the project

speciesLink

speciesLink is a distributed information system that integrates primary data from biological collections. The development was funded by FAPESP, GBIF, JRS Foundation, MCTI, CNPq, FINEP, RNP and CRIA.

news

458 collections and sub-collections
8,745,560 online records
4,063,789 georeferenced
489,999 different species names
14 aug 2017 - 03:06

indicators

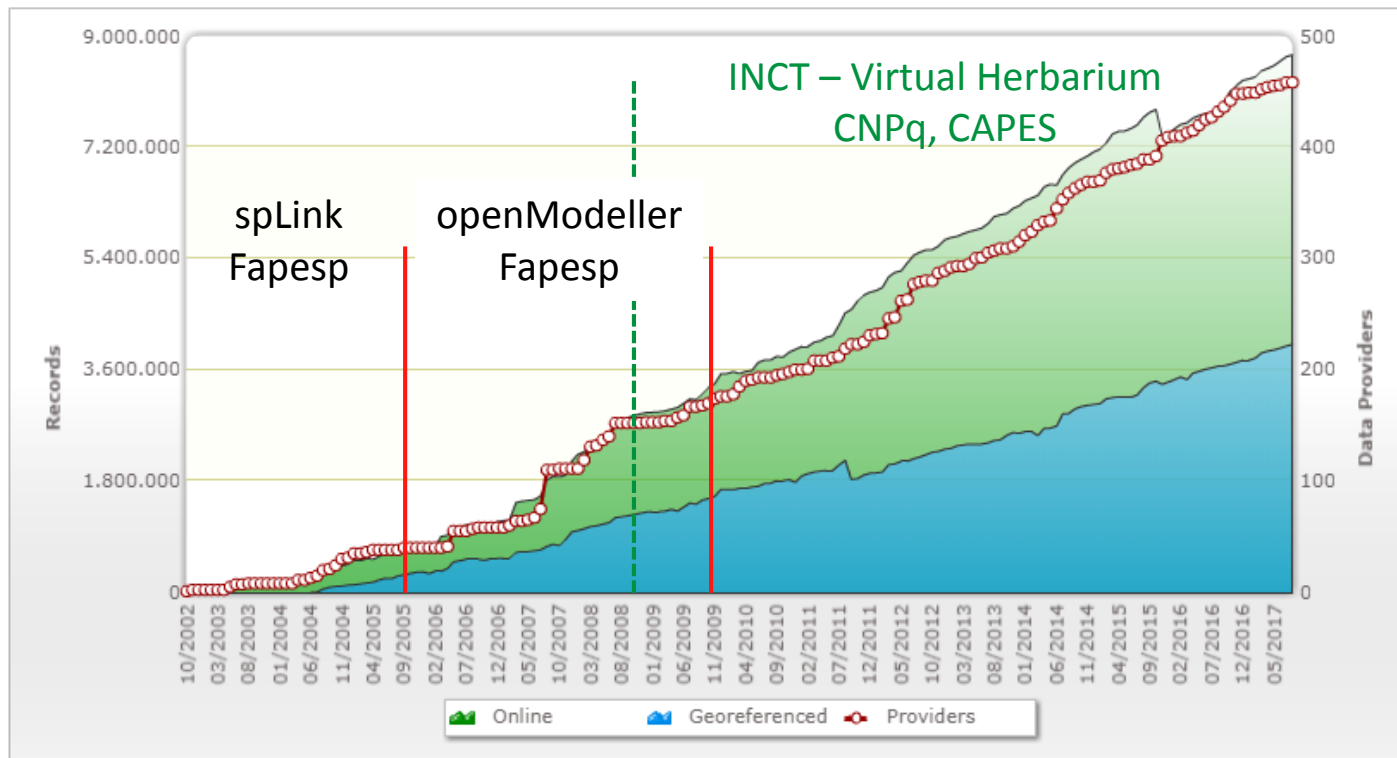

data & tools

Indicators

All indicators presented are based on online data only. They are dynamic or daily reports presented as charts or graphs. The indicator reflects only the analysis of data that is available online so therefore may not reflect the reality of each collection, especially those with a low percentage of digitized data. [Click here](#) to view the table data contribution x dependency per state.

[See other options for indicators here](#) ↓

All Networks - All Collections - records

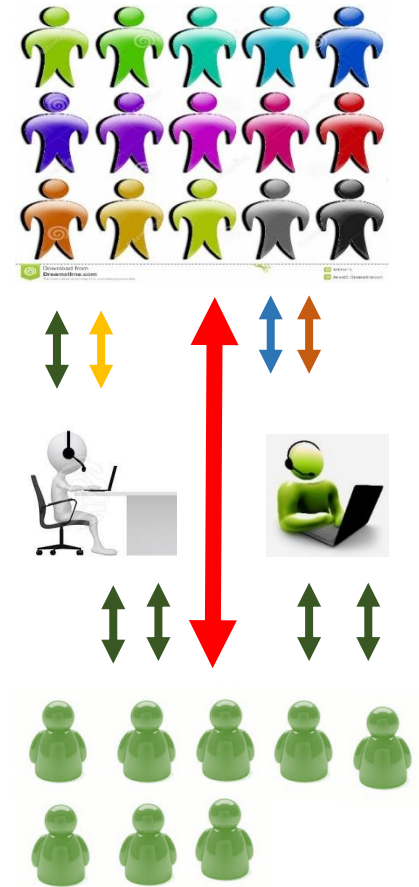

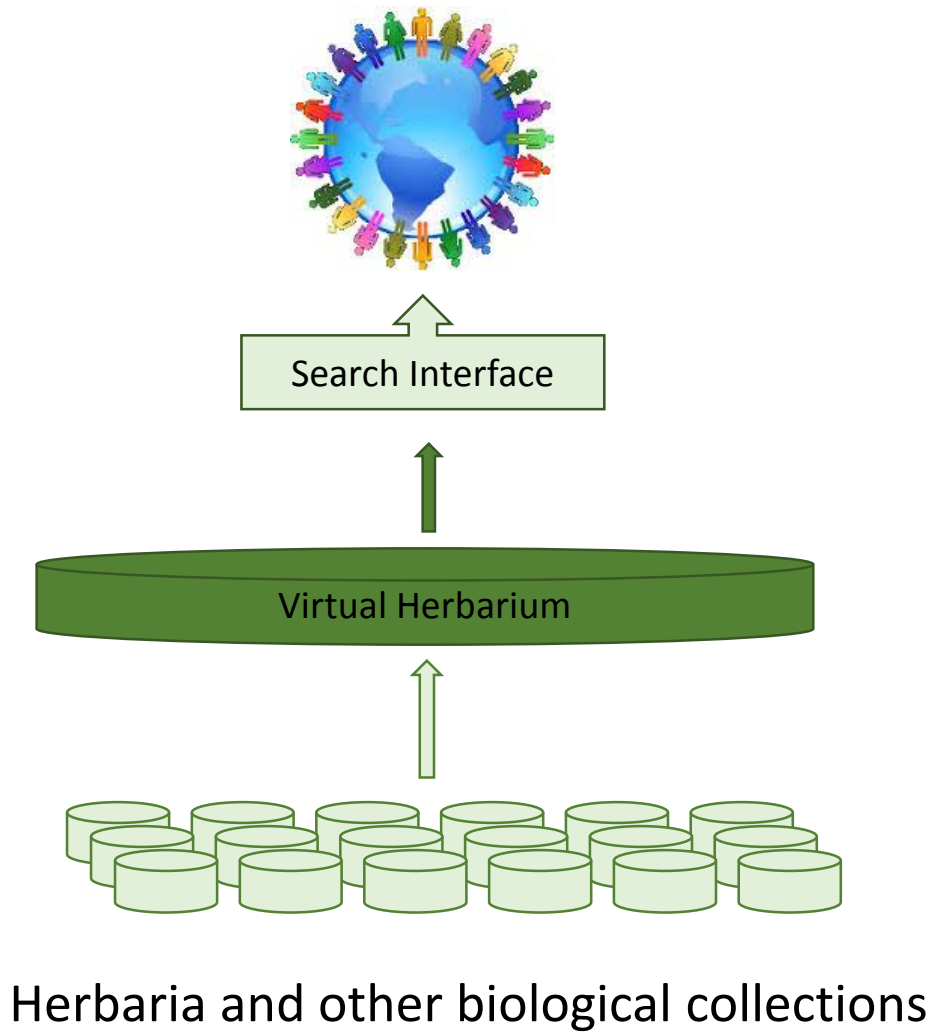

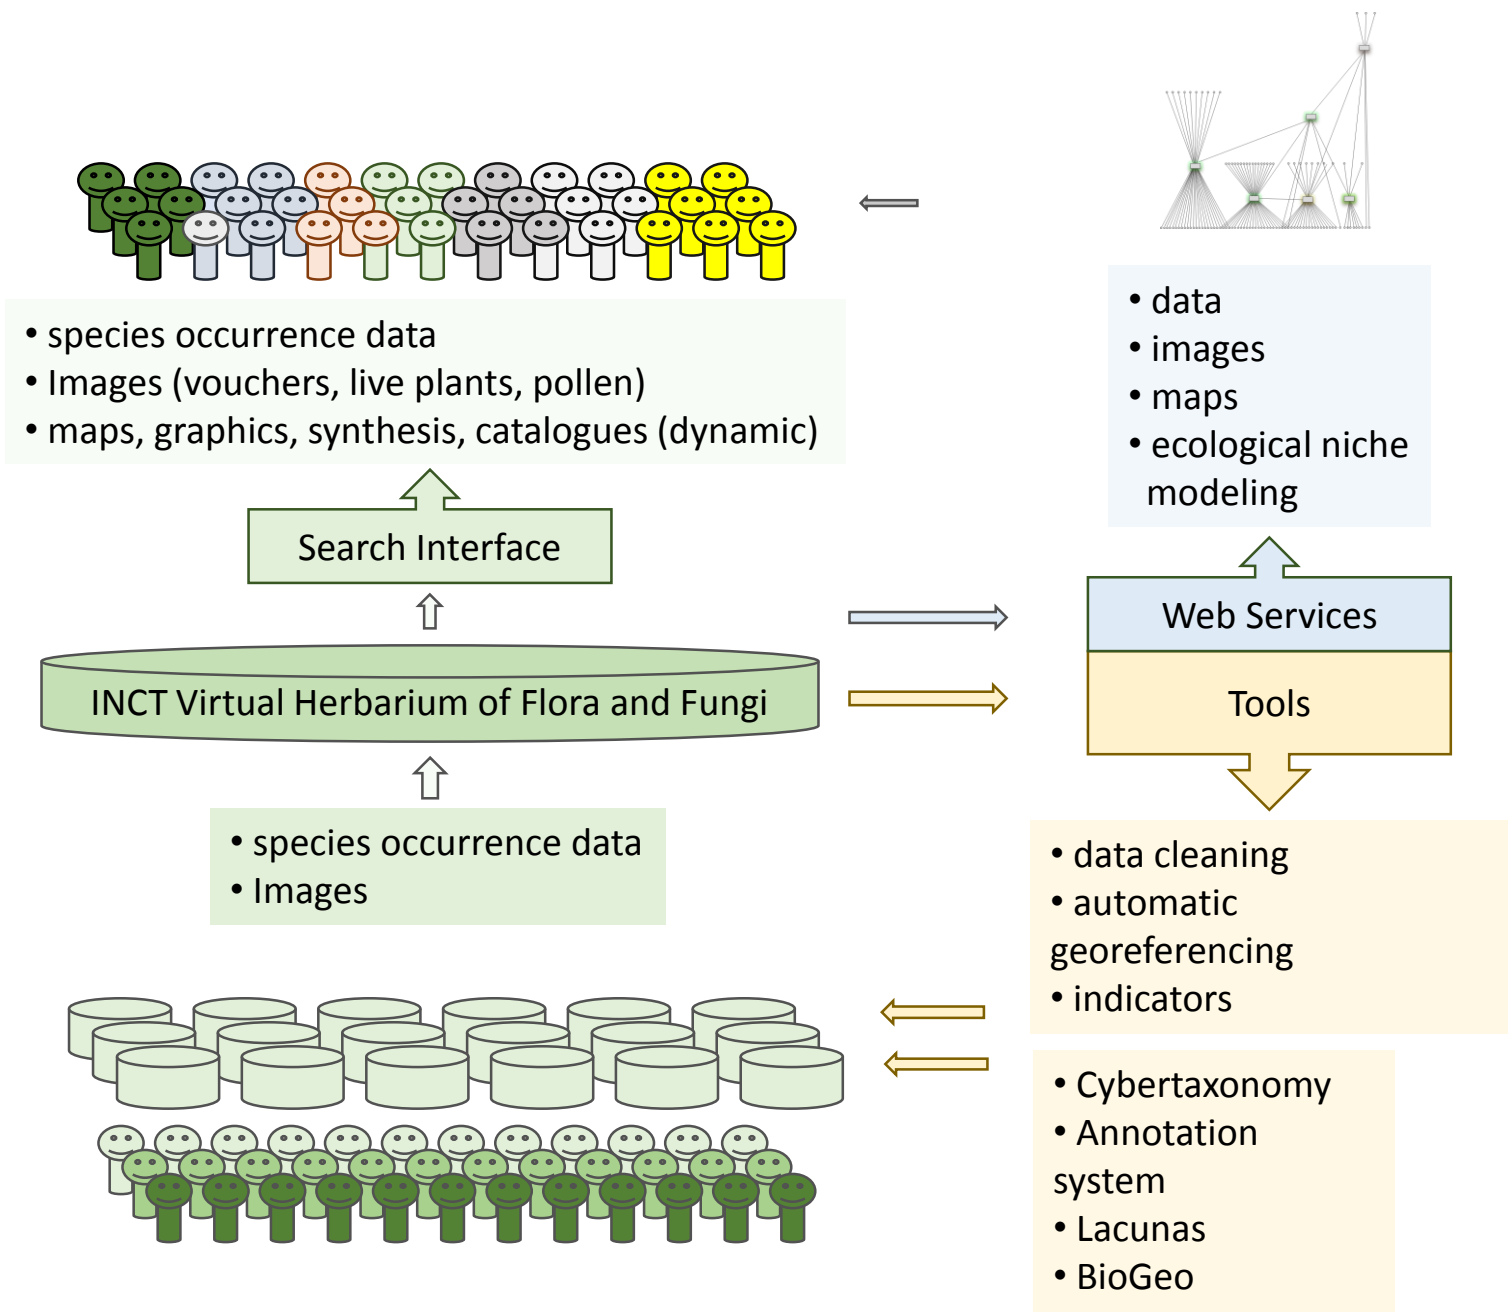

This graph reflects the movement of data (entry and removal) in the network. Monthly averages are presented for both total online records and total georeferenced records. The red line shows the number of data providers per month.

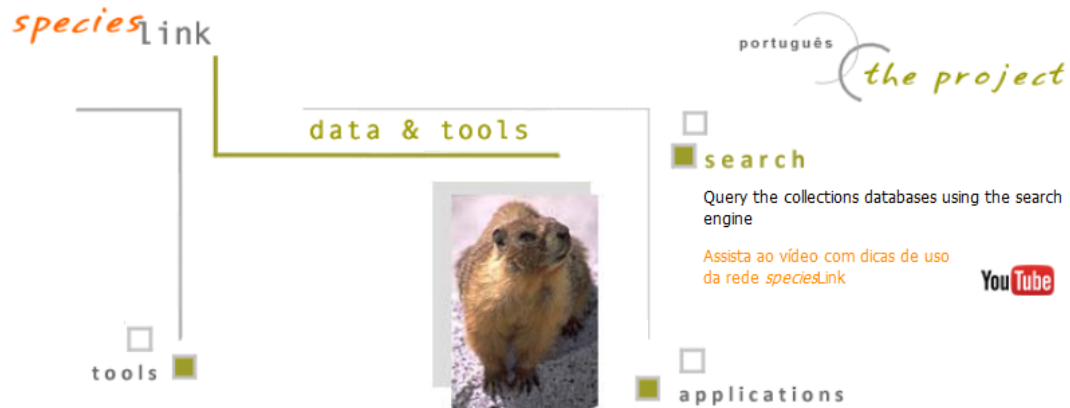

Updated on 14/08/17 05:01

Local e-Infrastructures

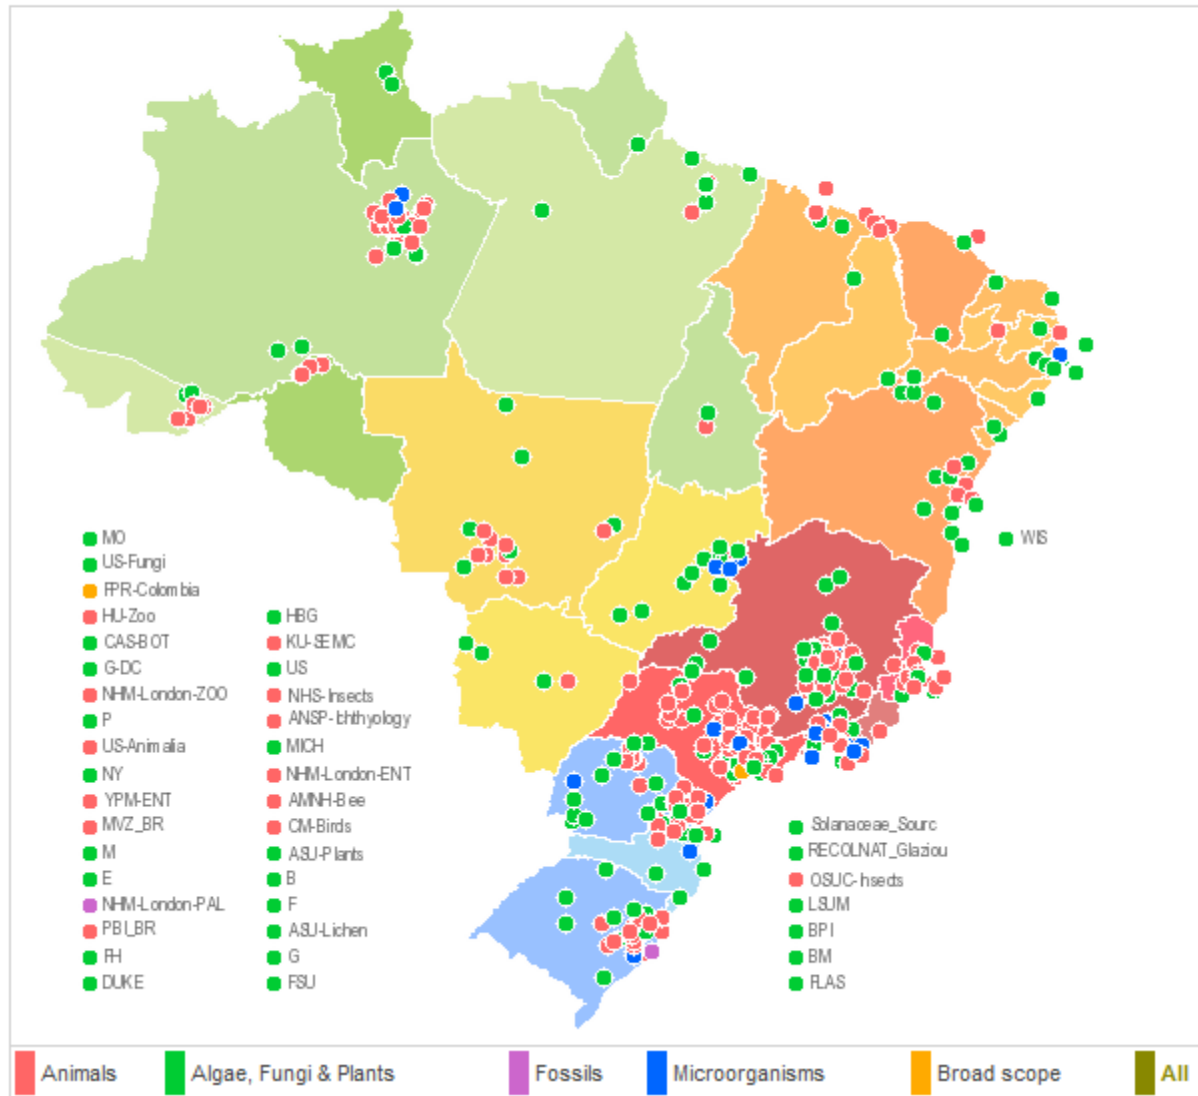

Data and Tools: open and free access

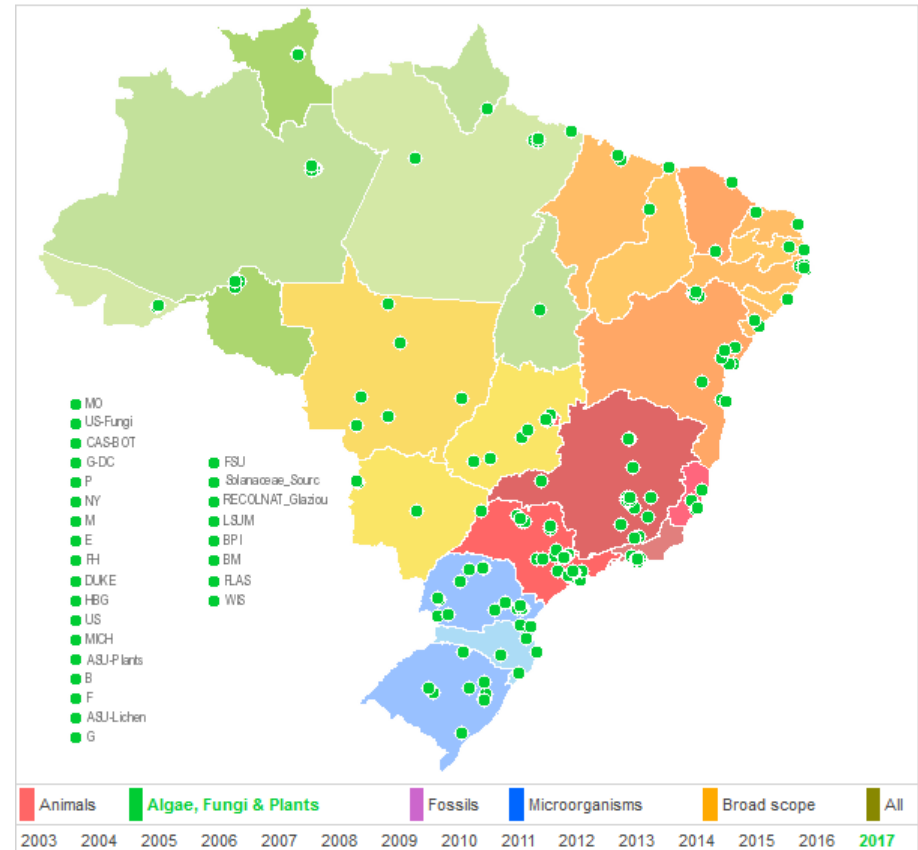

- **dataCleaning**
This tool was developed to facilitate the detection of possible errors and to help collections in the process of standardizing data. (only portuguese version available)
- **geoLoc**
Geo reference your data based on locality descriptions.
- **infoXY**
Get locality information using geographic coordinates.
- **spOutlier**
Detect outliers in latitude, longitude and altitude using techniques modified from Chapman, 1999.
- **speciesMapper**
Plot geo referenced points on a map.
- **converter**
Convert different types of representations of geographic coordinates and datum's.
- **spSearch firefox plugin**
Optimize the search of species scientific names in the speciesLink network, which can be done directly on your Mozilla Firefox without having to visit the web page.
- **networkManager**
Manager of the metadata of each participating collection of the speciesLink network.
- **indicators**
Dynamic or daily reports are submitted in the form of maps and charts.
- **Lacunas**
Tool that presents the status of the data available through the speciesLink network for each species listed in the List of Species of the Brazilian Flora.
- **Biogeo**
System that uses ecological niche modelling techniques to improve our understanding of plant biogeography in Brazil. Potential distribution maps can be generated, searched, visualized and downloaded for each species.
- **openModeller**
Open source spatial distribution modelling tool used to predict species distribution.
- **spLinker**
Application that enables biological collections to mirror their data in regional servers integrated to the speciesLink network.
- **speciesBase**
Its system to record specimens information based on Darwin Core.
- **plant collectors in Brazil**
The aim was to offer a standard list of collectors' names, important to taxonomic studies and herbaria digitization projects. This work ended together with the project, but the results obtained are available online.

DECRETO Nº 6.041, DE 8 DE FEVEREIRO DE 2007.

Institui a Política de Desenvolvimento da Biotecnologia, cria o Comitê Nacional de Biotecnologia e dá outras providências.

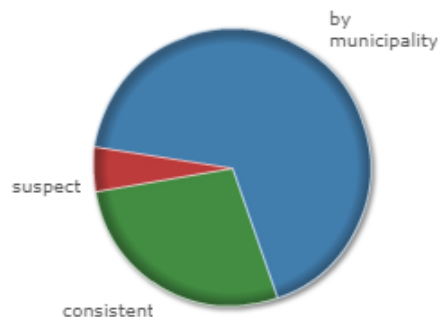

coordinates	records
by municipality	12,061
original	5,843
blocked	0
without coordinates	15,445
suspect	911
consistent	4,932
by municipality	12,061

coordinates origin

coordinates quality

The figures represent the **number of records** in the speciesLink network with geographic coordinates. **By municipality** are records with coordinates automatically assigned by a georeferencing tool. **Blocked coordinates** are records that do have coordinates but the data provider considers this information sensitive. **Suspect coordinates** refer to records with original coordinates that do not fall within the municipality informed.

+ More...

images	quantity
voucher	198
live material	0
pollen	0
subtotal	198
labels	0
<i>Flora brasiliensis</i>	0
total	198

type of material with images

The figures represent the **number of distinct images** associated to the retrieved records according to what they represent: vouchers, pollen, live material, labels or *Flora brasiliensis* drawings.

spp. names	records
accepted	15,460
synonyms	3,596
Genus id only	4,425
not found	9,533
not identified	335

names quality

The figures represent the **number of records** for each name status: accepted, synonym, identified to genus level only, not found or not identified (meaning genus and species equal blank). The system only recognizes names with correct spelling based on the available lists. Please check the "tips" link above for more detailed information.
