Run Description

A weighted reciprocal rank fusion of (a) Anserini & Terrier runs based on different indexing schemes and topic variants, including relevance feedback (b) Neural retrieval runs based on synthetic query generation (<https://arxiv.org/abs/2004.14503>) (c) TF-Ranking + multiple BERT variants with softmax loss (<https://arxiv.org/abs/2004.08476>) trained on MS-Marco (d) TF-Ranking + multiple BERT variants and topic variants fine-tuned with softmax loss on the relevance judgments from Rounds 1 - 4. For weighting the runs, we use a simple scheme which doubles the weight of any runs that have access to relevance judgments in the reciprocal rank fusion.
