Abstract: *This report delves into the design and implementation of an shop inventory (SI) tailored to meet the dynamic needs of modern businesses. The SI serves as a crucial tool for businesses to efficiently monitor, track, and manage their inventory, optimizing operations and enhancing overall productivity. Key features of the SI include real-time inventory tracking, automated stock replenishment, customizable reporting functionalities, and integration with other business systems. The report outlines the system architecture, database design, user interface, and functionalities, highlighting the benefits and potential challenges of implementing such a system. Additionally, it discusses the importance of data security measures and scalability to accommodate future business growth.*

Keywords: Shop Inventory, Shop stock on rent battery sell
