Have you ever seen the sequence whose recursive definition is:

$$a \text{ sub } 0 = 0$$
$$a \text{ sub } n = n + a \text{ sub } floor(n/2), \ n \geq$$

The first few terms are:

0 1 3 4 7 8 10 11 15 16 18 19 22 23 25 26 31
32 34 35 38 39 41 42 46 47 49 50 53 54 56

It comes between 921 and 922 in your book.
