

**Supplementary Table 2: Association to T2D in the primary replication group (Denmark B).**

Association results for the 47 SNPs tested in the primary replication cohort (Denmark B), consisting of 1110 T2D cases and 2272 controls. Included in the table is the chromosome, the position of the SNPs in NCBI Build 34, the marker and allele tested, frequency in controls and the frequency in cases, odds ratio (OR) and *P* value in all T2D cases, non-obese T2D cases and obese T2D cases, respectively. For all three groups of cases, the same group of controls is used and the number of cases is included in the parentheses. The two SNPs selected for replication in additional T2D case-control groups are highlighted with bold typesetting.

Chr	Position	Marker	Allele	Con.frq	All T2D cases (1110)			NonObese T2D cases (640)			Obese T2D cases (470)
