Introduction

Global Ionospheric Map中

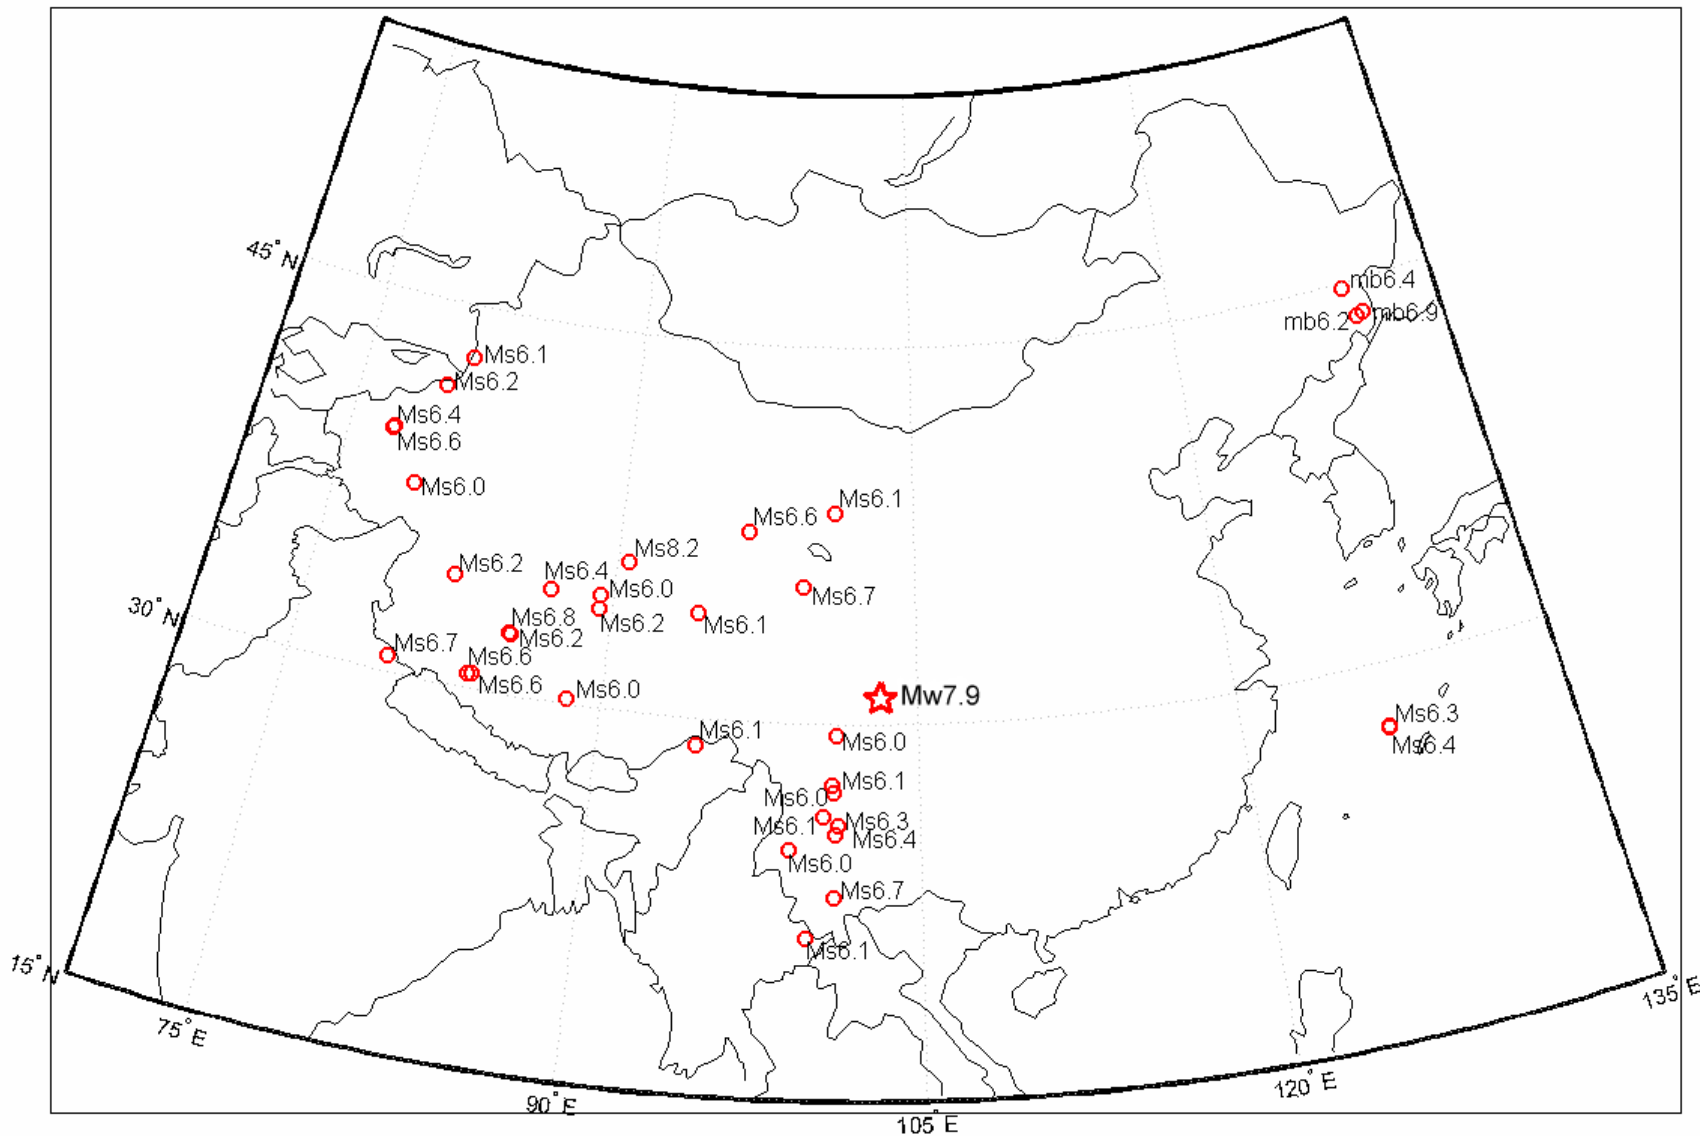

Temporal Precursor

1998/05/01~2008/05/12 36 $M \geq 6.0$ earthquakes in China

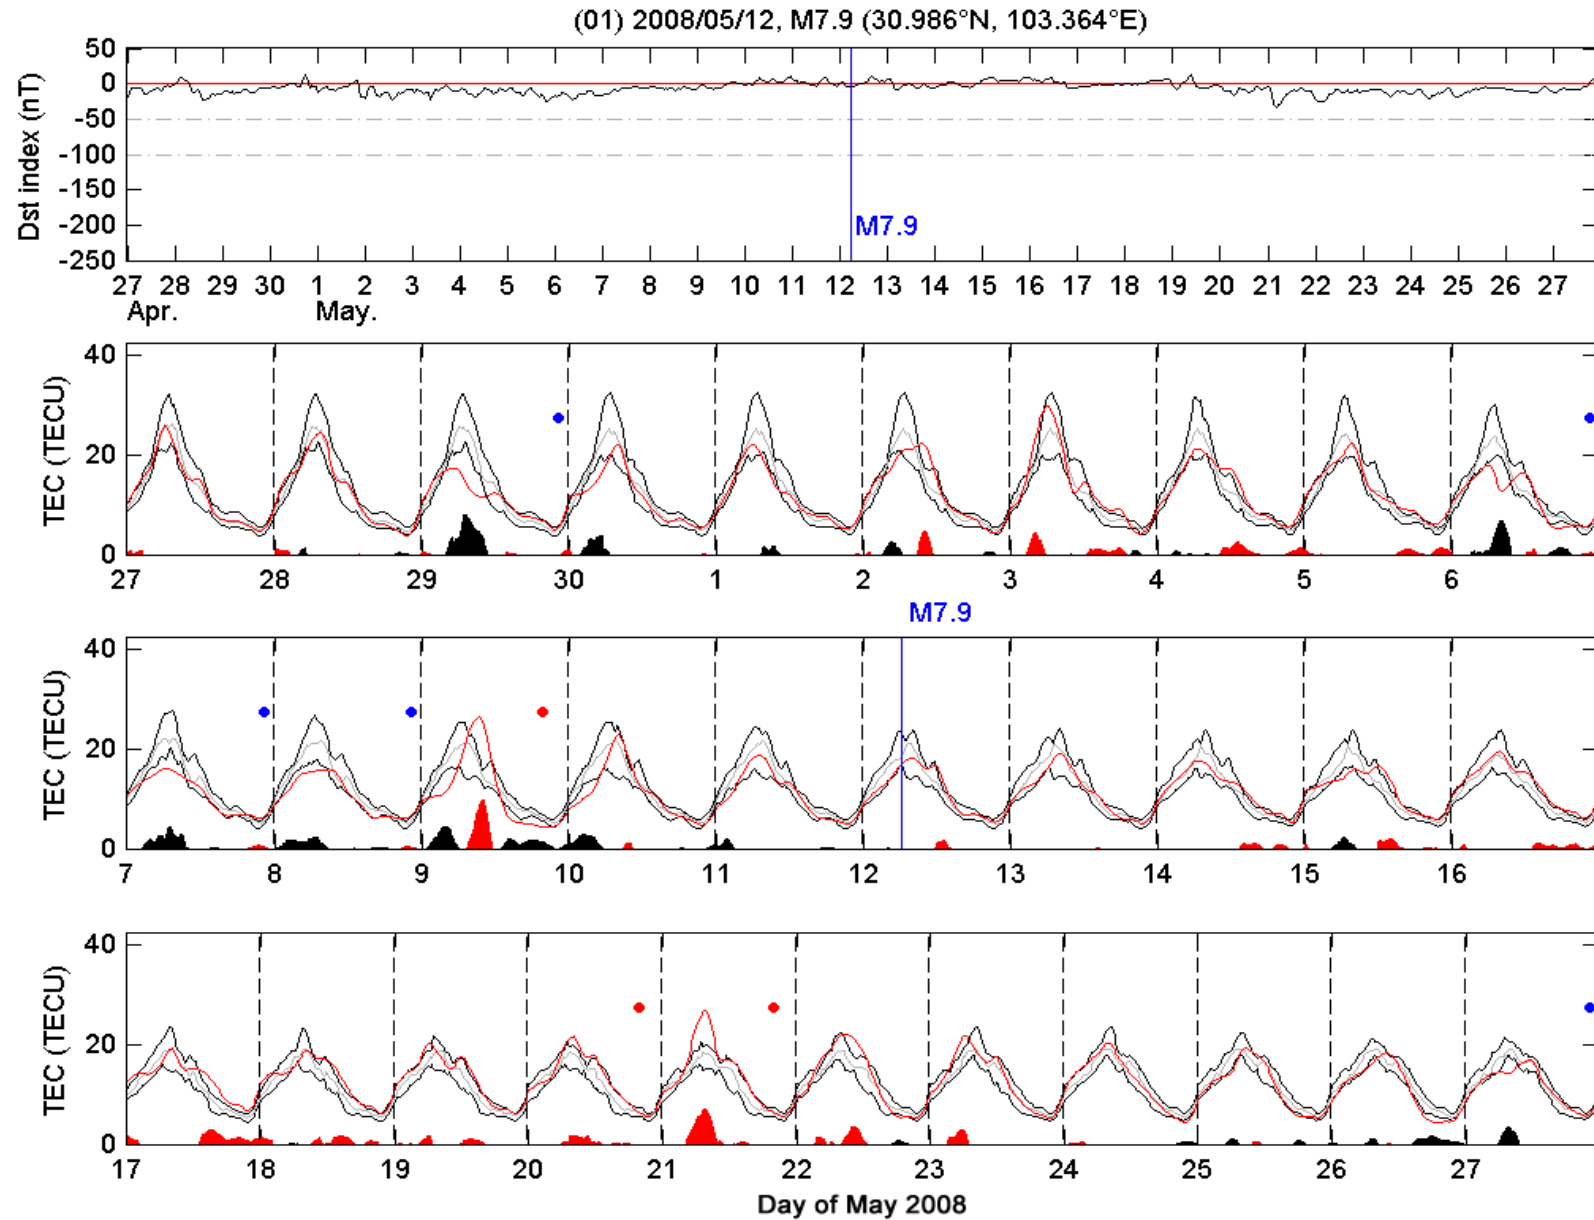

2008/5/12 M7.9 Wenchuan Earthquake

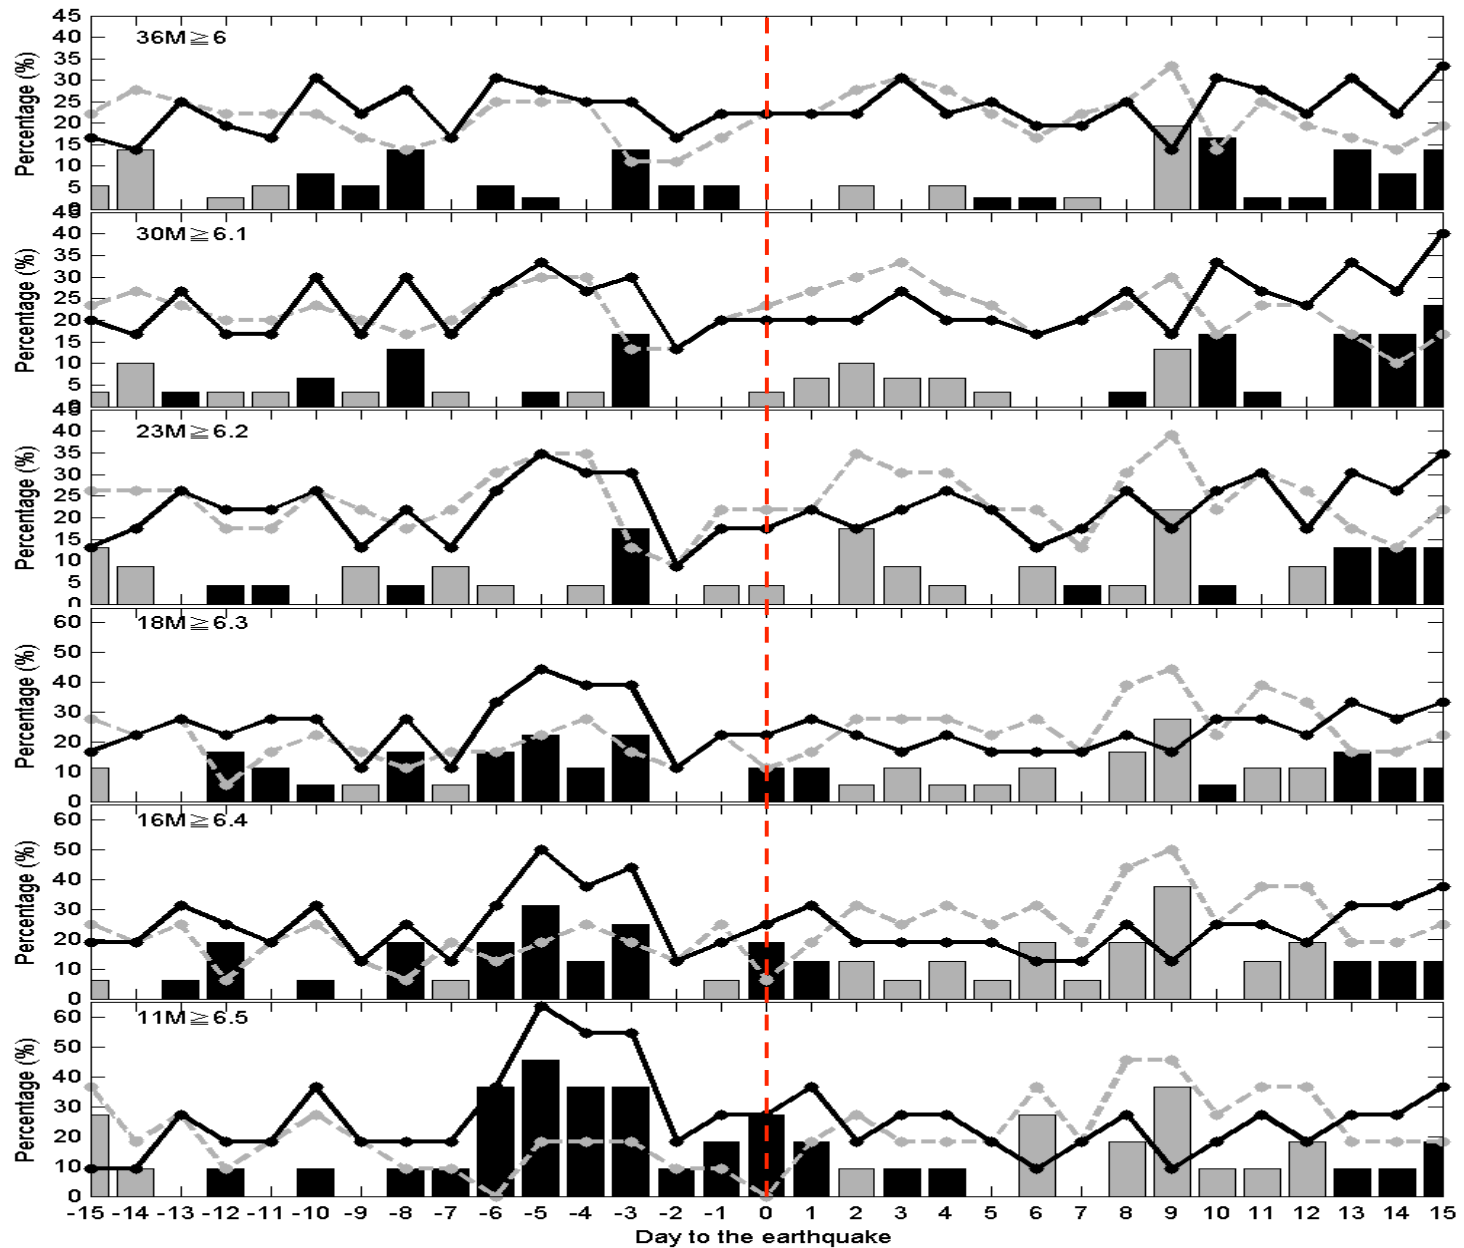

Locations of the 35 $M \geq 6.0$ earthquakes together with Wenchuan earthquake occurred in China during May 1, 1998-May 12, 2008.

A time series of GPS TEC right above the epicenter of the M7.9 Wenchuan earthquake on May 15, 2008.

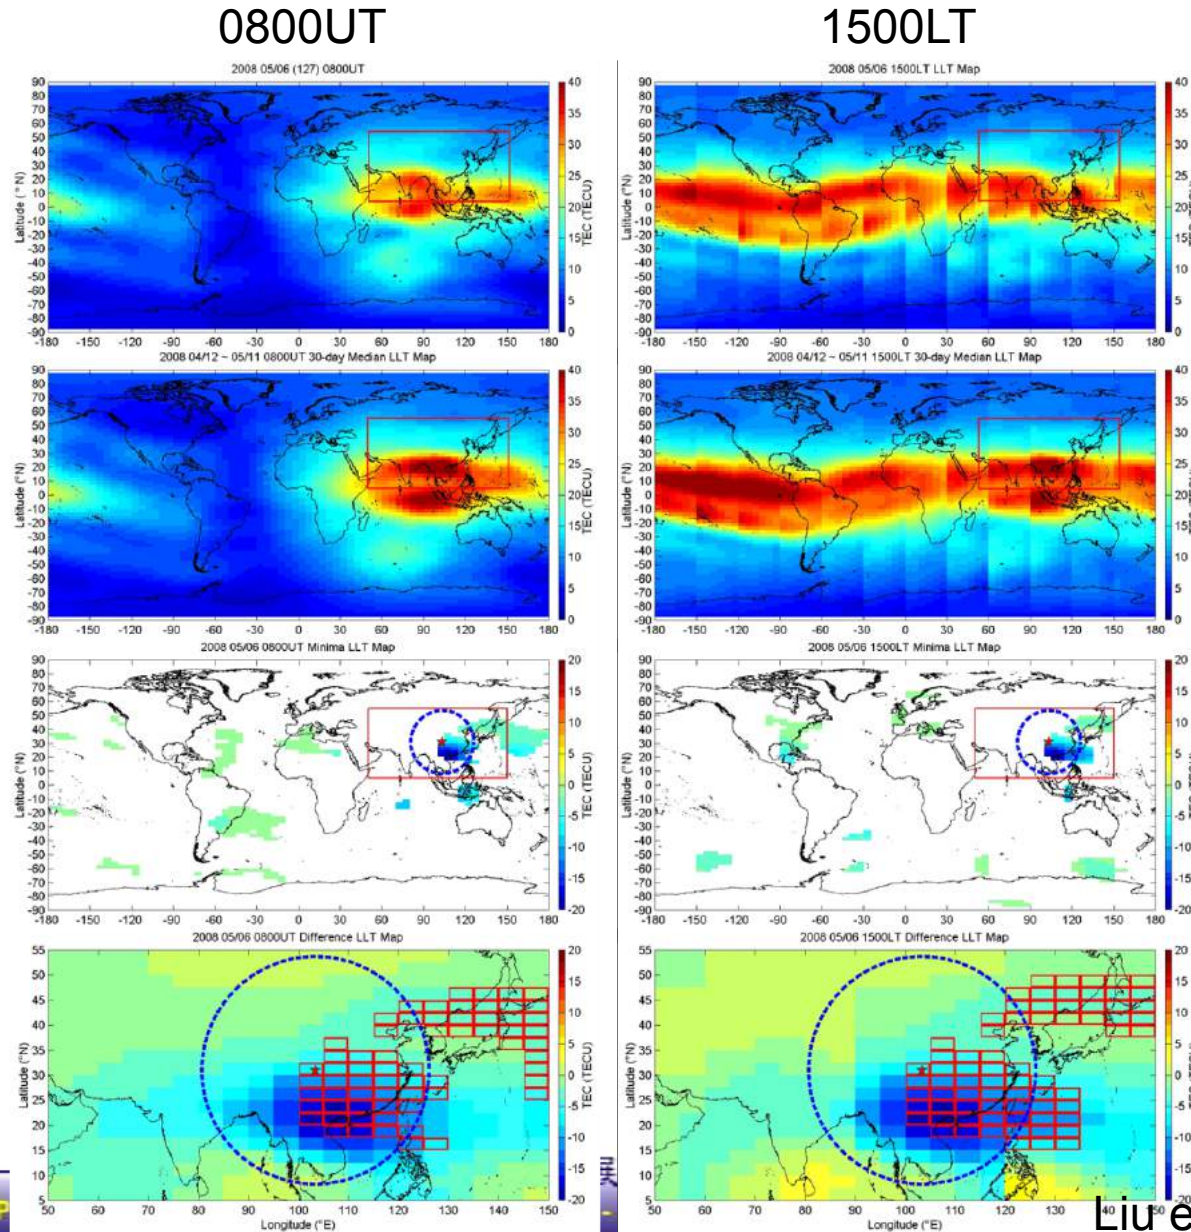

Spatial Precursor教

The GIMs observed at 08:00UT and global fixed 15:00 LT on day 6 before the 2008 Mw7.9 Sichuan Earthquake.

$$R = 10^{0.43M}$$

震電磁前兆研究
Magnetic Precursors of Earthquake

The GIMs observed at 08:00UT and global fixed 15:00 LT on day 3 before the 2008 Mw7.9 Sichuan Earthquake.

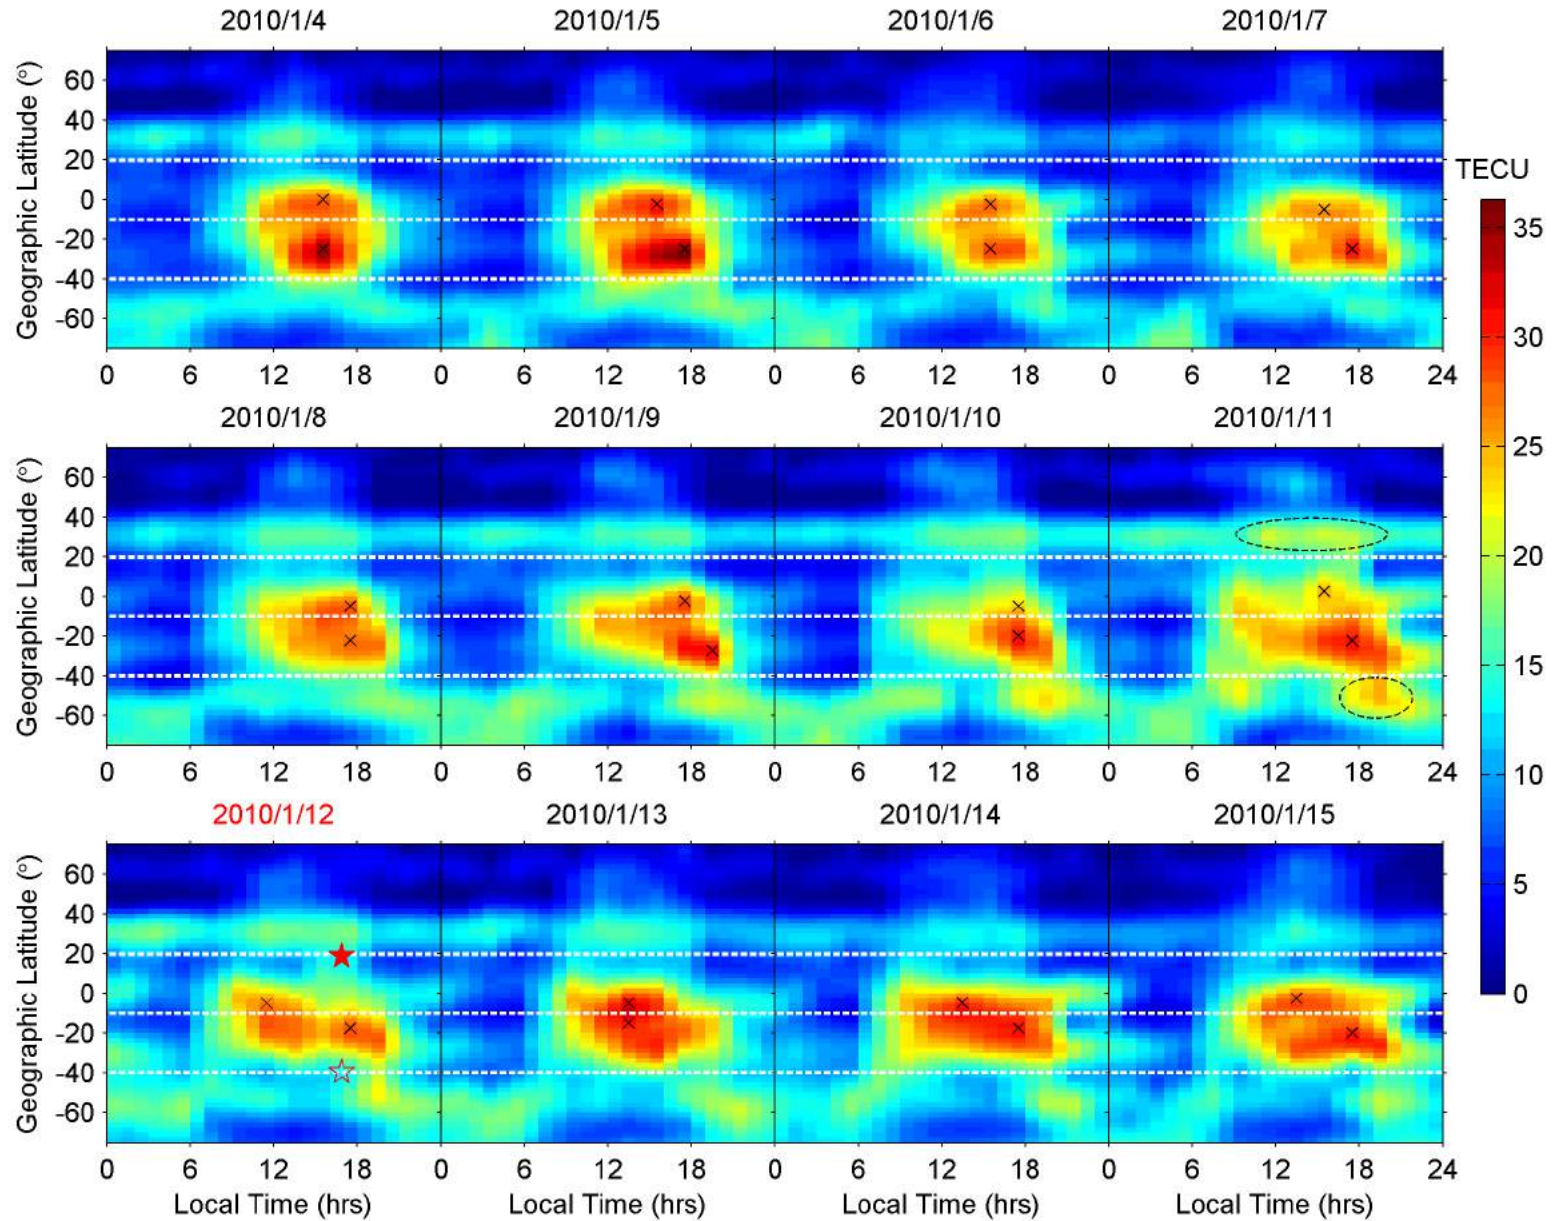

Observations and Simulations of seismo- ionospheric GPS TEC anomalies before the 12 January 2010 M7.0 Haiti Earthquake教

A time series of the Dst index and the GPS TEC right above the Haiti epicenter extracted from the GIM during 12/13/2009-1/16/2010. The M7.0 Haiti earthquake occurred at 16:53 LT on 12 January 2010.

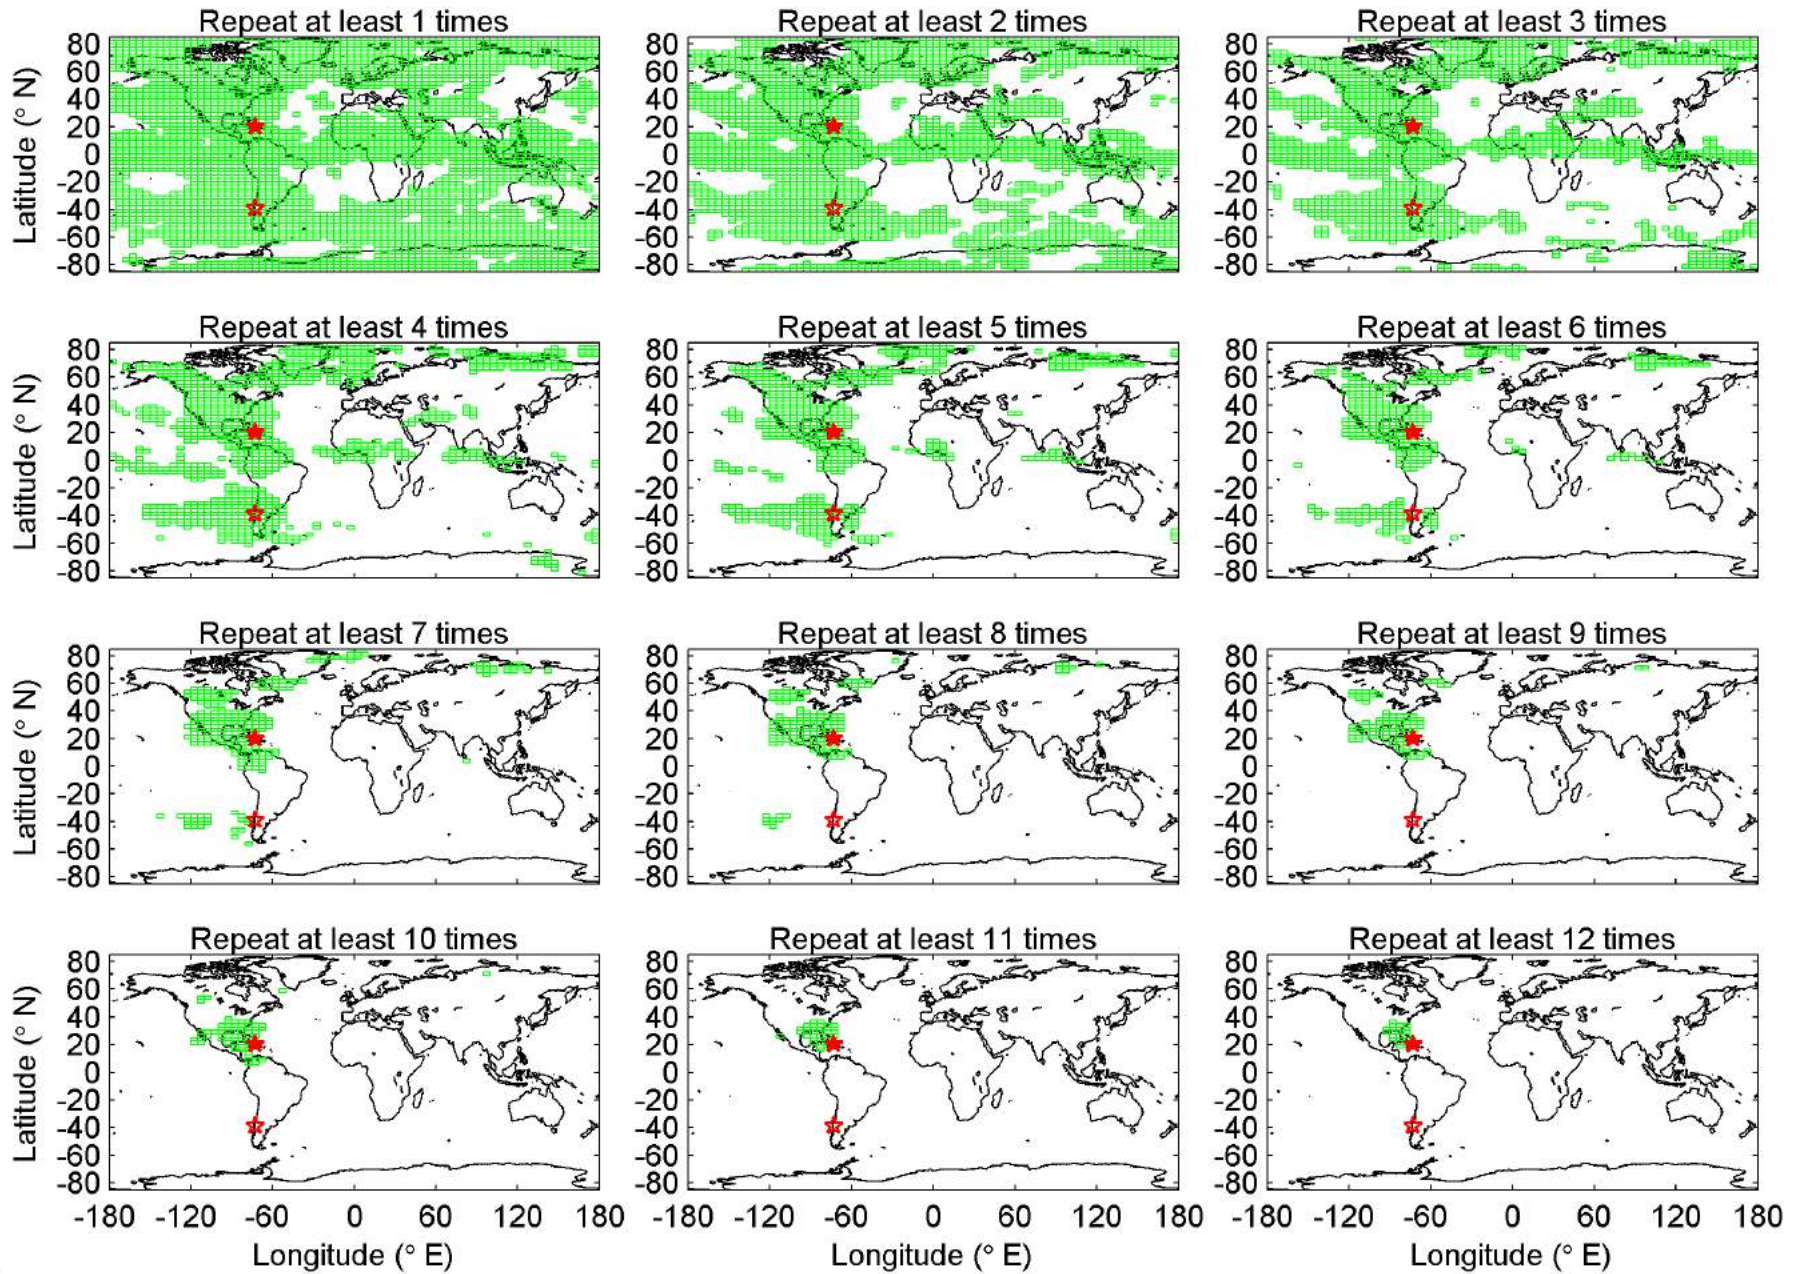

The latitude-time-TEC plots extracted from the GIM during 4-15 January 2010. 中

大學學術追求卓越發展計畫

地震電磁前兆研究

Program for Promoting University Academic Excellence - Research on Seismo-Electromagnetic Precursors of Earthquake

Locations of the 30-day extreme enhancement (maximum) repeatedly appear at various time points on the local day of 11 January 2010 in Haiti.

大學學術追求卓越發展計畫

地震電磁前兆研究

Program for Promoting University Academic Excellence - Research on Early Seismological Precursors of Earthquake

Conclusion中

- The observation shows that the TEC over the epicenter significantly enhances on 11 January 2010, 1 day before the Haiti earthquake.
- The spatial analysis further demonstrates that the enhancement anomaly specifically and persistently appears for the entire day in a small region in the northern epicenter area.

Conclusion教

- The GPS TEC variations of the pre-earthquake anomalies and the co-seismic ionosphere disturbances are about 1 and 10 TEC units ($1 \text{ TECu} = 10^{16} \text{ el/m}^2$), respectively.
- The pre-earthquake anomalies are possibly induced by seismo generated electromagnetic signals (EM process), while the co-seismic ionosphere disturbances could be triggered by vertical surface motions of seismic and tsunami waves (mechanical process).教
