Figures

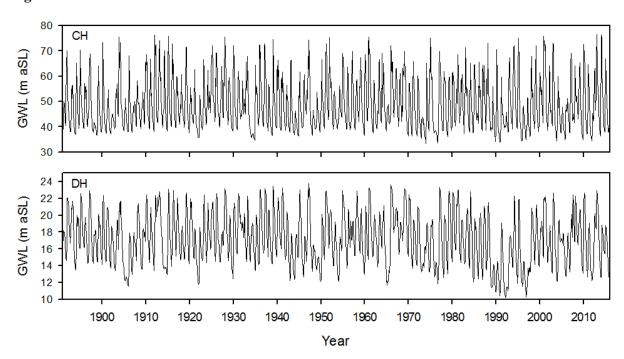

Figure S1. Monthly groundwater levels at CH and DH.

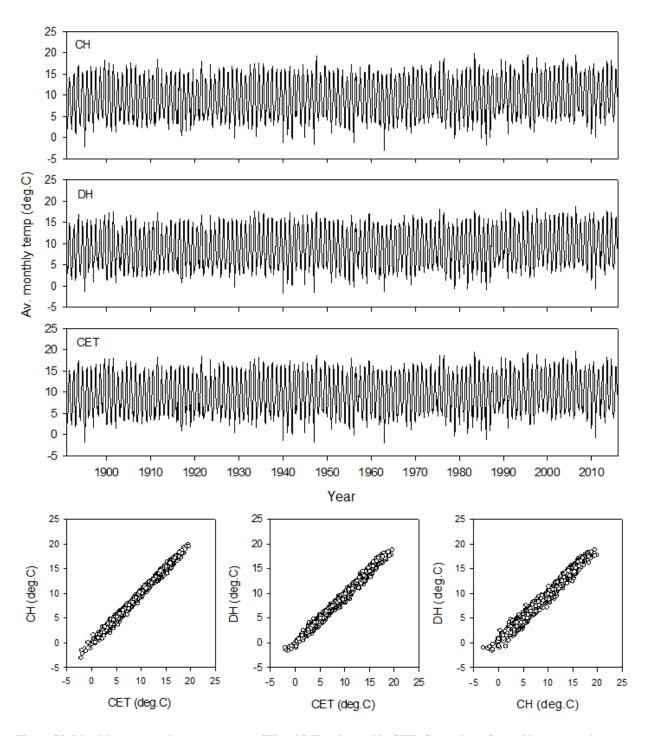

Figure S2. Monthly average air temperature at CH and DH and monthly CET. Cross plots of monthly average air temperature at CH and DH and monthly CET.

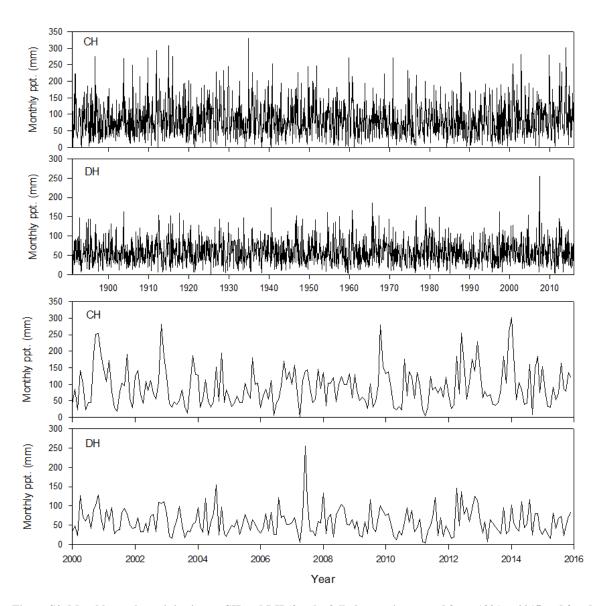

Figure S3. Monthly total precipitation at CH and DH (for the full observation record from 1891 to 2015 and for the last 15 years of the record).

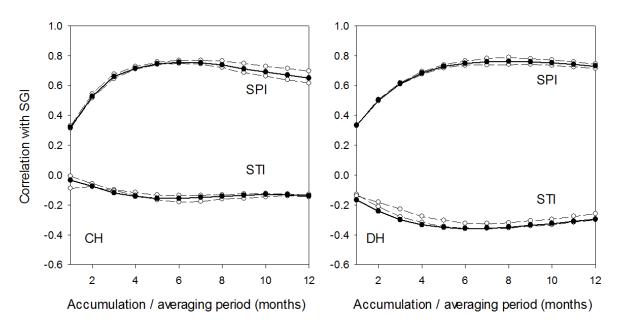

Figure S4. Variation in Pearson correlation coefficient between SGI and SPI for a range of SPI accumulation periods and between SGI and STI for a range of STI averaging periods. Solid lines show the correlation for the entire time series, the dashed lines indicate correlations for first and last third of the record.

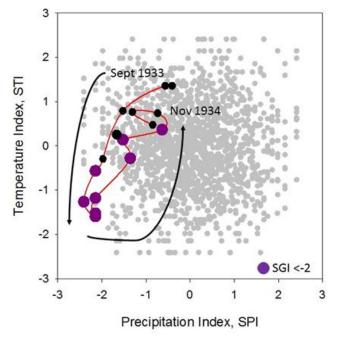

Figure S5. Illustration of variation in SPI and STI during the episode of groundwater drought at CH between September 1933 and November 1934.
