<sup>a</sup>Includes the hexa-Ala-hexa-His tag; <sup>b</sup>Includes the MTS predicted by MitoFates<sup>64</sup>; <sup>c</sup>The mature protein predicted by Parey and coworkers,<sup>19</sup> as used in the final model; <sup>d</sup>Little sequence homology but excellent secondary structure overlap; <sup>e</sup>Little sequence homology and some secondary structure overlap (situated at equivalent site in model). MTS-cleavage sites were assumed from previously published information<sup>62,63</sup>.

**Supplementary Table 2. Reference table for the numbering of the water molecules used in this manuscript, relative to the system used in the model (PDB 6YJ4).**

Manuscript water number	Numbering in 6YJ4	Nearest Subunit	Subunit Chain
