Dear Mr. Sloane,

I find your book "A Handbook of Integer Sequences" very interesting.

Recently I came across the following series :-

1, 2, 4, 8, 16, 32, 63, 120,

which is not found in your book.

I wonder whether this series is interesting enough to be included in your next edition. It is given by M.L. Cornelius in a paper "Variations on a Geometric Progression" in the magazine "Mathematics in School"

(Volume 4, No. 3, May 1975). page 32)

Hoping to hear from you.

Yours faithfully,
S. C. Chan.
