

Description of Additional Supplementary Files Document

Supplementary Movie. 1 | Terrace area fitting procedure for cubic nanoparticle. Surface Miller-index of cubic nanoparticle with varying rotation angle along $+y'$ (in Supplementary Fig. 4a) from $-60^\circ \sim 60^\circ$ with 2° step size. At the center, the overall Miller-index of the plane becomes $\{100\}$ series except for the edge and corner of the nanoparticle that produces the “most red” color-coding result.
