

Supplementary Figure 7. TLR2^{-/-}4^{-/-} mice were more susceptible to hyperoxia. Wild type (WT) and TLR2^{-/-}4^{-/-} mice were exposed to > 99% O₂ and monitored for survival. WT had a median survival of 93 hours (*n* = 11), whereas TLR2^{-/-}4^{-/-} had 48 hours (*n* = 8), *P* = 0.0003 by the long-rank test.
