# 1 Annotation Interface

Fig. 1. The Annotation Interface for OmniBenchmark. The meta information of each concept consists of a tag, description, and reference images. Annotators determine whether the unlabeled image conforms to the concept. The yes option will be marked if the annotator provides a positive answer to the question above.

We illustrate the annotation interface for building OmniBenchmark in Fig. 1. In addition, the annotator needs to determine the legality of the image. If the unlabeled images contain pornography or any offensive content, annotators should click "No" button in this interface.

# 2 Experiments Results

We present the complete Top-1 accuracy (Table 1) and accuracy relative to the baseline ResNet50 (Table 2) of all the 26 models. For all the models, we split them across the four model categories. As shown in Table 1, Swin-T that has similar parameters to ResNet-50 models achieves the best average accuracy on the OmniBenchmark. In addition, GV-D [17] is the best ResNet-50 model, which is pre-trained on the 69M GV-D data.

2 Zhang et al.

### 3 Social Impact

The usage of OmniBenchmark might bring several risks, such as privacy, and problematic content. We discuss these risks and their mitigation strategies as follows.

**Copyright.** All images in this paper and the dataset are licensed by the CC-BY (https://creativecommons. org/licenses/by/2.0/) license and contain information on their creator. On the above url, this license is described as follows:

- Copy and redistribute the material in any medium or format.
- Remix, transform, and build upon the material for any purpose, even commercially.
- This license is acceptable for Free Cultural Works.
- The licensor cannot revoke these freedoms as long as you follow the license terms.

Referred to LAION-400M [16], Conceptual 12M [4] and MS-COCO [13], we only present the lists of URLs to this data. We build the meta file as follow.

#### [image\_url] [class\_index]

**Problematic Content.** The problematic contents such as drugs, nudity, and other offensive content exist in the web data. As mentioned in Sec. 1, the annotators were asked to discard such images instead of conducting annotation.

**Privacy.** To mitigate privacy issues with public visual datasets, researchers have attempted to obfuscate private information before publishing the data [7, 24]. We plan to follow this line of work to blur faces, license plates in our new annotated data. In addition, if the original picture found at the URL present on the OmniBenchmark on the record states users' names, phone numbers, or any personal information, users can request a takedown of this image.

**Bias.** The images were crawled from Flickr thus inheriting all the biases of that website. The usage of user generated data might bring the risk of bias. We plan to tackle this problem by balancing various categories.

Table 1. Top-1 accuracy of 26 models on 21 realms. We present the completeTop-1 accuracy of 25 models on 21 realms. ImageNet-1K-seen-realms are marked inunderline. Consumer. indicates consumer\_goods, Locom. indicates locomotive.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Consumer.
