

CONTENTS

Zusammenfassung	iii
Abstract	v
Preface	vii
1 Introduction and Survey	1
2 Mesh Generation with Templates	5
2.1 Introduction and Background	5
2.2 An Exact Model	11
2.3 Intractability of Mesh Refinement with Templates	17
2.4 Reformulation as a Bidirected Flow Problem	24
2.5 An Algorithm for Mesh Refinement	28
2.6 Computational Experiences — Part I	33
2.7 Excursion: Heuristic Search for Augmenting Paths	37
2.7.1 A Variation on Depth-First-Search	39
2.7.2 Greedy Starting Procedures	43
2.7.3 Computational Results	46
2.7.4 Conclusions	48
3 Mesh Generation without Templates	51
3.1 General Mesh Refinement	51
3.2 A Simple Approach for Conformal Mesh Refinement	52
3.3 Optimizing Meshes without Branchings	57
3.3.1 Mesh Refinement as a Bidirected Flow Problem	57
3.3.2 Optimizing the Mesh Quality	63
3.4 Mesh Refinement with Branchings	67
3.5 Computational Experiences — Part II	73
3.5.1 Mesh Decomposition into Homogeneous Components	73
3.5.2 Graph Embeddings and Mesh Smoothing	74
3.6 Variants and Extensions	79

4	Minimum Quadrangulations of Convex Polygons	81
4.1	Introduction	81
4.2	Perfect Polygons	83
4.3	The Structure of Minimum Decompositions of Polygons	89
4.3.1	Internal Quadrilaterals	94
4.3.2	Internal Components	99
4.3.3	Combinations of Internal Components	106
4.3.4	A Linear-Time Algorithm for the Non-Perfect Case	114
4.4	The Structure of Minimum Refinements of Polygons	116
5	Minimum Quadrangulations of Finite Element Meshes	123
5.1	Conformal Mesh Refinements	123
5.2	Intractability of Minimum Mesh Quadrangulation	126
5.3	Subdivisions of Polygons	128
5.4	Approximation of Minimum Conformal Mesh Refinements	130
5.4.1	A Simple Approximation with Performance Guarantee 4	130
5.4.2	Improved Approximations via T -Joins	132
5.5	Detailed Proofs of the Subdivision Lemmas	141
5.6	Concluding Remarks	152
A	Selected Examples	155
	Bibliography	163
	Notations	171
	Index	177
	Curriculum Vitae	181
