The AUTONOMIC SYSTEMS book series provides a platform of communication between academia and industry by publishing research monographs, outstanding PhD theses, and peer-reviewed compiled contributions on the latest developments in the field of autonomic systems.

It covers a broad range of topics from the theory of autonomic systems that are researched by academia and industry. Hence, cutting-edge research, prototypical case studies, as well as industrial applications are in the focus of this book series. Fast reviewing provides a most convenient way to publish latest results in this rapid moving research area.

The topics covered by the series include (among others):

- self-* properties in autonomic systems (e.g. self-management, self-healing)
- architectures, models, and languages for building autonomic systems
- trust, negotiation, and risk management in autonomic systems
- theoretical foundations of autonomic systems
- applications and novel computing paradigms of autonomic systems
