the resulting tree.

---

## **CWE-443: DEPRECATED: HTTP response splitting**

CWE ID : 443

### **Description**

This weakness can be found at CWE-113.

---

## **CWE-445: DEPRECATED: User Interface Errors**

CWE ID : 445

### **Summary**

This weakness has been deprecated because it was a duplicate of CWE-355. All content has been transferred to CWE-355.

---

## **CWE-458: DEPRECATED: Incorrect Initialization**

CWE ID : 458

### **Description**

This weakness has been deprecated because its name and description did not match. The description duplicated CWE-454, while the name suggested a more abstract initialization problem. Please refer to CWE-665 for the more abstract problem.

---

## **CWE-461: DEPRECATED: Data Structure Issues**

---

**CWE ID : 461**

### Summary

This entry has been deprecated. It was originally used for organizing the Development View (CWE-699) and some other views, but it introduced unnecessary complexity and depth to the resulting tree.

---

## **CWE-490: DEPRECATED: Mobile Code Issues**

**CWE ID : 490**

### Summary

This entry has been deprecated. It was originally used for organizing the Development View (CWE-699) and some other views, but it introduced unnecessary complexity and depth to the resulting tree.

---

## **CWE-503: DEPRECATED: Byte/Object Code**

**CWE ID : 503**

### Summary

This category has been deprecated. It was originally used for organizing the Development View (CWE-699), but it introduced unnecessary complexity and depth to the resulting tree.

---

## **CWE-504: DEPRECATED: Motivation/Intent**

**CWE ID : 504**

### Summary

This category has been deprecated. It was originally used for organizing the Development View (CWE-699), but it introduced unnecessary complexity and depth to the resulting tree.

---

## **CWE-505: DEPRECATED: Intentionally Introduced Weakness**

**CWE ID : 505**

### Summary

This category has been deprecated as it was originally used for organizing the Development View (CWE-699), but it introduced unnecessary complexity and depth to the resulting tree.

---

## **CWE-513: DEPRECATED: Intentionally Introduced Nonmalicious Weakness**

**CWE ID : 513**

### Summary

---

This category has been deprecated as it was originally used for organizing the Development View (CWE-699), but it introduced unnecessary complexity and depth to the resulting tree.

---

### **CWE-516: DEPRECATED: Covert Timing Channel**

CWE ID : 516

#### **Description**

This weakness can be found at CWE-385.

---

### **CWE-517: DEPRECATED: Other Intentional, Nonmalicious Weakness**

CWE ID : 517

#### **Summary**

This category has been deprecated as it was originally used for organizing the Development View (CWE-699), but it introduced unnecessary complexity and depth to the resulting tree.

---

### **CWE-518: DEPRECATED: Inadvertently Introduced Weakness**

CWE ID : 518

#### **Summary**

This category has been deprecated as it was originally used for organizing the Development View (CWE-699), but it introduced unnecessary complexity and depth to the resulting tree.

---

### **CWE-519: DEPRECATED: .NET Environment Issues**

CWE ID : 519

#### **Summary**

This entry has been deprecated. It was originally used for organizing the Development View (CWE-699) and some other views, but it introduced unnecessary complexity and depth to the resulting tree.

---

### **CWE-533: DEPRECATED: Information Exposure Through Server Log Files**

CWE ID : 533

#### **Description**

This entry has been deprecated because its abstraction was too low-level. See CWE-532.

---

### **CWE-534: DEPRECATED: Information Exposure Through Debug Log Files**

CWE ID : 534

---

### Description

This entry has been deprecated because its abstraction was too low-level. See CWE-532.

---

## **CWE-542: DEPRECATED: Information Exposure Through Cleanup Log Files**

CWE ID : 542

### Description

This entry has been deprecated because its abstraction was too low-level. See CWE-532.

---

## **CWE-545: DEPRECATED: Use of Dynamic Class Loading**

CWE ID : 545

### Description

This weakness has been deprecated because it partially overlaps CWE-470, it describes legitimate programmer behavior, and other portions will need to be integrated into other entries.

---

## **CWE-559: DEPRECATED: Often Misused: Arguments and Parameters**

CWE ID : 559

### Summary

This entry has been deprecated. It was originally used for organizing the Development View (CWE-699) and some other views, but it introduced unnecessary complexity and depth to the resulting tree.

---

## **CWE-592: DEPRECATED: Authentication Bypass Issues**

CWE ID : 592

### Description

This weakness has been deprecated because it covered redundant concepts already described in CWE-287.

---

## **CWE-596: DEPRECATED: Incorrect Semantic Object Comparison**

CWE ID : 596

### Description

This weakness has been deprecated. It was poorly described and difficult to distinguish from other entries. It was also inappropriate to assign a separate ID solely because of domain-specific considerations. Its closest equivalent is CWE-1023.

---

## **CWE-630: DEPRECATED: Weaknesses Examined by SAMATE**

CWE ID : 630

### **Objective**

This view has been deprecated. It was only used for an early year of the NIST SAMATE project, and it did not represent any official or commonly-utilized list.

---

## **CWE-631: DEPRECATED: Resource-specific Weaknesses**

CWE ID : 631

### **Objective**

This view has been deprecated because it is not actively maintained and does not provide utility to stakeholders. It was originally created before CWE 1.0 as a simple example of how views could be structured within CWE.

---

## **CWE-632: DEPRECATED: Weaknesses that Affect Files or Directories**

CWE ID : 632

### **Summary**

This category has been deprecated. It was not actively maintained, and it was not useful to stakeholders. It was originally created before CWE 1.0 as part of view CWE-631, which was a simple example of how views could be structured within CWE.

---

## **CWE-633: DEPRECATED: Weaknesses that Affect Memory**

CWE ID : 633

### **Summary**

This category has been deprecated. It was not actively maintained, and it was not useful to stakeholders. It was originally created before CWE 1.0 as part of view CWE-631, which was a simple example of how views could be structured within CWE.

---

## **CWE-634: DEPRECATED: Weaknesses that Affect System Processes**

CWE ID : 634

### **Summary**

This category has been deprecated. It was not actively maintained, and it was not useful to stakeholders. It was originally created before CWE 1.0 as part of view CWE-631, which was a simple example of how views could be structured within CWE.

---

## **CWE-679: DEPRECATED: Chain Elements**

CWE ID : 679

2756

---

### Objective

This view has been deprecated. It has limited utility for stakeholders, since all weaknesses can be links in a chain.

---

## **CWE-769: DEPRECATED: Uncontrolled File Descriptor Consumption**

CWE ID : 769

### Description

This entry has been deprecated because it was a duplicate of CWE-774. All content has been transferred to CWE-774.

---

## **CWE-999: DEPRECATED: Weaknesses without Software Fault Patterns**

CWE ID : 999

### Objective

This view has been deprecated. It was based on gaps in another view (CWE-888) related to research that is no longer updated, but was complete with respect to CWE at the time it was conducted.

---

## **CWE-1187: DEPRECATED: Use of Uninitialized Resource**

CWE ID : 1187

### Description

This entry has been deprecated because it was a duplicate of CWE-908. All content has been transferred to CWE-908.

---

## **CWE-1324: DEPRECATED: Sensitive Information Accessible by Physical Probing of JTAG Interface**

CWE ID : 1324

### Description

This entry has been deprecated because it was at a lower level of abstraction than supported by CWE. All relevant content has been integrated into CWE-319.

---

## **Glossary**

---

# Index

## A

Absolute Path Traversal, 75  
 Acceptance of Extraneous Untrusted Data With Trusted Data, 865  
 Access Control Check Implemented After Asset is Accessed, 2130  
 Access of Memory Location After End of Buffer, 1674  
 Access of Memory Location Before Start of Buffer, 1663  
 Access of Resource Using Incompatible Type ('Type Confusion'), 1781  
 Access of Uninitialized Pointer, 1734  
 Access to Critical Private Variable via Public Method, 1615  
 Active Debug Code, 1175  
 Addition of Data Structure Sentinel, 1112  
 Allocation of File Descriptors or Handles Without Limits or Throttling, 1635  
 Allocation of Resources Without Limits or Throttling, 1618  
 Always-Incorrect Control Flow Implementation, 1480  
 API / Function Errors, 2494  
 Application-Level Admin Tool with Inconsistent View of Underlying Operating System, 2057  
 Architectural Concepts, 2589(*Graph: 2689*)  
 Architecture with Number of Horizontal Layers Outside of Expected Range, 1884  
 Array Declared Public, Final, and Static, 1319  
 ASP.NET Misconfiguration: Creating Debug Binary, 9  
 ASP.NET Misconfiguration: Improper Model Validation, 1975  
 ASP.NET Misconfiguration: Missing Custom Error Page, 11  
 ASP.NET Misconfiguration: Not Using Input Validation Framework, 1275  
 ASP.NET Misconfiguration: Password in Configuration File, 13  
 ASP.NET Misconfiguration: Use of Identity Impersonation, 1277  
 Assigning instead of Comparing, 1158  
 Assignment of a Fixed Address to a Pointer, 1327  
 Assignment to Variable without Use, 1285  
 Assumed-Immutable Data is Stored in Writable Memory, 2135  
 Asymmetric Resource Consumption (Amplification), 990  
 Attempt to Access Child of a Non-structure Pointer, 1329  
 Audit, 2436  
 Audit / Logging Errors, 2487  
 Authenticate Actors, 2436  
 Authentication Bypass by Alternate Name, 707  
 Authentication Bypass by Assumed-Immutable Data, 739  
 Authentication Bypass by Capture-replay, 716  
 Authentication Bypass by Primary Weakness, 744  
 Authentication Bypass by Spoofing, 709  
 Authentication Bypass Using an Alternate Path or Channel, 704  
 Authentication Bypass: OpenSSL CTX Object Modified after SSL Objects are Created, 1336  
 Authentication Errors, 2487  
 Authorization Bypass Through User-Controlled Key, 1412  
 Authorization Bypass Through User-Controlled SQL Primary Key, 1291  
 Authorization Errors, 2488  
 Authorize Actors, 2437  
 Automated Recognition Mechanism with Inadequate Detection or Handling of Adversarial Input Perturbations, 1878

## B

Bad Coding Practices, 2434

Behavioral Change in New Version or Environment, 1065  
 Behavioral Problems, 2338  
 Binding to an Unrestricted IP Address, 2223  
 Buffer Access Using Size of Source Buffer, 1715  
 Buffer Access with Incorrect Length Value, 1707  
 Buffer Copy without Checking Size of Input ('Classic Buffer Overflow'), 307  
 Buffer Over-read, 337  
 Buffer Under-read, 340  
 Buffer Underwrite ('Buffer Underflow'), 330  
 Business Logic Errors, 2372

## C

Call to Non-ubiquitous API, 1330  
 Call to Thread run() instead of start(), 1302  
 Callable with Insufficient Behavioral Summary, 1962  
 CERT C Secure Coding Standard (2008) Appendix - POSIX (POS), 2363  
 CERT C Secure Coding Standard (2008) Chapter 10 - Input Output (FIO), 2359

  - Explicit Call to Finalize(), 1325
  - Exposed Dangerous Method or Function, 1569
  - Exposed IOCTL with Insufficient Access Control, 1653
  - Exposed Unsafe ActiveX Method, 1386
  - Exposure of Access Control List Files to an Unauthorized Control Sphere, 1243
  - Exposure of Backup File to an Unauthorized Control Sphere, 1244
  - Exposure of Core Dump File to an Unauthorized Control Sphere, 1242
  - Exposure of Data Element to Wrong Session, 1173
  - Exposure of File Descriptor to Unintended Control Sphere ('File Descriptor Leak'), 982
  - Exposure of Information Through Directory Listing, 1266
  - Exposure of Information Through Shell Error Message, 1250
  - Exposure of Private Personal Information to an Unauthorized Actor, 886
  - Exposure of Resource to Wrong Sphere, 1474
  - Exposure of Sensitive Information caused by Incorrect Data Forwarding during Transient Execution, 2307
  - Exposure of Sensitive Information caused by Shared Microarchitectural Predictor State that Influences Transient Execution, 2312
  - Exposure of Sensitive Information Due to Incompatible Policies, 552
  - Exposure of Sensitive Information during Transient Execution, 2293
  - Exposure of Sensitive Information in Shared Microarchitectural Structures during Transient Execution, 2300
  - Exposure of Sensitive Information Through Data Queries, 520
  - Exposure of Sensitive Information Through Metadata, 2012
  - Exposure of Sensitive Information to an Unauthorized Actor, 509
  - Exposure of Sensitive System Information Due to Uncleared Debug Information, 2078
  - Exposure of Sensitive System Information to an Unauthorized Control Sphere, 1198
  - Exposure of Version-Control Repository to an Unauthorized Control Sphere, 1241
  - Exposure of WSDL File Containing Sensitive Information, 1439
  - Expression is Always False, 1297
  - Expression is Always True, 1300
  - Expression Issues, 2342
  - External Control of Assumed-Immutable Web Parameter, 1128
  - External Control of Critical State Data, 1419
  - External Control of File Name or Path, 133
  - External Control of System or Configuration Setting, 17
  - External Influence of Sphere Definition, 1488
  - External Initialization of Trusted Variables or Data Stores, 1089
  - Externally Controlled Reference to a Resource in Another Sphere, 1369
  - Externally-Generated Error Message Containing Sensitive Information, 545
- ## F
- Fabric-Address Map Allows Programming of Unwarranted Overlaps of Protected and Unprotected Ranges, 2200
  - Failure to Disable Reserved Bits, 1996
  - Failure to Handle Incomplete Element, 586
  - Failure to Handle Missing Parameter, 580
  - Failure to Sanitize Paired Delimiters, 410
  - Failure to Sanitize Special Elements into a Different Plane (Special Element Injection), 143
  - File Handling Issues, 2492
  - Files or Directories Accessible to External Parties, 1270
  - finalize() Method Declared Public, 1320
  - finalize() Method Without super.finalize(), 1295
  - Firmware Not Updateable, 2124
  - Floating Point Comparison with Incorrect Operator, 1922
  - Free of Memory not on the Heap, 1331
  - Free of Pointer not at Start of Buffer, 1597
  - Function Call With Incorrect Argument Type, 1513
  - Function Call With Incorrect Number of Arguments, 1512
  - Function Call With Incorrect Order of Arguments, 1509
  - Function Call With Incorrect Variable or Reference as Argument, 1516
  - Function Call With Incorrectly Specified Argument Value, 1515
  - Function Call with Incorrectly Specified Arguments, 1403
- ## G
- General Circuit and Logic Design Concerns, 2483
  - Generation of Error Message Containing Sensitive Information, 537
  - Generation of Incorrect Security Tokens, 2109
  - Generation of Predictable IV with CBC Mode, 815
  - Generation of Predictable Numbers or Identifiers, 846
  - Generation of Weak Initialization Vector (IV), 1992
  - Guessable CAPTCHA, 1706
- ## H
- Handler Errors, 2338
  - Hardware Allows Activation of Test or Debug Logic at Runtime, 2194
  - Hardware Child Block Incorrectly Connected to Parent System, 2121
  - Hardware Design, 2598(*Graph: 2705*)
  - Hardware Internal or Debug Modes Allow Override of Locks, 2021
  - Hardware Logic Contains Race Conditions, 2167
  - Hardware Logic with Insecure De-Synchronization between Control and Data Channels, 2095
  - Heap-based Buffer Overflow, 322
  - Hidden Functionality, 1808

  - Use of Blocking Code in Single-threaded, Non-blocking Context, 2216
  - Use of Cache Containing Sensitive Information, 1237
  - Use of Client-Side Authentication, 1359
  - Use of Cryptographically Weak Pseudo-Random Number Generator (PRNG), 841
  - Use of Default Credentials, 2280
  - Use of Default Cryptographic Key, 2284
  - Use of Default Password, 2282
  - Use of Expired File Descriptor, 1805
  - Use of Externally-Controlled Format String, 368
  - Use of Externally-Controlled Input to Select Classes or Code ('Unsafe Reflection'), 1122
  - Use of Function with Inconsistent Implementations, 1133
  - Use of GET Request Method With Sensitive Query Strings, 1345
  - Use of getlogin() in Multithreaded Application, 1278
  - Use of Hard-coded Credentials, 1695
  - Use of Hard-coded Cryptographic Key, 789
  - Use of Hard-coded Password, 627
  - Use of Hard-coded, Security-relevant Constants, 1264
  - Use of Implicit Intent for Sensitive Communication, 1841
  - Use of Incorrect Byte Ordering, 508
  - Use of Incorrect Operator, 1154
  - Use of Incorrectly-Resolved Name or Reference, 1549
  - Use of Inherently Dangerous Function, 590
  - Use of Inner Class Containing Sensitive Data, 1180
  - Use of Insufficiently Random Values, 818
  - Use of Invariant Value in Dynamically Changing Context, 853
  - Use of Less Trusted Source, 863
  - Use of Low-Level Functionality, 1529
  - Use of Multiple Resources with Duplicate Identifier, 1528
  - Use of Non-Canonical URL Paths for Authorization Decisions, 1431
  - Use of NullPointerException Catch to Detect NULL Pointer Dereference, 961
  - Use of Object without Invoking Destructor Method, 1936
  - Use of Obsolete Function, 1143
  - Use of Out-of-range Pointer Offset, 1731
  - Use of Password Hash Instead of Password for Authentication, 1766
  - Use of Password Hash With Insufficient Computational Effort, 1818
  - Use of Password System for Primary Authentication, 758
  - Use of Path Manipulation Function without Maximum-sized Buffer, 1661
  - Use of Persistent Cookies Containing Sensitive Information, 1255
  - Use of Platform-Dependent Third Party Components, 1948
  - Use of Pointer Subtraction to Determine Size, 1120
  - Use of Potentially Dangerous Function, 1494
  - Use of Predictable Algorithm in Random Number Generator, 2038
  - Use of Prohibited Code, 1977
  - Use of Redundant Code, 1880
  - Use of RSA Algorithm without OAEP, 1649
  - Use of Same Invokable Control Element in Multiple Architectural Layers, 1937
  - Use of Same Variable for Multiple Purposes, 1954
  - Use of Single-factor Authentication, 756
  - Use of Singleton Pattern Without Synchronization in a Multithreaded Context, 1260
  - Use of sizeof() on a Pointer Type, 1115
  - Use of umask() with chmod-style Argument, 1279
  - Use of Uninitialized Resource, 1797
  - Use of Uninitialized Variable, 1098
  - Use of Unmaintained Third Party Components, 1949
  - Use of Weak Credentials, 2277
  - Use of Weak Hash, 810
  - Use of Web Browser Cache Containing Sensitive Information, 1238
  - Use of Web Link to Untrusted Target with window.opener Access, 1867
  - Use of Wrong Operator in String Comparison, 1342
  - User Interface (UI) Misrepresentation of Critical Information, 1084
  - User Interface Security Issues, 2332
  - User Session Errors, 2491
  - Using Referer Field for Authentication, 714
- V**
- Validate Inputs, 2445
  - Variable Extraction Error, 1390
  - Verify Message Integrity, 2446
  - Violation of Secure Design Principles, 1451
- W**
- Weak Authentication, 2275
  - Weak Encoding for Password, 635
  - Weak Password Recovery Mechanism for Forgotten Password, 1415
  - Weak Password Requirements, 1228
  - Weakness Base Elements, 2566

Weaknesses Addressed by ISA/IEC 62443 Requirements, 2612

Weaknesses Addressed by the CERT C Secure Coding Standard (2008), 2572(*Graph: 2632*)

Weaknesses Addressed by The CERT Oracle Secure Coding Standard for Java (2011), 2576(*Graph: 2638*)

Weaknesses Addressed by the SEI CERT C Coding Standard, 2595(*Graph: 2701*)

Weaknesses Addressed by the SEI CERT C++ Coding Standard (2016 Version), 2578(*Graph: 2641*)

Weaknesses Addressed by the SEI CERT Oracle Coding Standard for Java, 2594(*Graph: 2698*)

Weaknesses Addressed by the SEI CERT Perl Coding Standard, 2597(*Graph: 2704*)

Weaknesses for Simplified Mapping of Published Vulnerabilities, 2588(*Graph: 2686*)

Weaknesses in Mobile Applications, 2585

Weaknesses in OWASP Top Ten (2004), 2571(*Graph: 2629*)

Weaknesses in OWASP Top Ten (2007), 2563(*Graph: 2615*)

Weaknesses in OWASP Top Ten (2010), 2575(*Graph: 2637*)

Weaknesses in OWASP Top Ten (2013), 2586(*Graph: 2659*)

Weaknesses in OWASP Top Ten (2017), 2590(*Graph: 2694*)

Weaknesses in OWASP Top Ten (2021), 2605(*Graph: 2716*)

Weaknesses in SEI ETF Categories of Security Vulnerabilities in ICS, 2608(*Graph: 2722*)

Weaknesses in Software Written in C, 2565

Weaknesses in Software Written in C++, 2565

Weaknesses in Software Written in Java, 2566

Weaknesses in Software Written in PHP, 2566

Weaknesses in the 2009 CWE/SANS Top 25 Most Dangerous Programming Errors, 2574(*Graph: 2635*)

Weaknesses in the 2010 CWE/SANS Top 25 Most Dangerous Programming Errors, 2575(*Graph: 2636*)

Weaknesses in the 2011 CWE/SANS Top 25 Most Dangerous Software Errors, 2584(*Graph: 2658*)

Weaknesses in the 2019 CWE Top 25 Most Dangerous Software Errors, 2599(*Graph: 2708*)

Weaknesses in the 2020 CWE Top 25 Most Dangerous Software Weaknesses, 2606(*Graph: 2721*)

Weaknesses in the 2021 CWE Most Important Hardware Weaknesses List, 2604

Weaknesses in the 2021 CWE Top 25 Most Dangerous Software Weaknesses, 2601(*Graph: 2713*)

Weaknesses in the 2022 CWE Top 25 Most Dangerous Software Weaknesses, 2609(*Graph: 2725*)

Weaknesses in the 2023 CWE Top 25 Most Dangerous Software Weaknesses, 2612(*Graph: 2745*)

Weaknesses Introduced During Design, 2570

Weaknesses Introduced During Implementation, 2570

Weaknesses Originally Used by NVD from 2008 to 2016, 2564

Windows Hard Link, 124

Windows Shortcut Following (.LNK), 122

Wrap-around Error, 342

Write-what-where Condition, 327

**X**

XML Injection (aka Blind XPath Injection), 218
