

- Download Contract Kit by running:
 - ‘docker pull oasislabs/contract-kit’
- Launch Contract Kit:
 - ‘docker run -ti -rm -v “\$PWD:/project oasislabs/contract-kit bash’
- Within the Contract Kit Environment:
 - Create a new project directory
 - mkdir geolocation && cd geolocation
 - Configure an empty Truffle project
 - ‘truffle unbox oasislabs/oasis-box’
 - Create a new file of type .sol
 - For a non-confidential contract, name it:
 - “Geolocation.sol”
 - For a confidential contract, name it:
 - “confidential-Geolocation.sol”; or
 - “confidential_Geolocation.sol”
 - Copy the contents from the developed contract in Remix and save the new file
 - Compile the contract
 - ‘truffle compile’
 - Open truffle-config.js and add the seed words used to create your MetaMask wallet for the constant variable named *MNEMONIC*.
 - Create a file named ‘migrations/2_geolocation_migration.js’ with the following contents:
 - ```
const Geolocation = artifacts.require("GeoLocation");
module.exports = function(deployer) {
 deployer.deploy(Geolocation);
}
```
  - Run the migration to deploy the contract to Oasis Devnet:
    - ‘truffle migrate -- network oasis’
