

Dear colleagues

Although the Patient Blood Management (ROTEM and Visual Clot) simulation study was a while ago, we hope you remember the user-centered technology - Visual Clot.

Our research team is engaged in developing a user-centered and situational working environment - your opinion and needs are the basis for this.

Therefore, we have created a short survey on Visual Clot that reflects your views on different aspects of using this technology.

Link to the survey (duration max. 2 min):

xxx

Best regards and thank you for your contribution to the development of user-centered technologies that support us in life-saving decision-making.

Your research team
