## **Reporting Summary**

Nature Portfolio wishes to improve the reproducibility of the work that we publish. This form provides structure for consistency and transparency in reporting. For further information on Nature Portfolio policies, see our <u>Editorial Policies</u> and the <u>Editorial Policy Checklist</u>.

$\sim$				
<.	tat	ΙIC	:11	$\sim$

For	all st	atistical analyses, confirm that the following items are present in the figure legend, table legend, main text, or Methods section.
n/a	Cor	nfirmed
	$\boxtimes$	The exact sample size $(n)$ for each experimental group/condition, given as a discrete number and unit of measurement
X		A statement on whether measurements were taken from distinct samples or whether the same sample was measured repeatedly
$\boxtimes$		The statistical test(s) used AND whether they are one- or two-sided Only common tests should be described solely by name; describe more complex techniques in the Methods section.
X		A description of all covariates tested
$\boxtimes$		A description of any assumptions or corrections, such as tests of normality and adjustment for multiple comparisons
$\boxtimes$		A full description of the statistical parameters including central tendency (e.g. means) or other basic estimates (e.g. regression coefficient) AND variation (e.g. standard deviation) or associated estimates of uncertainty (e.g. confidence intervals)
$\boxtimes$		For null hypothesis testing, the test statistic (e.g. <i>F</i> , <i>t</i> , <i>r</i> ) with confidence intervals, effect sizes, degrees of freedom and <i>P</i> value noted <i>Give P values as exact values whenever suitable.</i>
$\boxtimes$		For Bayesian analysis, information on the choice of priors and Markov chain Monte Carlo settings
$\boxtimes$		For hierarchical and complex designs, identification of the appropriate level for tests and full reporting of outcomes
$\boxtimes$		Estimates of effect sizes (e.g. Cohen's d, Pearson's r), indicating how they were calculated
	'	Our web collection on <u>statistics for biologists</u> contains articles on many of the points above.

#### Software and code

Policy information about availability of computer code

Data collection

Biopython and Biotite was used to parse the PDB files. The scripts for data collection and preprocessing are available in the code repository.

Data analysis

Python and its standard libaries (NumPy, matplotlib, and PyTorch) were used to analyze the data.

For manuscripts utilizing custom algorithms or software that are central to the research but not yet described in published literature, software must be made available to editors and reviewers. We strongly encourage code deposition in a community repository (e.g. GitHub). See the Nature Portfolio guidelines for submitting code & software for further information.

#### Data

Policy information about availability of data

All manuscripts must include a data availability statement. This statement should provide the following information, where applicable:

- Accession codes, unique identifiers, or web links for publicly available datasets
- A description of any restrictions on data availability
- For clinical datasets or third party data, please ensure that the statement adheres to our policy

CATH 4.3 non-redundant S40 dataset was used for this study, which is publicly available in for following link: http://download.cathdb.info/cath/releases/all-releases/v4\_3\_0/non-redundant-data-sets/cath-dataset-nonredundant-S40-v4\_3\_0.pdb.tgz. The dataset was filtered for structures of length 40-128, and the exact CATH IDs used for the train/test splits can be found in the code repository.

Human research participants			
Policy information about studies involving human research participants and Sex and Gender in Research.			
Reporting on sex	and gender	N/A	
Population chara	cteristics	N/A	
Recruitment		N/A	
Ethics oversight		N/A	
Note that full informa	ation on the app	roval of the study protocol must also be provided in the manuscript.	
Field-spe	ecific re	eporting	
Please select the o	ne below that	is the best fit for your research. If you are not sure, read the appropriate sections before making your selection.

Lite scier	nces st	udy design	
All studies must dis	sclose on these	e points even when the disclosure is negative.	
Sample size		s, we used 2 samples per backbone mainly due to experimental and time constraints. No sample size calculation was d we selected sample sizes based on previous publications (Watson et. al., 2022, Ingraham et. al., 2022).	
Data exclusions	Data was not e	excluded when computing the general metrics, but some samples were hand-selected for structural visualization.	
Replication	The CD spectra scan was performed 10 times across two sequences for the same input protein, and observed strong consistency. The model was trained at different seeds and observed similar performance. Multiple iterations of sampling from the model also resulted in consistent metrics (scTM, Rosetta Energy, etc.)		
Randomization	There were no	experimental groups.

### Eukaryotic cell lines

Policy information about  $\underline{\mathsf{cell\ lines\ and\ Sex\ and\ Gender\ in\ Research}}$ 

Cell line source(s)

HEK293T cell lines from ATCC were used for protein expression.

Authentication	None of the used cell lines were authenticated
Mycoplasma contamination	All lines tested negative for mycoplasma.

Commonly misidentified lines (See <u>ICLAC</u> register)

No commonly misidentified lines were used in this study.
