

MOKi

the Modelling Wiki ---

Marco Rospocher

DKM Unit, FBK-irst, Trento

Joint work with:

C. Ghidini, V. Pammer, L. Serafini, and S. Lindstaedt.

Motivations

- **Enterprise modelling**: modelling the relevant aspects of an enterprise.
- Enterprise modelling is a **collaborative** activity involving a team of modellers.
- Our collaborative modelling paradigm:
 - **asynchronous** collaboration toward the creation of the enterprise model;
 - specification at different **degrees of formality**;
 - **automatized alignment** between informal/formal specification.

MoKi: the Modelling Wiki

- It supports our collaborative paradigm.
- It currently supports the creation of integrated **domain** and **process** models.
- It is built on top of **Semantic MediaWiki**.
 - wikis support collaborative editing;
 - users are quite familiar with wikis;
 - only a web-browser is required on the client side;
 - wikis can provide a uniform tool/interface for the specification of enterprise model;
 - semantic information provided in the wiki can be reused to automatically create the formal models.

Pages in Moki

- A page for each element of the enterprise model, containing:
 - an **informal description** in natural language, to document and clarify the model;
 - a **structured part** composed of triples (subject, relation, object), to represent the intra/inter-connection between elements of the models.
- Use of appropriate forms/templates to guide users in providing valuable descriptions.

A domain concept page

Modify Concept: Workshop

Annotations

Description: An educational seminar or series of meetings emphasizing interaction and exchange of information among a usually small number of participants

Synonyms:

Hierarchical Structure

Is a: Event

Is part of:

Properties

Property: participant

Property target: Person,

Remove

Add another

- Similarly for properties and processes.

Import

- Import of an available **domain ontology**.
- Input of **structured lists of elements**.
 - inserting lists of domain concepts organized according to pre-defined semantic structures (taxonomy or paronomy).
- **Text analysis** functionalities.
 - extract relevant terms from digital resources, and to cluster such terms according to their relatedness. (KnowMiner)

List domain concepts

Number of concepts in the Domain Model: 71

☒ Concept	☒ Description
Misc	Work of another or undetermined the scheme is not explicitly stated
UndergraduateIntermediateClass	see: http://www.neurolabor.de/cgi-bin/dict/urlexp/200307052
UndergraduateAdvancedClass	see: http://www.neurolabor.de
GraduateClass	see: http://www.neurolabor.de
Topic	If changing this concept (or its ontology) depends on the forecast The swrc topic ontology can be found at http://ontoware.org/frs/download.php/1000/swrc-topics.owl
Document	Dublin Core elements added. See: http://dublincore.org/documents/ for document types see: http://www.bsz-bw.de/diglib/metadata/

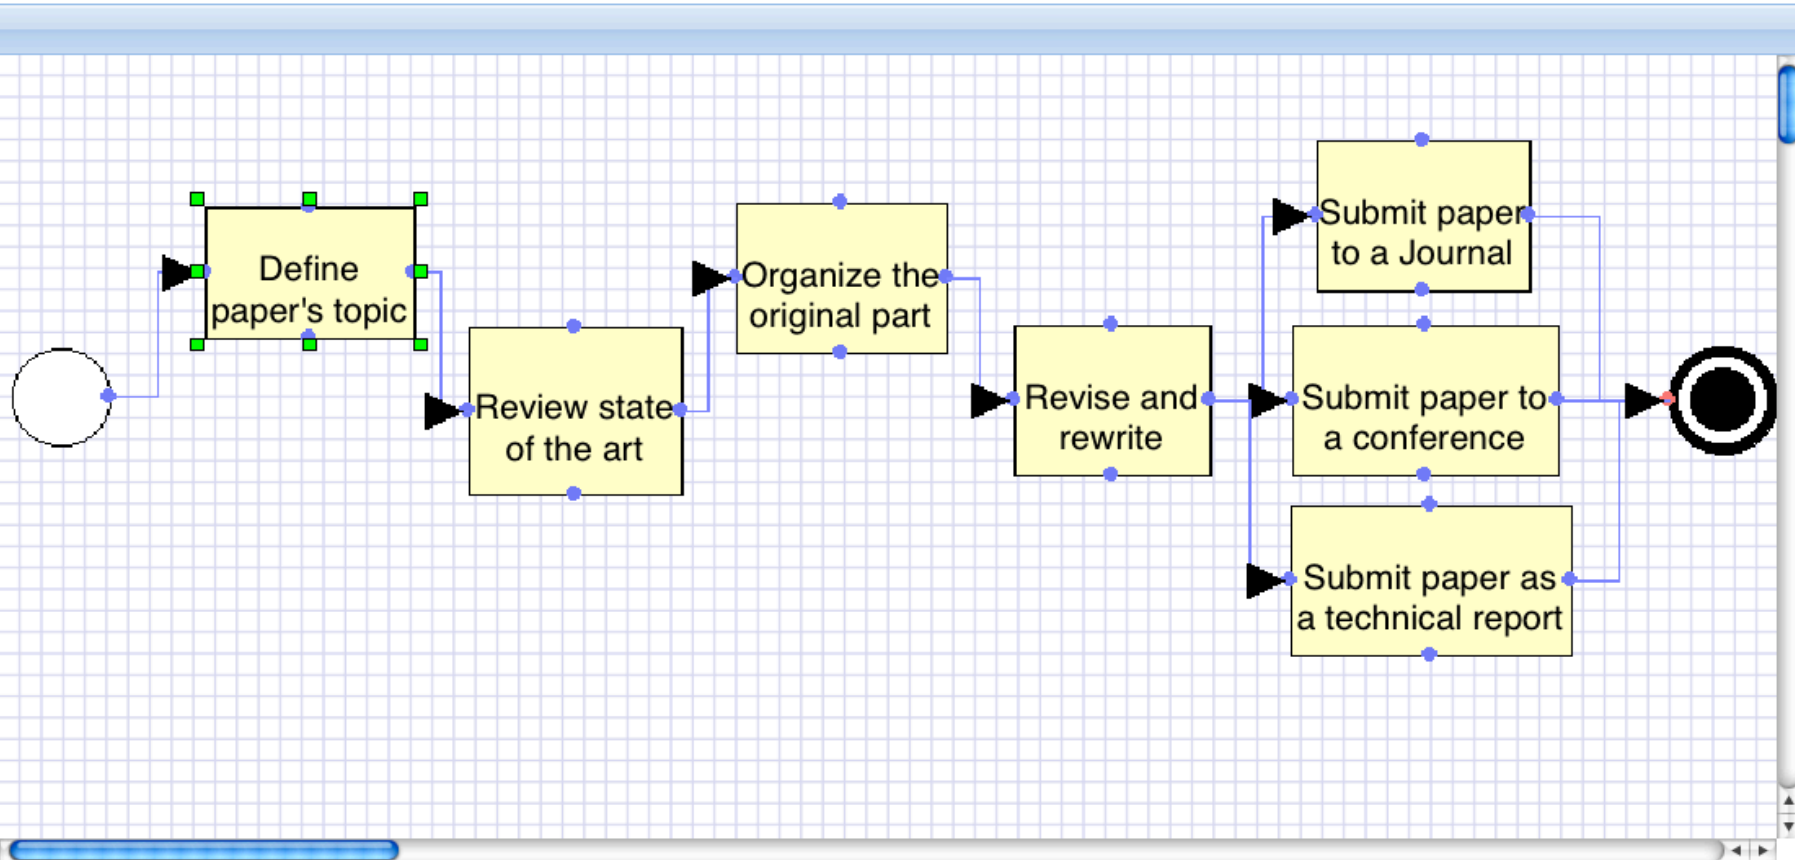

Domain Model: Is_a Browser

☒ Is part of

Write a paper

Export to eRDF format (for Oryx) Only this process | Sub processes in same file as embedded design

Description: The process of writing a scientific paper

Required concept: [Publication](#), [ResearchTopic](#), [Event](#)

Revision & Export

- Revision support: **automatic checks** to verify the quality of the enterprise model.

- Export functionalities: **automatic export** of the enterprise model to **an OWL ontology**.
 - The process model and the domain model can also be exported **separately**.
 - The process model can also be exported in a **BPMN specification** (eRDF serialisation).

Usage of MoKi

- Used to create six medium-size enterprise models for the use cases in **APOSDLE** (FP6 EU-project – www.aposdle.org).
- Used in a Knowledge Management course at TU Graz (6 installations with ~50 users each).
- In use @ the Joint European Summer School on Technology Enhanced Learning 2009.
- Twin tools:
 - **Clip-MoKi** – collaborative tool for modeling **clinical protocols** encoded in ASBRU;
 - **BP-Moki** – collaborative tool for the creation of **semantically annotated business processes**.

Things we are working on...

- Support modelling of **individuals** and **data-type properties**.
- Provide **tailored templates** for different families of ontology concepts.
- Extend **import/export** functionalities to support more expressive constructs.
- Extend support for **revision**.
- Support different **levels of formality** for differently skilled users.

This is the end...

- A demo version of MoKi is available on line at:
moki.fbk.eu
- For any question/info feel free to contact me at:
Marco Rospocher (rospocher@fbk.eu)

See you @ the demo!
