

# Supplementary Figure 2

**Supplementary Figure 2.** Weight profile of MM xenograft models after treatment with BSO, L-PAM, and combination. Average body weight ( $\pm$  SD) of each group ( $n \geq 5$ ) of MM.1S (a), KMS-12-PE (b), OPM-2 (c) and all models combined (d). BSO + L-PAM treatment induced ~20-30% of weight loss in the first two weeks. Mice recovered from toxicity within three weeks. No significant difference was seen with L-PAM treatment, while BSO or vehicle treated mice showed a moderate weight gain.
