

Table of contents

1. INTRODUCTION.	1
2. DEFINITIONS AND NOTATIONS.	7
3. LINE-SWEEP ALGORITHMS.	11
3.1. Computing the contour of a set of rectangles.	12
3.1.1. The contour problem.	12
3.1.2. The algorithm.	15
3.1.3. The contracted segment tree: structure and operations.	22
3.1.4. Traversing and manipulating the secondary structure.	35
3.2. I-contour and i-measure problems.	46
3.2.1. Problem description.	46
3.2.2. Computing the height of a set of rectangles.	48
3.2.3. Computing the height-measure.	52
3.2.4. Computing the height-contour.	55
3.2.5. Computing all measures.	65
3.2.6. Computing all contours.	70
3.2.7. Computing the i-measure.	72
3.2.8. Computing the i-contour.	73
3.2.9. Summary of results, lower bounds.	85

<b>4. DIVIDE-AND-CONQUER ALGORITHMS.</b>	<b>92</b>
<b>4.1. Finding line segment intersections.</b>	<b>94</b>
<b>4.2. Finding point enclosures.</b>	<b>105</b>
<b>4.3. Finding rectangle intersections.</b>	<b>109</b>
<b>4.4. Computing measure and contour for a set of rectangles.</b>	<b>112</b>
<b>4.4.1. An abstract description of the union of a set of rectangles.</b>	<b>113</b>
<b>4.4.2. Reducing the problems.</b>	<b>115</b>
<b>4.4.3. Computing the set of stripes.</b>	<b>118</b>
<b>4.4.4. Implementation.</b>	<b>127</b>
<b>5. NON-ORTHOGONAL PROBLEMS: EFFICIENT ALGORITHMS FOR C-ORIENTED POLYGONS.</b>	<b>134</b>
<b>5.1. The stabbing number problem.</b>	<b>136</b>
<b>5.1.1. The batched problem.</b>	<b>138</b>
<b>5.1.2. The query problem.</b>	<b>142</b>
<b>5.2. Polygonal intersection searching.</b>	<b>146</b>
<b>5.2.1. The subproblems.</b>	<b>146</b>
<b>5.2.2. Line segment intersection searching.</b>	<b>149</b>
<b>5.2.3. Polygonal range searching.</b>	<b>152</b>
<b>5.2.4. Polygonal point enclosure searching.</b>	<b>158</b>
<b>5.3. Computing the contour of a set of c-oriented polygons.</b>	<b>162</b>
<b>6. CONCLUSIONS.</b>	<b>167</b>
<b>References.</b>	<b>177</b>
