

View on the Triple Torus Hologram for the Universe.

Author: Ing. D.C.M. Visser (Dan Visser), Almere, the Netherlands

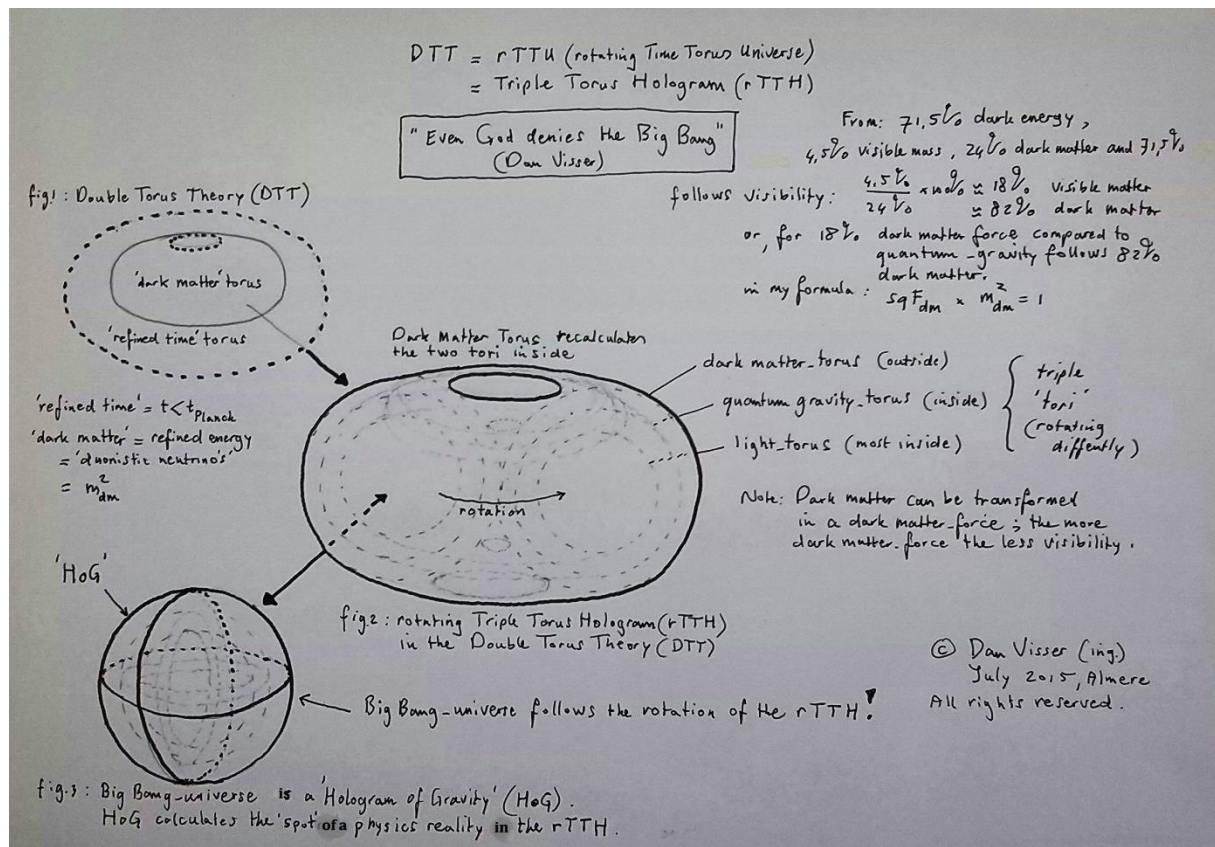

Date: August 16 2015

Abstract.

This paper is an additional short topic to my former paper <http://vixra.org/abs/1506.0192>. In the paper a visualization is given of the rotating Triple Torus Hologram (rTTH), which emerges from my Double Torus Theory (DTT), and which comprehends a rotating Time Torus Universe (rTTU) that performs three 'tori', in which the recalculation of the physical reality happens.

View on new holographic dynamical universe instead of the classical Big Bang.

We definitely don't live in a Big Bang-universe, which expands faster and faster, to end either in a Big Rip after 22 Billion years, or in an icy-cold empty universe after 100 Billion years without ever been observed longer. The topic refers to <http://vixra.org/abs/1506.0192>. Therein I gave proof of several experimental observations, which need to be interpreted differently than always and again is done in the context of the current paradigm called Bang Bang-universe. I theoretically presented a formula, which proves the Big Bang Universe is a Hologram of Gravity (HoG) that follows the rotation of a rotating Time Torus Universe (rTTU) eternally. This is more than the axioms, assumptions or calculations done by others for a stand-alone hologram of the Big Bang-universe the last few years. The new perception presented, or so to say the *new paradigm*, proves: The Big Bang universe is embedded in a rotating time-torus-universe as a dynamically calculated hologram. So, it is not only a hologram, but also a hologram in a second kind of universe that recalculates the hologram. Read the details in the text of the view below (fig. 1,2 and 3).
