Research Questions and Literature Search Process

Research Questions:

RQ 1 | Which apps for the prevention and handling (first aid) of unintentional injuries in children have been studied in the scientific literature?

a) Which app architecture characteristics and features can be described?

b) What do they visualize? c) Who is their target audience?

RQ 2 | What theories and methods are used to research these mobile applications?

RQ 3 | Which needs do a) private caregivers, b) professional caregivers, and c) health professionals have when using apps dealing with the prevention and/or acute (pain) management of unintentional childhood injuries? What constraints may prevent the use of the app?
