Abstract: *Discussing the benefits of herbal cosmetics compared to synthetic ones, particularly for addressing various skin issues. Utilizing natural ingredients like multani-mitti, turmeric, aloe vera, sandalwood, orange peel, neem, and rose petals powder in formulations for face packs can potentially offer safer and effective solutions. Evaluating these formulations for their properties and safety measures is a crucial step towards achieving radiant skin while minimizing adverse effects. Formulating a polyherbal face pack using natural ingredients is indeed becoming popular due to the perceived safety and fewer side effects compared to synthetic products. The assessment of organoleptic, Physicochemical, and microscopical characteristics is crucial for ensuring the quality and effectiveness of the product.*
