### Abstract [Translate](#)

Spens highlights the project of Kengo Kuma & Associates, which was judged the final winner during a competition for an international center for design in Dundee. As if floated into the waterfront like a sculptural iceberg, Kuma's project attaches itself gracefully to the urban spaces of the city. It's structure of slatted high technology stone cladding will weather slowly and benignly, with a natural effect. This is inherent in the systemic horizontal gaps between the layered, compound stone panels, which are made up of over 90% quartz, granite, marble and natural stone elements.
