

TruSeqTM

The most accurate
next-gen sequencing
technology available.

Every Illumina sequencer is powered by TruSeq—the technology that delivers the most accurate human genome at any coverage. TruSeq produces the highest yield of error-free reads. The most bases over Q30. The greatest number of peer-reviewed publications—more than 1,700 in the past three years.

That's Tru data quality.

**I CAN'T STOP USING MICROARRAYS,
MY INFRASTRUCTURE IS ALREADY IN PLACE.**

**I THINK I'LL WAIT IT OUT, MICROARRAYS HAVE
WORKED FOR ME FOR MORE THAN A DECADE.**

**I'M GOING FOR IT. WITH MICROARRAY-
COMPATIBLE DATA, THERE'S NOTHING TO LOSE.**

ADOPT RNA SEQ ASAP

**TO MOVE YOUR RESEARCH
IN THE RIGHT DIRECTION.**

Only Expression Analysis enables you to harness the power of mRNA-Seq with your existing microarray bioinformatics infrastructure. Now you can explore allele-specific expression, alternative splice sites, previously unknown isoforms, cSNPs, and rare and novel transcripts — all in a single experiment.

- 100% array-compatible data
- Gene and isoform level relative abundance estimates
- 10 years of leadership in gene expression data processing

GENOMIC KNOW-HOW®

fastest next-gen workflow 10X more throughput fastest-selling sequencer all in six months

Everything moves faster when The Chip is the Machine.™

Semiconductor technology has transformed every industry it has touched, from computing to photography to music. And now it's transforming the life sciences. The Ion Personal Genome Machine™ sequencer is powered by an innovative semiconductor chip that makes it faster, easier to use, and more accessible than any light-based solution. Get the speed, simplicity, and scalability of semiconductor sequencing on your side with the Ion PGM™ sequencer.

Get There Faster

Reach your scientific destinations faster with the most accurate Hi-Res Melting® systems on the market.

Our LightScanner systems will take your lab to the next level of high-sensitive mutation screening and genotyping. As the pioneers of both rapid real-time PCR and Hi-Res Melting, Idaho Technology is the only company that offers a complete system capable of superior performance at an affordable price.

If You're Not Using Complete Genomics for Human Sequencing, Your Study is Incomplete

When researching disease-associated variants, approaches like low-pass and exome-only sequencing leave you with incomplete data. As the world's leading provider of complete human genome sequencing, Complete Genomics delivers:

- More informative data—including non-coding variants
- Comprehensive CNV and SV data—information unavailable with exome sequencing
- Higher quality exome data than selection methods

Recent published studies have shown how non-coding variants are implicated in disease.

And finally, Complete Genomics has made whole genome human sequencing cost-effective.

When Zero Really Matters.

No more wasted RNA-Seq reads.

Superior rRNA removal for RNA-Seq. That's the Ribo-Zero™ performance guarantee. Our kits remove >99% of the rRNA from a variety of total RNA samples. They deliver outstanding results with samples that other kits won't even touch, like partially degraded or FFPE RNA. For better RNA-Seq results without wasted rRNA reads, try Ribo-Zero kits today.

Single-pass method. Intact or degraded RNA. Performance guaranteed.

Discover More, Sequence Less

More exomes per lane

Choose the NimbleGen SeqCap EZ Exome Library with more than two million empirically rebalanced DNA probes for highly optimized performance.

Minimize sequencing cost, maximize results

- Achieve uniform coverage across the exome to sequence more exomes per lane with up to eight exomes in a single lane!

Focus on what matters

- Cover more than 98% of RefSeq coding regions with an extremely efficient 44 Mb capture target.

Capture and sequence more difficult exons

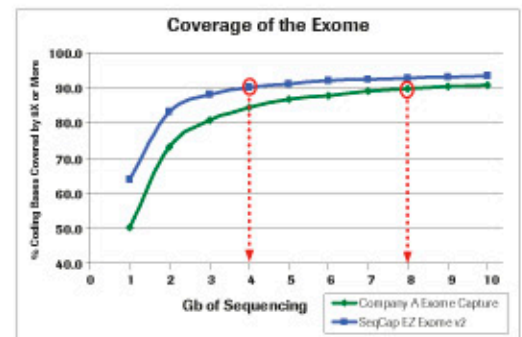

- High density tiling and empirical rebalancing significantly improve coverage for high GC regions, such as first exons.

Comparison of SeqCap EZ Human Exome Library v2.0 and Company A kit. The same Illumina PE library from HapMap sample NA12878 was used for both exome enrichment technologies, and each enriched DNA sample was sequenced with one HiSeq lane. SeqCap EZ Exome outperforms Company A based on number of raw sequences needed to achieve greater than 8X coverage for 90% of RefSeq coding regions. Only 4 Gb sequencing is needed for SeqCap EZ Exome, compared to 8 Gb for Company A exome capture.

The Mammary Gland as an Experimental Model

Edited by Mina J. Bissell, *Lawrence Berkeley National Laboratory*, Kornelia Polyak, *Harvard Medical School*, Jeffrey M. Rosen, *Baylor College of Medicine*

Studies of mammary gland biology are critically important given the prevalence of breast cancer in the population. There are many other reasons to study this organ, however. It represents an excellent model system for research into developmental mechanisms, gene regulation, tissue organization, hormonal action, secretion, and stem cell biology, revealing general principles that can be extended to other organs and tissues. Moreover, many *in vitro*, *ex vivo*, and *in vivo* techniques have been developed using the mammary gland model and may be applied to other systems. This book therefore provides valuable lessons for all cell, developmental, and cancer biologists.

2011, 325 pp., illus. (54 color, 5 b/w), index
Hardcover \$135

ISBN 978-0-879699-06-2

Contents

Preface

SECTION I: HISTORICAL BACKGROUND

Of Mice and Women: A Short History of Mouse Mammary Cancer Research with an Emphasis on the Paradigms Inspired by the Transplantation Method
Daniel Medina

A Compendium of the Mouse Mammary Tumor Biologist: From the Initial Observations in the House Mouse to the Development of Genetically Engineered Mice
Robert D. Cardiff and Nicholas Kenney

Choosing a Mouse Model: Experimental Biology in Context—The Utility and Limitations of Mouse Models of Breast Cancer
Alexander D. Borowsky

SECTION II: STEM CELLS

Murine Mammary Epithelial Stem Cells: Discovery, Function, and Current Status
Jane E. Visvader and Gilbert H. Smith

Stem Cells in the Human Breast
Ole William Petersen and Kornelia Polyak

SECTION III: SIGNALING

Hormone Action in the Mammary Gland
Cathrin Brisken and Bert O'Malley

Mammary Gland Growth Factors: Roles in Normal Development and in Cancer
Nancy E. Hynes and Christine J. Watson

Cell–Matrix Interactions in Mammary Gland Development and Breast Cancer
John Muschler and Charles H. Streuli

Mammary Gland ECM Remodeling, Stiffness, and Mechanosignaling in Normal Development and Tumor Progression
Pepper Schedin and Patricia J. Keely

Oncogene and Tumor Suppressor Genes
Eva Y.H.P. Lee and William B. Muller

SECTION VI: MAMMARY GLAND DEVELOPMENTAL BIOLOGY AND CANCER

The Role of the Microenvironment in Mammary Gland Development and Cancer
Kornelia Polyak and Raghu Kalluri

Molecular Mechanisms Guiding Embryonic Mammary Gland Development
Pamela Cowin and John Wysolmerski

TGF- Biology in Mammary Development and Breast Cancer
Harold Moses and Mary Helen Barcellos-Hoff

Mammary Gland Reprogramming: Metalloproteinases Couple Form with Function
Rama Khokha and Zena Werb

Leukocytes in Mammary Development and Cancer
Lisa M. Coussens and Jeffrey W. Pollard

SYSTEM BIOLOGY AND GENOMICS

Systems Biology and Genomics of Breast Cancer
Charles M. Perou and Anne-Lise Borresen-Dale

Using Functional Genetics to Understand Breast Cancer Biology
Alan Ashworth and Rene Bernards

Chromatin Remodeling in Mammary Gland Differentiation and Breast Tumorigenesis
Tim H.-M. Huang and Manel Esteller

In Vivo Imaging in Cancer
John Condeelis and Ralph Weissleder

● Custom Oligonucleotides

- ◆ Regular oligos
- ◆ Long oligos
- ◆ Phosphorothioated oligos (S-Oligos)
- ◆ Modified oligos
- ◆ Dual-labeled fluorescent oligos
- ◆ Oligonucleotide-peptide conjugation
- ◆ OPC, PAGE, HPLC purification

● Custom Peptide Synthesis

- ◆ Purities from desalt to 98%
- ◆ Acetylation/Amidation free of charge
- ◆ Phosphorylated peptides
- ◆ Fluorescein/Biotin labeled peptides
- ◆ Specialty peptides with unnatural amino acids
- ◆ Cyclic peptides
- ◆ KLH/BSA/OVA Conjugation
- ◆ Multiple Antigenic Peptides

Minor Bases
 Cytosine
 Guanine
 Adenine
 Thymine
 Uracil
 Inosine
 Xanthosine
 Hypoxanthine
 Guanosine

Oligo Modifications?

Your wish is our command.

SKILLED AND ACCOMPLISHED CAPABILITIES

All Modifications and Oligo Types Synthesized

- Long oligos up to 250 mer
- Fluorescent Molecular Probes
- Ultra-Modified, DNA, RNA, Chimeric, Fluorescent, and Antisense Oligos
- Specializing in the design and synthesis of challenging combinations of modifications

Providing oligos for demanding applications and consistent results for more than a decade

Gene Link. Results you can rely on.

An actual gel photo of each oligo is affixed on the oligo report.

An absolute testimony of quality.

CAREER TRACKS

Dedicated entirely to Employment, Conferences, Meetings, Fellowships, and Grants

University of Massachusetts Medical School Program in Bioinformatics and Integrative Biology

The newly established Program in Bioinformatics and Integrative Biology continues to invite applications for **tenure-track or senior tenured professor positions**. We are seeking innovative, energetic and collaborative individuals who plan to develop strong computational research programs to tackle problems in one of the following areas: regulatory genomics, comparative genomics, systems biology, RNA biology, evolutionary biology, statistical genetics, or proteomics. Exceptionally strong candidates in other computational biology areas will also be considered. Wet bench research space can be arranged for individuals who are interested in performing experiments to augment their computational efforts.

The Program in Bioinformatics and Integrative Biology is housed in a state-of-the-art research building with the neighboring Departments of Biochemistry and Molecular Pharmacology, Neurobiology, Cancer Biology, Medicine, and the Program in Gene Function and Expression. The Program has high-performance computing facilities and a full-time Bioinformatician to support the research activities of its faculty. Salary and start-up package will be competitive and commensurate with the high level of accomplishment expected for successful applicants.

Applicants should submit a cover letter explaining their interest in the Program, a curriculum vitae that includes honors, publications, and a succinct research plan to <http://www.academicjobsonline.org>. To expedite the review process, applicants should invite three individuals who are familiar with your work and potential for success to upload their recommendation letters at the same web address. Inquiries, but not application materials, may be directed to Professor Zhiping Weng at zhiping.weng@umassmed.edu.

As an equal opportunity and affirmative action employer, UMMS recognizes the power of a diverse community and encourages applications from individuals with varied experiences, perspectives and backgrounds.
