3.5 Analysis on heterotypic anticommutative relations of $\tilde{A},\Psi$ under radiation gauge

According to the electromagnetic field covariant quantization scheme, only $\delta_1\pm\delta_2=0$, the micro causality is satisfied. At the same time only when $\delta_1,\delta_2\geq0$, the probability is just nonnegative. Therefore, among the eight covariant commutative or anticommutative schemes in mathematics, there is only one physically reasonable scheme: That is, when $\delta_1=\delta_2=1$, it satisfies the commutative

relation. There are actually two other options. Namely when $\delta_1 = \delta_2 = 0$, it satisfies the commutative or anticommutative relation, which is just the classic case.

3.5.1 Homomorphic commutative relations of $\tilde{A}, \Psi$ under radiation gauge

Cor. 3.5.1. $$\begin{cases}[a_\sigma(\vec{p}), a^+_{\sigma'}(\vec{p}')] = \kappa\delta_{\sigma\sigma'}\delta^3(\vec{p}-\vec{p}')\\ [a_\sigma(\vec{p}), a_{\sigma'}(\vec{p}')] = 0\\ [a^+_\sigma(\vec{p}), a^+_{\sigma'}(\vec{p}')] = 0\end{cases} \Leftrightarrow \begin{cases}[\tilde{A}_i(\vec{r},t), \dot{\tilde{A}}_j(\vec{r}',t)] = i\kappa(\delta_{ij} - \frac{\partial_i\partial_j}{\nabla^2})\delta^3(\vec{r}-\vec{r}')\\ [\tilde{A}_i(\vec{r},t), \tilde{A}_j(\vec{r}',t)] = 0\\ [\dot{\tilde{A}}_i(\vec{r},t), \dot{\tilde{A}}_j(\vec{r}',t)] = 0\end{cases}$$

$$[\Updownarrow] \qquad\qquad [\Updownarrow]$$

Cor. 3.5.2. $$\begin{cases}[a_\sigma(\vec{p},-\varsigma), a^+_{\sigma'}(\vec{p}',-\varsigma)] = \kappa\varsigma\delta_{\sigma\sigma'}\delta^3(\vec{p}-\vec{p}')\\ [a_\sigma(\vec{p},-\varsigma), a_{\sigma'}(\vec{p}',-\varsigma)] = 0\\ [a^+_\sigma(\vec{p},-\varsigma), a^+_{\sigma'}(\vec{p}',-\varsigma)] = 0\end{cases} \Leftrightarrow \begin{cases}[\Psi_i(\vec{r},t), \Psi^+_j(\vec{r}',t)] = i\varsigma\kappa\gamma^k{}_{ij}\partial_k\delta^3(\vec{r}-\vec{r}')\\ [\Psi_i(\vec{r},t), \Psi_j(\vec{r}',t)] = 0\\ [\Psi^+_i(\vec{r},t), \Psi^+_j(\vec{r}',t)] = 0\end{cases}$$

When $\kappa = 1$, It satisfies both micro causality and non negative probability, so it is physical. When $\kappa = -1$, it satisfies micro causality but violates non negative probability, so it is non physical.

3.5.2 Isomorphic anticommutative relations of $\tilde{A}, \Psi$ under radiation gauge

Cor. 3.5.3.
$$\begin{cases}\{a_\sigma(\vec{p}), a^+_{\sigma'}(\vec{p}')\} = \kappa\delta_{\sigma\sigma'}\delta^3(\vec{p}-\vec{p}')\\ \{a_\sigma(\vec{p}), a_{\sigma'}(\vec{p}')\} = 0\\ \{a^+_\sigma(\vec{p}), a^+_{\sigma'}(\vec{p}')\} = 0\end{cases} \Leftrightarrow \begin{cases}\{\tilde{A}_i(\vec{r},t), \dot{\tilde{A}}_j(\vec{r}',t)\} = 0\\ \{\tilde{A}_i(\vec{r},t), \tilde{A}_j(\vec{r}',t)\} = \kappa\frac{1}{\sqrt{-\nabla^2}}(\delta_{ij} - \frac{\partial_i\partial_j}{\nabla^2})\delta^3(\vec{r}-\vec{r}')\\ \{\dot{\tilde{A}}_i(\vec{r},t), \dot{\tilde{A}}_j(\vec{r}',t)\} = \kappa\sqrt{-\nabla^2}(\delta_{ij} - \frac{\partial_i\partial_j}{\nabla^2})\delta^3(\vec{r}-\vec{r}')\end{cases}$$

$$[\Updownarrow] \qquad\qquad [\Updownarrow]$$

Cor. 3.5.4.
$$\begin{cases}\{a_\sigma(\vec{p},-\varsigma), a^+_{\sigma'}(\vec{p}',-\varsigma)\} = \kappa\delta_{\sigma\sigma'}\delta^3(\vec{p}-\vec{p}')\\ \{a_\sigma(\vec{p},-\varsigma), a_{\sigma'}(\vec{p}',-\varsigma)\} = 0\\ \{a^+_\sigma(\vec{p},-\varsigma), a^+_{\sigma'}(\vec{p}',-\varsigma)\} = 0\end{cases} \Leftrightarrow \begin{cases}\{\Psi_i(\vec{r},t), \Psi^+_j(\vec{r}',t)\} = \kappa\sqrt{-\nabla^2}(\delta_{ij} - \frac{\partial_i\partial_j}{\nabla^2})\delta^3(\vec{r}-\vec{r}')\\ \{\Psi_i(\vec{r},t), \Psi_j(\vec{r}',t)\} = 0\\ \{\Psi^+_i(\vec{r},t), \Psi^+_j(\vec{r}',t)\} = 0\end{cases}$$

When $\kappa = 1$, it satisfies non negative probability but violates micro causality, so it is non physical. When $\kappa = -1$, it violates both micro causality and non negative probability, so it is non physical.

3.5.3 Heterotypic commutative relations of $\tilde{A}, \Psi$ under radiation gauge

Cor. 3.5.5.
$$\begin{cases}[a_\sigma(\vec{p}), a^+_{\sigma'}(\vec{p}')] = \kappa(-1)^{\sigma+1}\delta_{\sigma\sigma'}\delta^3(\vec{p}-\vec{p}')\\ [a_\sigma(\vec{p}), a_{\sigma'}(\vec{p}')] = 0\\ [a^+_\sigma(\vec{p}), a^+_{\sigma'}(\vec{p}')] = 0\end{cases} \Leftrightarrow \begin{cases}[\tilde{A}_i(\vec{r},t), \dot{\tilde{A}}_j(\vec{r}',t)] = -\kappa\frac{\gamma^k{}_{ij}\partial_k}{\sqrt{-\nabla^2}}\delta^3(\vec{r}-\vec{r}')\\ [\tilde{A}_i(\vec{r},t), \tilde{A}_j(\vec{r}',t)] = 0\\ [\dot{\tilde{A}}_i(\vec{r},t), \dot{\tilde{A}}_j(\vec{r}',t)] = 0\end{cases}$$

$$[\Updownarrow] \qquad\qquad [\Updownarrow]$$

Cor. 3.5.6.
$$\begin{cases}[a_\sigma(\vec{p},-\varsigma), a^+_{\sigma'}(\vec{p}',-\varsigma)]\\ = \kappa\varsigma(-1)^{\sigma+1}\delta_{\sigma\sigma'}\delta^3(\vec{p}-\vec{p}')\\ [a_\sigma(\vec{p},-\varsigma), a_{\sigma'}(\vec{p}',-\varsigma)] = 0\\ [a^+_\sigma(\vec{p},-\varsigma), a^+_{\sigma'}(\vec{p}',-\varsigma)] = 0\end{cases} \Leftrightarrow \begin{cases}[\Psi_i(\vec{r},t), \Psi^+_j(\vec{r}',t)] = \kappa\varsigma\sqrt{-\nabla^2}(\delta_{ij} - \frac{\partial_i\partial_j}{\nabla^2})\delta^3(\vec{r}-\vec{r}')\\ [\Psi_i(\vec{r},t), \Psi_j(\vec{r}',t)] = 0\\ [\Psi^+_i(\vec{r},t), \Psi^+_j(\vec{r}',t)] = 0\end{cases}$$

Regardless of the value of κ, it violates both microscopic causality and non negative probability. So it is non physical.

3.5.4 Heterotypic anticommutative relations of $\tilde{A}, \Psi$ under radiation gauge

Cor. 3.5.7.
$$\begin{cases}\{a_\sigma(\vec{p}), a^+_{\sigma'}(\vec{p}')\} = \kappa(-1)^{\sigma+1}\delta_{\sigma\sigma'}\delta^3(\vec{p}-\vec{p}')\\ \{a_\sigma(\vec{p}), a_{\sigma'}(\vec{p}')\} = 0\\ \{a^+_\sigma(\vec{p}), a^+_{\sigma'}(\vec{p}')\} = 0\end{cases} \Leftrightarrow \begin{cases}\{\tilde{A}_i(\vec{r},t), \dot{\tilde{A}}_j(\vec{r}',t)\} = 0\\ \{\tilde{A}_i(\vec{r},t), \tilde{A}_j(\vec{r}',t)\} = -i\kappa\frac{\gamma^k{}_{ij}\partial_k}{\nabla^2}\delta^3(\vec{r}-\vec{r}')\\ \{\dot{\tilde{A}}_i(\vec{r},t), \dot{\tilde{A}}_j(\vec{r}',t)\} = i\kappa\gamma^k{}_{ij}\partial_k\delta^3(\vec{r}-\vec{r}')\end{cases}$$

$$[\Updownarrow] \qquad\qquad [\Updownarrow]$$

Cor. 3.5.8.
$$\begin{cases}\{a_\sigma(\vec{p},-\varsigma), a^+_{\sigma'}(\vec{p}',-\varsigma)\} = \kappa(-1)^{\sigma+1}\delta_{\sigma\sigma'}\delta^3(\vec{p}-\vec{p}')\\ \{a_\sigma(\vec{p},-\varsigma), a_{\sigma'}(\vec{p}',-\varsigma)\} = 0\\ \{a^+_\sigma(\vec{p},-\varsigma), a^+_{\sigma'}(\vec{p}',-\varsigma)\} = 0\end{cases} \Leftrightarrow \begin{cases}\{\Psi_i(\vec{r},t), \Psi^+_j(\vec{r}',t)\} = i\kappa\gamma^k{}_{ij}\partial_k\delta^3(\vec{r}-\vec{r}')\\ \{\Psi_i(\vec{r},t), \Psi_j(\vec{r}',t)\} = 0\\ \{\Psi^+_i(\vec{r},t), \Psi^+_j(\vec{r}',t)\} = 0\end{cases}$$

Regardless of the value of κ, it satisfies the microscopic causality but violates the non negative probability. So it is non physical.

3.6 Summary of commutative relations for physical $\tilde{A}, \Psi$ under radiation gauge

Cor. 3.6.1. $\begin{cases}[a_\sigma(\vec{p}), a^+_{\sigma'}(\vec{p}')] = \delta_{\sigma\sigma'}\delta^3(\vec{p}-\vec{p}') \\ [a_\sigma(\vec{p}), a_{\sigma'}(\vec{p}')] = 0 \\ [a^+_\sigma(\vec{p}), a^+_{\sigma'}(\vec{p}')] = 0\end{cases} \Leftrightarrow \begin{cases}[\tilde{A}_i(\vec{r},t), \dot{\tilde{A}}_j(\vec{r}',t)] = i(\delta_{ij} - \frac{\partial_i\partial_j}{\nabla^2})\delta^3(\vec{r}-\vec{r}') \\ [\tilde{A}_i(\vec{r},t), \tilde{A}_j(\vec{r}',t)] = 0 \\ [\dot{\tilde{A}}_i(\vec{r},t), \dot{\tilde{A}}_j(\vec{r}',t)] = 0\end{cases}$

$[\Updownarrow] \qquad [\Updownarrow]$

Cor. 3.6.2. $\begin{cases}[a_\sigma(\vec{p},-\varsigma), a^+_{\sigma'}(\vec{p}',-\varsigma)] = \varsigma\delta_{\sigma\sigma'}\delta^3(\vec{p}-\vec{p}') \\ [a_\sigma(\vec{p},-\varsigma), a_{\sigma'}(\vec{p}',-\varsigma)] = 0 \\ [a^+_\sigma(\vec{p},-\varsigma), a^+_{\sigma'}(\vec{p}',-\varsigma)] = 0\end{cases} \Leftrightarrow \begin{cases}[\Psi_i(\vec{r},t), \Psi^+_j(\vec{r}',t)] = i\varsigma\gamma^k{}_{ij}\partial_k\delta^3(\vec{r}-\vec{r}') \\ [\Psi_i(\vec{r},t), \Psi_j(\vec{r}',t)] = 0 \\ [\Psi^+_i(\vec{r},t), \Psi^+_j(\vec{r}',t)] = 0\end{cases}$

$[\Updownarrow] \qquad [\Updownarrow]$

Cor. 3.6.3. $\begin{cases}[\Psi_{\alpha_\varsigma}(x), \Psi^+_{\alpha'_\varsigma}(x')] = i\sigma^{ab}_{\alpha_\varsigma\alpha'_\varsigma}\partial_a\partial_b\Delta(x-x') \\ [\Psi_{\alpha_\varsigma}(x), \Psi_{\beta_\varsigma}(x')] = 0 \\ [\Psi^+_{\alpha'_\varsigma}(x), \Psi^+_{\beta'_\varsigma}(x')] = 0\end{cases} \Leftrightarrow \begin{cases}[\Psi_{\alpha_\varsigma}(\vec{r},t), \Psi^+_{\alpha'_\varsigma}(\vec{r}',t)] = \varsigma\varepsilon^k{}_{\alpha_\varsigma\alpha'_\varsigma}\partial_k\delta(\vec{r}-\vec{r}') \\ [\Psi_{\alpha_\varsigma}(\vec{r},t), \Psi_{\beta_\varsigma}(\vec{r}',t)] = 0 \\ [\Psi^+_{\alpha'_\varsigma}(\vec{r},t), \Psi^+_{\beta'_\varsigma}(\vec{r}',t)] = 0\end{cases}$

Electromagnetic field only has the one case. It is to satisfy both micro causality and non negative probability. It is actually physical and correct.

3.7 Classical anticommutative relations under radiation gauge(Zero mode)

Cor. 3.7.1. $\begin{cases}\{\tilde{A}_i(\vec{r},t), \dot{\tilde{A}}_j(\vec{r}',t)\} = \kappa(\delta_{ij} - \frac{\partial_i\partial_j}{\nabla^2})\delta^3(\vec{r}-\vec{r}') \\ \{\tilde{A}_i(\vec{r},t), \tilde{A}_j(\vec{r}',t)\} = 0 \\ \{\dot{\tilde{A}}_i(\vec{r},t), \dot{\tilde{A}}_j(\vec{r}',t)\} = 0\end{cases}$

Cor. 3.7.2. $\lambda_m(\hat{p},-1)a_1(\vec{p}) + \lambda_m(\hat{p},1)a_2(\vec{p}) = \frac{1}{\sqrt{2}}\frac{1}{(2\pi)^{3/2}}\int\{i\tilde{A}(\vec{r},t)\sqrt{|\vec{p}|} - \dot{\tilde{A}}(\vec{r},t)\frac{1}{\sqrt{|\vec{p}|}}\}e^{-ip\cdot x}d^3\vec{r}$

4.6 Quantum scalar product equation of complex field strength Ψ operator (Is it the most basic?)

Def. 4.6.1. $\langle\eta|\dot{\Psi}(\vec{r},t) + i[\Psi(\vec{r},t),H]|\varphi\rangle = 0, \langle\eta|\nabla\cdot\Psi(\vec{r},t)|\varphi\rangle = 0$

Def. 4.6.2. $\langle\eta|\partial_a\Psi(\vec{r},t) - i[\Psi(\vec{r},t),P_a]|\varphi\rangle = 0 \Leftrightarrow \langle\eta|[P_a,\Psi(\vec{r},t)] - i\partial_a\Psi(\vec{r},t)|\varphi\rangle = 0$

It has two solutions, one determined by operator equation $\dot{\Psi}(\vec{r},t) = -i[\Psi(\vec{r},t),H], \nabla\cdot\Psi(\vec{r},t)| = 0$. Another solution is their vacuum states for all physical states: $\langle\eta|\Psi(\vec{r},t)|\varphi\rangle = 0$. So it is a complete Fourier expansion solution.

The above theorem unifies covariance and non covariance, radiation gauge and Lorentz gauge, which is very beautiful. In particular, the second term clearly describes the repulsive self interaction energy between electrons, which is greater than zero. At the same time, it is completely possible to perform perturbation expansion based on field quantities without using electromagnetic potential expansion. In this way, the entire deployment process is physical. There are no non physical factors and independent of guages. Can this avoid infinity? No need for renormalization? Further exploration is needed. The third item is a full differential term, which can be removed (?). This item is very delicate and beautiful, and it is the guarantee of Lorentz covariance and the key to unified description.

5.2 S-matrix of field representation for electromagnetic interaction

Cor. 5.2.1. $U(t, t_0) = 1 - i\int_{t_0}^{t} H_i(t_1)U(t_1, t_0)dt_1, S = U(+\infty, -\infty) = Texp\{-i\int_{-\infty}^{+\infty} H_i(t)dt\}$

Cor. 5.2.2. $S = U(+\infty, -\infty) = Texp\{-i\int_{-\infty}^{+\infty} H_i(t)dt\}$
$= Texp\{-i\int_{-\infty}^{+\infty}[-ie\frac{\bar{\psi}}{\sqrt{-\nabla^2}}(\vec{\gamma}\cdot\partial_t\vec{E})\frac{\psi}{\sqrt{-\nabla^2}} + e^2\frac{\bar{\psi}\gamma^a\psi}{\sqrt{-\nabla^2}}\frac{\bar{\psi}\gamma_a\psi}{\sqrt{-\nabla^2}}]dx^4\}$

Chapter22 Covariant Quantization Scheme for Massless Particles

1 New covariant quantization program

1.1 New quantization program

1. Firstly, based on constant invariant tensor analysis, we can reasonably guess the covariant commutation rule.
2. According to the principle of micro causality and the elimination of abnormal particles with negative modes and negative probabilities, a reasonable covariant commutation rule is further determined.
3. According to the obtained covariant commutation rule, the commutation rule of the Fock representation is further obtained.
4. According to the general Fogg representation of energy and momentum in quantum field theory, the energy and momentum operators are inversely deduced, and whether they are true energy and momentum is verified. The spin representation and angular momentum representation are further determined.
5. According to the energy operator, the quantum operator equation in the same form as the classical equation is obtained again, and we will verify whether the quantum Poincare algebra is tenable.
6. Consider the interaction, calculate the scattering matrix, and compare with the experiment.
7. Extend to higher dimensional space and extend to string theory.
8. How to replace potential propagator with field propagator.
9. Think of string theory as potential theory, and what is its corresponding field theory?
10. Can we solve the infinite problem?
11. What is the difference between classical plane wave solutions and quantum plane wave solutions? Is there a significant difference between mode nonexcitation and mode nonexcitation, which may imply a major discovery in physics?

2 Covariant quantization scheme for massless complex scalar field [25, 26, 37, 38]

2.1 complex scalar field And its plane wave solutions

Def. 2.1.1. $\partial_a\partial^a\psi(\vec{r},t)=0$

Cor. 2.1.1. $\psi(\vec{r},t)=\frac{1}{(2\pi)^{3/2}}\int\limits_{\vec{p}=-\infty}^{+\infty}|\vec{p}|^{-\frac{1}{2}}\lambda(\hat{p},0)[a_1(\vec{p},0)e^{ip\cdot x}+a_2^+(\vec{p},0)e^{-ip\cdot x}]d^3\vec{p}$

$$\Leftrightarrow\begin{cases}|\vec{p}|^{-\frac{1}{2}}a_1(\vec{p},0)=\frac{1}{(2\pi)^{3/2}}\int\limits_{p=-\infty}^{+\infty}\lambda^+(\hat{p},0)[\phi(\vec{r},t)+\frac{i}{|\vec{p}|}\dot{\phi}(\vec{r},t)]e^{-ip\cdot x}d^3\vec{r}\\ |\vec{p}|^{-\frac{1}{2}}a_2^+(\vec{p},0)=\frac{1}{(2\pi)^{3/2}}\int\limits_{p=-\infty}^{+\infty}\lambda^+(\hat{p},0)[\phi(\vec{r},t)-\frac{i}{|\vec{p}|}\dot{\phi}(\vec{r},t)]e^{ip\cdot x}d^3\vec{r}\\ \lambda(\hat{p},0):=\frac{1}{\sqrt{2}},\Gamma(0):=\lambda(\hat{p},0)\lambda^+(\hat{p},0)=\frac{1}{2},\lambda^+(\hat{p},0)\lambda(\hat{p},0)=\frac{1}{2}\end{cases}$$

Def. 2.1.2. *Define projection operator:* $\hat{P}(0):=2\lambda(\hat{p},0)\lambda^+(\hat{p},0)=1$

2.2 Properties of covariant constant invariant tensor $\Gamma(0)$ for complex scalar field

Def. 2.2.1. $\lambda(\hat{p},0):=\frac{1}{\sqrt{2}},\Gamma(0):=\lambda(\hat{p},0)\lambda^+(\hat{p},0)=\frac{1}{2},\lambda^+(\hat{p},0)\lambda(\hat{p},0)=\frac{1}{2}$

2.3 General covariant commutation rules in mathematics for complex scalar field

Thm. 2.3.1.

$$\begin{cases}[a_\sigma(\vec{p},0),a_{\sigma'}^+(\vec{p}',0)]_\pm=\delta_\sigma\delta_{\sigma\sigma'}\delta^3(\vec{p}-\vec{p}')\\ [a_\sigma(\vec{p},0),a_{\sigma'}(\vec{p}',0)]_\pm=0\\ [a_\sigma^+(\vec{p},0),a_{\sigma'}^+(\vec{p}',0)]_\pm=0\end{cases}\Rightarrow\begin{cases}[\psi(x),\psi^+(x')]_\pm\\ =i2\Gamma(0)[(\delta_1\pm\delta_2)\Delta^{(+)}(x-x')-\pm\delta_2\Delta(x-x')]\\ [\psi(x),\psi(x')]_\pm=0\\ [\psi^+(x),\psi^+(x')]_\pm=0\end{cases}$$

Proof: $[\psi^{(+)}(x),\psi^{(+)+}(x')]_\pm$
$=\frac{1}{(2\pi)^3}\int|\vec{p}|^{-\frac{1}{2}}|\vec{p}'|^{-\frac{1}{2}}\lambda(\hat{p},0)\lambda^+(\hat{p}',0)[a_1(\vec{p},0),a_1^+(\vec{p}',0)]_\pm e^{i\vec{p}\cdot(x-x')}d^3\vec{p}d^3\vec{p}'$
$=\frac{1}{(2\pi)^3}\int|\vec{p}|^{-1}\delta_1\lambda(\hat{p},0)\lambda^+(\hat{p},0)\delta^3(\vec{p}-\vec{p}')e^{i\vec{p}\cdot(x-x')}d^3\vec{p}d^3\vec{p}'$

$= \frac{1}{(2\pi)^3}\int |\vec{p}|^{-1}\delta_1\lambda(\hat{p},0)\lambda^+(\hat{p},0)e^{i\vec{p}\cdot(x-x')}d^3\vec{p}$
$= i\frac{1}{(2\pi)^3}\int \delta_1\frac{-i}{2|\vec{p}|}2\Gamma(0)e^{ip\cdot(x-x')}d^3\vec{p}$
$= i\delta_1 2\Gamma(0)\Delta^{(+)}(x-x')$ □

Proof: $[\psi^{(-)}(x),\psi^{(-)+}(x')]_\pm$
$= \frac{1}{(2\pi)^3}\int |\vec{p}|^{-\frac{1}{2}}|\vec{p}'|^{-\frac{1}{2}}\lambda(\hat{p},0)\lambda^+(\hat{p},0)[a_2^+(\vec{p},0),a_2(\vec{p}',0)]_\pm e^{-i\vec{p}\cdot(x-x')}d^3\vec{p}d^3\vec{p}'$
$= \pm\frac{1}{(2\pi)^3}\int |\vec{p}|^{-1}\delta_2\lambda(\hat{p},0)\lambda^+(\hat{p},0)\delta^3(\vec{p}-\vec{p}')e^{-i\vec{p}\cdot(x-x')}d^3\vec{p}d^3\vec{p}'$
$= \pm\frac{1}{(2\pi)^3}\int |\vec{p}|^{-1}\delta_2\lambda(\hat{p},0)\lambda^+(\hat{p},0)e^{-i\vec{p}\cdot(x-x')}d^3\vec{p}$
$= -\pm i\frac{1}{(2\pi)^3}\int \delta_2\frac{i}{2|\vec{p}|}2\Gamma(0)e^{-ip\cdot(x-x')}d^3\vec{p}$
$= -\pm i\delta_2 2\Gamma(0)\Delta^{(-)}(x-x')$ □

Proof: $[\psi(x),\psi^+(x')]_\pm$
$= [\psi^{(+)}(x),\psi^{(+)+}(x')]_\pm + [\psi^{(-)}(x),\psi^{(-)+}(x')]_\pm$
$= i\delta_1 2\Gamma(0)\Delta^{(+)}(x-x') - \pm i\delta_2 2\Gamma(0)\Delta^{(-)}(x-x')$
$= i2\Gamma(0)[\delta_1\Delta^{(+)}(x-x') - \pm\delta_2\Delta^{(-)}(x-x')]$
$= i2\Gamma(0)[(\delta_1\pm\delta_2)\Delta^{(+)}(x-x') - \pm\delta_2\Delta(x-x')]$ □

From the above, only $\delta_1\pm\delta_2=0$, the micro causality is satisfied. At the same time only when $\delta_1,\delta_2\geq 0$, the probability is just nonnegative. Therefore, among the eight covariant commutative or anticommutative schemes in mathematics, there is only one physically reasonable scheme: That is, when $\delta_1=\delta_2=1$, it satisfies the commutative relation. There are actually two other options. Namely when $\delta_1=\delta_2=0$, it satisfies the commutative or anticommutative relation, which is just the classic case.

2.4 Covariant commutation rules for complex scalar field physics

Thm. 2.4.1.
$$\begin{cases}[a_\sigma(\vec{p},0),a^+_{\sigma'}(\vec{p}',0)]=\delta_{\sigma\sigma'}\delta^3(\vec{p}-\vec{p}')\\ [a_\sigma(\vec{p},0),a_{\sigma'}(\vec{p}',0)]=0\\ [a^+_\sigma(\vec{p},0),a^+_{\sigma'}(\vec{p}',0)]=0\end{cases}\Rightarrow\begin{cases}[\psi(x),\psi^+(x')]=i2\Gamma(0)\Delta(x-x')\\ [\psi(x),\psi(x')]=0\\ [\psi^+(x),\psi^+(x')]=0\end{cases}$$

Cor. 2.4.1.
$$\begin{cases}[a_\sigma(\vec{p},0),a^+_{\sigma'}(\vec{p}',0)]=\delta_{\sigma\sigma'}\delta^3(\vec{p}-\vec{p}')\\ [a_\sigma(\vec{p},0),a_{\sigma'}(\vec{p}',0)]=0\\ [a^+_\sigma(\vec{p},0),a^+_{\sigma'}(\vec{p}',0)]=0\end{cases}\Rightarrow\begin{cases}[\psi^{(+)}(x),\psi^{(+)+}(x')]=i2\Gamma(0)\Delta^{(+)}(x-x')\\ [\psi^{(-)}(x),\psi^{(-)+}(x')]=i2\Gamma(0)\Delta^{(-)}(x-x')\\ [\psi^{(+)}(x),\psi^{(-)+}(x')]=0\end{cases}$$

Cor. 2.4.2.
$$\begin{cases}[\psi(x),\psi^+(x')]=i2\Gamma(0)\Delta(x-x')\\ [\psi(x),\psi(x')]=0\\ [\psi^+(x),\psi^+(x')]=0\end{cases}\Rightarrow\begin{cases}[\psi(\vec{r},t),\psi^+(\vec{r}',t)]=0\\ [\psi(\vec{r},t),\psi(\vec{r}',t)]=0\\ [\psi^+(x),\psi^+(\vec{r}',t)]=0\end{cases}$$

2.5 Commutation function, causality function and Feynman propagator of complex scalar field

Def. 2.5.1.
$$\begin{cases}\Delta^{(+)}(x):=\frac{-i}{(2\pi)^3}\int\frac{1}{2|\vec{p}|}e^{ip\cdot x}d^3\vec{p}, i\Delta^{(+)}(\vec{r},0)\leftrightarrow\frac{1}{2|\vec{p}|}\\ \Delta^{(-)}(x):=-\frac{-i}{(2\pi)^3}\int\frac{1}{2|\vec{p}|}e^{-ip\cdot x}d^3\vec{p},\Delta^{(-)}(x)=-\Delta^{(+)}(-x)\\ \Delta(x):=\frac{-i}{(2\pi)^3}\int\frac{1}{2|\vec{p}|}[e^{ip\cdot x}-e^{-ip\cdot x}\}d^3\vec{p},\Delta(x)=\Delta^{(+)}(x)+\Delta^{(-)}(x)\end{cases}$$

Pro. 2.5.1.
$$\begin{cases}\Delta^*(x)=\Delta(x),\Delta(-x)=-\Delta(x),(\nabla^2-\partial_t^2)\Delta(x)=0\\ \partial_t\Delta(x)|_{t=0}=-\delta^3(\vec{r}),\partial_k\partial_t\Delta(x)|_{t=0}=\partial_t\partial_k\Delta(x)|_{t=0}=-\partial_k\delta^3(\vec{r})\\ \partial_k\Delta(x)|_{t=0}=0,\partial_k\partial_l\Delta(x)|_{t=0}=0,\partial_t^2\Delta(x)|_{t=0}=0\end{cases}$$

Pro. 2.5.2. $\Delta(x-x'):=\frac{-i}{(2\pi)^3}\int\frac{1}{2|\vec{p}|}[e^{ip\cdot(x-x')}-e^{-ip\cdot(x-x')}\}d^3\vec{p}$
$$\begin{cases}\partial_u\Delta(x-x')=-\partial'_u\Delta(x-x')\\ \nabla\Delta(x-x')=-\nabla'\Delta(x-x')\\ \partial_\pi\Delta(x-x')=-\partial'_\pi\Delta(x-x')\end{cases}\quad\begin{cases}(\sqrt{-\nabla^2})^n\Delta(x-x')=(\sqrt{-\nabla'^2})^n\Delta(x-x')\\ \frac{1}{(\sqrt{-\nabla^2})^n}\Delta(x-x')=\frac{1}{(\sqrt{-\nabla'^2})^n}\Delta(x-x')\\ \partial_\pi^{2n}\Delta(x-x')=\partial'^{2n}_\pi\Delta(x-x')\end{cases}$$

Def. 2.5.2.
$$\begin{cases}\Delta(x)=\Delta^{(+)}(x)+\Delta^{(-)}(x)=\Delta^{ret}(x)-\Delta^{adv}(x)\\ \Delta^{(l)}(x)=i[\Delta^{(-)}(x)-\Delta^{(+)}(x)]\\ \Delta_F(x)=\langle T\varphi(x)\varphi(x')\rangle_0=i\Delta^{(c)}(x)=\frac{1}{(2\pi)^4}\int\Delta_F(p)e^{ipx}d^4p\\ \Delta_F(p)=\frac{-i}{p^2-i\varepsilon}\end{cases}$$

$$\begin{cases}\Delta^{(c)}(x)=\theta(t)\Delta^{(+)}(x)-\theta(-t)\Delta^{(-)}(x)\\ \Delta^{ret}(x)=\theta(t)\Delta(x)=\Delta^{(c)}(x)+\Delta^{(-)}(x)\\ \Delta^{adv}(x)=-\theta(-t)\Delta(x)=\Delta^{(c)}(x)-\Delta^{(+)}(x)\end{cases}$$

Cor. 2.5.1.

$$\begin{cases}\partial_a\partial^a\Delta(x)=0\\ \partial_a\partial^a\Delta^{(+)}(x)=0\\ \partial_a\partial^a\Delta^{(-)}(x)=0\\ \partial_a\partial^a\Delta^{(l)}(x)=0\end{cases}\qquad\begin{cases}\partial_a\partial^a\Delta^{(c)}(x)=\delta^4(x)\\ \partial_a\partial^a\Delta^{ret}(x)=\delta^4(x)\\ \partial_a\partial^a\Delta^{adv}(x)=\delta^4(x)\\ \partial_a\partial^a\Delta_F(x)=i\delta^4(x)\end{cases}$$

Cor. 2.5.2. $\Delta(x)\partial_t\delta(t)=-\partial_t\Delta(x)\delta(t)=\delta^4(x)$

Proof: $\int f(t)\Delta(x)\partial_t\delta(t)dt=-\partial_t[f(t)\Delta(x)]|_{t=0}=f(0)\delta^3(\vec{r})$ □

Proof: $\int f(t)\partial_t\Delta(x)\delta(t)dt=f(t)\partial_t\Delta(x)|_{t=0}=-f(0)\delta^3(\vec{r})$ □

Cor. 2.5.3. $\partial_t^2[\theta(t)\Delta(x)]=-\delta^4(x)+\theta(t)\partial_t^2\Delta(x)$

Proof: $\partial_t^2[\theta(t)\Delta(x)]$
$=\partial_t[\partial_t\theta(t)\Delta(x)+\theta(t)\partial_t\Delta(x)]$
$=\partial_t^2\theta(t)\Delta(x)+2\partial_t\theta(t)\partial_t\Delta(x)+\theta(t)\partial_t^2\Delta(x)$
$=\partial_t\delta(t)\Delta(x)+2\delta(t)\partial_t\Delta(x)+\theta(t)\partial_t^2\Delta(x)$
$=\delta(t)\partial_t\Delta(x)+\theta(t)\partial_t^2\Delta(x)$
$=-\delta^4(x)+\theta(t)\partial_t^2\Delta(x)$ □

Cor. 2.5.4. $\Delta(x)\partial_t^n\delta(t)=\sum\limits_{l=0}^{[(n-1)/2]}C_n^{2l+1}\nabla^{2l}\partial_t^{n-2l-1}\delta^4(x)$

Proof: $\int f(t)\Delta(x)\partial_t^n\delta(t)dt$
$=(-1)^n\partial_t^n[f(t)\Delta(x)]_{t=0}=f(0)\delta^3(\vec{r})$

From the above, only $\delta_1 \mp \delta_2 = 0$, the micro causality is satisfied. At the same time only when $\delta_1, \delta_2 \geq 0$, the probability is just nonnegative. Therefore, among the eight covariant commutative or anticommutative schemes in mathematics, there is only one physically reasonable scheme: That is, when $\delta_1 = \delta_2 = 1$, it satisfies the commutative relation. There are actually two other options. Namely when $\delta_1 = \delta_2 = 0$, it satisfies the commutative or anticommutative relation, which is just the classic case.

3.5 Physical covariant anticommutative rules for neutrino field

Thm. 3.5.1.

$= [\Psi^{(+)}_{k_\varsigma}(x), \Psi^{(+)+}_{k'_\varsigma}(x')]_\pm + [\Psi^{(-)}_{k_\varsigma}(x), \Psi^{(-)+}_{k'_\varsigma}(x')]_\pm$
$= i\delta_1 \Gamma^{ab}_{k_\varsigma k'_\varsigma}\partial_a\partial_b\Delta^{(+)}(x-x') - \pm i\delta_2\Gamma^{ab}_{k_\varsigma k'_\varsigma}\partial_a\partial_b\Delta^{(-)}(x-x')$
$= i\Gamma^{ab}_{k_\varsigma k'_\varsigma}\partial_a\partial_b[\delta_1\Delta^{(+)}(x-x') - \pm\delta_2\Delta^{(-)}(x-x')]$
$= i\Gamma^{ab}_{k_\varsigma k'_\varsigma}\partial_a\partial_b[(\delta_1 \pm \delta_2)\Delta^{(+)}(x-x') - \pm\delta_2\Delta(x-x')]$
$= i\Gamma^{ab}_{k_\varsigma k'_\varsigma}\partial_a\partial_b[\delta_1\Delta(x-x') - (\delta_1 \pm \delta_2)\Delta^{(-)}(x-x')]$ □

From the above, only $\delta_1 \pm \delta_2 = 0$, the micro causality is satisfied. At the same time only when $\delta_1, \delta_2 \geq 0$, the probability is just nonnegative. Therefore, among the eight covariant commutative or anticommutative schemes in mathematics, there is only one physically reasonable scheme: That is, when $\delta_1 = \delta_2 = 1$, it satisfies the commutative relation. There are actually two other options. Namely when $\delta_1 = \delta_2 = 0$, it satisfies the commutative or anticommutative relation, which is just the classic case.

4.4 Covariant commutation rules of photon spinor field

From the previous section, we can see that the commutation rules with physical significance are as follows:(In order to confirm each other, a new proof has been made.)

Thm. 4.4.1.
$$\begin{cases}[a_\sigma(\vec p,-\varsigma), a^+_{\sigma'}(\vec p\,',-\varsigma)] = \delta_{\sigma\sigma'}\delta^3(\vec p-\vec p\,')\\ [a_\sigma(\vec p,-\varsigma), a_{\sigma'}(\vec p\,',-\varsigma)] = 0\\ [a^+_\sigma(\vec p,-\varsigma), a^+_{\sigma'}(\vec p\,',-\varsigma)] = 0\end{cases} \Rightarrow \begin{cases}[\psi_{k_\varsigma}(x), \psi^+_{k'_\varsigma}(x')] = i\Gamma^{ab}_{k_\varsigma k'_\varsigma}\partial_a\partial_b\Delta(x-x')\\ [\psi_{k_\varsigma}(x), \psi_{l_\varsigma}(x')] = 0\\ [\psi^+_{k'_\varsigma}(x), \psi^+_{l'_\varsigma}(x')] = 0\end{cases}$$

Proof: $\{\psi_{k_\varsigma}(x), \psi^+_{k'_\varsigma}(x')\}$
$= \frac{1}{(2\pi)^3}\int d^3\vec p d^3\vec p\,'$
$\lambda_{k_\varsigma}(\hat p,-\varsigma)\lambda^+_{k'_\varsigma}(\hat p,-\varsigma)|\vec p|^{1/2}|\vec p\,'|^{1/2}\{[a_1(\vec p,-\varsigma), a^+_1(\vec p\,',-\varsigma)]e^{ip\cdot(x-x')} + [a^+_2(\vec p,-\varsigma), a_2(\vec p\,',-\varsigma)]e^{-ip\cdot(x-x')}\}$
$= \frac{1}{(2\pi)^3}\int |\vec p|\lambda_{k_\varsigma}(\hat p,-\varsigma)\lambda^+_{k'_\varsigma}(\hat p,-\varsigma)[\delta^3(\vec p-\vec p\,')e^{ip\cdot(x-x')} - \delta^3(\vec p-\vec p\,')e^{-ip\cdot(x-x')}]d^3\vec p d^3\vec p\,'$
$= \frac{1}{(2\pi)^3}\int |\vec p|\lambda_{k_\varsigma}(\hat p,-\varsigma)\lambda^+_{k'_\varsigma}(\hat p,-\varsigma)[e^{ip\cdot(x-x')} - e^{-ip\cdot(x-x')}]d^3\vec p$
$= -\frac{1}{(2\pi)^3}\int \frac{1}{2|\vec p|}\Gamma^{ab}_{k_\varsigma k'_\varsigma}p_a p_b[e^{ip\cdot(x-x')} - e^{-ip\cdot(x-x')}]d^3\vec p$

5 New Scheme for covariant quantization of complex electromagnetic field strength

This section is replaced by an electromagnetic representation. Once again a complete description of the photon covariant quantization scheme is given for easy using in later chapters.

5.1 Various equivalent forms of electromagnetic field [22, 24]

Def. 5.1.1. $\Psi_{\alpha_\varsigma} := \frac{-i\varsigma}{\sqrt{2}}\psi_{\alpha_\varsigma} = \frac{-i\varsigma}{\sqrt{2}}\frac{i}{2}\sigma^{ab}_{\varsigma\alpha_\varsigma}F_{ab} = \frac{-i\varsigma}{\sqrt{2}}i\varsigma(E - i\varsigma B)_{\alpha_\varsigma}$

Def. 5.1.2. $\Psi := \frac{1}{\sqrt{2}}(\vec{E} - i\varsigma\vec{B}) = \frac{1}{\sqrt{2}}(\vec{E} - i\varsigma\nabla\times\vec{A}), \Psi_i = \frac{1}{\sqrt{2}}(E_i - i\varsigma\varepsilon_i{}^{jk}\partial_jA_k), p\cdot x := \vec{p}\cdot\vec{r} - Et$

Thm. 5.1.1.
$$\begin{cases}\partial^aF_{ab} = 0\\ \partial^a * F_{ab} = 0\end{cases} \Leftrightarrow \begin{cases}\nabla\cdot\vec{E} = 0, \nabla\times\vec{E} = -\partial_t\vec{B}\\ \nabla\cdot\vec{B} = 0, \nabla\times\vec{B} = \partial_t\vec{E}\end{cases} \Leftrightarrow \begin{cases}(\gamma,-i\varsigma)^a\partial_a\Psi = 0\\ \nabla\cdot\Psi = 0\end{cases} \Leftrightarrow \begin{cases}[\partial_a + iS_{ab}(\gamma,\varsigma)\partial^b]\Psi = 0\\ S_{ab}(\gamma,\varsigma) = i\sigma^{\alpha_\varsigma}_{\varsigma ab}\gamma_{\alpha_\varsigma}(s)\end{cases}$$

5.2 Spin equation and plane wave solutions of complex electromagnetic field strength

Thm. 5.2.1. $[\partial_a + iS_{ab}(\gamma,\varsigma)\partial^b]\Psi(x) = 0$

Cor. 5.2.1.
$$\begin{cases}\Psi(\vec{r},t) := \frac{1}{(2\pi)^{3/2}}\int\limits_{\vec{p}\neq 0}\sqrt{|\vec{p}|}\lambda_m(\hat{p},-\varsigma)[a_1(\vec{p},-\varsigma)e^{i\varsigma p\cdot x} + a_2^+(\vec{p},-\varsigma)e^{-i\varsigma p\cdot x}]d^3\vec{p}\\ \sqrt{|\vec{p}|}a_1(\vec{p},-\varsigma) = \frac{1}{(2\pi)^{3/2}}\int\lambda_m^+(\hat{p},-\varsigma)\Psi(\vec{r},t)e^{-i\varsigma p\cdot x}d^3\vec{r}\\ \sqrt{|\vec{p}|}a_2^+(\vec{p},-\varsigma) = \frac{1}{(2\pi)^{3/2}}\int\lambda_m^+(\hat{p},-\varsigma)\Psi(\vec{r},t)e^{i\varsigma p\cdot x}d^3\vec{r}\end{cases}$$

Cor. 5.2.2. $(\gamma,-i\varsigma)^a\partial_a\frac{1}{(2\pi)^{3/2}}\int\limits_{\vec{p}\neq 0}\sum\limits_{h=1}^{-1}\sqrt{|\vec{p}|}\lambda_m(\hat{p},h)[a_1(\vec{p},-\varsigma)e^{i\varsigma p\cdot x} + a_2^+(\vec{p},-\varsigma)e^{-i\varsigma p\cdot x}]d^3\vec{p} = 0$

$$\int\limits_{\vec{p}\neq 0}\sum\limits_{h=1}^{-1}\sqrt{|\vec{p}|}(\gamma,-i\varsigma)^ap_a\lambda_m(\hat{p},h)[a_1(\vec{p},-\varsigma)e^{i\varsigma p\cdot x} - a_2^+(\vec{p},-\varsigma)e^{-i\varsigma p\cdot x}]d^3\vec{p} = 0$$

5.3 Properties of constant invariant tensor $\sigma^{ab}_{\alpha_\varsigma\alpha'_\varsigma}$ in electromagnetic field

From constant invariant tensor analysis, it can be seen that:

Cor. 5.3.1.
$\sigma^{\pi\pi}_{\alpha_\varsigma\alpha'_\varsigma} = \frac{1}{2}\delta_{\alpha_\varsigma\alpha'_\varsigma}$
$\sigma^{k\pi}_{\alpha_\varsigma\alpha'_\varsigma} = \sigma^{\pi k}_{\alpha_\varsigma\alpha'_\varsigma} = -\frac{\varsigma}{2}\varepsilon^k{}_{\alpha_\varsigma\alpha'_\varsigma}$
$\sigma^{kl}_{\alpha_\varsigma\alpha'_\varsigma} = \frac{1}{2}(\delta^k_{\alpha_\varsigma}\delta^l_{\alpha'_\varsigma} + \delta^k_{\alpha'_\varsigma}\delta^l_{\alpha_\varsigma} - \delta^{kl}\delta_{\alpha_\varsigma\alpha'_\varsigma})$

Cor. 5.3.2. $\sigma^{ab}_{\alpha_\varsigma\alpha'_\varsigma}\partial_a\partial_b = \partial_{\alpha_\varsigma}\partial_{\alpha'_\varsigma} - \frac{1}{2}\delta_{\alpha_\varsigma\alpha'_\varsigma}(\nabla^2 + \partial_t^2) + i\varsigma\varepsilon^k{}_{\alpha_\varsigma\alpha'_\varsigma}\partial_k\partial_t$

Proof: $\sigma^{ab}_{\alpha_\varsigma\alpha'_\varsigma}\partial_a\partial_b = \sigma^{kl}_{\alpha_\varsigma\alpha'_\varsigma}\partial_k\partial_l + 2\sigma^{k\pi}_{\alpha_\varsigma\alpha'_\varsigma}\partial_k\partial_\pi + \sigma^{\pi\pi}_{\alpha_\varsigma\alpha'_\varsigma}\partial_\pi\partial_\pi$
$= \partial_{\alpha_\varsigma}\partial_{\alpha'_\varsigma} - \frac{1}{2}\delta_{\alpha_\varsigma\alpha'_\varsigma}(\nabla^2 - \partial_\pi^2) - \varsigma\varepsilon^k{}_{\alpha_\varsigma\alpha'_\varsigma}\partial_k\partial_\pi$
$= \partial_{\alpha_\varsigma}\partial_{\alpha'_\varsigma} - \frac{1}{2}\delta_{\alpha_\varsigma\alpha'_\varsigma}(\nabla^2 + \partial_t^2) + i\varsigma\varepsilon^k{}_{\alpha_\varsigma\alpha'_\varsigma}\partial_k\partial_t$ □

Cor. 5.3.3. $\sigma^{ab}_{\alpha_\varsigma\alpha'_\varsigma} p_a p_b = p_{\alpha_\varsigma} p_{\alpha'_\varsigma} - \delta_{\alpha_\varsigma\alpha'_\varsigma}|\vec{p}|^2 - i\varsigma\varepsilon^k{}_{\alpha_\varsigma\alpha'_\varsigma} p_k|\vec{p}|$

Cor. 5.3.4. $\sigma^{ab}_{\alpha_\varsigma\alpha'_\varsigma}\partial_a\partial_b\Delta(x) = (\partial_{\alpha_\varsigma}\partial_{\alpha'_\varsigma} - \delta_{\alpha_\varsigma\alpha'_\varsigma}\nabla^2 + i\varsigma\varepsilon^k{}_{\alpha_\varsigma\alpha'_\varsigma}\partial_k\partial_t)\Delta(x) = -\sigma^{ab}_{\alpha_\varsigma\alpha'_\varsigma} p_a p_b\Delta(x)$

Cor. 5.3.5.
$\begin{cases}\sigma^{ab}_{\{\alpha_\varsigma\alpha'_\varsigma\}}\partial_a\partial_b = 2\partial_{\alpha_\varsigma}\partial_{\alpha'_\varsigma} - \delta_{\alpha_\varsigma\alpha'_\varsigma}(\nabla^2+\partial_t^2)\\ \sigma^{ab}_{[\alpha_\varsigma\alpha'_\varsigma]}\partial_a\partial_b = 2i\varsigma\varepsilon^k{}_{\alpha_\varsigma\alpha'_\varsigma}\partial_k\partial_t = -2\varsigma(\gamma\cdot\nabla)_{\alpha_\varsigma\alpha'_\varsigma}\partial_t\end{cases}$ $\begin{cases}\sigma^{ab}_{\{\alpha_\varsigma\alpha'_\varsigma\}}\partial_a\partial_b\Delta(x) = 2(\partial_{\alpha_\varsigma}\partial_{\alpha'_\varsigma} - \delta_{\alpha_\varsigma\alpha'_\varsigma}\nabla^2)\Delta(x)\\ \sigma^{ab}_{[\alpha_\varsigma\alpha'_\varsigma]}\partial_a\partial_b\Delta(x) = 2i\varsigma\varepsilon^k{}_{\alpha_\varsigma\alpha'_\varsigma}\partial_k\partial_t\Delta(x)\end{cases}$

Cor. 5.3.6.
$\begin{cases}\sigma^{ab}_{\{\alpha_\varsigma\alpha'_\varsigma\}} p_a p_b = 2(p_{\alpha_\varsigma}p_{\alpha'_\varsigma} - \delta_{\alpha_\varsigma\alpha'_\varsigma}|\vec{p}|^2)\\ \sigma^{ab}_{[\alpha_\varsigma\alpha'_\varsigma]} p_a p_b = -2i\varsigma\varepsilon^k{}_{\alpha_\varsigma\alpha'_\varsigma}p_k|\vec{p}| = 2\varsigma\gamma^k{}_{\alpha_\varsigma\alpha'_\varsigma}p_k|\vec{p}|\end{cases}$ $\begin{cases}\sigma^{ab}_{\{\alpha_\varsigma\alpha'_\varsigma\}}\hat{p}_a\hat{p}_b = 2(\hat{p}_{\alpha_\varsigma}\hat{p}_{\alpha'_\varsigma} - \delta_{\alpha_\varsigma\alpha'_\varsigma})\\ \sigma^{ab}_{[\alpha_\varsigma\alpha'_\varsigma]}\hat{p}_a\hat{p}_b = -2i\varsigma\varepsilon^k{}_{\alpha_\varsigma\alpha'_\varsigma}\hat{p}_k = 2\varsigma\gamma^k{}_{\alpha_\varsigma\alpha'_\varsigma}\hat{p}_k\end{cases}$

Lem. 5.3.1. $\sigma^{ab}_{\alpha_\varsigma\alpha'_\varsigma} p_a p_b = -2|\vec{p}|^2\lambda_{m\alpha_\varsigma}(\hat{p},-\varsigma)\lambda^+_{m\alpha'_\varsigma}(\hat{p},-\varsigma)$

Proof: $\sigma^{ab}_{\alpha_\varsigma\alpha'_\varsigma} p_a p_b$
$= p_{\alpha_\varsigma}p_{\alpha'_\varsigma} + \varsigma\gamma^k{}_{\alpha_\varsigma\alpha'_\varsigma}p_k|\vec{p}| - \delta_{\alpha_\varsigma\alpha'_\varsigma}|\vec{p}|^2$
$= p_{\alpha_\varsigma}p_{\alpha'_\varsigma} + \varsigma|\vec{p}|\gamma^k{}_{\alpha_\varsigma}{}^{\beta_\varsigma}p_k\delta_{\beta_\varsigma\alpha'_\varsigma} - \delta_{\alpha_\varsigma\alpha'_\varsigma}|\vec{p}|^2$
$= \lambda_{m\alpha_\varsigma}(\hat{p},0)\lambda^+_{m\alpha'_\varsigma}(\hat{p},0)|\vec{p}|^2 + \varsigma|\vec{p}|\gamma^k{}_{\alpha_\varsigma}{}^{\beta_\varsigma}p_k\sum_{h=1}^{-1}\lambda_{m\beta_\varsigma}(\hat{p},h)\lambda^+_{m\alpha'_\varsigma}(\hat{p},h) - \delta_{\alpha_\varsigma\alpha'_\varsigma}|\vec{p}|^2$
$= \lambda_{m\alpha_\varsigma}(\hat{p},0)\lambda^+_{m\alpha'_\varsigma}(\hat{p},0)|\vec{p}|^2 + \varsigma|\vec{p}|[\varsigma|\vec{p}|\lambda_{m\beta_\varsigma}(\hat{p},\varsigma)\lambda^+_{m\alpha'_\varsigma}(\hat{p},\varsigma) - \varsigma|\vec{p}|\lambda_{m\beta_\varsigma}(\hat{p},-\varsigma)\lambda^+_{m\alpha'_\varsigma}(\hat{p},-\varsigma)] - \delta_{\alpha_\varsigma\alpha'_\varsigma}|\vec{p}|^2$
$= |\vec{p}|^2\sum_{h=1}^{-1}\lambda_{m\alpha_\varsigma}(\hat{p},h)\lambda^+_{m\alpha'_\varsigma}(\hat{p},h) - \delta_{\alpha_\varsigma\alpha'_\varsigma}|\vec{p}|^2 - 2|\vec{p}|^2\lambda_{m\alpha_\varsigma}(\hat{p},-\varsigma)\lambda^+_{m\alpha'_\varsigma}(\hat{p},-\varsigma)$
$= -2|\vec{p}|^2\lambda_{m\alpha_\varsigma}(\hat{p},-\varsigma)\lambda^+_{m\alpha'_\varsigma}(\hat{p},-\varsigma)$ □

The above lemma links constant invariant tensor analysis with helicity analysis.

Cor. 5.3.7. $\begin{cases}(\sigma^{ab}\hat{p}_a\hat{p}_b)^n = (-2)^{n-1}\sigma^{ab}\hat{p}_a\hat{p}_b\\ (\frac{\sigma^{ab}\partial_a\partial_b}{\nabla^2})^n = (-2)^{n-1}\frac{\sigma^{ab}\partial_a\partial_b}{\nabla^2}\end{cases}$ $\begin{cases}(\hat{p}^T\hat{p}-1)^n = (-1)^{n-1}(\hat{p}^T\hat{p}-1)\\ (\frac{\nabla^T\nabla}{\nabla^2}-1)^n = (-2)^{n-1}(\frac{\nabla^T\nabla}{\nabla^2}-1)\end{cases}$

Cor. 5.3.8. $\begin{cases}(\varsigma\gamma\cdot\hat{p})^{2n} = -(\hat{p}^T\hat{p}-1)\\ (\frac{-i\varsigma\gamma\cdot\nabla}{\sqrt{-\nabla^2}})^{2n} = -(\frac{\nabla^T\nabla}{\nabla^2}-1)\end{cases}$ $\begin{cases}(\varsigma\gamma\cdot\hat{p})^{2n-1} = (\varsigma\gamma\cdot\hat{p})\\ (\frac{-i\varsigma\gamma\cdot\nabla}{\sqrt{-\nabla^2}})^{2n-1} = (\frac{-i\varsigma\gamma\cdot\nabla}{\sqrt{-\nabla^2}})\end{cases}$

Cor. 5.3.9. $\begin{cases}(\hat{p}^T\hat{p}-1)(\varsigma\gamma\cdot\hat{p}) = (\varsigma\gamma\cdot\hat{p})(\hat{p}^T\hat{p}-1) = -(\varsigma\gamma\cdot\hat{p})\\ (\frac{\nabla^T\nabla}{\nabla^2}-1)(\frac{-i\varsigma\gamma\cdot\nabla}{\sqrt{-\nabla^2}}) = (\frac{-i\varsigma\gamma\cdot\nabla}{\sqrt{-\nabla^2}})(\frac{\nabla^T\nabla}{\nabla^2}-1) = -(\frac{-i\varsigma\gamma\cdot\nabla}{\sqrt{-\nabla^2}})\end{cases}$

5.4 General covariant commutation rules for electromagnetic field in mathematics

Thm. 5.4.1.

$$\begin{cases}[a_\sigma(\vec{p},-\varsigma),a^+_{\sigma'}(\vec{p}',-\varsigma)]_\pm = \varsigma^{\overset{0}{1}}\delta_\sigma\delta_{\sigma\sigma'}\delta^3(\vec{p}-\vec{p}')\\ [a_\sigma(\vec{p},-\varsigma),a_{\sigma'}(\vec{p}',-\varsigma)]_\pm = 0\\ [a^+_\sigma(\vec{p},-\varsigma),a^+_{\sigma'}(\vec{p}',-\varsigma)]_\pm = 0\end{cases} \Rightarrow \begin{cases}[\Psi_{\alpha_\varsigma}(x),\Psi^+_{\alpha'_\varsigma}(x')]_\pm\\ = i\varsigma^{\overset{1}{0}}\sigma^{ab}_{\alpha_\varsigma\alpha'_\varsigma}\partial_a\partial_b[\delta_1\Delta^{(+\varsigma)}(x-x') - \pm\delta_2\Delta^{(-\varsigma)}(x-x')]\\ [\Psi_{\alpha_\varsigma}(x),\Psi_{\beta_\varsigma}(x')]_\pm = 0\\ [\Psi^+_{\alpha'_\varsigma}(x),\Psi^+_{\beta'_\varsigma}(x')]_\pm = 0\end{cases}$$

$=[\Psi^{(+\varsigma)}_{\alpha_\varsigma}(x),\Psi^{(+\varsigma)+}_{\alpha'_\varsigma}(x')]_\pm+[\Psi^{(-\varsigma)}_{\alpha_\varsigma}(x),\Psi^{(-\varsigma)+}_{\alpha'_\varsigma}(x')]_\pm$
$=i\varsigma^{\frac{1}{0}}\delta_1\sigma^{ab}_{\alpha_\varsigma\alpha'_\varsigma}\partial_a\partial_b\Delta^{(+\varsigma)}(x-x')-\pm i\varsigma^{\frac{1}{0}}\delta_2\sigma^{ab}_{\alpha_\varsigma\alpha'_\varsigma}\partial_a\partial_b\Delta^{(-\varsigma)}(x-x')$
$=i\varsigma^{\frac{1}{0}}\sigma^{ab}_{\alpha_\varsigma\alpha'_\varsigma}\partial_a\partial_b[\delta_1\Delta^{(+\varsigma)}(x-x')-\pm\delta_2\Delta^{(-\varsigma)}(x-x')]$
$=i\varsigma^{\frac{1}{0}}\sigma^{ab}_{\alpha_\varsigma\alpha'_\varsigma}\partial_a\partial_b[(\delta_1\pm\delta_2)\Delta^{(+\varsigma)}(x-x')-\pm\delta_2\Delta(x-x')]$ □

From the above, only $\delta_1\pm\delta_2=0$, the micro causality is satisfied. At the same time only when $\delta_1,\delta_2\geq 0$, the probability is just nonnegative. Therefore, among the eight covariant commutative or anticommutative schemes in mathematics, there is only one physically reasonable scheme: That is, when $\delta_1=\delta_2=1$, it satisfies the commutative relation. There are actually two other options. Namely when $\delta_1=\delta_2=0$, it satisfies the commutative or anticommutative relation, which is just the classic case.

5.5 Physical covariant commutation rules for electromagnetic field

From the previous section, we can see that the commutation rules with physical significance are as follows:(In order to confirm each other, a new proof has been made.)

Thm. 5.5.1.
$$\begin{cases}[a_\sigma(\vec p,-\varsigma),a^+_{\sigma'}(\vec p',-\varsigma)]=\varsigma\delta_{\sigma\sigma'}\delta^3(\vec p-\vec p')\\ [a_\sigma(\vec p,-\varsigma),a_{\sigma'}(\vec p',-\varsigma)]=0\\ [a^+_\sigma(\vec p,-\varsigma),a^+_{\sigma'}(\vec p',-\varsigma)]=0\end{cases}\Rightarrow\begin{cases}[\Psi_{\alpha_\varsigma}(x),\Psi^+_{\alpha'_\varsigma}(x')]=i\sigma^{ab}_{\alpha_\varsigma\alpha'_\varsigma}\partial_a\partial_b\Delta(x-x')\\ [\Psi_{\alpha_\varsigma}(x),\Psi_{\beta_\varsigma}(x')]=0\\ [\Psi^+_{\alpha'_\varsigma}(x),\Psi^+_{\beta'_\varsigma}(x')]=0\end{cases}$$

Proof: $[\Psi_{\alpha_\varsigma}(x),\Psi^+_{\alpha'_\varsigma}(x')]$
$=\frac{1}{(2\pi)^3}\int\limits_{\vec p\neq 0}d^3\vec p d^3\vec p'$
$\lambda_{m\alpha_\varsigma}(\hat p,-\varsigma)\lambda^+_{m\alpha'_\varsigma}(\vec p',-\varsigma)\sqrt{|\vec p||\vec p'|}\{[a_1(\vec p,-\varsigma),a^+_1(\vec p',-\varsigma)]e^{i\varsigma\vec p\cdot(x-x')}+[a^+_2(\vec p,-\varsigma),a_2(\vec p',-\varsigma)]e^{-i\varsigma\vec p\cdot(x-x')}\}$

$=-\frac{i}{\sqrt{2}}\Gamma^{abc}_{k_\varsigma k'_\varsigma}\partial_a\partial_b\partial_c[(\delta_1-\pm\delta_2)\Delta^{(+)}(x-x')\pm\delta_2\Delta(x-x')]$ □

From the above, only $\delta_1\mp\delta_2=0$, the micro causality is satisfied. At the same time only when $\delta_1,\delta_2\geq0$, the probability is just nonnegative. Therefore, among the eight covariant commutative or anticommutative schemes in mathematics, there is only one physically reasonable scheme: That is, when $\delta_1=\delta_2=1$, it satisfies the commutative relation. There are actually two other options. Namely when $\delta_1=\delta_2=0$, it satisfies the commutative or anticommutative relation, which is just the classic case.

7.4 Physical covariant anticommutative rules for gravitino field

Thm. 7.4.1. $\begin{cases}\{a_\sigma(\vec{p},-\frac{3}{2}\varsigma),a^+_{\sigma'}(\vec{p}',-\frac{3}{2}\varsigma)\}=\delta_{\sigma\sigma'}\delta^3(\vec{p}-\vec{p}')\\ \{a_\sigma(\vec{p},-\frac{3}{2}\varsigma),a_{\sigma'}(\vec{p}',-\frac{3}{2}\varsigma)\}=0\\ \{a^+_\sigma(\vec{p},-\frac{3}{2}\varsigma),a^+_{\sigma'}(\vec{p}',-\frac{3}{2}\varsigma)]=0\end{cases}\Rightarrow\begin{cases}\{\psi_{k_\varsigma}(x),\psi^+_{k'_\varsigma}(x')\}=\frac{-i}{\sqrt{2}}\Gamma^{abc}_{k_\varsigma k'_\varsigma}\partial_a\partial_b\partial_c\Delta(x-x')\\ \{\psi_{k_\varsigma}(x),\psi_{l_\varsigma}(x')\}=0\\ \{\psi^+_{k'_\varsigma}(x),\psi^+_{l'_\varsigma}(x')\}=0\end{cases}$

Proof: $\{\psi_{k_\varsigma}(x),\psi^+_{k'_\varsigma}(x')\}$
$=\frac{1}{(2\pi)^3}\int\lambda_{k_\varsigma}(\hat{p},-\frac{3}{2}\varsigma)\lambda^+_{k'_\varsigma}(\hat{p},-\frac{3}{2}\varsigma)|\vec{p}||\vec{p}'|$

From the above, only $\delta_1\pm\delta_2=0$, the micro causality is satisfied. At the same time only when $\delta_1,\delta_2\geq 0$, the probability is just nonnegative. Therefore, among the eight covariant commutative or anticommutative schemes in mathematics, there is only one physically reasonable scheme: That is, when $\delta_1=\delta_2=1$, it satisfies the commutative relation. There are actually two other options. Namely when $\delta_1=\delta_2=0$, it satisfies the commutative or anticommutative relation, which is just the classic case.

8.4 Physical Covariant commutation rules for graviton field

From the previous section, we can see that the commutation rules with physical significance are as follows:(In order to confirm each other, a new proof has been made.)

Thm. 8.4.1.
$$\begin{cases}[a_\sigma(\vec{p},-2\varsigma),a^+_{\sigma'}(\vec{p}',-2\varsigma)]=\delta_{\sigma\sigma'}\delta^3(\vec{p}-\vec{p}')\\ [a_\sigma(\vec{p},-2\varsigma),a_{\sigma'}(\vec{p}',-2\varsigma)]=0\\ [a^+_\sigma(\vec{p},-2\varsigma),a^+_{\sigma'}(\vec{p}',-2\varsigma)]=0\end{cases} \Rightarrow \begin{cases}[\psi_{k_\varsigma}(x),\psi^+_{k'_\varsigma}(x')]=\frac{i}{2}\Gamma^{abcd}_{k_\varsigma k'_\varsigma}\partial_a\partial_b\partial_c\partial_d\Delta(x-x')\\ [\psi_{k_\varsigma}(x),\psi_{l_\varsigma}(x')]=0\\ [\psi^+_{k'_\varsigma}(x),\psi^+_{l'_\varsigma}(x')]=0\end{cases}$$

Proof: $\{\psi_{k_\varsigma}(x),\psi^+_{k'_\varsigma}(x')\}$
$= \frac{1}{(2\pi)^3}\int d^3\vec{p}d^3\vec{p}'\lambda_{k_\varsigma}(\hat{p},-2\varsigma)\lambda^+_{k'_\varsigma}(\hat{p},-2\varsigma)|\vec{p}|^{3/2}|\vec{p}'|^{3/2}$

Chapter23 Covariant Quantization Scheme for s-spin Equation

Self comment: In this chapter, I have finally established a corresponding quantum field theory for all massless spin particles in a unified manner. Without knowing the Hamiltonian, various spin particles can be quantized by using a unified new program. Unified quantization commutative rules and energy momentum operator forms have been given. And partial quantum Poincare algebras have been given. However, the angular momentum operator has only achieved partial success and has not been thoroughly resolved. Efforts are still needed.

1 Fourier transform properties of spin wave functions

(No need to satisfy the spin equation.)

1.1 First order correspondent properties between coordinate and momentum space

Pro. 1.1.1. $\begin{cases}\int\psi^+(\vec{r},t)\psi(\vec{r},t)d^3\vec{r}=\int\psi^+(\vec{p},t)\psi(\vec{p},t)d^3\vec{p}=\int[a_1^+(\vec{p})a_1(\vec{p})+a_2(\vec{p})a_2^+(\vec{p})]d^3\vec{p}\\ \int\psi^+(\vec{r},t)\sigma(s)\psi(\vec{r},t)d^3\vec{r}[=\int\psi^+(\vec{p},t)\sigma(s)\psi(\vec{p},t)d^3\vec{p}]\end{cases}$

Pro. 1.1.2. $\begin{cases}\int\psi^+(\vec{r},t)\hat{\nabla}\psi(\vec{r},t)d^3\vec{r}=\int\psi^+(\vec{p},t)\hat{p}\psi(\vec{p},t)d^3\vec{p}\\ \int\psi^+(\vec{r},t)\vec{r}\psi(\vec{r},t)d^3\vec{r}=\int\psi^+(\vec{p},t)(i\tilde{\nabla})\psi(\vec{p},t)d^3\vec{p}\\ \int\psi^+(\vec{r},t)[\sigma(s)\cdot\hat{\nabla}]\psi(\vec{r},t)d^3\vec{r}=\int\psi^+(\vec{p},t)[\sigma(s)\cdot\hat{p}]\psi(\vec{p},t)d^3\vec{p}\end{cases}$

Pro. 1.1.3. $\begin{cases}\int\psi^+(\vec{r},t)[\sigma(s)\cdot\hat{\nabla}]\hat{\nabla}\psi(\vec{r},t)d^3\vec{r}=\int\psi^+(\vec{p},t)[\sigma(s)\cdot\hat{p}]\hat{p}\psi(\vec{p},t)d^3\vec{p}\\ \int\psi^+(\vec{r},t)\sigma(s)[\sigma(s)\cdot\hat{\nabla}]\psi(\vec{r},t)d^3\vec{r}=\int\psi^+(\vec{p},t)\sigma(s)[\sigma(s)\cdot\hat{p}]\psi(\vec{p},t)d^3\vec{p}\\ \int\psi^+(\vec{r},t)[\sigma(s)\cdot\hat{\nabla}]\sigma(s)\psi(\vec{r},t)d^3\vec{r}=\int\psi^+(\vec{p},t)[\sigma(s)\cdot\hat{p}]\sigma(s)\psi(\vec{p},t)d^3\vec{p}\end{cases}$

Pro. 1.1.4. $\begin{cases}\int\psi^+(\vec{r},t)r_i\sigma_j(s)\psi(\vec{r},t)d^3\vec{r}=\int\psi^+(\vec{p},t)\sigma_j(s)(i\tilde{\partial}_i)\psi(\vec{p},t)d^3\vec{p}\\ \int\psi^+(\vec{r},t)\sigma_i(s)\partial_j\psi(\vec{r},t)d^3\vec{r}=i\int\psi^+(\vec{p},t)\sigma_i(s)p_j\psi(\vec{p},t)d^3\vec{p}\end{cases}$

Pro. 1.1.5. $\begin{cases}\int\psi^+(\vec{r},t)[r_i\sigma_j(s)-r_j\sigma_i(s)]\psi(\vec{r},t)d^3\vec{r}=-i\int\psi^+(\vec{p},t)[\sigma_i(s)\tilde{\partial}_j-\sigma_j(s)\tilde{\partial}_i]\psi(\vec{p},t)d^3\vec{p}\\ \int\psi^+(\vec{r},t)[\sigma_i(s)\partial_j-\sigma_j(s)\partial_i]\psi(\vec{r},t)d^3\vec{r}=i\int\psi^+(\vec{p},t)[\sigma_i(s)p_j-\sigma_j(s)p_i]\psi(\vec{p},t)d^3\vec{p}\end{cases}$

1.2 Second order correspondent properties between coordinate and momentum space

Pro. 1.2.1. $\begin{cases}\int\psi^+(\vec{r},t)r_i\partial_j\psi(\vec{r},t)d^3\vec{r}=\int d^3\vec{p}\psi^+(\vec{p},t)(-\delta_{ij}-p_j\tilde{\partial}_i)\psi(\vec{p},t)\\ \int\psi^+(\vec{r},t)(\delta_{ij}+r_i\partial_j)\psi(\vec{r},t)d^3\vec{r}=\int d^3\vec{p}\psi^+(\vec{p},t)(-p_j\tilde{\partial}_i)\psi(\vec{p},t)\\ \int\psi^+(\vec{r},t)(r_i\partial_j-r_j\partial_i)\psi(\vec{r},t)d^3\vec{r}=\int\psi^+(\vec{p},t)(p_i\tilde{\partial}_j-p_j\tilde{\partial}_i)\psi(\vec{p},t)d^3\vec{p}\end{cases}$

Proof: $\int\psi^+(\vec{r},t)r_i\partial_j\psi(\vec{r},t)d^3\vec{r}$

From the above, only $\delta_1 \pm (-1)^{-2s}\delta_2 = 0$, the micro causality is satisfied. At the same time only when $\delta_1, \delta_2 \geq 0$, the probability is just nonnegative. Therefore, among the eight covariant commutative or anticommutative schemes in mathematics, there is only one physically reasonable scheme: That is, when $\delta_1 = \delta_2 = 1$,(if not 1,it can be normalized.) It satisfies the commutative relation for bosons and satisfies the anticommutative relation for fermions. There are actually two other options. Namely when $\delta_1 = \delta_2 = 0$, it satisfies the commutative or anticommutative relation, which is just the classic case.

6.3 Covariant commutation rules for s-spin field physics

Def. 6.3.1. $\Delta_{k_\varsigma k'_\varsigma}(s;x) := \frac{(-1)^{2s}}{2^{s-1}} \Gamma^{\overbrace{abc\cdots}^{2s}}_{k_\varsigma k'_\varsigma}(s) \overbrace{\partial_a\partial_b\partial_c\cdots}^{2s} \Delta(x)$

Thm. 6.3.1.

$$\begin{cases} [a_\sigma(\vec{p},-s\varsigma), a^+_{\sigma'}(\vec{p}',-s\varsigma)]_{-^{2s+1}} = \delta_{\sigma\sigma'}\delta^3(\vec{p}-\vec{p}') \\ [a_\sigma(\vec{p},-s\varsigma), a_{\sigma'}(\vec{p}',-s\varsigma)]_{-^{2s+1}} = 0 \\ [a^+_\sigma(\vec{p},-s\varsigma), a^+_{\sigma'}(\vec{p}',-s\varsigma)]_{-^{2s+1}} = 0 \end{cases} \Rightarrow \begin{cases} [\psi_{k_\varsigma}(x), \psi^+_{k'_\varsigma}(x')]_{-^{2s+1}}, s \geq 0 \\ = i\frac{(-1)^{2s}}{2^{s-1}} \Gamma^{\overbrace{abc\cdots}^{2s}}_{k_\varsigma k'_\varsigma}(s) \overbrace{\partial_a\partial_b\partial_c\cdots}^{2s} \Delta(x-x'), \Gamma(0) := 1 \\ [\psi_{k_\varsigma}(x), \psi_{l_\varsigma}(x')]_{-^{2s+1}} = 0, [\psi^+_{k'_\varsigma}(x), \psi^+_{l'_\varsigma}(x')]_{-^{2s+1}} = 0 \end{cases}$$

8 Covariate quantization of fully symmetric Penrose equation

Self comment: Since Penrose fully symmetric equation is completely equivalent to the spin equation, the covariant quantization of Penrose fully symmetric equation has also been successfully completed in principle. It only needs to be equivalently converted from the spin equation. But starting directly from Penrose fully symmetric equation can provide a completely new solution.It has implications for the covariant quantization of massive particles. As detailed conclusions have been obtained by the spin equation method, only the essence of the Penrose fully symmetric equation solution is given below. I no longer seek perfection. And it is a supplement to the spin equation method.

8.1 Penrose fully symmetric equation [1,2] and its plane wave solutions

Thm. 8.1.1.

$[s\partial_a+iS_{ab}(s,\varsigma)\partial^b]\psi(x)=0\Leftrightarrow(\sigma,-i\varsigma)_a^{A'_\varsigma A_\varsigma}\partial^a\psi_{\underbrace{A_\varsigma B_\varsigma C_\varsigma\cdots}_{2s}}(x)=0,\psi_{\underbrace{A_\varsigma B_\varsigma C_\varsigma\cdots}_{2s}}(x)=\Gamma^{k_\varsigma}_{\underbrace{A_\varsigma B_\varsigma C_\varsigma\cdots}_{2s}}(s)\psi_{k_\varsigma}(x)$

Cor. 8.1.1.

□

Self comment: The above proof method is no longer based on the isochronous commutation rule, but directly based on the covariant commutation rule. It seems more difficult, but it's actually simpler. Because there is no need to find complex isochronal commutation rules (see the next section). Even if it is calculated out, it is still difficult to use. The covariant commutation rule itself is known and very regular and can also be decomposed into the product of spin bases. The entire proof process basically depends on the properties of the spin base and hasn't complex calculations. This proof method can be extended to all other similar cases and thereby simplify all similar proofs. The other commutative brackets can also be calculated out by using the same method and will not be listed.

8.9 Isochronous quantization rules for Penrose fully symmetric equation

Thm. 8.9.1. $[\psi_{\underbrace{A_\varsigma B_\varsigma\cdots}_{2s}}(x),\psi^+_{\underbrace{A'_\varsigma B'_\varsigma\cdots}_{2s}}(x')]_{-^{2s+1}}=i\frac{(i\varsigma)^{2s}}{2^{2s-1}}\overbrace{(\sigma,i\varsigma)^a_{A_\varsigma A'_\varsigma}(\sigma,i\varsigma)^b_{B_\varsigma B'_\varsigma}\cdots}^{2s}\overbrace{\partial_a\partial_b\cdots}^{2s}\Delta(x-x')$

Chapter24 Field Covariation Scheme for Complex Particles with Mass

Self comment: This chapter and the next chapter describe complex particles with mass. Positive and negative particles are different. It is essentially complex functions in mathematics, And they are different from Majorana particles. Positive and negative particles are same for Majorana particle. It is essentially a real function in mathematics. We will discuss it in detail in the following chapters. The massive particle scheme adopts the opposite steps to the massless particle scheme. It first proves the general spin particle case, and then respectively studies the special cases of $s = \frac{1}{2}, 1, \frac{3}{2}, 2$. The reason for doing this is as follows: Firstly, the new covariant quantization scheme has been relatively clear in general after previous research. The second is to prove the general case first, and the later special cases do not need to be proved again. It saves a lot of trouble and makes the content more compact. And I can also focuse more on physics. In order to prove the general case, it is necessary to first study the properties of the spin basis for Dirac equation. Therefore, the first half of this chapter mainly studies the spin basis for Dirac equation, and the second half is the proof for the general spin particle case. However, the complete covariant quantization scheme for Dirac equation will be studied in the latter chapters. In this chapter, the corresponding quantum field theories for all massive spin complex particles are established in a unified manner. Like massless particles, it is not necessary to know the Hamiltonian to quantize various massive spin particles according to a unified new program. It provides a unified quantization commutation rule and energy momentum operator form. As well as a partial quantum Poincare algebra is given. Like massless particles, the angular momentum operator has only achieved partial success and has not been thoroughly resolved. Efforts are still needed.

1.1.1 Four-dimensional Fourier solution of plane wave for Dirac electron equation [4]

Thm. 1.1.1. $(\gamma^a \partial_a + m)\psi(\vec{r}, t) = 0$

$$\Leftrightarrow \begin{cases} \psi(\vec{r}, t) = \frac{1}{(2\pi)^{3/2}} \int\limits_{\vec{p}=-\infty}^{+\infty} \frac{1}{2E_{\vec{p}}}[a(\vec{p}, E_{\vec{p}})e^{i(\vec{p}\cdot\vec{r} - E_{\vec{p}}t)} + a(-\vec{p}, -E_{\vec{p}})e^{-i(\vec{p}\cdot\vec{r} - E_{\vec{p}}t)}]d^3\vec{p} \\ (i\gamma^a p_a + m)a(\vec{p}, E_{\vec{p}}) = 0, (-i\gamma^a p_a + m)a(-\vec{p}, -E_{\vec{p}}) = 0 \end{cases}$$

Proof: $(\gamma^a \partial_a + m)\psi(\vec{r}, t) = 0$

$$\Rightarrow \frac{1}{(2\pi)^{3/2}} \int\limits_{\vec{p}=-\infty}^{+\infty} \int\limits_{E=-\infty}^{+\infty} (i\gamma^a p_a + m)\psi(\vec{p}, E)e^{ip\cdot x}d^3\vec{p}dE = 0$$

$$\Leftrightarrow (i\gamma^a p_a + m)\psi(\vec{p}, E) = 0 \Leftrightarrow (i\gamma^a p_a - m)(i\gamma^a p_a + m)\psi(\vec{p}, E) = 0, (i\gamma^a p_a + m)\psi(\vec{p}, E) = 0$$

$$\Leftrightarrow (E^2 - \vec{p}^2 - m^2)\psi(\vec{p}, E) = 0, (i\gamma^a p_a + m)\psi(\vec{p}, E) = 0$$

$$\Leftrightarrow \psi(\vec{p}, E) = a(\vec{p}, E)\delta(E^2 - \vec{p}^2 - m^2) + \psi_0(\vec{p}, E)\delta_{E^2, \vec{p}^2 + m^2}, (i\gamma^a p_a + m)\psi(\vec{p}, E) = 0$$

$$\Rightarrow \psi(\vec{r}, t) = \frac{1}{(2\pi)^{3/2}} \int\limits_{\vec{p}=-\infty}^{+\infty} \int\limits_{E=-\infty}^{+\infty} [a(\vec{p}, E)\delta(E^2 - \vec{p}^2 - m^2) + \psi_0(\vec{p}, E)\delta_{E^2, \vec{p}^2 + m^2}]e^{ip\cdot x}d^3\vec{p}dE$$

$$\Leftrightarrow \psi(\vec{r}, t) = \frac{1}{(2\pi)^{3/2}} \int\limits_{\vec{p}=-\infty}^{+\infty} \int\limits_{E=-\infty}^{+\infty} a(\vec{p}, E)\delta(E^2 - \vec{p}^2 - m^2)e^{ip\cdot x}d^3\vec{p}dE$$

$$\Leftrightarrow \begin{cases} \psi(\vec{r}, t) = \frac{1}{(2\pi)^{3/2}} \int\limits_{\vec{p}=-\infty}^{+\infty} \frac{1}{2E_{\vec{p}}}[a(\vec{p}, E_{\vec{p}})e^{i(\vec{p}\cdot\vec{r} - E_{\vec{p}}t)} + a(\vec{p}, -E_{\vec{p}})e^{i(\vec{p}\cdot\vec{r} + E_{\vec{p}}t)}]d^3\vec{p} \\ (i\gamma^a p_a + m)a(\vec{p}, E_{\vec{p}}) = 0, (i\gamma \cdot \vec{p} + \gamma^4 E_{\vec{p}} + m)a(\vec{p}, -E_{\vec{p}}) = 0 \end{cases}$$

$$\Leftrightarrow \begin{cases} \psi(\vec{r}, t) = \frac{1}{(2\pi)^{3/2}} \int\limits_{\vec{p}=-\infty}^{+\infty} \frac{1}{2E_{\vec{p}}}[a(\vec{p}, E_{\vec{p}})e^{i(\vec{p}\cdot\vec{r} - E_{\vec{p}}t)} + a(-\vec{p}, -E_{\vec{p}})e^{-i(\vec{p}\cdot\vec{r} - E_{\vec{p}}t)}]d^3\vec{p} \\ (i\gamma^a p_a + m)a(\vec{p}, E_{\vec{p}}) = 0, (-i\gamma^a p_a + m)a(-\vec{p}, -E_{\vec{p}}) = 0 \end{cases} \qquad \square$$

Thm. 1.1.2. $(i\gamma^a p_a + m)a(\vec{p}, E_{\vec{p}}) = 0, \gamma^a = (\sigma \otimes \sigma_y, \varsigma I \otimes \sigma_x), (i\gamma^a p_a + m) = \begin{bmatrix} m & -\varsigma E + \sigma\cdot\vec{p} \\ -\varsigma E - \sigma\cdot\vec{p} & m \end{bmatrix}$

$$\Leftrightarrow \begin{cases} a(\vec{p},E_{\vec{p}}) = \begin{bmatrix} m\varphi(\vec{p}) \\ (\varsigma E_{\vec{p}}+\sigma\cdot\vec{p})\varphi(\vec{p}) \end{bmatrix} = (-i\gamma^a p_a+m)\begin{bmatrix}\varphi(\vec{p})\\0\end{bmatrix} = (-i\gamma^a p_a+m)\begin{bmatrix}0\\ \frac{\varsigma E_{\vec{p}}+\sigma\cdot\vec{p}}{m}\varphi(\vec{p})\end{bmatrix} \\ a(\vec{p},E_{\vec{p}}) = \begin{bmatrix} (\varsigma E_{\vec{p}}-\sigma\cdot\vec{p})\eta(\vec{p}) \\ m\eta(\vec{p}) \end{bmatrix} = (-i\gamma^a p_a+m)\begin{bmatrix}0\\ \eta(\vec{p})\end{bmatrix} = (-i\gamma^a p_a+m)\begin{bmatrix}\frac{\varsigma E_{\vec{p}}-\sigma\cdot\vec{p}}{m}\eta(\vec{p})\\0\end{bmatrix} \end{cases}$$

Cor. 1.1.1. $(i\gamma^a p_a-m)a(-\vec{p},-E_{\vec{p}})=0, \gamma^a=(\sigma\otimes\sigma_y,\varsigma I\otimes\sigma_x), (i\gamma^a p_a-m)=\begin{bmatrix}-m & -\varsigma E+\sigma\cdot\vec{p}\\ -\varsigma E-\sigma\cdot\vec{p} & -m\end{bmatrix}$

$$\Leftrightarrow \begin{cases} a(-\vec{p},-E_{\vec{p}}) = \begin{bmatrix} -m\varphi(-\vec{p}) \\ (\varsigma E_{\vec{p}}+\sigma\cdot\vec{p})\varphi(-\vec{p}) \end{bmatrix} = (-i\gamma^a p_a-m)\begin{bmatrix}\varphi(-\vec{p})\\0\end{bmatrix} = (-i\gamma^a p_a-m)\begin{bmatrix}0\\ \frac{-\varsigma E_{\vec{p}}-\sigma\cdot\vec{p}}{m}\varphi(-\vec{p})\end{bmatrix} \\ a(-\vec{p},-E_{\vec{p}}) = \begin{bmatrix} (\varsigma E_{\vec{p}}-\sigma\cdot\vec{p})\eta(-\vec{p}) \\ -m\eta(-\vec{p}) \end{bmatrix} = (-i\gamma^a p_a-m)\begin{bmatrix}0\\ \eta(-\vec{p})\end{bmatrix} = (-i\gamma^a p_a-m)\begin{bmatrix}\frac{-\varsigma E_{\vec{p}}+\sigma\cdot\vec{p}}{m}\eta(-\vec{p})\\0\end{bmatrix} \end{cases}$$

Self comment: From the above, it can be seen that the plane wave solutions of Dirac equation have multiple equivalent expressions.There are many intuitive choices for spin bases, essentially unlimited choices. But they are also essentially representation equivalent and lack a unitary transformation. No matter which base is chosen, physics is equivalent and consistent. But if you choose well, it's convenient to calculate. However, it should be noted that for massless particles, the above expressions are not necessarily equivalent.

1.1.2 Non normalized Dirac basis(suitable for arbitrary mass cases)

Cor. 1.1.2. $(\gamma^a\partial_a+m)\psi(\vec{r},t)=0, \gamma^a=(\sigma\otimes\sigma_y,\varsigma I\otimes\sigma_x)$

$$\Leftrightarrow \psi(\vec{r},t)=\frac{1}{(2\pi)^{3/2}}\int_{\vec{p}=-\infty}^{+\infty}\frac{1}{2E}[a(\vec{p},E)e^{i(\vec{p}\cdot\vec{r}-Et)}+a(-\vec{p},-E)e^{-i(\vec{p}\cdot\vec{r}-Et)}]d^3\vec{p}$$

$$a(\vec{p},E)=(-i\gamma^a p_a+m)\begin{bmatrix}\varphi(\vec{p})\\0\end{bmatrix}, a(-\vec{p},-E)=(-i\gamma^a p_a-m)\begin{bmatrix}\eta(\vec{p})\\0\end{bmatrix}$$

γ^a **: This chapter adopts the above provisions, unless otherwise specified.**

Def. 1.1.1. $X(\vec{p},\frac{\kappa}{2}):=(-i\gamma^a p_a+m)\begin{bmatrix}\lambda(\hat{p},\frac{\kappa}{2})\\0\end{bmatrix}, Y(\vec{p},\frac{\kappa}{2}):=(-i\gamma^a p_a-m)\begin{bmatrix}\lambda(\hat{p},\frac{\kappa}{2})\\0\end{bmatrix}$

Cor. 1.1.3. $X(\vec{p},\frac{\kappa}{2})=\lambda(\hat{p},\frac{\kappa}{2})\otimes\begin{bmatrix}m\\ \varsigma E+\kappa|\vec{p}|\end{bmatrix}, Y(\vec{p},\frac{\kappa}{2})=\lambda(\hat{p},\frac{\kappa}{2})\otimes\begin{bmatrix}-m\\ \varsigma E+\kappa|\vec{p}|\end{bmatrix}$

1.1.3 Normalized massless Dirac basis

Def. 1.1.2. $X(\vec{p},\frac{\kappa}{2})=Y(\vec{p},\frac{\kappa}{2}):=-i\gamma^a p_a\begin{bmatrix}\lambda(\hat{p},\frac{\kappa}{2})\\0\end{bmatrix}$

Cor. 1.1.4. $X(\vec{p},\frac{\varsigma}{2})=Y(\vec{p},\frac{\varsigma}{2})=2\varsigma|\vec{p}|\lambda(\hat{p},\frac{\kappa}{2})\otimes\begin{bmatrix}0\\1\end{bmatrix}, X(\vec{p},-\frac{\varsigma}{2})=Y(\vec{p},-\frac{\varsigma}{2})=0$

Cor. 1.1.5. $\bar{X}(\vec{p},\frac{\varsigma}{2})=\bar{Y}(\vec{p},\frac{\varsigma}{2})=\lambda(\hat{p},\frac{\kappa}{2})\otimes\begin{bmatrix}0\\1\end{bmatrix}, \bar{X}(\vec{p},-\frac{\varsigma}{2})=\bar{Y}(\vec{p},-\frac{\varsigma}{2})=0$

Self comment: The massless case is obtained by directly using $m\to 0$. But it is not comprehensive. This is just one set of solutions, and there is another set of solutions. In fact the massless case requires reanalysis.

1.1.4 Definition of Dirac charge basis

Def. 1.1.3. $\mu(\vec{p},\frac{\kappa}{2}):=\begin{bmatrix}\sqrt{\frac{E-\kappa\varsigma|\vec{p}|}{2m}}\\ \varsigma\sqrt{\frac{E+\kappa\varsigma|\vec{p}|}{2m}}\end{bmatrix}, \nu(\vec{p},\frac{\kappa}{2}):=\begin{bmatrix}-\sqrt{\frac{E-\kappa\varsigma|\vec{p}|}{2m}}\\ \varsigma\sqrt{\frac{E+\kappa\varsigma|\vec{p}|}{2m}}\end{bmatrix}$

Cor. 1.1.6. $\mu(\vec{p},\frac{\kappa}{2}):=\frac{1}{\sqrt{2}}\begin{bmatrix}\sqrt{\frac{m}{E+\kappa\varsigma|\vec{p}|}}\\ \varsigma\sqrt{\frac{E+\kappa\varsigma|\vec{p}|}{m}}\end{bmatrix}, \nu(\vec{p},\frac{\kappa}{2}):=\frac{1}{\sqrt{2}}\begin{bmatrix}-\sqrt{\frac{m}{E+\kappa\varsigma|\vec{p}|}}\\ \varsigma\sqrt{\frac{E+\kappa\varsigma|\vec{p}|}{m}}\end{bmatrix}$

Def. 1.1.4. $\tilde{\mu}(\vec{p},\frac{\kappa}{2}):=\begin{bmatrix}\sqrt{\frac{E-\kappa\varsigma|\vec{p}|}{2E}}\\ \varsigma\sqrt{\frac{E+\kappa\varsigma|\vec{p}|}{2E}}\end{bmatrix}, \tilde{\nu}(\vec{p},\frac{\kappa}{2}):=\begin{bmatrix}-\sqrt{\frac{E-\kappa\varsigma|\vec{p}|}{2E}}\\ \varsigma\sqrt{\frac{E+\kappa\varsigma|\vec{p}|}{2E}}\end{bmatrix}$

Cor. 1.1.7. $\tilde{\mu}(\vec{p},\frac{\kappa}{2})=\sqrt{\frac{m}{E}}\mu(\vec{p},\frac{\kappa}{2}), \tilde{\nu}(\vec{p},\frac{\kappa}{2})=\sqrt{\frac{m}{E}}\nu(\vec{p},\frac{\kappa}{2})$

Self comment: Why is it called a charge base related to the latter concrete analysis? Maybe that's not the right way to call it.

1.1.5 Normalized Dirac basis

Cor. 1.1.8. $u(\vec{p},\frac{\kappa}{2})=\frac{\lambda(\hat{p},\frac{\kappa}{2})}{\sqrt{2m(E+\kappa\varsigma|\vec{p}|)}}\otimes\begin{bmatrix}m\\ \varsigma E+\kappa|\vec{p}|\end{bmatrix},v(\vec{p},\frac{\kappa}{2})=\frac{\lambda(\hat{p},\frac{\kappa}{2})}{\sqrt{2m(E+\kappa\varsigma|\vec{p}|)}}\otimes\begin{bmatrix}-m\\ \varsigma E+\kappa|\vec{p}|\end{bmatrix}$

Cor. 1.1.9. $u(\vec{p},\frac{\kappa}{2})=\lambda(\hat{p},\frac{\kappa}{2})\otimes\mu(\vec{p},\frac{\kappa}{2}),v(\vec{p},\frac{\kappa}{2})=\lambda(\hat{p},\frac{\kappa}{2})\otimes\nu(\vec{p},\frac{\kappa}{2})$

Cor. 1.1.10. $u(\vec{p},h)=-\varsigma\gamma_5v(\vec{p},h),v(\vec{p},h)=-\varsigma\gamma_5u(\vec{p},h),h=-\frac{1}{2},\frac{1}{2}$

Thm. 1.1.3. $(i\gamma^ap_a+m)u(\vec{p},h)=0,(i\gamma^ap_a-m)v(\vec{p},h)=0,\gamma^a=(\sigma\otimes\sigma_y,\varsigma I\otimes\sigma_x,\varsigma I\otimes\sigma_z)$

Def. 1.1.5. $\tilde{u}(\vec{p},\frac{\kappa}{2}):=\sqrt{\frac{m}{E}}u(\vec{p},\frac{\kappa}{2}),\tilde{v}(\vec{p},\frac{\kappa}{2}):=\sqrt{\frac{m}{E}}v(\vec{p},\frac{\kappa}{2})$

Cor. 1.1.11. $\tilde{u}(\vec{p},\frac{\kappa}{2})=\frac{\lambda(\hat{p},\frac{\kappa}{2})}{\sqrt{2E(E+\kappa\varsigma|\vec{p}|)}}\otimes\begin{bmatrix}m\\ \varsigma E+\kappa|\vec{p}|\end{bmatrix},\tilde{v}(\vec{p},\frac{\kappa}{2})=\frac{\lambda(\hat{p},\frac{\kappa}{2})}{\sqrt{2E(E+\kappa\varsigma|\vec{p}|)}}\otimes\begin{bmatrix}-m\\ \varsigma E+\kappa|\vec{p}|\end{bmatrix}$

Cor. 1.1.12. $\tilde{u}(\vec{p},\frac{\kappa}{2};m=0)=\frac{\lambda(\hat{p},\frac{\kappa}{2})}{\sqrt{2E(E+\kappa\varsigma|\vec{p}|)}}\otimes\begin{bmatrix}m\\ \varsigma E+\kappa|\vec{p}|\end{bmatrix},\tilde{v}(\vec{p},\frac{\kappa}{2};m=0)=\frac{\lambda(\hat{p},\frac{\kappa}{2})}{\sqrt{2E(E+\kappa\varsigma|\vec{p}|)}}\otimes\begin{bmatrix}-m\\ \varsigma E+\kappa|\vec{p}|\end{bmatrix}$

Self comment: Why do we define two normalized spin bases? Because it is corresponding to two different normalization methods. There are two main reasons why we choose such spin bases. The first is that it can be decomposed into a direct product of two bases, which can simplify many calculations. The second is that one of the bases is helicity, which can make full use of previous helicity analysis results and greatly simplify the calculation.

1.1.6 Definition of new charge operator

Def. 1.1.6. $\hat{Q}(\vec{p}):=\frac{i\gamma^ap_a}{m},\hat{q}(\vec{p},\kappa):=\frac{-\varsigma E\sigma_x+i\kappa|\vec{p}|\sigma_y}{m}$

Lem. 1.1.1. $i\gamma^ap_a=\begin{bmatrix}0&-\varsigma E+\sigma\cdot\vec{p}\\ -\varsigma E-\sigma\cdot\vec{p}&0\end{bmatrix}=-\varsigma EI\otimes\sigma_x+i\sigma\cdot\vec{p}\otimes\sigma_y,\gamma^a=(\sigma\otimes\sigma_y,\varsigma I\otimes\sigma_x)$

Thm. 1.1.4. $\hat{Q}(\vec{p})u(\vec{p},\frac{\kappa}{2})=-u(\vec{p},\frac{\kappa}{2}),\hat{Q}(\vec{p})v(\vec{p},\frac{\kappa}{2})=v(\vec{p},\frac{\kappa}{2}),\hat{q}(\vec{p},\kappa)\mu(\vec{p},\frac{\kappa}{2})=-\mu(\vec{p},\frac{\kappa}{2}),\hat{q}(\vec{p},\kappa)\nu(\vec{p},\frac{\kappa}{2})=\nu(\vec{p},\frac{\kappa}{2})$

Proof: $\hat{Q}(\vec{p})u(\vec{p},\frac{\kappa}{2})=\frac{i\gamma^ap_a}{m}u(\vec{p},\frac{\kappa}{2})$
$=(-\varsigma\frac{E}{m}I\otimes\sigma_x+i\frac{1}{m}\sigma\cdot\vec{p}\otimes\sigma_y)\lambda(\hat{p},\frac{\kappa}{2})\otimes\mu(\vec{p},\frac{\kappa}{2})=(I\otimes\frac{-\varsigma E\sigma_x+i\kappa|\vec{p}|\sigma_y}{m})(\lambda(\hat{p},\frac{\kappa}{2}))\otimes\mu(\vec{p},\frac{\kappa}{2})$
$=-\lambda(\hat{p},\frac{\kappa}{2})\otimes\mu(\vec{p},\frac{\kappa}{2})=-u(\vec{p},\frac{\kappa}{2})$ □

Proof: $\hat{Q}(\vec{p})v(\vec{p},\frac{\kappa}{2})=\frac{i\gamma^ap_a}{m}v(\vec{p},\frac{\kappa}{2})$
$=(-\varsigma\frac{E}{m}I\otimes\sigma_x+i\frac{1}{m}\sigma\cdot\vec{p}\otimes\sigma_y)\lambda(\hat{p},\frac{\kappa}{2})\otimes\nu(\vec{p},\frac{\kappa}{2})=(I\otimes\frac{-\varsigma E\sigma_x+i\kappa|\vec{p}|\sigma_y}{m})(\lambda(\hat{p},\frac{\kappa}{2}))\otimes\nu(\vec{p},\frac{\kappa}{2})$
$=\lambda(\hat{p},\frac{\kappa}{2})\otimes\nu(\vec{p},\frac{\kappa}{2})=v(\vec{p},\frac{\kappa}{2})$ □

1.1.7 Dirac basis is a common eigenstate of three operators: spin, helicity and charge

Pro. 1.1.1.
$$\begin{cases}\sigma^2(\frac{1}{2})\otimes Iu(\vec{p},\frac{\kappa}{2})=\frac{1}{2}(\frac{1}{2}+1)u(\vec{p},\frac{\kappa}{2})\\ \sigma(\frac{1}{2})\cdot\hat{p}\otimes Iu(\vec{p},\frac{\kappa}{2})=\frac{\kappa}{2}u(\vec{p},\frac{\kappa}{2})\\ \hat{Q}(\vec{p})u(\vec{p},\frac{\kappa}{2})=-u(\vec{p},\frac{\kappa}{2})\\ \textit{Description electron: }(s,h;Q)=(\frac{1}{2};\frac{\kappa}{2},-1)\end{cases}\quad\begin{cases}\sigma^2(\frac{1}{2})\otimes Iv(\vec{p},\frac{\kappa}{2})=\frac{1}{2}(\frac{1}{2}+1)v(\vec{p},\frac{\kappa}{2})\\ \sigma(\frac{1}{2})\cdot\hat{p}\otimes Iv(\vec{p},\frac{\kappa}{2})=\frac{\kappa}{2}v(\vec{p},\frac{\kappa}{2})\\ \hat{Q}(\vec{p})v(\vec{p},\frac{\kappa}{2})=v(\vec{p},\frac{\kappa}{2})\\ \textit{Description positron: }(s,h;Q)=(\frac{1}{2};\frac{\kappa}{2},1)\end{cases}$$

1.2 Introduction of 4D vector spin basis

1.2.1 4D vector spin basis

Cor. 1.2.1. $\lambda_m(\hat{p},-1)=\lambda_m^*(\hat{p},1),\lambda_m(\hat{p},0)=-\lambda_m^*(\hat{p},0),\lambda_m(\hat{p},1)=\lambda_m^*(\hat{p},-1)$

Def. 1.2.1. $\varepsilon_a(\vec{p},\kappa):=[i\lambda_m(\vec{p},\kappa),0]_a,\varepsilon_a(\vec{p},0):=\frac{1}{m}[iE\lambda_m(\vec{p},0),i|\vec{p}|]_a,\bar{\varepsilon}_a(\vec{p},h):=\varepsilon^+_{a'}(\vec{p},h)\eta_a^{a'}$

Cor. 1.2.2.
$$\begin{cases}\lambda_m(\begin{bmatrix}0\\0\\1\end{bmatrix},1)=\frac{1}{\sqrt{2}}\begin{bmatrix}i\\-1\\0\end{bmatrix}\\ \lambda_m(\begin{bmatrix}0\\0\\1\end{bmatrix},0)=\begin{bmatrix}0\\0\\-i\end{bmatrix}\\ \lambda_m(\begin{bmatrix}0\\0\\1\end{bmatrix},-1)=\frac{1}{\sqrt{2}}\begin{bmatrix}-i\\-1\\0\end{bmatrix}\end{cases}$$

Cor. 1.2.3. $\varepsilon_a(\begin{bmatrix}0\\0\\|\vec{p}|\end{bmatrix},1):=\frac{1}{\sqrt{2}}[-1,-i,0,0]_a,\varepsilon_a(\begin{bmatrix}0\\0\\|\vec{p}|\end{bmatrix},0):=\frac{1}{m}[0,0,E,i|\vec{p}|]_a,\varepsilon_a(\begin{bmatrix}0\\0\\|\vec{p}|\end{bmatrix},-1):=\frac{1}{\sqrt{2}}[1,-i,0,0]_a$

Cor. 1.2.4. $\eta_{aa'}\varepsilon^{+a'}(\vec{p},\kappa)=-\varepsilon_a(\vec{p},-\kappa),\eta_{aa'}\varepsilon^{+a'}(\vec{p},0)=\varepsilon_a(\vec{p},0),\eta_{aa'}\varepsilon^{+a'}(\vec{p},h)=(-1)^h\varepsilon_a(\vec{p},-h)$

Thm. 1.2.1. $\varepsilon^+(\vec{p},h)\varepsilon(\vec{p},h')=(\frac{E^2+p^2}{m^2})^{1-|h|}\delta_{hh'},\sum\limits_{h=1}^{-1}\varepsilon_a(\vec{p},h)\varepsilon^+_{a'}(\vec{p},h)=\eta_{aa'}+\frac{p_ap^+_{a'}}{m^2},\sum\limits_{h=1}^{-1}h\varepsilon(\vec{p},h)\varepsilon^+(\vec{p},h)=R\cdot\hat{p}$

Thm. 1.2.2. $\bar{\varepsilon}(\vec{p},h)\varepsilon(\vec{p},h')=\delta_{hh'},\sum_{h=1}^{-1}\varepsilon_a(\vec{p},h)\bar{\varepsilon}_b(\vec{p},h)=\delta_{ab}+\frac{p_ap_b}{m^2},\sum_{h=1}^{-1}h\varepsilon(\vec{p},h)\bar{\varepsilon}(\vec{p},h)=R\cdot\hat{p}$

Cor. 1.2.5. $(R\cdot\hat{p})\varepsilon(\vec{p},h)=h\varepsilon(\vec{p},h),(R\cdot\hat{p})\frac{p_{[a]}}{m}=0;R^2\varepsilon(\vec{p},h)=1(1+1)\varepsilon(\vec{p},h)$

Cor. 1.2.6. $(L\cdot\hat{p})\varepsilon(\vec{p},\kappa)=0,(L\cdot\hat{p})\varepsilon(\vec{p},0)=-\frac{p_{[a]}}{m},(L\cdot\hat{p})\frac{p_{[a]}}{m}=-\varepsilon(\vec{p},0)$

Cor. 1.2.7. $\begin{cases}(\sigma_+\cdot\hat{p})\varepsilon(\vec{p},\kappa)=\kappa\varepsilon(\vec{p},\kappa),(\sigma_+\cdot\hat{p})\varepsilon(\vec{p},0)=-\frac{p_{[a]}}{m},(\sigma_+\cdot\hat{p})\frac{p_{[a]}}{m}=-\varepsilon(\vec{p},0)\\(\sigma_-\cdot\hat{p})\varepsilon(\vec{p},\kappa)=\kappa\varepsilon(\vec{p},\kappa),(\sigma_-\cdot\hat{p})\varepsilon(\vec{p},0)=\frac{p_{[a]}}{m},(\sigma_-\cdot\hat{p})\frac{p_{[a]}}{m}=\varepsilon(\vec{p},0)\end{cases}$

Self comment: Why do we choose such spin basis. It is related to the latter concrete analysis. In fact, I extracted this result from the latter concrete analysis. And then I put it here to conduct the necessary advance research. This allows latter chapters to focus more on physics itself.

1.2.2 Relations I between complex vector spin basis and 4D vector spin basis

Cor. 1.2.8. $\begin{cases}[R\cdot\lambda_m(\vec{p},0)]\varepsilon(\vec{p},\kappa)=-i\kappa\varepsilon(\vec{p},h),[R\cdot\lambda_m(\vec{p},0)]\varepsilon(\vec{p},0)=0,[R\cdot\lambda_m(\vec{p},0)]\frac{p_{[a]}}{m}=0\\ [L\cdot\lambda_m(\vec{p},0)]\varepsilon(\vec{p},\kappa)=0,[L\cdot\lambda_m(\vec{p},0)]\varepsilon(\vec{p},0)=\frac{ip_{[a]}}{m},[L\cdot\lambda_m(\vec{p},0)]\frac{p_{[a]}}{m}=i\varepsilon(\vec{p},0)\end{cases}$

Cor. 1.2.9. $\begin{cases}[R\cdot\lambda_m(\vec{p},1)]\varepsilon(\vec{p},1)=[\vec{0},0],[R\cdot\lambda_m(\vec{p},1)]\varepsilon(\vec{p},-1)=-[\lambda_m(\vec{p},0),0]\\ [R\cdot\lambda_m(\vec{p},1)]\varepsilon(\vec{p},0)=-\frac{E}{m}[\lambda_m(\vec{p},1),0],[R\cdot\lambda_m(\vec{p},1)]\frac{p_{[a]}}{m}=-\frac{|\vec{p}|}{m}[\lambda_m(\vec{p},1),0]\\ [L\cdot\lambda_m(\vec{p},1)]\varepsilon(\vec{p},1)=[\vec{0},0],[L\cdot\lambda_m(\vec{p},1)]\varepsilon(\vec{p},-1)=[\vec{0},1]\\ [L\cdot\lambda_m(\vec{p},1)]\varepsilon(\vec{p},0)=-\frac{|\vec{p}|}{m}[\lambda_m(\vec{p},1),0],[L\cdot\lambda_m(\vec{p},1)]\frac{p_{[a]}}{m}=-\frac{E}{m}[\lambda_m(\vec{p},1),0]\end{cases}$

Cor. 1.2.10. $\begin{cases}[R\cdot\lambda_m(\vec{p},-1)]\varepsilon(\vec{p},-1)=[\vec{0},0],[R\cdot\lambda_m(\vec{p},-1)]\varepsilon(\vec{p},1)=[\lambda_m(\vec{p},0),0]\\ [R\cdot\lambda_m(\vec{p},-1)]\varepsilon(\vec{p},0)=\frac{E}{m}[\lambda_m(\vec{p},-1),0],[R\cdot\lambda_m(\vec{p},-1)]\frac{p_{[a]}}{m}=\frac{|\vec{p}|}{m}[\lambda_m(\vec{p},-1),0]\\ [L\cdot\lambda_m(\vec{p},-1)]\varepsilon(\vec{p},-1)=[\vec{0},0],[L\cdot\lambda_m(\vec{p},-1)]\varepsilon(\vec{p},1)=[\vec{0},1]\\ [L\cdot\lambda_m(\vec{p},-1)]\varepsilon(\vec{p},0)=-\frac{|\vec{p}|}{m}[\lambda_m(\vec{p},-1),0],[L\cdot\lambda_m(\vec{p},-1)]\frac{p_{[a]}}{m}=-\frac{E}{m}[\lambda_m(\vec{p},-1),0]\end{cases}$

1.2.3 Relations II between complex vector spin basis and 4D vector spin basis

Cor. 1.2.11. $\begin{cases}[\sigma_+\cdot\lambda_m(\vec{p},0)]\varepsilon(\vec{p},\kappa)=-i\kappa\varepsilon(\vec{p},h),[\sigma_+\cdot\lambda_m(\vec{p},0)]\varepsilon(\vec{p},0)=\frac{ip_{[a]}}{m},[\sigma_+\cdot\lambda_m(\vec{p},0)]\frac{p_{[a]}}{m}=i\varepsilon(\vec{p},0)\\ [\sigma_-\cdot\lambda_m(\vec{p},0)]\varepsilon(\vec{p},\kappa)=-i\kappa\varepsilon(\vec{p},h),[\sigma_-\cdot\lambda_m(\vec{p},0)]\varepsilon(\vec{p},0)=-\frac{ip_{[a]}}{m},[\sigma_-\cdot\lambda_m(\vec{p},0)]\frac{p_{[a]}}{m}=-i\varepsilon(\vec{p},0)\end{cases}$

Self comment: The above expression is very similar to the plane wave solutions form of massless particles, so physics has a unified expression in essence. However, it is important to note that plane wave solutions of massless particles cannot be obtained through $m\to 0$ for the plane wave solutions of massless particles mentioned above. This shows that there is an essential difference between massless particles and massive particles.

2.3 Plane wave solutions of Bargmann-Wigner equation under real representation

Thm. 2.3.1. $(\gamma_s^a\partial_a+m)_{\kappa_\varsigma}{}^{\lambda_\varsigma}\psi_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdot\cdot\tau_\varsigma}_{2s}}(\vec{r},t)=0,\psi_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdot\cdot\tau_\varsigma}_{2s}}(\vec{r},t)=\frac{1}{(2s)!}\psi_{\underbrace{\{\lambda_\varsigma\mu_\varsigma\cdot\cdot\tau_\varsigma\}}_{2s}}(\vec{r},t)$

Self comment: The above proof method is similar to the case of Penrose equation. And it is no longer based on the isochronous commutation rule, but directly based on the covariant commutation rule. It seems more difficult, but it's actually simpler. Because the isochronous commutation rule is not easy to calculate. Even if it is calculated out, it is still difficult to use. The covariant commutation rule itself is known and very regular and can also be decomposed into the product of spin bases. The entire proof process basically depends on the properties of the spin base and hasn't complex calculations. The three most difficult proofs of commutative parentheses are given above. While the other several commutative parentheses can be easily proved, and will not be listed in detail. In fact, the isochronous commutation rule is a special case of the covariant commutation rule.Therefore, the above proof method can also be used for the isochronous commutation rule ($t=t'$ is taken).

5.3 Summary of covariant commutation rules for Bargmann-Wigner equation

By combining the proofs in the above two sections, the following important theorems are obtained.

Thm. 5.3.1.

$$\begin{cases}[\psi_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdots}_{2s}}(x),\psi^+_{\underbrace{\lambda'_\varsigma\mu'_\varsigma\cdots}_{2s}}(x')]_{-^{2s+1}}=\frac{i}{2^{2s-1}}\frac{1}{[(2s)!]^2}\overbrace{[(m-\gamma^a\partial_a)\gamma^4]_{\{\lambda_\varsigma(\lambda'_\varsigma}[(m-\gamma^b\partial_b)\gamma^4]_{\mu_\varsigma\mu'_\varsigma}\cdots\})}^{2s}\Delta(x-x')\\ [rest]_{-^{2s+1}}=0\end{cases}$$

$$\Leftrightarrow[a(\vec{p},h),a^+(\vec{p}',h')]_{-^{2s+1}}=\delta_{hh'}\delta^3(\vec{p}-\vec{p}'),[b(\vec{p},h),b^+(\vec{p}',h')]_{-^{2s+1}}=\delta_{hh'}\delta^3(\vec{p}-\vec{p}'),[rest]_{-^{2s+1}}=0$$

Thm. 5.3.2. $[\psi_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdots}_{2s}}(x),\psi^+_{\underbrace{\lambda'_\varsigma\mu'_\varsigma\cdots}_{2s}}(x')]_{-^{2s+1}}=2im^{2s}\Lambda_{+\underbrace{\lambda_\varsigma\mu_\varsigma\cdots\tau_\varsigma}_{2s}\underbrace{\lambda'_\varsigma\mu'_\varsigma\cdots\tau_\varsigma}_{2s}}(-i\partial,s)$

Chapter25 Potential Covariation Scheme for Complex Particles with Mass

1 Commutation rules for Klein-Gordon equation

1.1 B-W equation is equivalent to K-G equation for spin-n particles with mass [16, 20, 21]

Def. 1.1.1. $\mathbb{X}_a = [im\gamma_a(\varsigma) - 2S_{ab}(e,\varsigma)\partial^b]C, \mathbb{X}_a(p) = i[m\gamma_a(\varsigma) - 2S_{ab}(e,\varsigma)p^b]C$

Thm. 1.1.1.

$$\begin{cases}[\gamma^a(\varsigma)\partial_a + m]\psi_{\underbrace{[\lambda_\varsigma]\mu_\varsigma\eta_\varsigma\xi_\varsigma\cdot\cdot}_{2n}}(x) = 0\\ \psi_{\underbrace{[\lambda_\varsigma]\mu_\varsigma\eta_\varsigma\xi_\varsigma\cdot\cdot}_{2n}}(x)\ \textit{fully symmetric}\end{cases} \Leftrightarrow \begin{cases}(-\partial^c\partial_c + m^2)A_{\underbrace{ab\cdot\cdot}_{n}}(x) = 0\\ \delta^{ab}A_{\underbrace{ab\cdot\cdot}_{n}}(x) = 0, \partial^a A_{\underbrace{ab\cdot\cdot}_{n}}(x) = 0, A_{\underbrace{ab\cdot\cdot}_{n}}(x)\ \textit{fully symmetric}\\ \psi_{\underbrace{\lambda_\varsigma\mu_\varsigma\eta_\varsigma\xi_\varsigma\cdot\cdot}_{2n}}(x) = \frac{1}{2^n}\overbrace{\mathbb{X}^a_{\lambda_\varsigma\mu_\varsigma}\mathbb{X}^b_{\eta_\varsigma\xi_\varsigma}\cdot\cdot}^{n} A_{\underbrace{ab\cdot\cdot}_{n}}(x)\end{cases}$$

$$\psi_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdot\cdot}_{2n}}(\vec{r},t) = \frac{1}{(2\pi)^{3/2}}\int_{\vec{p}=-\infty}^{+\infty}\sum_{h=n}^{-n} E^{n-\frac{1}{2}}\sqrt{\frac{m}{E}}^{2n}[a(\vec{p},h)U_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdot\cdot}_{2n}}(\vec{p},h)e^{ip\cdot x} + b^+(\vec{p},h)V_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdot\cdot}_{2n}}(\vec{p},h)e^{-ip\cdot x}]d^3\vec{p}$$

$$A_{\underbrace{ab\cdot\cdot}_{n}}(\vec{r},t) = \frac{1}{(2\pi)^{3/2}}\int_{\vec{p}=-\infty}^{+\infty}\sum_{h=n}^{-n}\frac{1}{\sqrt{2^n E}}[a(\vec{p},h)\varepsilon_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)e^{ip\cdot x} + b^+(\vec{p},h)\tilde{\varepsilon}_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)e^{-ip\cdot x}]d^3\vec{p}$$

Self comment: By substituting their respective plane wave solutions into the above two equivalent equations and using Fourier component equivalence, the following two corollaries can be easily obtained. This above equation is a macroscopic structure, while the below equation is a microscopic structure, which is a mathematical atom.

Cor. 1.1.1.

$$\begin{cases}(i\gamma^a p_a + m)U_{\underbrace{[\lambda_\varsigma]\mu_\varsigma\eta_\varsigma\xi_\varsigma\cdot\cdot}_{2n}}(\vec{p},h) = 0\\ U_{\underbrace{\lambda_\varsigma\mu_\varsigma\eta_\varsigma\xi_\varsigma\cdot\cdot}_{2n}}(\vec{p},h)\ \textit{fully symmetric}, \varepsilon_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)\\ = \frac{1}{(i\sqrt{2})^n}\overbrace{(\bar{C}\gamma_a)^{\lambda_\varsigma\mu_\varsigma}(\bar{C}\gamma_b)^{\eta_\varsigma\xi_\varsigma}\cdot\cdot}^{n} U_{\underbrace{\lambda_\varsigma\mu_\varsigma\eta_\varsigma\xi_\varsigma\cdot\cdot}_{2n}}(\vec{p},h)\end{cases} \Leftrightarrow \begin{cases}(p^c p_c + m^2)\varepsilon_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h) = 0, \delta^{ab}\varepsilon_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h) = 0\\ p^a\varepsilon_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h) = 0, \varepsilon_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)\ \textit{fully symmetric}\\ U_{\underbrace{\lambda_\varsigma\mu_\varsigma\eta_\varsigma\xi_\varsigma\cdot\cdot}_{2n}}(\vec{p},h)\\ = \frac{1}{(2\sqrt{2}m)^n}\underbrace{\mathbb{X}^a_{\lambda_\varsigma\mu_\varsigma}(p)\mathbb{X}^b_{\eta_\varsigma\xi_\varsigma}(p)\cdot\cdot}_{n}\varepsilon_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)\end{cases}$$

Cor. 1.1.2.

$$\begin{cases}(-i\gamma^a p_a + m)V_{\underbrace{[\lambda_\varsigma]\mu_\varsigma\eta_\varsigma\xi_\varsigma\cdot\cdot}_{2n}}(\vec{p},h) = 0\\ V_{\underbrace{\lambda_\varsigma\mu_\varsigma\eta_\varsigma\xi_\varsigma\cdot\cdot}_{2n}}(\vec{p},h)\ \textit{fully symmetric}, \tilde{\varepsilon}_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)\\ = \frac{1}{(i\sqrt{2})^n}\overbrace{(\bar{C}\gamma_a)^{\lambda_\varsigma\mu_\varsigma}(\bar{C}\gamma_b)^{\eta_\varsigma\xi_\varsigma}\cdot\cdot}^{n} V_{\underbrace{\lambda_\varsigma\mu_\varsigma\eta_\varsigma\xi_\varsigma\cdot\cdot}_{2n}}(\vec{p},h)\end{cases} \Leftrightarrow \begin{cases}(p^c p_c + m^2)\tilde{\varepsilon}_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h) = 0, \delta^{ab}\tilde{\varepsilon}_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h) = 0\\ p^a\tilde{\varepsilon}_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h) = 0, \tilde{\varepsilon}_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)\ \textit{fully symmetric}\\ V_{\underbrace{\lambda_\varsigma\mu_\varsigma\eta_\varsigma\xi_\varsigma\cdot\cdot}_{2n}}(\vec{p},h)\\ = \frac{1}{(2\sqrt{2}m)^n}\underbrace{\mathbb{X}^a_{\lambda_\varsigma\mu_\varsigma}(-p)\mathbb{X}^b_{\eta_\varsigma\xi_\varsigma}(-p)\cdot\cdot}_{n}\tilde{\varepsilon}_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)\end{cases}$$

1.4 Strictly prove complete decomposition of K-G equation basis by mathematical induction

Thm. 1.4.1.

$$\begin{cases}\varepsilon_{\underbrace{a\cdot\cdot b\cdot\cdot c\cdot\cdot}_{n}}(\vec{p},n-2k)=\frac{1}{\sqrt{C_{2n}^{2k}}}\sum_{i=0}^{\min(k,n-k)}\frac{2^i}{(n-k-i)!(2i)!(k-i)!}\underbrace{\varepsilon_{\{a}(\vec{p},1)\cdot\cdot}_{n-k-i}\underbrace{\varepsilon_b(\vec{p},0)\cdot\cdot}_{2i}\underbrace{\varepsilon_{c\}}(\vec{p},-1)}_{k-i}\\ \varepsilon_{\underbrace{a\cdot\cdot b\cdot\cdot c\cdot\cdot}_{n}}(\vec{p},n-2k-1)=\frac{1}{\sqrt{C_{2n}^{2k+1}}}\sum_{i=0}^{\min(k,n-1-k)}\frac{2^i\sqrt{2}}{(n-k-i-1)!(2i+1)!(k-i)!}\underbrace{\varepsilon_{\{a}(\vec{p},1)\cdot\cdot}_{n-k-i-1}\underbrace{\varepsilon_b(\vec{p},0)\cdot\cdot}_{2i+1}\underbrace{\varepsilon_{c\}}(\vec{p},-1)}_{k-i}\end{cases}$$

Proof: Using mathematical induction to prove this theorem.

Step 1: When $n'=1$, the following is established.

$$\begin{cases}\varepsilon_{\underbrace{a\cdot\cdot b\cdot\cdot c\cdot\cdot}_{1}}(\vec{p},1-2k)=\frac{1}{\sqrt{C_{2}^{2k}}}\sum_{i=0}^{\min(k,1-k)}\frac{2^i}{(1-k-i)!(2i)!(k-i)!}\underbrace{\varepsilon_{\{a}(\vec{p},1)\cdot\cdot}_{1-k-i}\underbrace{\varepsilon_b(\vec{p},0)\cdot\cdot}_{2i}\underbrace{\varepsilon_{c\}}(\vec{p},-1)}_{k-i}\\ \varepsilon_{\underbrace{a\cdot\cdot b\cdot\cdot c\cdot\cdot}_{1}}(\vec{p},1-2k-1)=\frac{1}{\sqrt{C_{2}^{2k+1}}}\sum_{i=0}^{\min(k,1-1-k)}\frac{2^i\sqrt{2}}{(1-k-i-1)!(2i+1)!(k-i)!}\underbrace{\varepsilon_{\{a}(\vec{p},1)\cdot\cdot}_{1-k-i-1}\underbrace{\varepsilon_b(\vec{p},0)\cdot\cdot}_{2i+1}\underbrace{\varepsilon_{c\}}(\vec{p},-1)}_{k-i}\end{cases}$$

Step 2: Assume when $n'=n-1$, the following is established.

$$\begin{cases}\varepsilon_{\underbrace{a\cdot\cdot b\cdot\cdot c\cdot\cdot}_{n-1}}(\vec{p},(n-1)-2k)=\frac{1}{\sqrt{C_{2n-2}^{2k}}}\sum_{i=0}^{\min(k,n-1-k)}\frac{2^i}{(n-1-k-i)!(2i)!(k-i)!}\underbrace{\varepsilon_{\{a}(\vec{p},1)\cdot\cdot}_{n-1-k-i}\underbrace{\varepsilon_b(\vec{p},0)\cdot\cdot}_{2i}\underbrace{\varepsilon_{c\}}(\vec{p},-1)}_{k-i}\\ \varepsilon_{\underbrace{a\cdot\cdot b\cdot\cdot c\cdot\cdot}_{n-1}}(\vec{p},(n-1)-2k-1)=\frac{1}{\sqrt{C_{2n-2}^{2k+1}}}\sum_{i=0}^{\min(k,n-1-1-k)}\frac{2^i\sqrt{2}}{(n-1-k-i-1)!(2i+1)!(k-i)!}\underbrace{\varepsilon_{\{a}(\vec{p},1)\cdot\cdot}_{n-1-k-i-1}\underbrace{\varepsilon_b(\vec{p},0)\cdot\cdot}_{2i+1}\underbrace{\varepsilon_{c\}}(\vec{p},-1)}_{k-i}\end{cases}$$

Step 3: When $n'=n$, 1:

$$n!\varepsilon_{\underbrace{a\cdot\cdot b\cdot\cdot cd}_{n}}(\vec{p},h)$$

$$=\frac{\sqrt{C_{n+h}^2}}{\sqrt{C_{2n}^2}}\varepsilon_{\{\underbrace{a\cdot\cdot b\cdot\cdot c}_{n-1}}(\vec{p},h-1)\varepsilon_{d\}}(\vec{p},1)+\frac{\sqrt{C_{n+h}^1C_{n-h}^1}}{\sqrt{C_{2n}^2}}\varepsilon_{\{\underbrace{a\cdot\cdot b\cdot\cdot c}_{n-1}}(\vec{p},h)\varepsilon_{d\}}(\vec{p},0)+\frac{\sqrt{C_{n-h}^2}}{\sqrt{C_{2n}^2}}\varepsilon_{\{\underbrace{a\cdot\cdot b\cdot\cdot c}_{n-1}}(\vec{p},h+1)\varepsilon_{d\}}(\vec{p},-1)$$

This step proves that when $n'=n$, the proposition is established.
Step 4: Based on the above inductive reasoning, the theorem has been proved. □

Previously, this theorem was obtained only through intuition, speculation, trial and verification. After more than two years (2019-2022), I finally rigorously proved the above theorem by using mathematical induction. It seems that long-term persistence and continuous in-depth thinking are very important, sometimes more important than interest. This lays the foundation for completely proving

the Behrends-Frontsdal projection operator formula.

1.5 Recursive relations of quasi projection operator for K-G equation

$[\Updownarrow]$

Thm. 7.1.8. $[\psi_{k_\varsigma}(x), \psi^+_{k'_\varsigma}(x')] = i\frac{(-1)^{2n}}{2^{n-1}}\Gamma^{\overbrace{abc\cdot\cdot}^{2n}}_{k_\varsigma k'_\varsigma}(n)\overbrace{\partial_a\partial_b\partial_c\cdot\cdot}^{2s}\Delta(x-x')$

There are two equivalent expressions for the commutative relationship between potential A and field ψ, and they are mutually premises and causal each other. You can deduce everything from potential commutation relations, or you can deduce everything from field commutation relations too. This shows that the two descriptions of potential and field are completely equivalent for massive particles. And it can be deduced from the massive particle commutation rules which are completely similar to the massless particle commutation rules. But not vice versa.

7.2 Relations between commutation rules and quasi projection operators for massive boson

There are two equivalent expressions for the commutative relationship between potential A and field ψ, and they are mutually premises and causal each other. You can deduce everything from potential commutation relations, or you can deduce everything from field commutation relations too. This shows that the two descriptions of potential and field are completely equivalent for massive particles. And it can be deduced from the massive particle commutation rules which are completely similar to the massless particle commutation rules. But not vice versa.

7.4 Relations between commutation rules and quasi projection operators for massive fermion

Chapter26 Covariant Quantization Scheme for Real Particles with Mass

Self comment: Massive real particles are the Majorana particles etc. The positive and negative particles are the sam. In essence, mathematics can be completely described by real functions. It can be described by complex functions, but it must meet the Majorana condition. For particles described by the Bargmann-Wigner equation or Dirac equation, it is generally possible to describe both charged complex particles and uncharged Majorana particles. The principal commutation rule in both cases is consistent, but the rest are generally zero for charged complex particles. For uncharged Majorana particles, the rest of the commutative or anti commutative brackets are naturally derived from the principal commutative rule and Majorana conditions. And they are generally not zero. In this chapter, we discuss both the complex particle case and the Majorana particle case. The complete commutation rules for both cases are given. However, in latter chapters, we will generally not seek completeness, but only discuss the complex particle case and the principal commutation rule. The Majorana particle case is no longer specifically discussed. If we want to obtain the quantum field theory of the Majorana particle case, we only need to add the Majorana condition to the complex particle case. Then we will naturally obtain it. In this chapter, the corresponding quantum field theory is established for Majorana particles with any spin in a unified manner. Like complex particles, there is no need to know the hamiltonian. Then various massive spin particles can be quantized by using a unified new program. Unified quantization commutation rules and energy momentum operators for fields and potentials are given. And a partial quantum Poincare algebra is given too. Like complex particles, the angular momentum operator has only achieved partial success and has not been thoroughly resolved. Efforts are still needed. The problem of angular momentum operators is a difficult problem that needs to be solved urgently in the new quantization program.

1 Majorana equation

1.1 Majorana equation under real representation and Dirac separated representation [4]

Def. 1.1.1.

$$\begin{cases}(\gamma_s^a\partial_a+m)\psi_s=0,\gamma_s^a=(\sigma_{-\kappa}\sigma_{\kappa y},\varsigma\sigma_{\kappa x}),\psi_s^*=\psi_s\\(\gamma^a\partial_a+m)\psi=0,\gamma^a=(\sigma\otimes\sigma_y,\varsigma I\otimes\sigma_x),\psi^*=-e^{2i\theta}\sigma_y\otimes\sigma_y\psi\end{cases}$$

$$\begin{cases}\psi_s=S_s(\kappa,\theta)\psi,S_s(\kappa,\theta):=e^{i\theta}S_{em}(\kappa)\\S_s^T(\kappa,\theta)S_s(\kappa,\theta)=e^{2i\theta}S_{em}^T(\kappa)S_{em}(\kappa)=-e^{2i\theta}\sigma_y\otimes\sigma_y\end{cases},S_{em}(\kappa)=\frac{1}{\sqrt{2}}\begin{bmatrix}i&0&0&-i\\-1&0&0&-1\\0&-i&-i&0\\0&-\kappa&\kappa&0\end{bmatrix}$$

1.2 Majorana condition under real representation and Dirac separated representation

Cor. 1.2.1. $\psi_s=\psi_s^*\Leftrightarrow\psi^*=-e^{2i\theta}\sigma_y\otimes\sigma_y\psi,-\sigma_y\otimes\sigma_y=\bar{C}\gamma_4$

θ is adjust phase parameters, generally take 0 or $\pi/2$.

2 Majorana B-W equation

2.1 Majorana B-W equation under real representation and Dirac separated representation [16]

Def. 2.1.1.

$$\begin{cases}(\gamma_s^a\partial_a+m)_{\kappa_\varsigma}{}^{\lambda_\varsigma}\psi_{s\underbrace{\lambda_\varsigma\mu_\varsigma\cdot\cdot}_{2s}}(\vec{r},t)=0,\gamma_s^a=(\sigma_{-\kappa}\sigma_{\kappa y},\varsigma\sigma_{\kappa x}),\psi_s^*=\psi_s\\(\gamma^a\partial_a+m)_{\kappa_\varsigma}{}^{\lambda_\varsigma}\psi_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdot\cdot}_{2s}}(\vec{r},t)=0,\gamma^a=(\sigma\otimes\sigma_y,\varsigma I\otimes\sigma_x),\psi^*=(-1)^{2s}e^{4si\theta}\overbrace{\sigma_y\otimes\cdot\cdot\otimes\sigma_y}^{4s}\psi\end{cases}$$

2.2 Majorana condition under real representation and Dirac separated representation

Cor. 2.2.1.

$$\psi_s=\psi_s^*\Leftrightarrow\psi^*=(-1)^{2s}e^{4si\theta}\overbrace{\sigma_y\otimes\cdot\cdot\otimes\sigma_y}^{4s}\psi=e^{4si\theta}\overbrace{(\bar{C}\gamma_4)\otimes(\bar{C}\gamma_4)\cdot\cdot}^{2s}\psi$$

θ is adjust phase parameters, generally take 0 or $\pi/2$.

3 Plane wave solutions of Majorana B-W equation under separated representation

3.1 Lemma

Lem. 3.1.1. $\sum\limits_{h=s}^{-s} b^+(\vec{p},h)V_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdot\cdot\tau_\varsigma}_{2s}}(\vec{p},h)=(-1)^{2s}e^{-4si\theta}\sum\limits_{h=s}^{-s} a^+(\vec{p},h)\overbrace{\sigma_y\otimes\sigma_y\cdot\cdot}^{4s}U^+_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdot\cdot\tau_\varsigma}_{2s}}(\vec{p},h)$

$\Leftrightarrow b^+(\vec{p},h)=\varsigma^{2s}e^{-4si\theta}(-1)^{s+h}a^+(\vec{p},-h)\Leftrightarrow b(\vec{p},h)=\varsigma^{2s}e^{4si\theta}(-1)^{s+h}a(\vec{p},-h)$

Proof: $\sum\limits_{h=s}^{-s} b^+(\vec{p},h)V_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdot\cdot\tau_\varsigma}_{2s}}(\vec{p},h)=(-1)^{2s}e^{-4si\theta}\sum\limits_{h=s}^{-s} a^+(\vec{p},h)\overbrace{\sigma_y\otimes\sigma_y\cdot\cdot}^{4s}U^+_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdot\cdot\tau_\varsigma}_{2s}}(\vec{p},h)$

$=\varsigma^{2s}e^{-4si\theta}\sum\limits_{h=s}^{-s}(-1)^{s+h}a^+(\vec{p},-h)V_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdot\cdot\tau_\varsigma}_{2s}}(\vec{p},h)$

$\Leftrightarrow b^+(\vec{p},h)=\varsigma^{2s}e^{-4si\theta}(-1)^{s+h}a^+(\vec{p},-h)\Leftrightarrow b(\vec{p},h)=\varsigma^{2s}e^{4si\theta}(-1)^{s+h}a(\vec{p},-h)$ □

Lem. 3.1.2.

$$\begin{cases}[a(\vec{p},h),a^+(\vec{p}',h')]_{-^{2s+1}}=\delta_{hh'}\delta^3(\vec{p}-\vec{p}')\\ [a(\vec{p},h),a(\vec{p}',h')]_{-^{2s+1}}=0\\ [a^+(\vec{p},h),a^+(\vec{p}',h')]_{-^{2s+1}}=0\\ b^+(\vec{p},h)=\varsigma^{2s}e^{-4si\theta}(-1)^{s+h}a^+(\vec{p},-h)\\ b(\vec{p},h)=\varsigma^{2s}e^{4si\theta}(-1)^{s+h}a(\vec{p},-h)\end{cases}\Rightarrow\begin{cases}[b(\vec{p},h),b^+(\vec{p}',h')]_{-^{2s+1}}=\delta_{hh'}\delta^3(\vec{p}-\vec{p}')\\ [b(\vec{p},h),b(\vec{p}',h')]_{-^{2s+1}}=0\\ [b^+(\vec{p},h),b^+(\vec{p}',h')]_{-^{2s+1}}=0\\ [a(\vec{p},h),b^+(\vec{p}',h')]_{-^{2s+1}}=\varsigma^{2s}e^{-4si\theta}(-1)^{s-h}\delta_{-h,h'}\delta^3(\vec{p}-\vec{p}')\\ [a^+(\vec{p},h),b(\vec{p}',h')]_{-^{2s+1}}=-\varsigma^{2s}e^{4si\theta}(-1)^{s-h}\delta_{-h,h'}\delta^3(\vec{p}-\vec{p}')\\ [a(\vec{p},h),b(\vec{p}',h')]_{-^{2s+1}}=0\\ [a^+(\vec{p},h),b^+(\vec{p}',h')]_{-^{2s+1}}=0\end{cases}$$

3.2 Plane wave solutions of Majorana B-W equation [16] under separated representation (The proof needs to be supplemented.)

Thm. 3.2.1. $(\gamma^a\partial_a+m)_{\kappa_\varsigma}{}^{\lambda_\varsigma}\psi_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdot\cdot}_{2s}}(\vec{r},t)=0,\gamma^a=(\sigma\otimes\sigma_y,\varsigma I\otimes\sigma_x)$

$$A_{ab\cdot\cdot\tau_\varsigma}(\vec r,t)=\frac{1}{(2\pi)^{3/2}}\int\limits_{\vec p=-\infty}^{+\infty}\sum_{h=n}^{-n}\frac{\sqrt{m}}{\sqrt{2^nE}}[\varepsilon_{ab\cdot\cdot\tau_\varsigma}(\vec p,h)a(\vec p,h)e^{i(\vec p\cdot\vec r-Et)}+\tilde\varepsilon_{ab\cdot\cdot\tau_\varsigma}(\vec p,h)b^+(\vec p,h)e^{-i(\vec p\cdot\vec r-Et)}]d^3\vec p$$

7.2 Plane wave solutions of R-S equation with $s=n+\frac{1}{2}$ under separated representation

Cor. 7.2.1. $A_{ab\cdot\cdot\tau_\varsigma}(\vec r,t)=\frac{1}{(2\pi)^{3/2}}\int\limits_{\vec p=-\infty}^{+\infty}\sum_{h=n}^{-n}\frac{\sqrt{m}}{\sqrt{2^nE}}[\varepsilon_{ab\cdot\cdot\tau_\varsigma}(\vec p,h)a(\vec p,h)e^{i(\vec p\cdot\vec r-Et)}+\tilde\varepsilon_{ab\cdot\cdot\tau_\varsigma}(\vec p,h)b^+(\vec p,h)e^{-i(\vec p\cdot\vec r-Et)}]d^3\vec p$

Cor. 7.2.2. $A_{ab\cdot\cdot\tau_\varsigma}(\vec r,t)$

$$=\frac{1}{(2\pi)^{3/2}}\int\limits_{\vec p=-\infty}^{+\infty}\sum_{h=n}^{-n}\frac{\sqrt{m}}{\sqrt{2^nE}}\varepsilon_{ab\cdot\cdot\sigma_\varsigma}(\vec p,h)[\delta_{\tau_\varsigma}{}^{\sigma_\varsigma}a(\vec p,h)e^{i(\vec p\cdot\vec r-Et)}+(-1)^{h-\frac{1}{2}}e^{-(4n+2)i\theta}\gamma_{5\tau_\varsigma}{}^{\sigma_\varsigma}a^+(\vec p,-h)e^{-i(\vec p\cdot\vec r-Et)}]d^3\vec p$$

Thm. 7.2.1. $A^+_{ab\cdot\cdot\tau_\varsigma}(\vec r,t)=-e^{(4n+2)i\theta}\overbrace{\eta^{a'}_a\eta^{b'}_b\cdot\cdot}^{n}(\sigma_y\otimes\sigma_y)_{\tau_\varsigma}{}^{\tau'_\varsigma}A_{a'b'\cdot\cdot\tau'_\varsigma}(\vec r,t)=e^{(4n+2)i\theta}\overbrace{\eta^{a'}_a\eta^{b'}_b\cdot\cdot}^{n}(\bar C\gamma_4)_{\tau_\varsigma}{}^{\tau'_\varsigma}A_{a'b'\cdot\cdot\tau'_\varsigma}(\vec r,t)$

Proof: $-e^{-(4n+2)i\theta}\overbrace{\eta^{a'}_a\eta^{b'}_b\cdot\cdot}^{n}(\sigma_y\otimes\sigma_y)_{\tau_\varsigma}{}^{\tau'_\varsigma}A^+_{a'b'\cdot\cdot\tau'_\varsigma}(\vec r,t)$

$$=-\frac{1}{(2\pi)^{3/2}}\int\limits_{\vec p=-\infty}^{+\infty}\sum_{h=n}^{-n}\frac{\sqrt{m}}{\sqrt{2^nE}}$$

$$\overbrace{\eta^{a'}_a\eta^{b'}_b\cdot\cdot}^{n}\gamma_{2\tau_\varsigma}{}^{\tau'_\varsigma}\varepsilon^+_{a'b'\cdot\cdot\sigma'_\varsigma}(\vec p,h)[e^{-(4n+2)i\theta}\delta_{\tau'_\varsigma}{}^{\sigma'_\varsigma}a^+(\vec p,h)e^{-i(\vec p\cdot\vec r-Et)}+(-1)^{h-\frac{1}{2}}\gamma_{5\tau_\varsigma}{}^{\sigma_\varsigma}a(\vec p,-h)e^{i(\vec p\cdot\vec r-Et)}]d^3\vec p$$

$$=-\frac{1}{(2\pi)^{3/2}}\int\limits_{\vec p=-\infty}^{+\infty}\sum_{h=n}^{-n}\frac{\sqrt{m}}{\sqrt{2^nE}}\varepsilon_{\underbrace{ab\cdot\cdot}_{n}\tau'_\varsigma}(\vec p,-h)[(-1)^{h-\frac{1}{2}}e^{-(4n+2)i\theta}\gamma_{5\tau_\varsigma}{}^{\tau'_\varsigma}a^+(\vec p,h)e^{-i(\vec p\cdot\vec r-Et)}-\delta_{\tau_\varsigma}{}^{\tau'_\varsigma}a(\vec p,-h)e^{i(\vec p\cdot\vec r-Et)}]d^3\vec p$$

$$=\frac{1}{(2\pi)^{3/2}}\int\limits_{\vec p=-\infty}^{+\infty}\sum_{h=n}^{-n}\frac{\sqrt{m}}{\sqrt{2^nE}}\varepsilon_{\underbrace{ab\cdot\cdot}_{n}\sigma_\varsigma}(\vec p,h)[(-1)^{h-\frac{1}{2}}e^{-(4n+2)i\theta}\gamma_{5\tau_\varsigma}{}^{\sigma_\varsigma}a^+(\vec p,-h)e^{-i(\vec p\cdot\vec r-Et)}+\delta_{\tau_\varsigma}{}^{\sigma_\varsigma}a(\vec p,h)e^{i(\vec p\cdot\vec r-Et)}]d^3\vec p$$

$=A_{ab\cdot\cdot\tau_\varsigma}(\vec r,t)$ □

From the above conclusion it can be seen that in order to maintain the real property of potential $A_{ab\cdot\cdot}$, it is appropriate to take θ=0 or $\pi/2$. But taking $\theta=0$ is simpler.

7.3 Isochronous quantization rules for Majorana B-W equation under separated representation

Thm. 7.3.1.

[⇕]

Thm. 8.2.7. $[\psi_{k_\varsigma}(x),\psi^+_{k'_\varsigma}(x')]=i\frac{(-1)^{2n}}{2^{n-1}}\Gamma^{\overbrace{abc\cdots}^{2n}}_{k_\varsigma k'_\varsigma}(n)\overbrace{\partial_a\partial_b\partial_c\cdots}^{2s}\Delta(x-x')$

There are two equivalent expressions for the commutative relationship between potential A and field ψ, and they are mutually premises and causal each other. You can deduce everything from potential commutation relations, or you can deduce everything from field commutation relations too. This shows that the two descriptions of potential and field are completely equivalent for massive particles. And it can be deduced from the massive particle commutation rules which are completely similar to the massless particle commutation rules. But not vice versa.

8.3 Card anticommutation rules for Majorana fermion under separated representation

Thm. 8.3.1. $\{A_{a_1a_2\cdots a_n\tau_\varsigma}(x),A^+_{a'_1a'_2\cdots a'_n\tau'_\varsigma}(x')\}=i\hat{P}_{a_1\cdots a_n\tau_\varsigma a'_1\cdots a'_n\tau'_\varsigma}(n+\frac{1}{2})\Delta(x-x')$

[⇕]

Thm. 8.3.2.

There are two equivalent expressions for the commutative relationship between potential A and field ψ, and they are mutually premises and causal each other. You can deduce everything from potential commutation relations, or you can deduce everything from field commutation relations too. This shows that the two descriptions of potential and field are completely equivalent for massive particles. And it can be deduced from the massive particle commutation rules which are completely similar to the massless particle commutation rules. But not vice versa.

Def. 10.1.2. $\mathbb{X}^a_s\equiv[im\gamma^a_s(\varsigma)-2S^{ab}_s(e,\varsigma)\partial_b]C_s,\mathbb{X}^a_s(p)\equiv i[m\gamma^a_s(\varsigma)-2S^{ab}_s(e,\varsigma)p_b]C_s,C_s:=-\gamma^2_s\gamma^4_s\gamma^2$

There are two equivalent expressions for the commutative relationship between potential A and field ψ, and they are mutually premises and causal each other. You can deduce everything from potential commutation relations, or you can deduce everything from field commutation relations too. This shows that the two descriptions of potential and field are completely equivalent for massive particles. And it can be deduced from the massive particle commutation rules which are completely similar to the massless particle commutation rules. But not vice versa.

10.2 Card anticommutation rules for Majorana fermion under real representation

Def. 10.2.1. $\hat{P}_{sa_1\cdot\cdot a_n\tau_\varsigma a'_1\cdot\cdot a'_n\tau'_\varsigma}(n+\frac{1}{2})=\frac{n+1}{2n+3}\hat{P}_{aa_1\cdot\cdot a_na'a'_1\cdot\cdot a'_n}(n+1)[\gamma^a_s(-m-\gamma^c_s\partial_c)\gamma^4_s\gamma^{a'}_s]_{\tau_\varsigma\tau'_\varsigma},\gamma^{a'}_s=\gamma^a_s\eta^{a'}_a$

There are two equivalent expressions for the commutative relationship between potential A and field ψ, and they are mutually premises and causal each other. You can deduce everything from potential commutation relations, or you can deduce everything from field commutation relations too. This shows that the two descriptions of potential and field are completely equivalent for massive particles. And it can be deduced from the massive particle commutation rules which are completely similar to the massless particle commutation rules. But not vice versa.

Chapter27 Covariant quantization scheme for massive vector particles

Self comment: For particles described by the Bargmann Wigner equation, it is generally possible to describe both charged complex particles and uncharged Majorana particles. The principal commutation rule in both cases is consistent, but the rest are generally zero for charged complex particles. For uncharged Majorana particles, the rest of the commutative or anti commutative brackets are naturally derived from the principal commutative rule and Majorana conditions. And they are generally not zero. In this chapter, we discuss both the complex particle case and the Majorana particle case. The complete commutation rules for both cases are given. However, in latter chapters, we will generally not seek completeness, but only discuss the complex particle case and the principal commutation rule. The Majorana particle case is no longer specifically discussed. If we want to obtain the quantum field theory of the Majorana particle case, we only need to add the Majorana condition to the complex particle case. Then we will naturally obtain it.

1 Mutual conversion of two equivalent descriptions for massive vector particles

1.1 Two equivalent descriptions of B-W and K-G equation for spin-1 particles [16, 20, 21]

Def. 1.1.1. $\mathbb{X}_a(x) := [im\gamma_a(\varsigma) - 2S_{ab}(e,\varsigma)\partial^b]C, \mathbb{X}_a(p) := i[m\gamma_a(\varsigma) - 2S_{ab}(e,\varsigma)p^b]C, C = \gamma_2\gamma_4$
$\gamma_a = (\sigma \otimes \sigma_y, \varsigma I \otimes \sigma_x)$

Thm. 1.1.1. $\begin{cases}[\gamma^a(\varsigma)\partial_a + m]\psi_{[\lambda_\varsigma\mu_\varsigma]} = 0, \psi_{\lambda_\varsigma\mu_\varsigma} = \psi_{\mu_\varsigma\lambda_\varsigma} \\ im\frac{A_a}{2} = \frac{1}{4}tr[\bar{C}\gamma_a(\varsigma)\psi_{[\lambda_\varsigma\mu_\varsigma]}], C = \gamma_y(\varsigma)\gamma_4(\varsigma)\end{cases} \Leftrightarrow \begin{cases}\partial^b F_{ab} + m^2 A_a = 0, F_{ab} = \partial_a A_b - \partial_b A_a \\ \psi_{\lambda_\varsigma\mu_\varsigma} = \mathbb{X}^a_{\lambda_\varsigma\mu_\varsigma}(x)\frac{A_a}{2}\end{cases}$

Thm. 1.1.2. $\mathbb{X}^a_{\lambda_\varsigma\mu_\varsigma}(p)(\eta_{aa'} + \frac{p_a p^+_{a'}}{m^2})\mathbb{X}^{+a'}_{\lambda'_\varsigma\mu'_\varsigma}(p) = \frac{1}{2}[(m - i\gamma^a p_a)\gamma^4]_{\{\lambda_\varsigma(\lambda'_\varsigma}[(m - i\gamma^b p_b)\gamma^4]_{\mu_\varsigma\}\mu'_\varsigma)}$

1.2 Plane wave solutions of Bargmann-Wigner equation for spin-1 particles [16]

Thm. 1.2.1. $(\gamma^a\partial_a + m)_{\kappa_\varsigma}{}^{\lambda_\varsigma}\psi_{\lambda_\varsigma\mu_\varsigma}(\vec{r},t) = 0, \psi_{\lambda_\varsigma\mu_\varsigma}(\vec{r},t) = \frac{1}{2!}\psi_{\{\lambda_\varsigma\mu_\varsigma\}}(\vec{r},t)$

$$\psi_{\lambda_\varsigma\mu_\varsigma}(\vec{r},t) = \frac{1}{(2\pi)^{3/2}}\int_{\vec{p}=-\infty}^{+\infty}\sum_{h=1}^{-1}\sqrt{\frac{m^2}{E}}[a(\vec{p},h)U_{\lambda_\varsigma\mu_\varsigma}(\vec{p},h)e^{i(\vec{p}\cdot\vec{r}-Et)} + b^+(\vec{p},h)V_{\lambda_\varsigma\mu_\varsigma}(\vec{p},h)e^{-i(\vec{p}\cdot\vec{r}-Et)}]d^3\vec{p}$$

$$\begin{cases}U_{\lambda_\varsigma\mu_\varsigma}(\vec{p},1) = u_{\lambda_\varsigma}(\vec{p},\frac{1}{2})u_{\mu_\varsigma}(\vec{p},\frac{1}{2}), U_{\lambda_\varsigma\mu_\varsigma}(\vec{p},-1) = u_{\lambda_\varsigma}(\vec{p},-\frac{1}{2})u_{\mu_\varsigma}(\vec{p},-\frac{1}{2}) \\ U_{\lambda_\varsigma\mu_\varsigma}(\vec{p},0) = \frac{1}{\sqrt{2}}[u_{\lambda_\varsigma}(\vec{p},\frac{1}{2})u_{\mu_\varsigma}(\vec{p},-\frac{1}{2}) + u_{\lambda_\varsigma}(\vec{p},-\frac{1}{2})u_{\mu_\varsigma}(\vec{p},\frac{1}{2})]\end{cases}$$

$$\begin{cases}V_{\lambda_\varsigma\mu_\varsigma}(\vec{p},1) = v_{\lambda_\varsigma}(\vec{p},\frac{1}{2})v_{\mu_\varsigma}(\vec{p},\frac{1}{2}), V_{\lambda_\varsigma\mu_\varsigma}(\vec{p},-1) = v_{\lambda_\varsigma}(\vec{p},-\frac{1}{2})v_{\mu_\varsigma}(\vec{p},-\frac{1}{2}) \\ V_{\lambda_\varsigma\mu_\varsigma}(\vec{p},0) = \frac{1}{\sqrt{2}}[v_{\lambda_\varsigma}(\vec{p},\frac{1}{2})v_{\mu_\varsigma}(\vec{p},-\frac{1}{2}) + v_{\lambda_\varsigma}(\vec{p},-\frac{1}{2})v_{\mu_\varsigma}(\vec{p},\frac{1}{2})]\end{cases}$$

$$\begin{cases}a(\vec{p},h) = \frac{1}{(2\pi)^{3/2}}\int_{\vec{p}=-\infty}^{+\infty}\sqrt{\frac{m^2}{E^3}}U^{+\lambda_\varsigma\mu_\varsigma}(\vec{p},h)\psi_{\lambda_\varsigma\mu_\varsigma}(\vec{r},t)e^{-i(\vec{p}\cdot\vec{r}-Et)}d^3\vec{r} \\ b^+(\vec{p},s) = \frac{1}{(2\pi)^{3/2}}\int_{\vec{p}=-\infty}^{+\infty}\sqrt{\frac{m^2}{E^3}}V^{+\lambda_\varsigma\mu_\varsigma}(\vec{p},h)\psi_{\lambda_\varsigma\mu_\varsigma}(\vec{r},t)e^{i(\vec{p}\cdot\vec{r}-Et)}d^3\vec{r}\end{cases}$$

Thm. 1.2.2. $[\psi_{\lambda_\varsigma\mu_\varsigma}(x), \psi^+_{\lambda'_\varsigma\mu'_\varsigma}(x')]$

$= \frac{i}{8}[(m - \gamma^a\partial_a)\gamma^4]_{\{\lambda_\varsigma(\lambda'_\varsigma}[(m - \gamma^b\partial_b)\gamma^4]_{\mu_\varsigma\}\mu'_\varsigma)}\Delta(x - x') = \frac{i}{4}\mathbb{X}^a_{\lambda_\varsigma\mu_\varsigma}(x)\mathbb{X}^{+a'}_{\lambda'_\varsigma\mu'_\varsigma}(x')[\eta_{aa'} - \frac{\partial_a\partial^+_{a'}}{m^2}]\Delta(x - x')$

Thm. 2.3.2. $[\psi_{\alpha_\varsigma}(x), \psi^+_{\alpha'_\varsigma}(x')] = i\sigma^{ab}_{\alpha_\varsigma\alpha'_\varsigma}\partial_a\partial_b\Delta(x-x')$

2.4 Summary of third equivalent description for massive vector particle equation

Thm. 2.4.1. $(\partial_a + iS_{ab}\partial^b)_{\beta_\varsigma}{}^{\alpha_\varsigma}\psi_{\alpha_\varsigma} = \frac{i}{\sqrt{2}} im^2\sigma^{ab}_{\varsigma\beta_\varsigma}A_b, \psi_{\alpha_\varsigma} := \frac{i}{\sqrt{2}}\frac{i}{2}\sigma^{ab}_{\varsigma\alpha_\varsigma}F_{ab}, S_{ab} := i\sigma^{\alpha_\varsigma}_{\varsigma ab}\gamma_{\alpha_\varsigma}$

$$A_a(\vec{r},t) = \frac{1}{(2\pi)^{3/2}} \int_{\vec{p}=-\infty}^{+\infty} \sum_{h=1}^{-1} \frac{1}{\sqrt{2E}}\varepsilon_a(\vec{p},h)[a(\vec{p},h)e^{i(\vec{p}\cdot\vec{r}-Et)} - b^+(\vec{p},h)e^{-i(\vec{p}\cdot\vec{r}-Et)}]d^3\vec{p}$$

$$F_{ab}(\vec{r},t) = \frac{1}{(2\pi)^{3/2}} \int_{\vec{p}=-\infty}^{+\infty} \sum_{h=1}^{-1} \frac{1}{\sqrt{2E}}\lambda_{ab}(\vec{p},h)[a(\vec{p},h)e^{i(\vec{p}\cdot\vec{r}-Et)} + b^+(\vec{p},h)e^{-i(\vec{p}\cdot\vec{r}-Et)}]d^3\vec{p}$$

$$\psi_{\alpha_\varsigma}(\vec{r},t) = \frac{1}{(2\pi)^{3/2}} \int_{\vec{p}=-\infty}^{+\infty} \sum_{h=1}^{-1} \frac{1}{\sqrt{2E}}\lambda_{\alpha_\varsigma}(\vec{p},h)[a(\vec{p},h)e^{i(\vec{p}\cdot\vec{r}-Et)} + b^+(\vec{p},h)e^{-i(\vec{p}\cdot\vec{r}-Et)}]d^3\vec{p}$$

Thm. 2.4.2. $\begin{cases} \sum_{h=1}^{-1} \varepsilon_a(\vec{p},h)\varepsilon^+_{a'}(\vec{p},h) = \eta_{aa'} + \frac{p_a p^+_{a'}}{m^2} \\ \sum_{h=1}^{-1} \lambda_{ab}(\vec{p},h)\lambda^+_{a'b'}(\vec{p},h) = p_{[a}p^+_{[a'}\eta_{b]b']} \\ \sum_{h=1}^{-1} \lambda_{\alpha_\varsigma}(\vec{p},h)\lambda^+_{\alpha'_\varsigma}(\vec{p},h) = -\sigma^{ab}_{\alpha_\varsigma\alpha'_\varsigma}p_a p_b \end{cases}$ $\begin{cases} [A_a(x), A^+_{a'}(x')] = i(\eta_{aa'} - \frac{\partial_a\partial^+_{a'}}{m^2})\Delta(x-x') \\ [F_{ab}(x), F^+_{a'b'}(x')] = -i\eta_{[a[a'}\partial_{b]}\partial^+_{b']}\Delta(x-x') \\ [\psi_{\alpha_\varsigma}(x), \psi^+_{\alpha'_\varsigma}(x')] = i\sigma^{ab}_{\alpha_\varsigma\alpha'_\varsigma}\partial_a\partial_b\Delta(x-x') \end{cases}$

2.5 $m \to 0$ formally derived photon case

Thm. 2.5.1. $(\partial_a + iS_{ab}\partial^b)_{\beta_\varsigma}{}^{\alpha_\varsigma}\psi_{\alpha_\varsigma} \to 0, \psi_{\alpha_\varsigma} := \frac{i}{\sqrt{2}}\frac{i}{2}\sigma^{ab}_{\varsigma\alpha_\varsigma}F_{ab}, S_{ab} := i\sigma^{\alpha_\varsigma}_{\varsigma ab}\gamma_{\alpha_\varsigma}$

$$A_a(\vec{r},t) = \frac{1}{(2\pi)^{3/2}} \int_{\vec{p}=-\infty}^{+\infty} \sum_{h=1}^{-1} \frac{1}{\sqrt{2E}}\varepsilon_a(\vec{p},h)[a(\vec{p},h)e^{i(\vec{p}\cdot\vec{r}-Et)} - b^+(\vec{p},h)e^{-i(\vec{p}\cdot\vec{r}-Et)}]d^3\vec{p} \to \infty$$

$$F_{ab}(\vec{r},t) = \frac{1}{(2\pi)^{3/2}} \int_{\vec{p}=-\infty}^{+\infty} \sum_{h=1}^{-1} \frac{1}{\sqrt{2E}}\lambda_{ab}(\vec{p},h)[a(\vec{p},h)e^{i(\vec{p}\cdot\vec{r}-Et)} + b^+(\vec{p},h)e^{-i(\vec{p}\cdot\vec{r}-Et)}]d^3\vec{p} \to \infty$$

$$\psi_{\alpha_\varsigma}(\vec{r},t) \to \frac{-\varsigma}{(2\pi)^{3/2}} \int_{\vec{p}=-\infty}^{+\infty} \sqrt{|\vec{p}|}\lambda_{m\alpha_\varsigma}(\vec{p},-\varsigma)[a(\vec{p},-\varsigma)e^{i(\vec{p}\cdot\vec{r}-Et)} + b^+(\vec{p},-\varsigma)e^{-i(\vec{p}\cdot\vec{r}-Et)}]d^3\vec{p}$$

Cor. 2.5.1. $\varepsilon_a(\vec{p},1) = [i\lambda_m(\vec{p},1),0]_a, \varepsilon_a(\vec{p},0) = \frac{1}{m}[iE\lambda_m(\vec{p},0), i|\vec{p}|]_a \to \infty, \varepsilon_a(\vec{p},-1) = [i\lambda_m(\vec{p},-1),0]_a$

Cor. 2.5.2. $\lambda_{\alpha_\varsigma}(\vec{p},-\varsigma) \to \sqrt{2}|\vec{p}|\lambda_{m\alpha_\varsigma}(\vec{p},-\varsigma), \lambda_{\alpha_\varsigma}(\vec{p},\varsigma) \to 0, \lambda_{\alpha_\varsigma}(\vec{p},0) \to 0$

Cor. 2.5.3. $\begin{cases} [A_a(x), A^+_{a'}(x')] = i(\eta_{aa'} - \frac{\partial_a\partial^+_{a'}}{m^2})\Delta(x-x') \to \infty \\ [F_{ab}(x), F^+_{a'b'}(x')] = -i\eta_{[a[a'}\partial_{b]}\partial^+_{b']}\Delta(x-x') \\ [\psi_{\alpha_\varsigma}(x), \psi^+_{\alpha'_\varsigma}(x')] = i\sigma^{ab}_{\alpha_\varsigma\alpha'_\varsigma}\partial_a\partial_b\Delta(x-x') \end{cases}$

From the above, we can be seen when $m \to 0$ then $A_a, F_{ab} \to \infty$. And it will become meaningless. But ψ_{α_ς} still makes sense and can be naturally transitioned. It is rewrote below. Of course, the strict approach still requires the method about massless particles. And here is only a formal derivation.

Cor. 2.5.4. $(\partial_a + iS_{ab}\partial^b)_{\beta_\varsigma}{}^{\alpha_\varsigma}\psi_{\alpha_\varsigma} \to 0$

$$\psi_{\alpha_\varsigma}(\vec{r},t) \to \frac{-\varsigma}{(2\pi)^{3/2}} \int_{\vec{p}=-\infty}^{+\infty} \sqrt{|\vec{p}|}\lambda_{m\alpha_\varsigma}(\vec{p},-\varsigma)[a(\vec{p},-\varsigma)e^{i(\vec{p}\cdot\vec{r}-Et)} + b^+(\vec{p},-\varsigma)e^{-i(\vec{p}\cdot\vec{r}-Et)}]d^3\vec{p}$$

$\lambda_{\alpha_\varsigma}(\vec{p},-\varsigma)\lambda^+_{\alpha'_\varsigma}(\vec{p},-\varsigma) = -\sigma^{ab}_{\alpha_\varsigma\alpha'_\varsigma}p_a p_b, [\psi_{\alpha_\varsigma}(x), \psi^+_{\alpha'_\varsigma}(x')] = i\sigma^{ab}_{\alpha_\varsigma\alpha'_\varsigma}\partial_a\partial_b\Delta(x-x')$

3 Intuitive proof method of two representations equivalence for massive vector field

Self comment: The simple and ingenious analytical proof method has been given in the previous chapter, so why should other proof methods be given? here are three reasons: first, I was the first to prove it by using this complex and intuitive method. The second is that in this complex proof process, all commutative rules with mass vector field decomposition can be obtained incidentally. Third, we can obtain a set of useful identities. I have encountered such similar cases many times. Different proof methods often require completely different mathematical skills. Some abstract proofs are concise, but the details are unclear. Sometimes it is clearly demonstrated, and there is always some suspicion because it is not intuitive and too abstract. Constructive proofs are sometimes concise and sometimes cumbersome. But every step can be clearly seen.

3.1 Mathematical preparation

3.1.1 Introduction of constant invariant tensor $\Gamma_{\lambda_\varsigma\mu_\varsigma\eta_\varsigma\xi_\varsigma}$

Def. 3.1.1. $\Gamma^a_{\lambda_\varsigma\mu_\varsigma} := [\gamma^a(\varsigma)C]_{\lambda_\varsigma\mu_\varsigma} = \begin{bmatrix} 0^a_{A_\varsigma B_\varsigma} & [(\sigma,i\varsigma)\sigma_y]^a_{A_\varsigma}{}^{B'_\varsigma} \\ [(\sigma,-i\varsigma)\sigma_y]_a{}^{A'_\varsigma}{}_{B_\varsigma} & 0_a^{A'_\varsigma B'_\varsigma} \end{bmatrix}$

Def. 3.1.2. $\Gamma^{ab}_{\lambda_\varsigma\mu_\varsigma\eta_\varsigma\xi_\varsigma} := \Gamma^a_{\lambda_\varsigma\mu_\varsigma}\Gamma^b_{\eta_\varsigma\xi_\varsigma}, \Gamma_{\lambda_\varsigma\mu_\varsigma\eta_\varsigma\xi_\varsigma} := \Gamma^a_{\lambda_\varsigma\mu_\varsigma}\delta_{ab}\Gamma^b_{\eta_\varsigma\xi_\varsigma}$

Pro. 3.1.1.
$\Gamma_{\lambda_\varsigma\mu_\varsigma\eta_\varsigma\xi_\varsigma} = \Gamma_{\mu_\varsigma\lambda_\varsigma\eta_\varsigma\xi_\varsigma}, \Gamma_{\lambda_\varsigma\mu_\varsigma\eta_\varsigma\xi_\varsigma} = \Gamma_{\lambda_\varsigma\mu_\varsigma\xi_\varsigma\eta_\varsigma}, \Gamma_{\lambda_\varsigma\mu_\varsigma\eta_\varsigma\xi_\varsigma} = \Gamma_{\eta_\varsigma\xi_\varsigma\lambda_\varsigma\mu_\varsigma}$
$\Gamma_{1_\varsigma 3_\varsigma 2_\varsigma 4_\varsigma} = \Gamma_{3_\varsigma 1_\varsigma 2_\varsigma 4_\varsigma} = \Gamma_{1_\varsigma 3_\varsigma 4_\varsigma 2_\varsigma} = \Gamma_{3_\varsigma 1_\varsigma 4_\varsigma 2_\varsigma} = 1,$
$\Gamma_{2_\varsigma 4_\varsigma 1_\varsigma 3_\varsigma} = \Gamma_{2_\varsigma 4_\varsigma 3_\varsigma 1_\varsigma} = \Gamma_{4_\varsigma 2_\varsigma 1_\varsigma 3_\varsigma} = \Gamma_{4_\varsigma 2_\varsigma 3_\varsigma 1_\varsigma} = 1,$
$\Gamma_{1_\varsigma 4_\varsigma 2_\varsigma 3_\varsigma} = \Gamma_{4_\varsigma 1_\varsigma 2_\varsigma 3_\varsigma} = \Gamma_{1_\varsigma 4_\varsigma 3_\varsigma 2_\varsigma} = \Gamma_{4_\varsigma 1_\varsigma 3_\varsigma 2_\varsigma} = -1,$
$\Gamma_{2_\varsigma 3_\varsigma 1_\varsigma 4_\varsigma} = \Gamma_{2_\varsigma 3_\varsigma 4_\varsigma 1_\varsigma} = \Gamma_{3_\varsigma 2_\varsigma 1_\varsigma 4_\varsigma} = \Gamma_{3_\varsigma 2_\varsigma 4_\varsigma 1_\varsigma} = -1$
$\Gamma_{rest} = 0, \Gamma_{\{\lambda_\varsigma\mu_\varsigma\eta_\varsigma\xi_\varsigma\}} = 0$

Pro. 3.1.2. $\Gamma_{\lambda_\varsigma\mu_\varsigma\eta_\varsigma\xi_\varsigma} = (-1)^{\lambda_\varsigma+\mu_\varsigma}u(\lambda_\varsigma+\mu_\varsigma-3)u(\eta_\varsigma+\xi_\varsigma-3)|\varepsilon_{\lambda_\varsigma\mu_\varsigma\eta_\varsigma\xi_\varsigma}|$

3.1.2 Matrix expansion of various quantities

Lem. 3.1.1. $\gamma^a = (\sigma\otimes\sigma_y, \varsigma I\otimes\sigma_x) = i\begin{bmatrix} 0 & -(\sigma,i\varsigma) \\ (\sigma,-i\varsigma) & 0 \end{bmatrix}, S_{ab}(\varsigma) = \frac{i}{2}\sigma^{\alpha_\varsigma}_{\varsigma ab}\sigma_{\alpha_\varsigma} = -\frac{i}{4}(\sigma,i\varsigma)_{[a}(\sigma,-i\varsigma)_{b]}$

Lem. 3.1.2. $im\gamma^a(\varsigma)C = \begin{bmatrix} 0 & im(\sigma,i\varsigma)\sigma_y \\ im(\sigma,-i\varsigma)\sigma_y & 0 \end{bmatrix}$

5 Massive Majorana vector field(take $\theta = 0$)

5.1 Comparison between massive Majorana vector field and massive vector field

The above conclusions for massive vector fields in this chapter are also valid for massive Majorana vector fields, but the following additional conditions must be added.

Thm. 5.1.1. $\psi = \gamma_2 \otimes \gamma_2 \psi^*, A_a = A^+_{a'} \eta^{a'}_a (F_{ab} = F^+_{a'b'} \eta^{a'}_a \eta^{b'}_b), b^+(\vec{p}, h) = (-1)^{s+h} a^+(\vec{p}, -h)$

The following is a detailed comparison and discussion of the difference between a massive Majorana vector field and a massive complex vector field.

5.2 Derive equivalent commutation rules of various physical quantities for spin-1 particles

5.2.1 Redefinition

Def. 5.2.1. *Third definition of electromagnetic field vector*

$$\begin{cases} F_{ab} := \partial_a A_b - \partial_b A_a \\ \psi_{\alpha_\varsigma} := -\frac{1}{2\sqrt{2}} \sigma^{ab}_{\varsigma\alpha_\varsigma} F_{ab} = -\frac{\varsigma}{\sqrt{2}} (E - i\varsigma B)_{\alpha_\varsigma} \\ \psi_{A_\varsigma B_\varsigma} := \frac{i\varsigma}{\sqrt{2}} \sigma^{\alpha_\varsigma}_{A_\varsigma B_\varsigma} \psi_{\alpha_\varsigma} \Leftrightarrow \psi_{\alpha_\varsigma} = \frac{i\varsigma}{\sqrt{2}} \sigma^{A_\varsigma B_\varsigma}_{\alpha_\varsigma} \psi_{A_\varsigma B_\varsigma} \end{cases} \Rightarrow \begin{cases} \psi_{A_\varsigma B_\varsigma} = -\varsigma S^{ab}{}_{A_\varsigma B_\varsigma} F_{ab} \\ F_{ab} = \frac{1}{\sqrt{2}} (\sigma^{\alpha_{-\varsigma}}_{-\varsigma ab} \psi_{\alpha_{-\varsigma}} + \sigma^{\alpha_\varsigma}_{\varsigma ab} \psi_{\alpha_\varsigma}) \\ *F_{ab} = \frac{\varsigma}{\sqrt{2}} (\sigma^{\alpha_{-\varsigma}}_{-\varsigma ab} \psi_{\alpha_{-\varsigma}} - \sigma^{\alpha_\varsigma}_{\varsigma ab} \psi_{\alpha_\varsigma}) \end{cases}$$

5.3 Equivalent commutation rules for $\psi_{\lambda_\varsigma \mu_\varsigma}$ and (A_a, F_{ab})

5.3.1 Common commutation rules for complex and real fields

Thm. 5.3.1.

Chapter28 Covariant Quantization Scheme for Massive Gravitino

Self comment: For particles described by the Bargmann Wigner equation, it is generally possible to describe both charged complex particles and uncharged Mayorana particles. The principal commutation rule in both cases is consistent, but the rest are generally zero for charged complex particles. For uncharged Mayorana particles, the rest of the commutative or anti commutative brackets are naturally derived from the principal commutative rule and Mayorana conditions. And they are generally not zero. In this chapter, we only discuss the case of complex particles and generally only give the principal commutation rule. The Mayorana particle case is no longer specifically discussed. If we want to obtain the quantum field theory of the Mayorana particle case, we only need to add the Mayorana condition to the complex particle case. Then we will naturally obtain it.

1 Mutual conversion of two equivalent descriptions for massive gravitino

1.1 Two equivalent descriptions of B-W equation and R-S equation for spin-$\frac{3}{2}$ particles [16, 17, 20]

Thm. 1.1.1. $\begin{cases}(\gamma^a\partial_a+m)_{\kappa_\varsigma}{}^{\lambda_\varsigma}\psi_{\lambda_\varsigma\mu_\varsigma\eta_\varsigma}=0\\ \psi_{\lambda_\varsigma\mu_\varsigma\eta_\varsigma}=\frac{1}{3!}\psi_{\{\lambda_\varsigma\mu_\varsigma\eta_\varsigma\}}\\ im\frac{A_{a\eta_\varsigma}}{2}=\frac{1}{4}tr[\bar{C}\gamma_a(\varsigma)\psi_{\lambda_\varsigma\mu_\varsigma\eta_\varsigma}]\end{cases}\Leftrightarrow\begin{cases}[\gamma^b(\varsigma)\partial_b+m]A_{a[\eta_\varsigma]}=0\\ \gamma^a(\varsigma)A_{a[\eta_\varsigma]}=0\\ \psi_{\lambda_\varsigma\mu_\varsigma\eta_\varsigma}=\mathbb{X}^a_{\lambda_\varsigma\mu_\varsigma}(x)\frac{A_{a\eta_\varsigma}}{2}\end{cases}$

Thm. 1.1.2. $\mathbb{X}^a_{\lambda_\varsigma\mu_\varsigma}(p)(\eta_{aa'}+\frac{p_ap^+_{a'}}{m^2})\mathbb{X}^{+a'}_{\lambda'_\varsigma\mu'_\varsigma}(p)=\frac{1}{2}[(m-i\gamma^ap_a)\gamma^4]_{\{\lambda_\varsigma(\lambda'_\varsigma}[(m-i\gamma^bp_b)\gamma^4]_{\mu_\varsigma\}\mu'_\varsigma)}$

1.2 Plane wave solutions of B-W equation for spin-$\frac{3}{2}$ particles [16]

Thm. 1.2.1. $(\gamma^a\partial_a+m)_{\kappa_\varsigma}{}^{\lambda_\varsigma}\psi_{\lambda_\varsigma\mu_\varsigma\eta_\varsigma}(\vec{r},t)=0,\psi_{\lambda_\varsigma\mu_\varsigma\eta_\varsigma}(\vec{r},t)=\frac{1}{3!}\psi_{\{\lambda_\varsigma\mu_\varsigma\eta_\varsigma\}}(\vec{r},t)$

Chapter29 Covariant quantization scheme for massive graviton

Self comment: For particles described by the Bargmann Wigner equation, it is generally possible to describe both charged complex particles and uncharged Mayorana particles. The principal commutation rule in both cases is consistent, but the rest are generally zero for charged complex particles. For uncharged Mayorana particles, the rest of the commutative or anti commutative brackets are naturally derived from the principal commutative rule and Mayorana conditions. And they are generally not zero. In this chapter, we only discuss the case of complex particles and generally only give the principal commutation rule. The Mayorana particle case is no longer specifically discussed. If we want to obtain the quantum field theory of the Mayorana particle case, we only need to add the Mayorana condition to the complex particle case. Then we will naturally obtain it.

1 Mutual conversion of two equivalent descriptions for massive graviton

1.1 Two equivalent descriptions of B-W equation for spin-2 particles and K-G equation [16,20,21]

Def. 1.1.1. $\mathbb{X}_a(x) := [im\gamma_a(\varsigma) - 2S_{ab}(e,\varsigma)\partial^b]C, \mathbb{X}_a(p) := i[m\gamma_a(\varsigma) - 2S_{ab}(e,\varsigma)p^b]C, C = \gamma_2\gamma_4$

Thm. 1.1.1.

$$\begin{cases}(\gamma^a\partial_a + m)_{\kappa_\varsigma}{}^{\lambda_\varsigma}\psi_{\lambda_\varsigma\mu_\varsigma\eta_\varsigma\xi_\varsigma} = 0, \psi_{\lambda_\varsigma\mu_\varsigma\eta_\varsigma\xi_\varsigma} = \frac{1}{4!}\psi_{\{\lambda_\varsigma\mu_\varsigma\eta_\varsigma\xi_\varsigma\}} \\ A_{ab} = \frac{1}{(2im)^2}[\bar{C}\gamma_a(\varsigma)]^{\lambda_\varsigma\mu_\varsigma}[\bar{C}\gamma_b(\varsigma)]^{\eta_\varsigma\xi_\varsigma}\psi_{\lambda_\varsigma\mu_\varsigma\eta_\varsigma\xi_\varsigma} \\ C = \gamma_2(\varsigma)\gamma_4(\varsigma)\end{cases} \Leftrightarrow \begin{cases}\partial^c F_{c|ab} + m^2 A_{ab} = 0, F_{c|ab} = \partial_c A_{ab} - \partial_a A_{cb} \\ \psi_{\lambda_\varsigma\mu_\varsigma\eta_\varsigma\xi_\varsigma} = \frac{1}{4}\mathbb{X}^a_{\lambda_\varsigma\mu_\varsigma}(x)\mathbb{X}^b_{\eta_\varsigma\xi_\varsigma}(x)A_{ab} \\ A_{ab} = A_{ba}, \delta^{ab}A_{ab} = 0\end{cases}$$

1.2 Plane wave solutions of B-W equation for spin-2 particles [16]

Thm. 1.2.1. $(\gamma^a\partial_a + m)_{\kappa_\varsigma}{}^{\lambda_\varsigma}\psi_{\lambda_\varsigma\mu_\varsigma\eta_\varsigma\xi_\varsigma}(\vec{r},t) = 0, \psi_{\lambda_\varsigma\mu_\varsigma\eta_\varsigma\xi_\varsigma}(\vec{r},t) = \frac{1}{4!}\psi_{\{\lambda_\varsigma\mu_\varsigma\eta_\varsigma\xi_\varsigma\}}(\vec{r},t)$

$$\psi_{\lambda_\varsigma\mu_\varsigma\eta_\varsigma\xi_\varsigma}(\vec{r},t) = \frac{1}{(2\pi)^{3/2}}\int\limits_{\vec{p}=-\infty}^{+\infty}\sum_{h=1}^{-1}\sqrt{\frac{m^4}{E}}[a(\vec{p},h)U_{\lambda_\varsigma\mu_\varsigma\eta_\varsigma\xi_\varsigma}(\vec{p},h)e^{i(\vec{p}\cdot\vec{r}-Et)} + b^+(\vec{p},h)V_{\lambda_\varsigma\mu_\varsigma\eta_\varsigma\xi_\varsigma}(\vec{p},h)e^{-i(\vec{p}\cdot\vec{r}-Et)}]d^3\vec{p}$$

$$\begin{cases}a(\vec{p},h) = \frac{1}{(2\pi)^{3/2}}\int\limits_{\vec{p}=-\infty}^{+\infty}\sqrt{\frac{m^4}{E^7}}U^{+\lambda_\varsigma\mu_\varsigma\eta_\varsigma\xi_\varsigma}(\vec{p},h)\psi_{\lambda_\varsigma\mu_\varsigma\eta_\varsigma\xi_\varsigma}(\vec{r},t)e^{-i(\vec{p}\cdot\vec{r}-Et)}d^3\vec{r} \\ b^+(\vec{p},s) = \frac{1}{(2\pi)^{3/2}}\int\limits_{\vec{p}=-\infty}^{+\infty}\sqrt{\frac{m^4}{E^7}}V^{+\lambda_\varsigma\mu_\varsigma\eta_\varsigma\xi_\varsigma}(\vec{p},h)\psi_{\lambda_\varsigma\mu_\varsigma\eta_\varsigma\xi_\varsigma}(\vec{r},t)e^{i(\vec{p}\cdot\vec{r}-Et)}d^3\vec{r}\end{cases}$$

Thm. 1.2.2. $[\psi_{\lambda_\varsigma\mu_\varsigma\eta_\varsigma\xi_\varsigma}(x), \psi^+_{\lambda'_\varsigma\mu'_\varsigma\eta'_\varsigma\xi'_\varsigma}(x')]$

$$= \frac{i}{2^3}\frac{1}{(4!)^2}[(m-\gamma^a\partial_a)\gamma^4]_{\{\lambda_\varsigma(\lambda'_\varsigma}[(m-\gamma^b\partial_b)\gamma^4]_{\mu_\varsigma\mu'_\varsigma}[(m-\gamma^a\partial_a)\gamma^4]_{\eta_\varsigma\eta'_\varsigma}[(m-\gamma^b\partial_b)\gamma^4]_{\xi_\varsigma\}\xi'_\varsigma)}\Delta(x-x')$$

Chapter30 Mathematical Analysis of Spin Bases and CG Coefficients

Self comment: This chapter conducts general mathematical analysis and logical deduction for various spin bases. And I finds that the coefficients of the transformation relationship between spin bases is just the CG coefficients of the spin coupling system. This also provides a new method for solving CG coefficients in general. This new method is more intuitive, specific, and simple than traditional methods for solving spin coupled eigenstates. Because the new method is completely constructive. And the selected spin basis is more general, universal and rigorous than the traditional one. So it is more convenient and useful to use. It may provide some help to thoroughly clarify quantum entanglement.

1 Bargmann-WignerReorganization and analysis of equation spin basis

1.1 Dirac spin basis is a common eigenstate of spin, helicity and charge three operators

Def. 1.1.1. $\hat{Q}(\vec{p}) := \frac{i\gamma^a p_a}{m}, \hat{q}(\vec{p},\kappa) := \frac{-\varsigma E\sigma_x + i\kappa|\vec{p}|\sigma_y}{m}$

Pro. 1.1.1.

$$\begin{cases}\sigma^2(\frac{1}{2})\otimes Iu(\vec{p},\frac{\kappa}{2}) = \frac{1}{2}(\frac{1}{2}+1)u(\vec{p},\frac{\kappa}{2})\\ \sigma(\frac{1}{2})\cdot\hat{p}\otimes Iu(\vec{p},\frac{\kappa}{2}) = \frac{\kappa}{2}u(\vec{p},\frac{\kappa}{2})\\ \hat{Q}(\vec{p})u(\vec{p},\frac{\kappa}{2}) = -u(\vec{p},\frac{\kappa}{2})\\ \textit{Describe electron: } (s,h;Q) = (\frac{1}{2};\frac{\kappa}{2},-1)\end{cases} \quad \begin{cases}\sigma^2(\frac{1}{2})\otimes Iv(\vec{p},\frac{\kappa}{2}) = \frac{1}{2}(\frac{1}{2}+1)v(\vec{p},\frac{\kappa}{2})\\ \sigma(\frac{1}{2})\cdot\hat{p}\otimes Iv(\vec{p},\frac{\kappa}{2}) = \frac{\kappa}{2}v(\vec{p},\frac{\kappa}{2})\\ \hat{Q}(\vec{p})v(\vec{p},\frac{\kappa}{2}) = v(\vec{p},\frac{\kappa}{2})\\ \textit{Describe positive electron: } (s,h;Q) = (\frac{1}{2};\frac{\kappa}{2},1)\end{cases}$$

Proof: Using mathematical induction to prove this theorem.
Step 1: When $s' = \frac{1}{2}$, the following is established.

Step 2: Assume when $s' = s - \frac{1}{2}$, the following is established.

Step 3: When $s' = s$,
This step proves that when $s' = s$, the proposition is established.
Step 4: Based on the above inductive reasoning, the theorem has been proved. □

1.2 Quasi projection operator of Dirac equation $\gamma^a = (\sigma\otimes\sigma_y, \varsigma I\otimes\sigma_x)$

Cor. 1.2.1. $\mu(\vec{p},\frac{\kappa}{2})\mu^+(\vec{p},-\frac{\kappa}{2}) = \frac{1}{2m}\begin{bmatrix} m & \varsigma E-\kappa|\vec{p}| \\ \varsigma E+\kappa|\vec{p}| & m\end{bmatrix} = \frac{1}{2}(I + \varsigma\frac{E}{m}\sigma_x - i\kappa\frac{|\vec{p}|}{m}\sigma_y)$

Cor. 1.2.2. $\mu(\vec{p},\frac{\kappa}{2})\mu^+(\vec{p},\frac{\kappa}{2}) = \frac{\varsigma}{2m}\begin{bmatrix} \varsigma E-\kappa|\vec{p}| & m \\ m & \varsigma E+\kappa|\vec{p}|\end{bmatrix} = \frac{\varsigma}{2}(I + \varsigma\frac{E}{m}\sigma_x - i\kappa\frac{|\vec{p}|}{m}\sigma_y)\sigma_x$

Cor. 1.2.3. $u(\vec{p},\frac{\kappa}{2}) = \frac{\lambda(\hat{p},\frac{\kappa}{2})}{\sqrt{2m(E+\kappa\varsigma|\vec{p}|)}}\otimes\begin{bmatrix} m \\ \varsigma E+\kappa|\vec{p}|\end{bmatrix}, v(\vec{p},\frac{\kappa}{2}) = \frac{\lambda(\hat{p},\frac{\kappa}{2})}{\sqrt{2m(E+\kappa\varsigma|\vec{p}|)}}\otimes\begin{bmatrix} -m \\ \varsigma E+\kappa|\vec{p}|\end{bmatrix}$

Cor. 1.2.4. $u(\vec{p},\frac{\kappa}{2})u^+(\vec{p},\frac{\kappa}{2}) = \frac{1}{4}[(\kappa\sigma\cdot\hat{p}+I)\otimes(I+\varsigma\frac{E}{m}\sigma_x - i\kappa\frac{|\vec{p}|}{m}\sigma_y)](\varsigma I\otimes\sigma_x), \gamma^a = (\sigma\otimes\sigma_y, \varsigma I\otimes\sigma_x)$

1.3 Corresponding spin basis under special representation $\gamma^a = (\sigma\otimes\sigma_y, I\otimes\sigma_x; I\otimes\sigma_z)$

Cor. 1.3.1. $\gamma^a = (\sigma\otimes\sigma_y, I\otimes\sigma_x)$

$u(\vec{p},\frac{\kappa}{2}) = \frac{\lambda(\hat{p},\frac{\kappa}{2})}{\sqrt{2m(E+\kappa|\vec{p}|)}}\otimes\begin{bmatrix} m \\ E+\kappa|\vec{p}|\end{bmatrix}, v(\vec{p},\frac{\kappa}{2}) = \frac{\lambda(\hat{p},\frac{\kappa}{2})}{\sqrt{2m(E+\kappa|\vec{p}|)}}\otimes\begin{bmatrix} -m \\ E+\kappa|\vec{p}|\end{bmatrix}$

1.4 Spin basis combinatorial properties $(\gamma_a,\gamma_5) := [(\sigma\otimes\sigma_y, I\otimes\sigma_z), -I\otimes\sigma_x]$

Cor. 1.4.1.

$$\begin{cases}\lambda(\hat{p},\frac{1}{2})\lambda^+(\hat{p},\frac{1}{2}) = \frac{1}{2}(\sigma\cdot\hat{p}+I) = \frac{1}{2}(\sigma,-i)^a\hat{p}_a, \hat{p}_a := (\hat{p},i)\\ \lambda(\hat{p},-\frac{1}{2})\lambda^+(\hat{p},-\frac{1}{2}) = -\frac{1}{2}(\sigma\cdot\hat{p}-I) = -\frac{1}{2}(\sigma,i)^a\hat{p}_a\\ \lambda(\hat{p},\frac{1}{2})\lambda^+(\hat{p},-\frac{1}{2}) = \frac{1}{2}(\sigma\cdot\hat{p}+I)i\sigma_y = \frac{1}{2}(\sigma,i)^a\hat{p}_a i\sigma_y\\ \lambda(\hat{p},-\frac{1}{2})\lambda^+(\hat{p},\frac{1}{2}) = -\frac{1}{2}i\sigma_y(\sigma\cdot\hat{p}+I) = -\frac{1}{2}i\sigma_y(\sigma,i)^a\hat{p}_a\end{cases}$$

Thm. 1.6.2. $\Omega^2(s;\sigma(\frac{1}{2})\otimes I)U_{\underbrace{\lambda_\varsigma\otimes\cdot\cdot\otimes\sigma_\varsigma\otimes\tau_\varsigma}_{2s}}(\vec{p},h)=s(s+1)U_{\underbrace{\lambda_\varsigma\otimes\cdot\cdot\otimes\sigma_\varsigma\otimes\tau_\varsigma}_{2s}}(\vec{p},h),-s\leq h\leq s$

he above theorem can be easily proved using a fully symmetric representation transformation method. From the above, it can be seen that $U_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdot\cdot\sigma_\varsigma\tau_\varsigma}_{2s}}(\vec{p},h)$ is a spin eigenstate. Therefore, the expansion coefficients are CG coefficients, and the actual calculation results also indicate that they are indeed the corresponding CG coefficients. This also provides a unified, standardized, intuitive and complete new method for calculating CG coefficients.

1.9 Raising and lowering operator of Bargmann-Wigner equation spin basis

Def. 1.9.1.

$$\begin{cases}\hat{J}(\vec{p},s;\gamma_a):=\underbrace{\hat{J}(\vec{p},\frac{1}{2};\gamma_a)\otimes I_4\otimes\cdot\cdot\otimes I_4}_{2s}+\underbrace{I_4\otimes\hat{J}(\vec{p},\frac{1}{2};\gamma_a)\otimes\cdot\cdot\otimes I_4}_{2s}+\cdots+\underbrace{I_4\otimes\cdot\cdot\otimes I_4\otimes\hat{J}(\vec{p},\frac{1}{2};\gamma_a)}_{2s}\\ \hat{Q}(\vec{p},s;\gamma_a):=\underbrace{\hat{Q}(\vec{p},\frac{1}{2};\gamma_a)\otimes I_4\otimes\cdot\cdot\otimes I_4}_{2s}+\underbrace{I_4\otimes\hat{Q}(\vec{p},\frac{1}{2};\gamma_a)\otimes\cdot\cdot\otimes I_4}_{2s}+\cdots+\underbrace{I_4\otimes\cdot\cdot\otimes I_4\otimes\hat{Q}(\vec{p},\frac{1}{2};\gamma_a)}_{2s}\end{cases}$$

Cor. 1.9.1.

$$\begin{cases}\hat{J}_x^2(\vec{p},\frac{1}{2};\gamma_a)=\frac{1}{4},\hat{J}_y^2(\vec{p},\frac{1}{2};\gamma_a)=\frac{1}{4},\hat{J}_z^2(\vec{p},\frac{1}{2};\gamma_a)=\frac{1}{4},\hat{J}^2(\vec{p},\frac{1}{2};\gamma_a)=\frac{1}{2}(\frac{1}{2}+1)\\ [\hat{J}_i(\vec{p},s;\gamma_a),\hat{J}_j(\vec{p},s;\gamma_a)]=\varepsilon_{ij}{}^k\hat{J}_k(\vec{p},s;\gamma_a)\end{cases}$$

Thm. 1.9.1. $\hat{J}_+(\vec{p},s;\gamma_a)U_{\underbrace{\lambda_\varsigma\otimes\cdot\cdot\otimes\sigma_\varsigma\otimes\tau_\varsigma}_{2s}}(\vec{p},h)=\sqrt{s(s+1)-h(h+1)}U_{\underbrace{\lambda_\varsigma\otimes\cdot\cdot\otimes\sigma_\varsigma\otimes\tau_\varsigma}_{2s}}(\vec{p},h+1)$

Proof: Using mathematical induction to prove this theorem.
Step 1: When $s'=\frac{1}{2}$, the following is established.
$\hat{J}_+(\vec{p},\frac{1}{2};\gamma_a)U_{\otimes\tau_\varsigma}(\vec{p},h)=\sqrt{\frac{3}{4}-h(h+1)}U_{\otimes\tau_\varsigma}(\vec{p},h+1),-\frac{1}{2}\le h\le\frac{1}{2}$
Step 2: Assume when $s'=s-\frac{1}{2}$, the following is established.
$\hat{J}_+(\vec{p},s-\frac{1}{2};\gamma_a)U_{\underbrace{\lambda_\varsigma\otimes\cdot\cdot\otimes\sigma_\varsigma}_{2s-1}}(\vec{p},h)=\sqrt{(s-\frac{1}{2})(s+\frac{1}{2})-h(h+1)}U_{\underbrace{\lambda_\varsigma\otimes\cdot\cdot\otimes\sigma_\varsigma}_{2s-1}}(\vec{p},h),-s+\frac{1}{2}\le h\le s-\frac{1}{2}$
Step 3: When $s'=s,\ -s\le h\le s,\hat{J}_+(\vec{p},s;\gamma_a)U_{\underbrace{\lambda_\varsigma\otimes\cdot\cdot\otimes\sigma_\varsigma\otimes\tau_\varsigma}_{2s}}(\vec{p},h)$

$$=\frac{\sqrt{s+h}}{\sqrt{2s}}[\hat{J}_+(\vec{p},s-\tfrac{1}{2};\gamma_a)U_{\underbrace{\lambda_\varsigma\otimes\cdot\cdot\otimes\sigma_\varsigma}_{2s-1}}(\vec{p},h-\tfrac{1}{2})]U_{\otimes\tau_\varsigma}(\vec{p},\tfrac{1}{2})+\frac{\sqrt{s-h}}{\sqrt{2s}}[\hat{J}_+(\vec{p},s-\tfrac{1}{2};\gamma_a)U_{\underbrace{\lambda_\varsigma\otimes\cdot\cdot\otimes\sigma_\varsigma}_{2s-1}}(\vec{p},h+\tfrac{1}{2})]U_{\otimes\tau_\varsigma}(\vec{p},-\tfrac{1}{2})$$
$$+\frac{\sqrt{s+h}}{\sqrt{2s}}U_{\underbrace{\lambda_\varsigma\otimes\cdot\cdot\otimes\sigma_\varsigma}_{2s-1}}(\vec{p},h-\tfrac{1}{2})\hat{J}_+(\vec{p},\tfrac{1}{2};\gamma_a)U_{\otimes\tau_\varsigma}(\vec{p},\tfrac{1}{2})+\frac{\sqrt{s-h}}{\sqrt{2s}}U_{\underbrace{\lambda_\varsigma\otimes\cdot\cdot\otimes\sigma_\varsigma}_{2s-1}}(\vec{p},h+\tfrac{1}{2})\hat{J}_+(\vec{p},\tfrac{1}{2};\gamma_a)U_{\otimes\tau_\varsigma}(\vec{p},-\tfrac{1}{2})$$
$$=\frac{\sqrt{s+h}\sqrt{(s+\frac{1}{2})(s-\frac{1}{2})-(h-\frac{1}{2})(h+\frac{1}{2})}}{\sqrt{2s}}U_{\underbrace{\lambda_\varsigma\otimes\cdot\cdot\otimes\sigma_\varsigma}_{2s-1}}(\vec{p},h+\tfrac{1}{2})U_{\otimes\tau_\varsigma}(\vec{p},\tfrac{1}{2})+\frac{\sqrt{s-h}}{\sqrt{2s}}U_{\underbrace{\lambda_\varsigma\otimes\cdot\cdot\otimes\sigma_\varsigma}_{2s-1}}(\vec{p},h+\tfrac{1}{2})U_{\otimes\tau_\varsigma}(\vec{p},\tfrac{1}{2})$$

$$+\frac{\sqrt{s-h}\sqrt{(s+\frac{1}{2})(s-\frac{1}{2})-(h+1-\frac{1}{2})(h+1+\frac{1}{2})}}{\sqrt{2s}}U_{\underbrace{\lambda_\varsigma\otimes\cdot\cdot\otimes\sigma_\varsigma}_{2s-1}}(\vec{p},h+\tfrac{3}{2})]U_{\otimes\tau_\varsigma}(\vec{p},-\tfrac{1}{2})$$

$$=\frac{\sqrt{(s-h)(s+h+1)}\sqrt{s+h+1}}{\sqrt{2s}}U_{\underbrace{\lambda_\varsigma\otimes\cdot\cdot\otimes\sigma_\varsigma}_{2s-1}}(\vec{p},h+\tfrac{1}{2})U_{\otimes\tau_\varsigma}(\vec{p},\tfrac{1}{2})+\frac{\sqrt{(s-h)(s+h+1)}\sqrt{s-h-1}}{\sqrt{2s}}U_{\underbrace{\lambda_\varsigma\otimes\cdot\cdot\otimes\sigma_\varsigma}_{2s-1}}(\vec{p},h+\tfrac{3}{2})U_{\otimes\tau_\varsigma}(\vec{p},-\tfrac{1}{2})$$

$$=\sqrt{s(s+1)-h(h+1)}U_{\underbrace{\lambda_\varsigma\otimes\cdot\cdot\otimes\sigma_\varsigma\otimes\tau_\varsigma}_{2s}}(\vec{p},h+1)$$

This step proves that when $s'=s$, the proposition is established.

Step 4: Based on the above inductive reasoning, the theorem has been proved. □

Thm. 1.9.2. $\hat{J}_-(\vec{p},s;\gamma_a)U_{\underbrace{\lambda_\varsigma\otimes\cdot\cdot\otimes\sigma_\varsigma\otimes\tau_\varsigma}_{2s}}(\vec{p},h)=\sqrt{s(s+1)-h(h-1)}U_{\underbrace{\lambda_\varsigma\otimes\cdot\cdot\otimes\sigma_\varsigma\otimes\tau_\varsigma}_{2s}}(\vec{p},h-1)$

Proof: Using mathematical induction to prove this theorem.

Step 1: When $s'=\frac{1}{2}$, the following is established.

$\hat{J}_-(\vec{p},\frac{1}{2};\gamma_a)U_{\otimes\tau_\varsigma}(\vec{p},h)=\sqrt{\frac{3}{4}-h(h-1)}U_{\otimes\tau_\varsigma}(\vec{p},h-1),-\frac{1}{2}\le h\le\frac{1}{2}$

Step 2: Assume when $s'=s-\frac{1}{2}$, the following is established.

$\hat{J}_-(\vec{p},s-\frac{1}{2};\gamma_a)U_{\underbrace{\lambda_\varsigma\otimes\cdot\cdot\otimes\sigma_\varsigma}_{2s-1}}(\vec{p},h)=\sqrt{(s-\frac{1}{2})(s+\frac{1}{2})-h(h-1)}U_{\underbrace{\lambda_\varsigma\otimes\cdot\cdot\otimes\sigma_\varsigma}_{2s-1}}(\vec{p},h-1),-s+\frac{1}{2}\le h\le s-\frac{1}{2}$

Step 3: When $s'=s,\ -s\le h\le s,\hat{J}_-(\vec{p},s;\gamma_a)U_{\underbrace{\lambda_\varsigma\otimes\cdot\cdot\otimes\sigma_\varsigma\otimes\tau_\varsigma}_{2s}}(\vec{p},h)$

$$=\frac{\sqrt{s+h}}{\sqrt{2s}}[\hat{J}_-(\vec{p},s-\tfrac{1}{2};\gamma_a)U_{\underbrace{\lambda_\varsigma\otimes\cdot\cdot\otimes\sigma_\varsigma}_{2s-1}}(\vec{p},h-\tfrac{1}{2})]U_{\otimes\tau_\varsigma}(\vec{p},\tfrac{1}{2})+\frac{\sqrt{s-h}}{\sqrt{2s}}[\hat{J}_-(\vec{p},s-\tfrac{1}{2};\gamma_a)U_{\underbrace{\lambda_\varsigma\otimes\cdot\cdot\otimes\sigma_\varsigma}_{2s-1}}(\vec{p},h+\tfrac{1}{2})]U_{\otimes\tau_\varsigma}(\vec{p},-\tfrac{1}{2})$$

$$+\frac{\sqrt{s+h}}{\sqrt{2s}}U_{\underbrace{\lambda_\varsigma\otimes\cdot\cdot\otimes\sigma_\varsigma}_{2s-1}}(\vec{p},h-\tfrac{1}{2})\hat{J}_-(\vec{p},\tfrac{1}{2};\gamma_a)U_{\otimes\tau_\varsigma}(\vec{p},\tfrac{1}{2})+\frac{\sqrt{s-h}}{\sqrt{2s}}\hat{J}_-(\vec{p},s-\tfrac{1}{2};\gamma_a)U_{\underbrace{\lambda_\varsigma\otimes\cdot\cdot\otimes\sigma_\varsigma}_{2s-1}}(\vec{p},h+\tfrac{1}{2})\hat{J}_-(\vec{p},\tfrac{1}{2};\gamma_a)U_{\otimes\tau_\varsigma}(\vec{p},-\tfrac{1}{2})$$

$$=\frac{\sqrt{s+h}\sqrt{(s+\frac{1}{2})(s-\frac{1}{2})-(h-1-\frac{1}{2})(h-1+\frac{1}{2})}}{\sqrt{2s}}U_{\underbrace{\lambda_\varsigma\otimes\cdot\cdot\otimes\sigma_\varsigma}_{2s-1}}(\vec{p},h-\tfrac{3}{2})U_{\otimes\tau_\varsigma}(\vec{p},\tfrac{1}{2})$$

$$+\frac{\sqrt{s-h}\sqrt{(s+\frac{1}{2})(s-\frac{1}{2})-(h-\frac{1}{2})(h+\frac{1}{2})}}{\sqrt{2s}}U_{\underbrace{\lambda_\varsigma\otimes\cdot\cdot\otimes\sigma_\varsigma}_{2s-1}}(\vec{p},h-\tfrac{1}{2})]U_{\otimes\tau_\varsigma}(\vec{p},-\tfrac{1}{2})+\frac{\sqrt{s+h}}{\sqrt{2s}}U_{\underbrace{\lambda_\varsigma\otimes\cdot\cdot\otimes\sigma_\varsigma}_{2s-1}}(\vec{p},h-\tfrac{1}{2})U_{\otimes\tau_\varsigma}(\vec{p},-\tfrac{1}{2})$$

$$=\frac{\sqrt{s+h}\sqrt{(s+h-1)(s-h+1)}}{\sqrt{2s}}U_{\underbrace{\lambda_\varsigma\otimes\cdot\cdot\otimes\sigma_\varsigma}_{2s-1}}(\vec{p},h-\tfrac{3}{2})U_{\otimes\tau_\varsigma}(\vec{p},\tfrac{1}{2})$$

$$+\frac{\sqrt{s-h}\sqrt{(s+h)(s-h)}}{\sqrt{2s}}U_{\underbrace{\lambda_\varsigma\otimes\cdot\cdot\otimes\sigma_\varsigma}_{2s-1}}(\vec{p},h-\tfrac{1}{2})]U_{\otimes\tau_\varsigma}(\vec{p},-\tfrac{1}{2})+\frac{\sqrt{s+h}}{\sqrt{2s}}U_{\underbrace{\lambda_\varsigma\otimes\cdot\cdot\otimes\sigma_\varsigma}_{2s-1}}(\vec{p},h-\tfrac{1}{2})U_{\otimes\tau_\varsigma}(\vec{p},-\tfrac{1}{2})$$

$$=\frac{\sqrt{(s+h)(s-h+1)}\sqrt{(s+h-1)}}{\sqrt{2s}}U_{\underbrace{\lambda_\varsigma\otimes\cdot\cdot\otimes\sigma_\varsigma}_{2s-1}}(\vec{p},h-\tfrac{3}{2})U_{\otimes\tau_\varsigma}(\vec{p},\tfrac{1}{2})$$

$$+\frac{\sqrt{(s+h)(s-h+1)}\sqrt{s-h+1}}{\sqrt{2s}}U_{\underbrace{\lambda_\varsigma\otimes\cdot\cdot\otimes\sigma_\varsigma}_{2s-1}}(\vec{p},h-\tfrac{1}{2})U_{\otimes\tau_\varsigma}(\vec{p},-\tfrac{1}{2})$$

$$=\sqrt{s(s+1)-h(h-1)}U_{\underbrace{\lambda_\varsigma\otimes\cdot\cdot\otimes\sigma_\varsigma\otimes\tau_\varsigma}_{2s}}(\vec{p},h-1)$$

This step proves that when $s'=s$, the proposition is established.

Step 4: Based on the above inductive reasoning, the theorem has been proved. □

1.18 Corollary-$U_{\lambda_\varsigma\mu_\varsigma\cdot\cdot\sigma_\varsigma\tau_\varsigma}(\vec{p},h)$ full symmetry

Thm. 1.18.1. $U_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdot\cdot\sigma_\varsigma\tau_\varsigma}_{2s}}(\vec{p},h) = \frac{1}{(2s)!}U_{\underbrace{\{\lambda_\varsigma\mu_\varsigma\cdot\cdot\tau_\varsigma\sigma_\varsigma\}}_{2s}}(\vec{p},h), -s\le h\le s$

Proof: Using mathematical induction to prove this theorem.
Step 1: When $s' = \frac{1}{2}, 1$, the following is established.
$U_{\lambda_\varsigma}(\vec{p},h) = \frac{1}{1!}U_{\lambda_\varsigma}(\vec{p},h), -\frac{1}{2}\le h\le\frac{1}{2}; U_{\lambda_\varsigma\mu_\varsigma}(\vec{p},h) = \frac{1}{2!}U_{\{\lambda_\varsigma\mu_\varsigma\}}(\vec{p},h), -1\le h\le 1$
Step 2: Assume when $s' = s-\frac{1}{2}$, the following is established.
$U_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdot\cdot\sigma_\varsigma}_{2s-1}}(\vec{p},h) = \frac{1}{(2s-1)!}U_{\underbrace{\{\lambda_\varsigma\mu_\varsigma\cdot\cdot\tau_\varsigma\}}_{2s-1}}(\vec{p},h), -s+\frac{1}{2}\le h\le s-\frac{1}{2}$
Step 3: When $1\le s' = s,\ -s\le h\le s, U_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdot\cdot\sigma_\varsigma\tau_\varsigma}_{2s}}(\vec{p},h)$

$= \sum_{h'=1/2}^{-1/2}\frac{\sqrt{C_{s+h}^{1/2+h'}C_{s-h}^{1/2-h'}}}{\sqrt{C_{2s}^{1}}}U_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdot\cdot\sigma_\varsigma}_{2s-1}}(\vec{p},h-h')U_{\tau_\varsigma}(\vec{p},h') = \sum_{h'=1}^{-1}\frac{\sqrt{C_{s+h}^{1+h'}C_{s-h}^{1-h'}}}{\sqrt{C_{2s}^{2}}}U_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdot\cdot}_{2(s-1)}}(\vec{p},h-h')U_{\sigma_\varsigma\tau_\varsigma}(\vec{p},h')$

$\Rightarrow U_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdot\cdot\sigma_\varsigma\tau_\varsigma}_{2s}}(\vec{p},h) = \frac{1}{(2s-1)!}U_{\underbrace{\{\lambda_\varsigma\mu_\varsigma\cdot\cdot\tau_\varsigma\}\sigma_\varsigma}_{2s}}(\vec{p},h), U_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdot\cdot\sigma_\varsigma\tau_\varsigma}_{2s}}(\vec{p},h) = U_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdot\cdot\sigma_\varsigma\tau_\varsigma}_{2s}}(\vec{p},h), -s\le h\le s$

$\Leftrightarrow U_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdot\cdot\sigma_\varsigma\tau_\varsigma}_{2s}}(\vec{p},h) = \frac{1}{(2s)!}U_{\underbrace{\{\lambda_\varsigma\mu_\varsigma\cdot\cdot\tau_\varsigma\sigma_\varsigma\}}_{2s}}(\vec{p},h), -s\le h\le s$

This step proves that when $s' = s$, the proposition is established.
Step 4: Based on the above inductive reasoning, the theorem has been proved. □

$= h\varepsilon_{\underbrace{a\otimes\cdot\cdot\otimes b\otimes c}_{n}}(\vec{p},h), -n\le h\le n$ □

Thm. 2.7.2. $\Omega^2(n;R)\varepsilon_{\underbrace{a\otimes\cdot\cdot\otimes b\otimes c}_{n}}(\vec{p},h) = n(n+1)\varepsilon_{\underbrace{a\otimes\cdot\cdot\otimes b\otimes c}_{n}}(\vec{p},h)$

he above theorem can be easily proved using a fully symmetric representation transformation method. From the above, it can be seen that $\varepsilon_{\underbrace{a\cdot\cdot bc}_{n}}(\vec{p},h)$ is a spin eigenstate. Therefore, the expansion coefficients are CG coefficients, and the actual calculation results also indicate that they are indeed the corresponding CG coefficients. This also provides a unified, standardized, intuitive and complete new method for calculating CG coefficients.

2.8 Klein-GordonRaising and lowering operator of equation spin basis

Def. 2.8.1.

$$\begin{cases}\hat{J}(\vec{p},n;R,L) := \underbrace{\hat{J}(\vec{p},1;R,L)\otimes I_4\otimes\cdot\cdot\otimes I_4}_{n} + \underbrace{I_4\otimes\hat{J}(\vec{p},1;R,L)\otimes\cdot\cdot\otimes I_4}_{n} + \cdots + \underbrace{I_4\otimes\cdot\cdot\otimes I_4\otimes\hat{J}(\vec{p},1;R,L)}_{n}\\ \hat{Q}(\vec{p},n;R,L) := \underbrace{\hat{Q}(\vec{p},1;R,L)\otimes I_4\otimes\cdot\cdot\otimes I_4}_{n} + \underbrace{I_4\otimes\hat{Q}(\vec{p},1;R,L)\otimes\cdot\cdot\otimes I_4}_{n} + \cdots + \underbrace{I_4\otimes\cdot\cdot\otimes I_4\otimes\hat{Q}(\vec{p},1;R,L)}_{n}\end{cases}$$

Def. 4.2.1. $\lambda_{\underbrace{A_\varsigma\cdot\cdot B_\varsigma C_\varsigma}_{2s}}(\hat{p},h)=\frac{\sqrt{s+h}}{\sqrt{2s}}\lambda_{\underbrace{A_\varsigma\cdot\cdot B_\varsigma}_{2s-1}}(\hat{p},h-\frac{1}{2})\lambda_{C_\varsigma}(\hat{p},\frac{1}{2})+\frac{\sqrt{s-h}}{\sqrt{2s}}\lambda_{\underbrace{A_\varsigma\cdot\cdot B_\varsigma}_{2s-1}}(\hat{p},h+\frac{1}{2})\lambda_{C_\varsigma}(\hat{p},-\frac{1}{2}),-s\le h\le s$

Cor. 4.2.1. $\lambda_{\underbrace{A_\varsigma\cdot\cdot B_\varsigma C_\varsigma}_{2s}}(\hat{p},h)=\sum_{h'=1/2}^{-1/2}\frac{\sqrt{C_{s+h}^{1/2+h'}C_{s-h}^{1/2-h'}}}{\sqrt{C_{2s}^{1}}}\lambda_{\underbrace{A_\varsigma\cdot\cdot B_\varsigma}_{2s-1}}(\hat{p},h-h')\lambda_{C_\varsigma}(\hat{p},h'),-s\le h\le s$

4.3 Corollary-$\lambda_{A_\varsigma\cdot\cdot B_\varsigma C_\varsigma}(\hat{p},h)$ is a spin eigenstate

Thm. 4.3.1. $[\Omega(s)\cdot\hat{p}]\lambda_{\underbrace{A_\varsigma\otimes\cdot\cdot\otimes B_\varsigma\otimes C_\varsigma}_{2s}}(\hat{p},h)=h\lambda_{\underbrace{A_\varsigma\otimes\cdot\cdot\otimes B_\varsigma\otimes C_\varsigma}_{2s}}(\hat{p},h),-s\le h\le s$

Proof: $[\Omega(s)\cdot\hat{p}]\lambda_{\underbrace{A_\varsigma\otimes\cdot\cdot\otimes B_\varsigma\otimes C_\varsigma}_{2s}}(\hat{p},h)$

$=[\Omega(s-\frac{1}{2})\otimes I+I_{2^{2s-1}}\otimes\sigma(\frac{1}{2})]\cdot\hat{p}$

$[\frac{\sqrt{s+h}}{\sqrt{2s}}\lambda_{\underbrace{A_\varsigma\otimes\cdot\cdot\otimes B_\varsigma}_{2s-1}}(\hat{p},h-\frac{1}{2})\lambda_{\otimes C_\varsigma}(\hat{p},\frac{1}{2})+\frac{\sqrt{s-h}}{\sqrt{2s}}\lambda_{\underbrace{A_\varsigma\otimes\cdot\cdot\otimes B_\varsigma}_{2s-1}}(\hat{p},h+\frac{1}{2})\lambda_{\otimes C_\varsigma}(\hat{p},-\frac{1}{2})],-s\le h\le s$

$=[\frac{\sqrt{s+h}}{\sqrt{2s}}h\lambda_{\underbrace{A_\varsigma\otimes\cdot\cdot\otimes B_\varsigma}_{2s-1}}(\hat{p},h-\frac{1}{2})\lambda_{\otimes C_\varsigma}(\hat{p},\frac{1}{2})+\frac{\sqrt{s-h}}{\sqrt{2s}}h\lambda_{\underbrace{A_\varsigma\otimes\cdot\cdot\otimes B_\varsigma}_{2s-1}}(\hat{p},h+\frac{1}{2})\lambda_{\otimes C_\varsigma}(\hat{p},-\frac{1}{2})],-s\le h\le s$

$=h\lambda_{\underbrace{A_\varsigma\otimes\cdot\cdot\otimes B_\varsigma\otimes C_\varsigma}_{2s}}(\hat{p},h),-s\le h\le s$ □

Thm. 4.3.2. $\Omega^2(s)\lambda_{\underbrace{A_\varsigma\otimes\cdot\cdot\otimes B_\varsigma\otimes C_\varsigma}_{2s}}(\hat{p},h)=s(s+1)\lambda_{\underbrace{A_\varsigma\otimes\cdot\cdot\otimes B_\varsigma\otimes C_\varsigma}_{2s}}(\hat{p},h),-s\le h\le s$

The above theorem can be easily proved using a fully symmetric representation transformation method. From the above, it can be seen that $\lambda_{\underbrace{A_\varsigma\cdot\cdot B_\varsigma C_\varsigma}_{2s}}(\hat{p},h)$ is a spin eigenstate. Therefore, the expansion coefficients are CG coefficients, and the actual calculation results also indicate that they are indeed the corresponding CG coefficients. This also provides a unified, standardized, intuitive and complete new method for calculating CG coefficients.

4.4 Raising and lowering operator of Penrose equation spin basis

Thm. 4.4.1.

$$\begin{cases}e^{i\vec{\omega}\cdot\Omega(s)}\Omega_x(s)e^{-i\vec{\omega}\cdot\Omega(s)}=\Omega_x(s)-\hat{p}_x\frac{\Omega(s)\cdot\hat{p}+\Omega_z(s)}{(1+\hat{p}_z)}\\ e^{i\vec{\omega}\cdot\Omega(s)}\Omega_y(s)e^{-i\vec{\omega}\cdot\Omega(s)}=\Omega_y(s)-\hat{p}_y\frac{\Omega(s)\cdot\hat{p}+\Omega_z(s)}{(1+\hat{p}_z)}\\ e^{i\vec{\omega}\cdot\Omega(s)}\Omega_z(s)e^{-i\vec{\omega}\cdot\Omega(s)}=\Omega(s)\cdot\hat{p}\end{cases}$$

Def. 4.4.1.

4.13 An important mathematical corollary

Cor. 4.13.1. $\sum_{h_1=s_1}^{-s_1}\sum_{h_2=s_2}^{-s_2}\cdot\cdot\sum_{h_n=s_n}^{-s_n}\frac{[\sum_{i=1}^{n}(s_i+h_i)]!}{\prod_{i=1}^{n}(s_i+h_i)!}\frac{[\sum_{i=1}^{n}(s_i-h_i)]!}{\prod_{i=1}^{n}(s_i-h_i)!}\delta(h-\sum_{i=1}^{n}h_i)=\frac{[\sum_{i=1}^{n}(2s_i)]!}{\prod_{i=1}^{n}(2s_i)!},-\sum_{i=1}^{n}s_i\le h\le\sum_{i=1}^{n}s_i$

4.14 Corollary-$\lambda_{A_\varsigma\cdot\cdot B_\varsigma C_\varsigma}(\hat{p},h)$ full symmetry

Thm. 4.14.1. $\lambda_{\underbrace{A_\varsigma\cdot\cdot B_\varsigma C_\varsigma}_{2s}}(\hat{p},h)=\frac{1}{(2s)!}\lambda_{\underbrace{\{A_\varsigma\cdot\cdot B_\varsigma C_\varsigma\}}_{2s}}(\hat{p},h),-s\le h\le s$

Proof: Using mathematical induction to prove this theorem.
Step 1: When $s'=\frac{1}{2},1$, the following is established.
$\lambda_{A_\varsigma}(\hat{p},h)=\frac{1}{1!}\lambda_{A_\varsigma}(\hat{p},h),-\frac{1}{2}\le h\le\frac{1}{2};\lambda_{A_\varsigma B_\varsigma}(\hat{p},h)=\frac{1}{2!}\lambda_{\{A_\varsigma B_\varsigma\}}(\hat{p},h),-1\le h\le 1$
Step 2: Assume when $s'=s-\frac{1}{2}$, the following is established.
$\lambda_{\underbrace{A_\varsigma\cdot\cdot B_\varsigma}_{2s-1}}(\hat{p},h)=\frac{1}{(2s-1)!}\lambda_{\underbrace{\{A_\varsigma\cdot\cdot B_\varsigma\}}_{2s-1}}(\hat{p},h),-s+\frac{1}{2}\le h\le s-\frac{1}{2}$
Step 3: When $1\le s'=s,\ -s\le h\le s,\lambda_{\underbrace{A_\varsigma\cdot\cdot B_\varsigma C_\varsigma}_{2s}}(\hat{p},h)$

$=\sum_{h'=1/2}^{-1/2}\frac{\sqrt{C_{s+h}^{1/2+h'}C_{s-h}^{1/2-h'}}}{\sqrt{C_{2s}^{1}}}\lambda_{\underbrace{A_\varsigma\cdot\cdot B_\varsigma}_{2s-1}}(\hat{p},h-h')\lambda_{C_\varsigma}(\hat{p},h')=\sum_{h'=1}^{-1}\frac{\sqrt{C_{s+h}^{1+h'}C_{s-h}^{1-h'}}}{\sqrt{C_{2s}^{2}}}\lambda_{\underbrace{A_\varsigma\cdot\cdot}_{2(s-1)}}(\hat{p},h-h')\lambda_{B_\varsigma C_\varsigma}(\hat{p},h')$

$\Rightarrow\lambda_{\underbrace{A_\varsigma\cdot\cdot B_\varsigma C_\varsigma}_{2s}}(\hat{p},h)=\frac{1}{(2s-1)!}\lambda_{\underbrace{\{A_\varsigma\cdot\cdot B_\varsigma\}C_\varsigma}_{2s}}(\hat{p},h),\lambda_{\underbrace{A_\varsigma\cdot\cdot B_\varsigma C_\varsigma}_{2s}}(\hat{p},h)=\lambda_{\underbrace{A_\varsigma\cdot\cdot C_\varsigma B_\varsigma}_{2s}}(\hat{p},h),-s\le h\le s$

$\Leftrightarrow\lambda_{\underbrace{A_\varsigma\cdot\cdot B_\varsigma C_\varsigma}_{2s}}(\hat{p},h)=\frac{1}{(2s)!}\lambda_{\underbrace{\{A_\varsigma\cdot\cdot C_\varsigma B_\varsigma\}}_{2s}}(\hat{p},h),-s\le h\le s$

This step proves that when $s'=s$, the proposition is established.
Step 4: Based on the above inductive reasoning, the theorem has been proved. □

5 Reorganization and analysis of spin equation spin basis

5.1 Definition-Spin basis decomposition: $s=(s-\frac{1}{2})\oplus\frac{1}{2}$

Def. 5.1.1. $-s\le h\le s$

$\lambda_{k_\varsigma}(\hat{p},h;s)=\Gamma_{k_\varsigma}^{\overbrace{A_\varsigma\cdot\cdot B_\varsigma}^{2s+1}}\Gamma^{l_\varsigma}_{\underbrace{A_\varsigma\cdot\cdot}_{2s}}[\frac{\sqrt{s+h}}{\sqrt{2s}}\lambda_{l_\varsigma}(\hat{p},h-\frac{1}{2};s-\frac{1}{2})\lambda_{B_\varsigma}(\hat{p},\frac{1}{2})+\frac{\sqrt{s-h}}{\sqrt{2s}}\lambda_{l_\varsigma}(\hat{p},h+\frac{1}{2};s-\frac{1}{2})\lambda_{B_\varsigma}(\hat{p},-\frac{1}{2})]$

Cor. 5.1.1. $\lambda(\hat{p},h;s)=\Gamma_{k_\varsigma}^{\overbrace{A_\varsigma\cdot\cdot B_\varsigma}^{2s+1}}\Gamma^{l_\varsigma}_{\underbrace{A_\varsigma\cdot\cdot}_{2s}}\sum_{h'=1/2}^{-1/2}\frac{\sqrt{C_{s+h}^{1/2+h'}C_{s-h}^{1/2-h'}}}{\sqrt{C_{2s}^{1}}}\lambda(\hat{p},h-h';s-\frac{1}{2})\lambda_{B_\varsigma}(\hat{p},h'),-s\le h\le s$

Cor. 5.1.2. $\lambda(\hat{p},h;s)=N^{A_\varsigma}(s)\sum_{h'=1/2}^{-1/2}\frac{\sqrt{C_{s+h}^{1/2+h'}C_{s-h}^{1/2-h'}}}{\sqrt{C_{2s}^{1}}}\lambda(\hat{p},h-h';s-\frac{1}{2})\lambda_{A_\varsigma}(\hat{p},h'),-s\le h\le s$

5.2 Corollary-$\lambda(\hat{p},h;s)$ is a spin eigenstate

Thm. 5.2.1. $[\sigma(s)\cdot\hat{p}]\lambda(\hat{p},h;s)=h\lambda(\hat{p},h;s),-s\le h\le s$

Thm. 5.2.2. $\sigma^2(s)\lambda(\hat{p},h;s)=s(s+1)\lambda(\hat{p},h;s),-s\le h\le s$

So $\lambda(\hat{p},h;s)$ is a spin eigenstate. Therefore, the expansion coefficients are just the CG coefficients.

5.3 Corollary-Spin eigenstate $\lambda(\hat{p},h;s)$ raising and lowering operator

Thm. 5.3.1.

$$\begin{cases}e^{i\vec{\omega}\cdot\sigma(s)}\sigma_x(s)e^{-i\vec{\omega}\cdot\sigma(s)}=\sigma_x(s)-\hat{p}_x\frac{\sigma(s)\cdot\hat{p}+\sigma_z(s)}{(1+\hat{p}_z)}\\ e^{i\vec{\omega}\cdot\sigma(s)}\sigma_y(s)e^{-i\vec{\omega}\cdot\sigma(s)}=\sigma_y(s)-\hat{p}_y\frac{\sigma(s)\cdot\hat{p}+\sigma_z(s)}{(1+\hat{p}_z)}\\ e^{i\vec{\omega}\cdot\sigma(s)}\sigma_z(s)e^{-i\vec{\omega}\cdot\sigma(s)}=\sigma(s)\cdot\hat{p}\end{cases}$$

Proof: $e^{i\vec{\omega}\cdot\sigma(s)}\sigma_i(s)e^{-i\vec{\omega}\cdot\sigma(s)}=(e^{-i\vec{\omega}\cdot\gamma})_i{}^j\sigma_j(s)$

$$=[1-i(\gamma\times\hat{p})_z-(\gamma\times\hat{p})_z^2/(1+\hat{p}_z)]_i{}^j\sigma_j(s)$$

$$=[1-i(\gamma_x\hat{p}_y-\gamma_y\hat{p}_x)-(\gamma_x\hat{p}_y-\gamma_y\hat{p}_x)^2/(1+\hat{p}_z)]_i{}^j\sigma_j(s)$$

$$=[1-i\begin{bmatrix}0&0&-i\hat{p}_x\\0&0&-i\hat{p}_y\\i\hat{p}_x&i\hat{p}_y&0\end{bmatrix}-\begin{bmatrix}\hat{p}_x^2&\hat{p}_x\hat{p}_y&0\\\hat{p}_x\hat{p}_y&\hat{p}_y^2&0\\0&0&\hat{p}_x^2+\hat{p}_y^2\end{bmatrix}/(1+\hat{p}_z)]_i{}^j\sigma_j(s)$$

$$=[1-\begin{bmatrix}\hat{p}_x^2&\hat{p}_x\hat{p}_y&\hat{p}_x(1+\hat{p}_z)\\\hat{p}_x\hat{p}_y&\hat{p}_y^2&\hat{p}_y(1+\hat{p}_z)\\-\hat{p}_x(1+\hat{p}_z)&-\hat{p}_y(1+\hat{p}_z)&\hat{p}_x^2+\hat{p}_y^2\end{bmatrix}/(1+\hat{p}_z)]_i{}^j\sigma_j(s)$$

$$=\sigma_i(s)-[\begin{bmatrix}\hat{p}_x^2&\hat{p}_x\hat{p}_y&\hat{p}_x\hat{p}_z+\hat{p}_x\\\hat{p}_x\hat{p}_y&\hat{p}_y^2&\hat{p}_y\hat{p}_z+\hat{p}_y\\-\hat{p}_x(1+\hat{p}_z)&-\hat{p}_y(1+\hat{p}_z)&(1-\hat{p}_z)(1+\hat{p}_z)\end{bmatrix}/(1+\hat{p}_z)]_i{}^j\sigma_j(s)$$

$$=\begin{bmatrix}\sigma_x(s)-\hat{p}_x[\sigma_z(s)+\sigma(s)\cdot\hat{p}]/(1+\hat{p}_z)\\\sigma_y(s)-\hat{p}_y[\sigma_z(s)+\sigma(s)\cdot\hat{p}]/(1+\hat{p}_z)\\\sigma(s)\cdot\hat{p}\end{bmatrix}_i$$ □

7.4 Self review

The above spin bases are obtained by unitary transformation for the corresponding isomomentum case. Except for the full symmetry breaking, all other properties are still satisfied. In fact its full symmetry still exists, but it is only hidden after unitary transformation. Essentially it still satisfies full symmetry, but it is only visually broken. The above spin bases can also be inverted to return to the isomomentum situation (especially in the z-axis direction). So this also indicates that the total spin of a multi-particle system is independent of the velocity of each particle and is entirely determined by the internal freedom degrees of the particle. After unitary transformation, only the probability is constant and real. But the physical image is not necessarily true, such as the momentum is changed. It can also be argued in another way that the momentum remains unchanged and the representation changes. But this is

not intuitive and natural. I prefer the former, which is more natural and intuitive in physics. It can be considered that the momentum in the expression at this time is the physical and real momentum. Therefore, the spin base at this time is also a physical and real spin base. These physical spin bases are a powerful mathematical tool for latter entanglement analysis. he spin transformation relationship in the above chapter represents a physical system as follows: Multiple different spin particles are combined to form the maximum total spin in a physical system. If the localization is small enough, then they are completely equivalent to a high spin particle. On the contrary, it is an entangled multi particles system. herefore, an entangled system is a state between a completely free system and a completely bound system. Perhaps various elementary particles are synthesized through quantum entanglement. his spin base no longer satisfies the original equation, but satisfies the new equation. But what does the new equation look like? It can be further studied. It perhaps implies new physical content.

8 General theory of spin coupling and CG coefficients [33, 39–41]

8.1 Single spin eigenstate

Axi. 8.1.1. $\begin{cases}\sigma(s)\times\sigma(s)=i\sigma(s),\sigma^2(s)=s(s+1)\\ \sigma^2(s)|s,m=s,\cdots,-s\rangle=s(s+1)|s,m=s,\cdots,-s\rangle\\ \sigma_z(s)|s,m=s,\cdots,-s\rangle=m|s,m=s,\cdots,-s\rangle\end{cases}$

Axi. 8.1.2. $\begin{cases}\hat{J}_k\times\hat{J}_k=i\hat{J}_k\\ \hat{J}_k^2|(j_k,m_k)\rangle=j_k(j_k+1)|(j_k,m_k)\rangle\\ J_{kz}|(j_k,m_k)\rangle=m_k|(j_k,m_k)\rangle\end{cases},\begin{cases}\hat{J}_k=\sigma(j_k)\\ |(j_k,m_k)\rangle\sim e^{(i\omega+\varsigma\varepsilon)\cdot\sigma(j_k)}\end{cases}$

Axi. 8.1.3. $\langle(j_k,m_k')|(j_k,m_k)\rangle=\delta_{m_k'm_k},\sum\limits_{m_k}|(j_k,m_k)\rangle\langle(j_k,m_k)|=1$

8.2 Multi spin coupling eigenstates

Def. 8.2.1. $|(j_1,m_1);\cdots;(j_n,m_n)\rangle:=|(j_1,m_1)\rangle\otimes\cdots\otimes|(j_n,m_n)\rangle$

Def. 8.2.2. $\hat{J}_k:=I_{2j_1+1}\otimes\cdots\otimes I_{2j_{k-1}+1}\otimes\sigma(j_k)\otimes I_{2j_{k+1}+1}\otimes\cdots\otimes I_{2j_n+1},\hat{J}=\sum\limits_{k=1}^{n}\hat{J}_k$

Def. 8.2.3. $\begin{cases}\hat{J}_k^2|(j_1,m_1);\cdots;(j_n,m_n)\rangle=j_k(j_k+1)|(j_1,m_1);\cdots;(j_n,m_n)\rangle\\ J_{kz}|(j_1,m_1);\cdots;(j_n,m_n)\rangle=m_k|(j_1,m_1);\cdots;(j_n,m_n)\rangle\end{cases}$

Def. 8.2.4. $\begin{cases}\hat{J}_k^2|j_1,j_2\cdots j_n;(j,m)\rangle=j_k(j_k+1)|j_1,j_2\cdots j_n;(j,m)\rangle\\ \hat{J}^2|j_1,j_2\cdots j_n;(j,m)\rangle=j(j+1)|j_1,j_2\cdots j_n;(j,m)\rangle\\ J_z|j_1,j_2\cdots j_n;(j,m)\rangle=m|j_1,j_2\cdots j_n;(j,m)\rangle\end{cases}$

8.3 Spin eigenstate expansion

Cor. 8.3.1. $\begin{cases}|j_1,j_2\cdots j_n;(j,m)\rangle=\sum\limits_{m_k}|(j_1,m_1);\cdots;(j_n,m_n)\rangle\langle(j_1,m_1);\cdots;(j_n,m_n)|j_1,j_2\cdots j_n;(j,m)\rangle\\ |j_1,j_2;(j,m)\rangle=\sum\limits_{m_k}|(j_1,m_1);(j_2,m_2)\rangle\langle(j_1,m_1);(j_2,m_2)|j_1,j_2;(j,m)\rangle\end{cases}$

$$[\Updownarrow]$$

Cor. 8.3.2. $\begin{cases}|(j_1,m_1);\cdots;(j_n,m_n)\rangle=\sum\limits_{m_k}|j_1,j_2\cdots j_n;(j,m)\rangle\langle j_1,j_2\cdots j_n;(j,m)|(j_1,m_1);\cdots;(j_n,m_n)\rangle\\ |(j_1,m_1);(j_2,m_2)\rangle=\sum\limits_{m_k}|j_1,j_2;(j,m)\rangle\langle j_1,j_2;(j,m)|(j_1,m_1);(j_2,m_2)\rangle\end{cases}$

8.4 Matrix transformation of spin eigenstate

Cor. 8.4.1. $\begin{cases}|j_1,j_2\cdots j_n;(j,m)\rangle=S_{1\cdots n}|(j_1,m_1);\cdots;(j_n,m_n)\rangle\\ |j_1,j_2;(j,m)\rangle=S_{12}|(j_1,m_1);(j_2,m_2)\rangle\end{cases}$

$$[\Updownarrow]$$

Cor. 8.4.2. $\begin{cases}|(j_1,m_1);\cdots;(j_n,m_n)\rangle=S_{1\cdots n}^{-1}|j_1,j_2\cdots j_n;(j,m)\rangle\\ |(j_1,m_1);(j_2,m_2)\rangle=S_{12}^{-1}|j_1,j_2;(j,m)\rangle\end{cases}$

8.5 Spin eigenstate orthogonality

Cor. 8.5.1. $\begin{cases}\langle (j_1,m_1');\cdots;(j_n,m_n')|(j_1,m_1);\cdots;(j_n,m_n)\rangle=\delta_{m_1'm_1}\cdot\cdot\delta_{m_n'm_n}\\ \langle (j_1,m_1');(j_2,m_2')|(j_1,m_1);(j_2,m_2)\rangle=\delta_{m_1'm_1}\delta_{m_2'm_2}\end{cases}$

$[\Updownarrow]$

Cor. 8.5.2. $\begin{cases}\langle j_1,j_2\cdots j_n;(j,m')|j_1,j_2\cdots j_n;(j,m)\rangle=\delta_{m'm}\\ \langle j_1,j_2;(j,m')|j_1,j_2;(j,m)\rangle=\delta_{m'm}\end{cases}$

8.6 Spin eigenstate completeness

Cor. 8.6.1. $\begin{cases}\sum\limits_{m_k}|(j_1,m_1);\cdots;(j_n,m_n)\rangle\langle (j_1,m_1);\cdots;(j_n,m_n)|=1\\ \sum\limits_{m_k}|(j_1,m_1);(j_2,m_2)\rangle\langle (j_1,m_1);(j_2,m_2)|=1\end{cases}$

$[\Updownarrow]$

Cor. 8.6.2. $\begin{cases}\sum\limits_{m_k}|j_1,j_2\cdots j_n;(j,m)\rangle\langle j_1,j_2\cdots j_n;(j,m)|=1\\ \sum\limits_{m_k}|j_1,j_2;(j,m)\rangle\langle j_1,j_2;(j,m)|=1\end{cases}$

8.7 General Racah formula for coupling CG coefficients of two angular momentum

Thm. 8.7.1. $|j_1,j_2;(j_3,m_3)\rangle=\sum\limits_{m_1=j_1}^{-j_1}\sum\limits_{m_2=j_2}^{-j_2}|(j_1,m_1);(j_2,m_2)\rangle\langle (j_1,m_1);(j_2,m_2)|j_1,j_2;(j_3,m_3)\rangle$

$CG_{Racah}=\langle (j_1,m_1);(j_2,m_2)|j_1,j_2;(j_3,m_3)\rangle=\delta(m_1+m_2-m_3)$
$\{(2j_3+1)\frac{(j_1+j_2-j_3)!(j_1-j_2+j_3)!(-j_1+j_2+j_3)!}{(j_1+j_2+j_3+1)!}(j_1+m_1)!(j_1-m_1)!(j_2+m_2)!(j_2-m_2)!(j_3+m_3)!(j_3-m_3)!\}^{1/2}$
$[\sum\limits_r(-1)^r r!(j_1+j_2-j_3-r)!(j_1-m_1-r)!(j_3-j_1-m_2+r)!(j_2+m_2-r)!(j_3-j_2+m_1+r)!]^{-1}$

8.8 Racah formula of CG coefficients for synthesizing two particles into one particle

Thm. 8.8.1. $|j_1,j_2;(j_1+j_2,m_3)\rangle=\sum\limits_{m_1=j_1}^{-j_1}\sum\limits_{m_2=j_2}^{-j_2}|(j_1,m_1);(j_2,m_2)\rangle\langle (j_1,m_1);(j_2,m_2)|j_1,j_2;(j_1+j_2,m_3)\rangle$

$\langle (j_1,m_1);(j_2,m_2)|j_1,j_2;(j_1+j_2,m_3)\rangle=\delta(m_1+m_2-m_3)\{\frac{(2j_1)!(2j_2)!(j_1+j_2+m_3)!(j_1+j_2-m_3)!}{(2j_1+2j_2)!(j_1+m_1)!(j_1-m_1)!(j_2+m_2)!(j_2-m_2)!}\}^{1/2}$

Proof: $\langle (j_1,m_1);(j_2,m_2)|j_1,j_2;(j_1+j_2,m_3)\rangle$
$=\delta(m_1+m_2-m_3)\{\frac{(2j_1)!(2j_2)!}{(2j_1+2j_2)!}(j_1+m_1)!(j_1-m_1)!(j_2+m_2)!(j_2-m_2)!(j_3+m_3)!(j_3-m_3)!\}^{1/2}$
$[(j_1-m_1)!(j_2-m_2)!(j_2+m_2)!(j_1+m_1)!]^{-1}$
$=\delta(m_1+m_2-m_3)\{\frac{(2j_1)!(2j_2)!(j_1+j_2+m_3)!(j_1+j_2-m_3)!}{(2j_1+2j_2)!(j_1+m_1)!(j_1-m_1)!(j_2+m_2)!(j_2-m_2)!}\}^{1/2}$ □

Cor. 8.8.1. $|n,1;(n+1,m_3)\rangle=\sum\limits_{m_1=n}^{-n}\sum\limits_{m_2=1}^{-1}|(n,m_1);(1,m_2)\rangle\langle (n,m_1);(1,m_2)|n,1;(n+1,m_3)\rangle$

The above proofs are initially mainly solved through mental thinking and concrete verification. Sometimes, although it is possible to think clearly through the arrangement and combination, but it is difficult to write them down clearly and clearly. Later, I have found a more rigorous method to prove it.

9.2 CG coefficients formula for multiple angular momentum coupling in special cases

Can the CG coefficients of multiple angular momentum couplings be obtained in principle by repeatly using the Racah formula? It seems only feasible in special single particle cases. The most common case has already been solved by Racah and Wigner. The formula is complex and physically inconvenient to use. Therefore, in some cases, it is still necessary to regain convenient expressions.

Def. 9.2.1. $j_{k+1} = n_1 + \cdot\cdot + n_k + n_{k+1}, j_k = n_2 + \cdot\cdot + n_k + n_{k+1}, \cdots, j_2 = n_k + n_{k+1}, j_1 = n_{k+1},$

Lem. 9.2.1.
$\langle (j_{k-1}, m_{k-1}); (n_2, l_2) | j_{k-1}, n_2; (j_k, m_k) \rangle = \delta(m_{k-1} + l_k - m_k) \{ \frac{(2j_{k-1})!(2n_2)!(j_k+m_k)!(j_k-m_k)!}{(2j_k)!(j_{k-1}+m_{k-1})!(j_{k-1}-m_{k-1})!(n_2+l_2)!(n_2-l_2)!} \}^{1/2}$

Thm. 9.2.1. $|j_1, n_k, \cdot\cdot, n_2, n_1; (j,m)\rangle = |j_k, n_1; (j,m)\rangle = |(j,m)\rangle$
$= \sum_{m_k=j_k}^{-j_k} \cdot\cdot \sum_{m_1=j_1}^{-j_1} \sum_{l_1=n_1}^{-n_1} \cdot\cdot \sum_{l_k=n_k}^{-n_k} |(j_1, m_1); (n_k, l_k); \cdot\cdot; (n_2, l_2); (n_1, l_1)\rangle$
$\delta(m_k + l_1 - m)\delta(m_{k-1} + l_2 - m_k) \cdot \cdot \delta(m_1 + l_k - m_2)$
$\{(2j+1)\frac{(j_k+n_1-j)!(j_k-n_1+j)!(-j_k+n_1+j)!}{(j_k+n_1+j+1)!}(j_k+m_k)!(j_k-m_k)!(n_1+l_1)!(n_1-l_1)!(j+m)!(j-m)!\}^{1/2}$

$[\sum\limits_{h=1}^{-1}(-1)^h\varepsilon_{a_{2r+1}}(\vec{p},h)\varepsilon_{b_{2r+1}}(\vec{p},-h)]\cdot\cdot[\sum\limits_{h=1}^{-1}(-1)^h\varepsilon_{a_n\}}(\vec{p},h)\varepsilon_{b_n\}}(\vec{p},-h)]$
$=\sum\limits_{r=0}^{[n/2]}(-1)^r\frac{n!n!}{(2n)!}\frac{(2n-2r)!}{r!(n-r)!(n-2r)!}$
$\{[C_{\{a_1}C_{a_2}-A_{\{a_1}B_{a_2}-B_{\{a_1}A_{a_2}][C_{(b_1}C_{b_2}-A_{(b_1}B_{b_2}-B_{(b_1}A_{b_2}]\cdot\cdot$
$[C_{a_{2r-1}}C_{a_{2r}}-A_{a_{2r-1}}B_{a_{2r}}-B_{a_{2r-1}}A_{a_{2r}}][C_{b_{2r-1}}C_{b_{2r}}-A_{b_{2r-1}}B_{b_{2r}}-B_{b_{2r-1}}A_{b_{2r}}]\}$
$[C_{a_{2r+1}}C_{b_{2r+1}}-A_{a_{2r+1}}B_{b_{2r+1}}-B_{a_{2r+1}}A_{b_{2r+1}}]\cdot\cdot[C_{a_n\}}C_{b_n)}-A_{a_n\}}B_{b_n)}-B_{a_n\}}A_{b_n)}]$

The above conjecture is equivalently transformed from the formula constructed by Behrends and Fronsdal [50, 51]. It has not been strictly proven and is essentially a conjecture. It is a prerequisite for many important conclusions to follow.

3.2 Definition expression of projection operator for spin-n particle Klein-Gordon equation

In particular, this section uses the conclusions of the latter chapter in advance, and then uses them to derive important conjectures.

Def. 3.2.1. $A=\varepsilon(\vec{p},1),B=\varepsilon(\vec{p},-1),C=\varepsilon(\vec{p},0)$

Cor. 3.2.1. $A_{r,n}=(-\frac{1}{2})^r\frac{n!(2n-2r-1)!!}{r!(n-2r)!(2n-1)!!}=(-1)^r\frac{n!n!}{(2n)!}\frac{(2n-2r)!}{r!(n-r)!(n-2r)!}$

Thm. 3.2.1. $\varepsilon_{\{a_1a_2\cdot\cdot a_n\}}(\vec{p},n-2k)$
$= \frac{1}{\sqrt{C_{2n}^{2k}}}\sum_{i=0}^{k|(n-k)}\frac{(\sqrt{2})^{2i}n!}{(n-k-i)!(k-i)!(2i)!}[A_{\{a_1}\cdot\cdot A_{a_{n-k-i}}][B_{a_{n+1-k-i}}\cdot\cdot B_{a_{n-2i}}][C_{a_{n+1-2i}}\cdot\cdot C_{a_n\}}]$

Thm. 3.2.2. $\varepsilon_{\{a_1a_2\cdot\cdot a_n\}}(\vec{p},n-2k-1)$
$= \frac{1}{\sqrt{C_{2n}^{2k+1}}}\sum_{i=0}^{k|(n-1-k)}\frac{(\sqrt{2})^{2i+1}n!}{(n-k-i-1)!(k-i)!(2i+1)!}[A_{\{a_1}\cdot\cdot A_{a_{n-k-i-1}}][B_{a_{n-k-i}}\cdot\cdot B_{a_{n-2i-1}}][C_{a_{n-2i}}\cdot\cdot C_{a_n\}}]$

Thm. 3.2.3. $\varepsilon_{\{a_1a_2\cdot\cdot a_n\}}(\vec{p},n-2k)\varepsilon_{(b_1b_2\cdot\cdot b_n)}(\vec{p},n-2(n-k))$
$= \frac{1}{C_{2n}^{2k}}\sum_{i,j=0}^{k|(n-k)}\frac{2^{i+j}n!n!}{(n-k-i)!(n-k-j)!(k-i)!(k-j)!(2i)!(2j)!}$
$\{[A_{\{a_1}\cdot\cdot A_{a_{n-k-i}}][B_{a_{n+1-k-i}}\cdot\cdot B_{a_{n-2i}}][C_{a_{n+1-2i}}\cdot\cdot C_{a_n\}}]\}\{[B_{(b_1}\cdot\cdot B_{b_{n-k-j}}][A_{b_{n+1-k-j}}\cdot\cdot A_{b_{n-2j}}][C_{b_{n+1-2j}}\cdot\cdot C_{b_n)}]\}$

Thm. 3.2.4. $\varepsilon_{\{a_1a_2\cdot\cdot a_n\}}(\vec{p},n-2k-1)\varepsilon_{(b_1b_2\cdot\cdot b_n)}(\vec{p},n-2(n-1-k)-1)$
$= \frac{1}{C_{2n}^{2k+1}}\sum_{i,j=0}^{k|(n-1-k)}\frac{2^{i+j+1}n!n!}{(n-k-i-1)!(n-k-j-1)!(k-i)!(k-j)!(2i+1)!(2j+1)!}$
$\{[A_{\{a_1}\cdot\cdot A_{a_{n-k-i-1}}][B_{a_{n-k-i}}\cdot\cdot B_{a_{n-2i-1}}][C_{a_{n-2i}}\cdot\cdot C_{a_n\}}]\}\{[B_{(b_1}\cdot\cdot B_{b_{n-k-j-1}}][A_{b_{n-k-j}}\cdot\cdot A_{b_{n-2j-1}}][C_{b_{n-2j}}\cdot\cdot C_{b_n)}]\}$

Thm. 3.2.5. $\sum_{h=n}^{-n}(-1)^h\varepsilon_{\{a_1a_2\cdot\cdot a_n\}}(\vec{p},h)\varepsilon_{(b_1b_2\cdot\cdot b_n)}(\vec{p},-h)$
$= \sum_{k=0}^{n}\frac{(-1)^n}{C_{2n}^{2k}}\sum_{i,j=0}^{k|(n-k)}\frac{2^{i+j}n!n!}{(n-k-i)!(n-k-j)!(k-i)!(k-j)!(2i)!(2j)!}$
$\{[A_{\{a_1}\cdot\cdot A_{a_{n-k-i}}][B_{a_{n+1-k-i}}\cdot\cdot B_{a_{n-2i}}][C_{a_{n+1-2i}}\cdot\cdot C_{a_n\}}]\}\{[B_{(b_1}\cdot\cdot B_{b_{n-k-j}}][A_{b_{n+1-k-j}}\cdot\cdot A_{b_{n-2j}}][C_{b_{n+1-2j}}\cdot\cdot C_{b_n)}]\}$
$-\sum_{k=0}^{n-1}\frac{(-1)^n}{C_{2n}^{2k+1}}\sum_{i,j=0}^{k|(n-1-k)}\frac{2^{i+j+1}n!n!}{(n-k-i-1)!(n-k-j-1)!(k-i)!(k-j)!(2i+1)!(2j+1)!}$
$\{[A_{\{a_1}\cdot\cdot A_{a_{n-k-i-1}}][B_{a_{n-k-i}}\cdot\cdot B_{a_{n-2i-1}}][C_{a_{n-2i}}\cdot\cdot C_{a_n\}}]\}\{[B_{(b_1}\cdot\cdot B_{b_{n-k-j-1}}][A_{b_{n-k-j}}\cdot\cdot A_{b_{n-2j-1}}][C_{b_{n-2j}}\cdot\cdot C_{b_n)}]\}$

The above theorems were proposed by me through inductive exploration and have been strictly proved in the following chapter.

3.3 Important conjecture of projection operator for spin-n particle Klein-Gordon equation

Ass. 3.3.1. $\sum_{r=0}^{[n/2]}(-1)^r\frac{n!n!}{(2n)!}\frac{(2n-2r)!}{r!(n-r)!(n-2r)!}$
$\{[C_{\{a_1}C_{a_2}-A_{\{a_1}B_{a_2}-B_{\{a_1}A_{a_2}][C_{(b_1}C_{b_2}-A_{(b_1}B_{b_2}-B_{(b_1}A_{b_2}]\cdot\cdot$
$[C_{a_{2r-1}}C_{a_{2r}}-A_{a_{2r-1}}B_{a_{2r}}-B_{a_{2r-1}}A_{a_{2r}}][C_{b_{2r-1}}C_{b_{2r}}-A_{b_{2r-1}}B_{b_{2r}}-B_{b_{2r-1}}A_{b_{2r}}]\}$
$[C_{a_{2r+1}}C_{b_{2r+1}}-A_{a_{2r+1}}B_{b_{2r+1}}-B_{a_{2r+1}}A_{b_{2r+1}}]\cdot\cdot[C_{a_n\}}C_{b_n)}-A_{a_n\}}B_{b_n)}-B_{a_n\}}A_{b_n)}]$
$= \sum_{k=0}^{n}\frac{(-1)^n}{C_{2n}^{2k}}\sum_{i,j=0}^{k|(n-k)}\frac{2^{i+j}n!n!}{(n-k-i)!(n-k-j)!(k-i)!(k-j)!(2i)!(2j)!}$
$\{[A_{\{a_1}\cdot\cdot A_{a_{n-k-i}}][B_{a_{n+1-k-i}}\cdot\cdot B_{a_{n-2i}}][C_{a_{n+1-2i}}\cdot\cdot C_{a_n\}}]\}\{[B_{(b_1}\cdot\cdot B_{b_{n-k-j}}][A_{b_{n+1-k-j}}\cdot\cdot A_{b_{n-2j}}][C_{b_{n+1-2j}}\cdot\cdot C_{b_n)}]\}$
$-\sum_{k=0}^{n-1}\frac{(-1)^n}{C_{2n}^{2k+1}}\sum_{i,j=0}^{k|(n-1-k)}\frac{2^{i+j+1}n!n!}{(n-k-i-1)!(n-k-j-1)!(k-i)!(k-j)!(2i+1)!(2j+1)!}$
$\{[A_{\{a_1}\cdot\cdot A_{a_{n-k-i-1}}][B_{a_{n-k-i}}\cdot\cdot B_{a_{n-2i-1}}][C_{a_{n-2i}}\cdot\cdot C_{a_n\}}]\}\{[B_{(b_1}\cdot\cdot B_{b_{n-k-j-1}}][A_{b_{n-k-j}}\cdot\cdot A_{b_{n-2j-1}}][C_{b_{n-2j}}\cdot\cdot C_{b_n)}]\}$

The above conjecture is obtained by combining the formula (conjecture) constructed by Behrends and Frontdal [50,51] with the theorem proposed by me in the previous section. It is a prerequisite for many following important conclusions. And in many cases the verification is correct. Currently, no counter examples have been encountered. However, to strictly prove it, it is necessary to first prove the formula constructed by Behrends and Frontdal. At present, I can't finish this proof. Of course, if this conjecture is proved by other methods, the formula constructed by Behrends and Frontdal can be strictly proved.

4 From physics to mathematical abstraction: Projection operator conjecture

In this section, A, B, and C are no longer specifically referred to, but generally refer to commutative variables.

4.1 Mathematical conjecture derived from projection operator for $s = n$ K-G equation

Ass. 4.1.1. $\sum_{r=0}^{[n/2]}(-1)^r\frac{n!n!}{(2n)!}\frac{(2n-2r)!}{r!(n-r)!(n-2r)!}$
$\{[A_{\{a_1}B_{a_2}+B_{\{a_1}A_{a_2}+C_{\{a_1}C_{a_2}][A_{(b_1}B_{b_2}+B_{(b_1}A_{b_2}+C_{(b_1}C_{b_2}]\cdot\cdot$
$[A_{a_{2r-1}}B_{a_{2r}}+B_{a_{2r-1}}A_{a_{2r}}+C_{a_{2r-1}}C_{a_{2r}}][A_{b_{2r-1}}B_{b_{2r}}+B_{b_{2r-1}}A_{b_{2r}}+C_{b_{2r-1}}C_{b_{2r}}]\}$
$[A_{a_{2r+1}}B_{b_{2r+1}}+B_{a_{2r+1}}A_{b_{2r+1}}+C_{a_{2r+1}}C_{b_{2r+1}}]\cdot\cdot[A_{a_n\}}B_{b_n)}+B_{a_n\}}A_{b_n)}+C_{a_n\}}C_{b_n)}]$

$= \sum_{k=0}^{n} \frac{1}{C_{2n}^{2k}} \sum_{i,j=0}^{k|(n-k)} \frac{(-2)^{i+j} n!n!}{(n-k-i)!(n-k-j)!(k-i)!(k-j)!(2i)!(2j)!}$
$\{[A_{\{a_1} \cdot \cdot A_{a_{n-k-i}}][B_{a_{n+1-k-i}} \cdot \cdot B_{a_{n-2i}}][C_{a_{n+1-2i}} \cdot \cdot C_{a_n\}}]\}\{[B_{(b_1} \cdot \cdot B_{b_{n-k-j}}][A_{b_{n+1-k-j}} \cdot \cdot A_{b_{n-2j}}][C_{b_{n+1-2j}} \cdot \cdot C_{b_n)}]\}$
$- \sum_{k=0}^{n-1} \frac{1}{C_{2n}^{2k+1}} \sum_{i,j=0}^{k|(n-1-k)} \frac{(-2)^{i+j+1} n!n!}{(n-k-i-1)!(n-k-j-1)!(k-i)!(k-j)!(2i+1)!(2j+1)!}$
$\{[A_{\{a_1} \cdot \cdot A_{a_{n-k-i-1}}][B_{a_{n-k-i}} \cdot \cdot B_{a_{n-2i-1}}][C_{a_{n-2i}} \cdot \cdot C_{a_n\}}]\}\{[B_{(b_1} \cdot \cdot B_{b_{n-k-i-1}}][A_{b_{n-k-i}} \cdot \cdot A_{b_{n-2i-1}}][C_{b_{n-2i}} \cdot \cdot C_{b_n)}]\}$

The above is a more general conjecture. If it holds, the conjecture in the previous section will naturally hold.

Cor. 4.1.1. $C = 0 \Rightarrow$
$\sum_{r=0}^{[n/2]} (-1)^r \frac{(2n-2r)!}{r!(n-r)!(n-2r)!}$
$\{[A_{\{a_1} B_{a_2} + B_{\{a_1} A_{a_2}][A_{(b_1} B_{b_2} + B_{(b_1} A_{b_2}] \cdot \cdot [A_{a_{2r-1}} B_{a_{2r}} + B_{a_{2r-1}} A_{a_{2r}}][A_{b_{2r-1}} B_{b_{2r}} + B_{b_{2r-1}} A_{b_{2r}}]\}$
$[A_{a_{2r+1}} B_{b_{2r+1}} + B_{a_{2r+1}} A_{b_{2r+1}}] \cdot \cdot [A_{a_n\}} B_{b_n)} + B_{a_n\}} A_{b_n)}]$
$= \sum_{k=0}^{n} \frac{(2k)!}{k!k!} \frac{(2n-2k)!}{(n-k)!(n-k)!} [A_{\{a_1} \cdot \cdot A_{a_{n-k}} B_{a_{n+1-k}} \cdot \cdot B_{a_n\}}][B_{(b_1} \cdot \cdot B_{b_{n-k}} A_{b_{n+1-k}} \cdot \cdot A_{b_n)}]$

4.2 New combinatorial identities obtained from projection operator conjecture

Cor. 4.2.1. $A = 0, B = 0, C = \pm 1 \Rightarrow \sum_{r=0}^{[n/2]} (-1)^r \frac{(2n-2r)!}{r!(n-r)!(n-2r)!} = 2^n$

Cor. 4.2.2. $A = \pm 1, B = \pm 1, C = 0 \Rightarrow \sum_{r=0}^{[n/2]} (-1)^r \frac{(2n-2r)!}{r!(n-r)!(n-2r)!} = \sum_{k=0}^{n} \frac{1}{2^n} \frac{(2k)!}{k!k!} \frac{(2n-2k)!}{(n-k)!(n-k)!} = 2^n$

Cor. 4.2.3. $\sum_{k=0}^{n} \frac{(2k)!}{k!k!} \frac{(2n-2k)!}{(n-k)!(n-k)!} = \sum_{k=0}^{n} C_{2k}^{k} C_{2n-2k}^{n-k} = 2^{2n}, \sum_{k=0}^{n} \frac{(2k-1)!!}{(2k)!!} \frac{(2n-2k-1)!!}{(2n-2k)!!} = 1$

4.3 Projection operator conjecture C(2i,2j) case

Thm. 4.3.1. $\sum_{r=0}^{[n/2]} \sum_{l \geq 0, i|j-r}^{\leq i,j,n/2-r} (-1)^r \frac{n!n!}{(2n)!} \frac{(2n-2r)!}{r!(n-r)!(n-2r)!}$
$C_r^{i-l} \{[C_{\{a_1} C_{a_2}] \cdot \cdot [C_{a_{2i-2l-1}} C_{a_{2i-2l}}][A_{a_{2i-2l+1}} B_{a_{2i-2l+2}} + B_{a_{2i-2l+1}} A_{a_{2i-2l+2}}] \cdot \cdot [A_{a_{2r-1}} B_{a_{2r}} + B_{a_{2r-1}} A_{a_{2r}}]$
$C_r^{j-l} [C_{(b_1} C_{b_2}] \cdot \cdot [C_{b_{2j-2l-1}} C_{b_{2j-2l}}][A_{b_{2j-2l+1}} B_{b_{2j-2l+2}} + B_{b_{2j-2l+1}} A_{b_{2j-2l+2}}] \cdot \cdot [A_{b_{2r-1}} B_{b_{2r}} + B_{b_{2r-1}} A_{b_{2r}}]\}$
$C_{n-2r}^{2l} [A_{a_{2r+1}} B_{b_{2r+1}} + B_{a_{2r+1}} A_{b_{2r+1}}] \cdot \cdot [A_{a_{n-2l}} B_{b_{n-2l}} + B_{a_{n-2l}} A_{b_{n-2l}}][C_{a_{n-2l+1}} C_{b_{n-2l+1}}] \cdot \cdot [C_{a_n\}} C_{b_n)}]$
$= \frac{n!n!}{(2n)!} \sum_{k \geq i|j}^{\leq n-i|j} \frac{(-2)^{i+j}}{(2i)!(2j)!} \frac{(2k)!}{(k-i)!(k-j)!} \frac{(2n-2k)!}{(n-k-i)!(n-k-j)!}$
$\{[A_{\{a_1} \cdot \cdot A_{a_{n-k-i}}][B_{a_{n+1-k-i}} \cdot \cdot B_{a_{n-2i}}][C_{a_{n+1-2i}} \cdot \cdot C_{a_n\}}]\}\{[B_{(b_1} \cdot \cdot B_{b_{n-k-j}}][A_{b_{n+1-k-j}} \cdot \cdot A_{b_{n-2j}}][C_{b_{n+1-2j}} \cdot \cdot C_{b_n)}]\}$

The above is an identity which contains denominator term $(2i)!(2j)!$ after $(AB + BA), CC$ type binomial expansion.

Cor. 4.3.1. $\sum_{r=0}^{[n/2]} \sum_{l \geq 0, i|j-r}^{\leq i,j,n/2-r} (-1)^r \frac{n!n!}{(2n)!} \frac{(2n-2r)!}{r!(n-r)!(n-2r)!} C_r^{i-l} 2^{r+l-i} C_r^{j-l} 2^{r+l-j} C_{n-2r}^{2l}$
$[C_{\{a_1} C_{a_2}] \cdot \cdot [C_{a_{2i-2l-1}} C_{a_{2i-2l}}][A_{a_{2i-2l+1}} B_{a_{2i-2l+2}}] \cdot \cdot [A_{a_{2r-1}} B_{a_{2r}}]$
$[C_{(b_1} C_{b_2}] \cdot \cdot [C_{b_{2j-2l-1}} C_{b_{2j-2l}}][A_{b_{2j-2l+1}} B_{b_{2j-2l+2}}] \cdot \cdot [A_{b_{2r-1}} B_{b_{2r}}]$
$[A_{a_{2r+1}} B_{b_{2r+1}} + B_{a_{2r+1}} A_{b_{2r+1}}] \cdot \cdot [A_{a_{n-2l}} B_{b_{n-2l}} + B_{a_{n-2l}} A_{b_{n-2l}}][C_{a_{n-2l+1}} C_{b_{n-2l+1}}] \cdot \cdot [C_{a_n\}} C_{b_n)}]$
$= \frac{n!n!}{(2n)!} \sum_{k \geq i|j}^{\leq n-i|j} \frac{(-2)^{i+j}}{(2i)!(2j)!} \frac{(2k)!}{(k-i)!(k-j)!} \frac{(2n-2k)!}{(n-k-i)!(n-k-j)!}$

6 Analysis of recursive relation for Klein-Gordon equation projection operators

Klein Gordon n+1-projection operator can uniquely expand by 1-projection operator. Then we can assume that it is equal to all possible combinations of n-projection operators multiplied by 1-projection

operators (including undetermined coefficients). Finally, we can calculate out the expansion coefficients of n+1-projection operator=$\sum$ n-projection operator multiplied by 1-projection operator. However the solution is not unique. And there are generally infinite solutions. So there is no clear physical meaning.

Def. 6.0.1. $\begin{cases}\hat{P}_{a_1\cdot\cdot a_n b_1\cdot\cdot b_n}(n)=\frac{1}{(n!)^2}\sum\limits_{P(a)}^{P(b)}\sum\limits_{r=0}^{[n/2]}k_r\hat{P}_{a_1a_2}\hat{P}_{b_1b_2}\cdot\cdot\hat{P}_{a_{2r-1}a_{2r}}\hat{P}_{b_{2r-1}b_{2r}}\prod\limits_{i=2r+1}^{n}\hat{P}_{a_ib_i}\\ \hat{P}_{a_1\cdot\cdot a_n b_1\cdot\cdot b_n}(n):=\eta_{b_1}^{a'_1}\eta_{b_2}^{a'_2}\cdot\cdot\eta_{b_n}^{a'_n}\hat{P}_{a_1\cdot\cdot a_n a'_1\cdot\cdot a'_n}(n)\end{cases}$

6 Explain photon entanglement by classical physics and probability theory

(Just exploratory.)

6.1 Description of spin polarization in classical electromagnetism

Def. 6.1.1. $|\circlearrowleft\rangle := \vec{E}_{\circlearrowleft} = A[cos(p\cdot x+\theta)\hat{e}_x + sin(p\cdot x+\theta)\hat{e}_y], |\circlearrowright\rangle := \vec{E}_{\circlearrowright} = A[cos(p\cdot x+\theta)\hat{e}_x - sin(p\cdot x+\theta)\hat{e}_y]$

Def. 6.1.2. $|\rightarrow\rangle := \vec{E}_{\rightarrow} = \sqrt{2}Acos(p\cdot x+\theta)\hat{e}_x, |\uparrow\rangle := \vec{E}_{\uparrow} = \sqrt{2}Asin(p\cdot x+\theta)\hat{e}_y$

Proof: $I_{\circlearrowleft} = \frac{1}{2}\int_V(\vec{E}^2_{\circlearrowleft} + \vec{B}^2_{\circlearrowleft})d^3\vec{r} = \int_V \vec{E}^2_{\circlearrowleft}d^3\vec{r} = \frac{1}{T}\int_0^T \vec{E}^2_{\circlearrowleft}dt = A^2 = h\nu$ □

Proof: $I_{\circlearrowright} = \frac{1}{2}\int_V(\vec{E}^2_{\circlearrowright} + \vec{B}^2_{\circlearrowright})d^3\vec{r} = \int_V \vec{E}^2_{\circlearrowright}d^3\vec{r} = \frac{1}{T}\int_0^T \vec{E}^2_{\circlearrowright}dt = A^2 = h\nu$ □

Proof: $I_{\rightarrow} = \frac{1}{2}\int_V(\vec{E}^2_{\rightarrow} + \vec{B}^2_{\rightarrow})d^3\vec{r} = \int_V \vec{E}^2_{\rightarrow}d^3\vec{r} = \frac{1}{T}\int_0^T \vec{E}^2_{\rightarrow}dt = A^2 = h\nu$ □

Proof: $I_{\uparrow} = \frac{1}{2}\int_V(\vec{E}^2_{\uparrow} + \vec{B}^2_{\uparrow})d^3\vec{r} = \int_V \vec{E}^2_{\uparrow}d^3\vec{r} = \frac{1}{T}\int_0^T \vec{E}^2_{\uparrow}dt = A^2 = h\nu$ □

Cor. 6.1.1. $\begin{cases}|\circlearrowleft\rangle = \frac{1}{\sqrt{2}}\{|\rightarrow\rangle + |\uparrow\rangle\}, |\circlearrowright\rangle = \frac{1}{\sqrt{2}}\{|\rightarrow\rangle - |\uparrow\rangle\}\\ |\rightarrow\rangle = \frac{1}{\sqrt{2}}\{|\circlearrowleft\rangle + |\circlearrowright\rangle\}, |\uparrow\rangle = \frac{1}{\sqrt{2}}\{|\circlearrowleft\rangle - |\circlearrowright\rangle\}\end{cases}$

6.2 Description of linear polarization in classical electromagnetics

Def. 6.2.1. $|\rightarrow\rangle := \vec{E}_{\rightarrow} = \sqrt{2}Acos(p\cdot x+\theta)\hat{e}_x, |\uparrow\rangle := \vec{E}_{\uparrow} = \sqrt{2}Acos(p\cdot x+\theta)\hat{e}_y$

Cor. 6.2.1. $\begin{cases}|\nearrow\rangle = \frac{1}{\sqrt{2}}\{|\rightarrow\rangle + |\uparrow\rangle\}, |\searrow\rangle = \frac{1}{\sqrt{2}}\{|\rightarrow\rangle - |\uparrow\rangle\}\\ |\rightarrow\rangle = \frac{1}{\sqrt{2}}\{|\nearrow\rangle + |\searrow\rangle\}, |\uparrow\rangle = \frac{1}{\sqrt{2}}\{|\nearrow\rangle - |\searrow\rangle\}\end{cases}$

Cor. 6.2.2. $\begin{cases}P(\rightarrow) = 1\end{cases} \rightarrow \oslash \rightarrow \begin{cases}P(\nearrow) = \frac{1}{2}\\ P(\searrow) = 0\end{cases} \rightarrow \ominus \rightarrow \begin{cases}P(\rightarrow) = \frac{1}{4}\\ P(\uparrow) = 0\end{cases} \rightarrow \ominus \rightarrow \begin{cases}P(\rightarrow) = \frac{1}{4}\\ P(\uparrow) = 0\end{cases}$

Cor. 6.2.3. $\begin{cases}P(\rightarrow) = 1\end{cases} \rightarrow \otimes \rightarrow \begin{cases}P(\nearrow) = \frac{1}{2}\\ P(\searrow) = \frac{1}{2}\end{cases} \rightarrow \oplus \rightarrow \begin{cases}P(\uparrow) = \frac{1}{2}\\ P(\rightarrow) = \frac{1}{2}\end{cases} \rightarrow \otimes \rightarrow \begin{cases}P(\nearrow) = \frac{1}{2}\\ P(\searrow) = \frac{1}{2}\end{cases}$

7 Multi particles spin system

7.1 Total spin of two electrons tightly coupled system

Cor. 7.1.1. $\vec{s} = \sigma(\frac{1}{2})\otimes I + I\otimes\sigma(\frac{1}{2})$

7.2 Total spin of two electrons loosely coupled system

Cor. 7.2.1. $s_{ij} = \sigma_i(\frac{1}{2})\otimes\sigma_j(\frac{1}{2})$

7.3 Total spin of multi electrons tightly coupled system

Cor. 7.3.1. $\vec{s} = \Omega(s)$

7.4 Total spin of multi electrons loosely coupled system

Cor. 7.4.1. $s_{i_1i_2\cdots i_{2s}} = \sigma_{i_1}(\frac{1}{2})\otimes\sigma_{i_2}(\frac{1}{2})\otimes\cdot\cdot\otimes\sigma_{i_{2s}}(\frac{1}{2})$

8 Conjecture on multi particles entanglement equation

8.1 Physical meaning 1 of fourth order matrix

Thm. 8.1.1. $X_{ab}(\vec{r},t) = \overbrace{\frac{1}{2!}[X_{\{ab\}}(\vec{r},t) - \frac{1}{2}\delta_{ab}trX(\vec{r},t)]}^{spin\text{-}2\ particle} + \overbrace{\frac{1}{2!}X_{[ab]}(\vec{r},t)}^{spin\text{-}1\ particle} + \overbrace{\frac{1}{4}\delta_{ab}trX(\vec{r},t)}^{spin\text{-}0\ particle}$

Thm. 8.1.2. $(\partial^c\partial_c - m^2)\overbrace{\frac{1}{2!}[X_{\{ab\}}(\vec{r},t) - \frac{1}{2}\delta_{ab}trX(\vec{r},t)]}^{spin\text{-}2\ particle} = 0, \partial^a\overbrace{\frac{1}{2!}[X_{\{ab\}}(\vec{r},t) - \frac{1}{2}\delta_{ab}trX(\vec{r},t)]}^{spin\text{-}2\ particle} = 0$

$$\overbrace{\frac{1}{2!}[X_{\{ab\}}(\vec{r},t) - \frac{1}{2}\delta_{ab}trX(\vec{r},t)]}^{spin\text{-}2\ particle} = \frac{1}{(2\pi)^{3/2}}\int_{\vec{p}=-\infty}^{+\infty}\sum_{h=2}^{-2}\frac{1}{\sqrt{2^2E}}\varepsilon_{ab}(\vec{p},h;2)[a(\vec{p},h;2)e^{ip\cdot x} + b^+(\vec{p},h;2)e^{-ip\cdot x}]d^3\vec{p}$$

Thm. 8.1.3. $(\partial^c\partial_c - m^2)\overbrace{\frac{1}{2!}X_{[ab]}(\vec{r},t)}^{spin\text{-}1\ particle} = 0, \partial^a\overbrace{\frac{1}{2!}X_{[ab]}(\vec{r},t)}^{spin\text{-}1\ particle} = 0$

$$\overbrace{\frac{1}{2!}X_{[ab]}(\vec{r},t)}^{spin\text{-}1\ particle} = \frac{1}{(2\pi)^{3/2}}\int_{\vec{p}=-\infty}^{+\infty}\sum_{h=1}^{-1}\frac{1}{\sqrt{2E}}\varepsilon_{ab}(\vec{p},h;1)[a(\vec{p},h;1)e^{ip\cdot x} + b^+(\vec{p},h;1)e^{-ip\cdot x}]d^3\vec{p}$$

Thm. 8.1.4. $(\partial^c\partial_c - m^2)\overbrace{\frac{1}{4}\delta_{ab}trX(\vec{r},t)}^{spin\text{-}0\ particle} = 0$

$$\overbrace{\frac{1}{4}\delta_{ab}trX(\vec{r},t)}^{spin\text{-}0\ particle} = \frac{1}{(2\pi)^{3/2}}\int_{\vec{p}=-\infty}^{+\infty}\frac{1}{\sqrt{2E}}[\varepsilon_{ab}(\vec{p},0;0) + \frac{p_ap_b}{m^2}][a(\vec{p},0;0)e^{ip\cdot x} + b^+(\vec{p},0;0)e^{-ip\cdot x}]d^3\vec{p}$$

8.2 Physical meaning 2 of fourth order matrix

Thm. 8.2.1. $X_{\lambda_\varsigma\mu_\varsigma}(\vec{r},t)=\overbrace{\frac{1}{2!}X_{\{\lambda_\varsigma\mu_\varsigma\}}(\vec{r},t)}^{spin\text{-}1\ particle}+\overbrace{\frac{1}{2!}X_{[\lambda_\varsigma\mu_\varsigma]}(\vec{r},t)}^{spin\text{-}0\ particle}$

Chapter33 Internal Component Interaction of Elementary Particles

1 Basic particle internal component hypothesis

Basic particle internal component hypothesis: It is assumed that the elementary particle has internal components, each corresponding to a geometric point. Scalar particle has an internal component corresponding to a geometric point. Neutrino [5] has two internal components corresponding to two geometric points. Photon [7,8] has three internal components corresponding to three geometric points. Gravitino [17] has four internal components corresponding to four geometric points. Graviton [11–14] has five internal components corresponding to five geometric points. electron [4] has four internal components corresponding to four geometric points.

The internal component interaction is essentially quantum entanglement. The form of interaction is different from traditional one, not attraction and repulsion, but mutual internal component correlation. It is a new interaction. owever, the transmission speed of the interaction is still the speed of light, not instantaneous transmission. The formation of baryons by several quarks is a complete internal component interaction. The normal plane wave superposition has no internal component action.

2 Particle recombination theory

2.1 Physical mechanism of two neutrinos synthesizing one photon

Initially, there were two independent neutrinos χ and φ. Then a new interaction occurs that is not yet known, namely the interaction between internal quantities. This interaction makes the second component of the first neutrino χ equal to the first component of the second neutrino φ in any reference system. That is $\chi_2 \equiv \varphi_1$. That is, the two geometric points of the internal component coincide. After this effect occurs, the previously independent covariancy cannot be maintaine. Because of their independent Lorentz transforms to other reference systems, $\chi_2 \equiv \varphi_1$ can't establish. The result is that the two particles form a new covariance together. It will create a new spin and that becomes a new particle: a photon. The process is as follows:

$$\begin{cases} (\sigma, -i\varsigma)^a \partial_a \begin{bmatrix} \chi_1 \\ \chi_2 \end{bmatrix} = 0, \begin{bmatrix} \chi_1 \\ \chi_2 \end{bmatrix} \sim e^{(i\omega+\varsigma\epsilon)\cdot\sigma(\frac{1}{2})} \\ (\sigma, -i\varsigma)^a \partial_a \begin{bmatrix} \varphi_1 \\ \varphi_2 \end{bmatrix} = 0, \begin{bmatrix} \varphi_1 \\ \varphi_2 \end{bmatrix} \sim e^{(i\omega+\varsigma\epsilon)\cdot\sigma(\frac{1}{2})} \end{cases} \Leftrightarrow (\sigma \otimes I, -i\varsigma)^a \partial_a \begin{bmatrix} \chi_1 \\ \chi_2 \\ \varphi_1 \\ \varphi_2 \end{bmatrix} = 0, \begin{bmatrix} \chi_1 \\ \chi_2 \\ \varphi_1 \\ \varphi_2 \end{bmatrix} \sim e^{(i\omega+\varsigma\epsilon)\cdot\sigma(\frac{1}{2})} \otimes I \tag{33.1}$$

The geometric points of the two internal components coincide: $\chi_2 \equiv \varphi_1$. The meaningful equation becomes:

$$\to (\sigma \otimes I, -i\varsigma)^a \partial_a \begin{bmatrix} \chi_1 \\ \chi_2 \equiv \varphi_1 \\ \varphi_1 \equiv \chi_2 \\ \varphi_2 \end{bmatrix} = 0, \begin{bmatrix} \chi_1 \\ \chi_2 \equiv \varphi_1 \\ \varphi_1 \equiv \chi_2 \\ \varphi_2 \end{bmatrix} \sim e^{(i\omega+\varsigma\epsilon)\cdot\sigma(\frac{1}{2})} \otimes e^{(i\omega+\varsigma\epsilon)\cdot\sigma(\frac{1}{2})} \tag{33.2}$$

$$\Leftrightarrow [\partial_a + S_{ab}(1,\varsigma)\partial^b] \begin{bmatrix} \chi_1 \\ \chi_2 \equiv \varphi_1 \\ \varphi_2 \end{bmatrix} = 0, \begin{bmatrix} \chi_1 \\ \chi_2 \equiv \varphi_1 \\ \varphi_2 \end{bmatrix} \sim e^{(i\omega+\varsigma\epsilon)\cdot\tau(1)} \tag{33.3}$$

2.2 Physical mechanism of 2s neutrinos synthesizing one s-spin particle

Initially, there were 2s independent neutrinos ${}^i\varphi, i = 1, 2, \cdots, 2s$. Then a new interaction occurs that is not yet known, namely the interaction between internal quantities. This interaction makes the second component of the i-order neutrino ${}^i\varphi$ equal to the first component of the i+1-order neutrino ${}^{i+1}\varphi$ in any reference system. That is ${}^i\varphi_2 \equiv^{i+1} \varphi_1$. That is, the two geometric points of the internal component coincide. After this effect occurs, the previously independent covariancy cannot be maintaine. Because of their independent Lorentz transforms to other reference systems, ${}^i\varphi_2 \equiv^{i+1} \varphi_1$ can't establish. The result is that the 2s particles form a new covariance together. It will create a new spin and that

becomes a new particle: a s-spin particle. The process is as follows:

$$\begin{cases} (\sigma,-i\varsigma)^a\partial_a \begin{bmatrix} {}^1\varphi_1 \\ {}^1\varphi_2 \end{bmatrix} = 0, \begin{bmatrix} {}^1\varphi_1 \\ {}^1\varphi_2 \end{bmatrix} \sim e^{(i\omega+\varsigma\epsilon)\cdot\sigma(\frac{1}{2})} \\ (\sigma,-i\varsigma)^a\partial_a \begin{bmatrix} {}^2\varphi_1 \\ {}^2\varphi_2 \end{bmatrix} = 0, \begin{bmatrix} {}^2\varphi_1 \\ {}^2\varphi_2 \end{bmatrix} \sim e^{(i\omega+\varsigma\epsilon)\cdot\sigma(\frac{1}{2})} \\ \cdots\cdots \\ (\sigma,-i\varsigma)^a\partial_a \begin{bmatrix} {}^{2s}\varphi_1 \\ {}^{2s}\varphi_2 \end{bmatrix} = 0, \begin{bmatrix} {}^{2s}\varphi_1 \\ {}^{2s}\varphi_2 \end{bmatrix} \sim e^{(i\omega+\varsigma\epsilon)\cdot\sigma(\frac{1}{2})} \end{cases} \tag{33.4}$$

$$\Leftrightarrow(\sigma\otimes I_{2s},-i\varsigma)^a\partial_a \begin{bmatrix} {}^1\varphi_1 \\ {}^1\varphi_2 \\ {}^2\varphi_1 \\ {}^2\varphi_2 \\ \cdots \\ {}^{2s}\varphi_1 \\ {}^{2s}\varphi_2 \end{bmatrix} = 0, \begin{bmatrix} {}^1\varphi_1 \\ {}^1\varphi_2 \\ {}^2\varphi_1 \\ {}^2\varphi_2 \\ \cdots \\ {}^{2s}\varphi_1 \\ {}^{2s}\varphi_2 \end{bmatrix} \sim e^{(i\omega+\varsigma\epsilon)\cdot\sigma(\frac{1}{2})}\otimes I_{2s} \tag{33.5}$$

The geometric points of internal components of two adjacent particles coincide: ${}^i\varphi_2 \equiv {}^{i+1}\varphi_1$. The meaningful equation becomes:

$$\to(\sigma\otimes I_{2s},-i\varsigma)^a\partial_a \begin{bmatrix} {}^1\varphi_1 \\ {}^1\varphi_2 \equiv {}^2\varphi_1 \\ {}^2\varphi_1 \equiv {}^1\varphi_2 \\ {}^2\varphi_2 \equiv {}^3\varphi_1 \\ \cdots \\ {}^{2s-1}\varphi_2 \equiv {}^{2s}\varphi_1 \\ {}^{2s}\varphi_2 \end{bmatrix} = 0, \begin{bmatrix} {}^1\varphi_1 \\ {}^1\varphi_2 \equiv {}^2\varphi_1 \\ {}^2\varphi_1 \equiv {}^1\varphi_2 \\ {}^2\varphi_2 \equiv {}^3\varphi_1 \\ \cdots \\ {}^{2s-1}\varphi_2 \equiv {}^{2s}\varphi_1 \\ {}^{2s}\varphi_2 \end{bmatrix} \sim e^{(i\omega+\varsigma\epsilon)\cdot\sigma(\frac{1}{2})}{}_{old}\otimes e^{(i\omega+\varsigma\epsilon)\cdot\tau(s-\frac{1}{2})}{}_{new} \tag{33.6}$$

$$\Leftrightarrow [s\partial_a + S_{ab}(s,\varsigma)\partial^b] \begin{bmatrix} {}^1\varphi_1 \\ {}^1\varphi_2 \equiv {}^2\varphi_1 \\ {}^2\varphi_2 \equiv {}^3\varphi_1 \\ \cdots \\ {}^{2s-2}\varphi_2 \equiv {}^{2s-1}\varphi_1 \\ {}^{2s-1}\varphi_2 \equiv {}^{2s}\varphi_1 \\ {}^{2s}\varphi_2 \end{bmatrix} = 0, \begin{bmatrix} {}^1\varphi_1 \\ {}^1\varphi_2 \equiv {}^2\varphi_1 \\ {}^2\varphi_2 \equiv {}^3\varphi_1 \\ \cdots \\ {}^{2s-2}\varphi_2 \equiv {}^{2s-1}\varphi_1 \\ {}^{2s-1}\varphi_2 \equiv {}^{2s}\varphi_1 \\ {}^{2s}\varphi_2 \end{bmatrix} \sim e^{(i\omega+\varsigma\epsilon)\cdot\tau(s)} \tag{33.7}$$

The above mathematical process can be correctly understood in various ways. That is, several neutrinos are first divided into several groups. Each group is synthesized into a new particle. Then these new particles are grouped again and each group is also synthesized into a new particle. This process can be repeated until it is synthesized into a single spin-s particle. Therefore, this synthesis process can be implemented in many combinations. So two neutrinos can be synthesized into one photon. hree neutrinos can be synthesized into a gravitino. A neutrino and a photon can be synthesized into a gravitino. Four neutrinos can be synthesized into one graviton. wo neutrinos and a photon can be synthesized into a graviton. Two photons can be synthesized into a graviton. A neutrino and a gravitational neutrino can be synthesized into a graviton, and so on.

3 Constant tensors and new interaction

3.1 New interaction

Def. 3.1.1. $S_I = G\int dx^4\psi_{k_\varsigma}(s)\Gamma^{k_\varsigma}_{\underbrace{A_\varsigma B_\varsigma C_\varsigma\cdots}_{2s}}(s)\overbrace{\psi_1^{A_\varsigma}\psi_2^{B_\varsigma}\psi_3^{C_\varsigma}\cdots}^{2s}+\{\}^*$

3.2 Graviton synthesis interaction

Def. 3.2.1. $S_{I1111} = G\int dx^4\psi_{k_\varsigma}(2)\Gamma^{k_\varsigma}_{A_\varsigma B_\varsigma C_\varsigma D_\varsigma}(2)\psi_1^{A_\varsigma}\psi_2^{B_\varsigma}\psi_3^{C_\varsigma}\psi_4^{D_\varsigma}+\{\}^*$

Def. 3.2.2. $S_{I211} = G\int dx^4\psi_{k_\varsigma}(2)\Gamma^{k_\varsigma}_{A_\varsigma B_\varsigma C_\varsigma D_\varsigma}(2)\psi_1^{A_\varsigma B_\varsigma}\psi_2^{C_\varsigma}\psi_3^{D_\varsigma}+\{\}^*$

Def. 3.2.3. $S_{I22} = G\int dx^4\psi_{k_\varsigma}(2)\Gamma^{k_\varsigma}_{A_\varsigma B_\varsigma C_\varsigma D_\varsigma}(2)\psi_1^{A_\varsigma B_\varsigma}\psi_2^{C_\varsigma D_\varsigma}+\{\}^*$

Def. 3.2.4. $S_{I31} = G\int dx^4\psi_{k_\varsigma}(2)\Gamma^{k_\varsigma}_{A_\varsigma B_\varsigma C_\varsigma D_\varsigma}(2)\psi_1^{A_\varsigma B_\varsigma C_\varsigma}\psi_2^{D_\varsigma}+\{\}^*$

3.3 Gravitino synthesis interaction

Def. 3.3.1. $S_{I111} = G\int dx^4 \psi_{k_\varsigma}(\frac{3}{2})\Gamma^{k_\varsigma}_{A_\varsigma B_\varsigma C_\varsigma}(\frac{3}{2})\psi_1^{A_\varsigma}\psi_2^{B_\varsigma}\psi_3^{C_\varsigma} + \{\}^*$

Def. 3.3.2. $S_{I21} = G\int dx^4 \psi_{k_\varsigma}(\frac{3}{2})\Gamma^{k_\varsigma}_{A_\varsigma B_\varsigma C_\varsigma D_\varsigma}(\frac{3}{2})\psi_1^{A_\varsigma B_\varsigma}\psi_2^{C_\varsigma} + \{\}^*$

3.4 Photon synthesis interaction

Def. 3.4.1. $S_{I11} = G\int dx^4 \psi_{k_\varsigma}(1)\Gamma^{k_\varsigma}_{A_\varsigma B_\varsigma}(1)\psi_1^{A_\varsigma}\psi_2^{B_\varsigma} + \{\}^*$

Def. 3.4.2. $S_{I11} = G\int dx^4 \psi_{\alpha_\varsigma}\sigma^{\alpha_\varsigma}_{A_\varsigma B_\varsigma}\psi_1^{A_\varsigma}\psi_2^{B_\varsigma} + \{\}^*$

Def. 3.4.3. $S_{I11} = G\int dx^4 \psi_{\alpha_\varsigma}\sigma^{\alpha_\varsigma}_{k_\varsigma l_\varsigma}(s)\psi_1^{k_\varsigma}(s)\psi_2^{l_\varsigma}(s) + \{\}^*$

3.5 New similar electromagnetic interactions

Thm. 3.5.1. $S = \int dx^4\{-\frac{e}{4}F^{ab}F_{ab} - \nu_e^+(\sigma,-i)^a\partial_a\nu_e - \nu_\mu^+(\sigma,-i)^a\partial_a\nu_\mu - \nu_\tau^+(\sigma,-i)^a\partial_a\nu_\tau\}$
$+ \frac{1}{2}G\int dx^4\{F_{ab}\sigma^{ab}_{+\alpha}\sigma^\alpha_{AB}[(m_e-m_\mu)\nu_e^A\nu_\mu^B + (m_\mu-m_\tau)\nu_\mu^A\nu_\tau^B + (m_\tau-m_e)\nu_\tau^A\nu_e^B]\}$

Thm. 3.5.2. $S_I = \frac{1}{2}G\int dx^4\{F_{ab}\sigma^{ab}_{+\alpha}\sigma^\alpha_{AB}[\alpha_{e\mu}\nu_e^A\nu_\mu^B + \alpha_{\mu\tau}\nu_\mu^A\nu_\tau^B + \alpha_{\tau e}\nu_\tau^A\nu_e^B]\}$

Thm. 3.5.3. $S_I = \frac{1}{2}G\int dx^4\{F_{ab}\sigma^{ab}_{+\alpha}\sigma^\alpha_{AB}(\nu_e^A\nu_\mu^B + \nu_\mu^A\nu_\tau^B + \nu_\tau^A\nu_e^B)\}$

Thm. 3.5.4.
$\nu_e \to \gamma + \bar{\nu}_\mu \to \nu_\tau : \alpha_{e\mu}\alpha_{\mu\tau}$
$\nu_e \to \gamma + \bar{\nu}_\tau \to \nu_\mu : \alpha_{\mu\tau}\alpha_{\tau e}$
$\nu_e \to \gamma + \bar{\nu}_\mu \to \nu_e : \alpha_{e\mu}\alpha_{e\mu}$
$\nu_e \to \gamma + \bar{\nu}_\tau \to \nu_e : \alpha_{\tau e}\alpha_{\tau e}$
$\nu_\mu \to \gamma + \bar{\nu}_\tau \to \nu_e$
$\Psi = \vec{E} + i\vec{B} = \vec{E} + i\nabla\times\vec{A}$
$\Psi_i = E_i + i\varepsilon_i{}^{jk}\partial_j A_k$
$[\Psi_i(x), \Psi_j(x')] = i\varepsilon_i{}^{kl}\partial_{x_k}[A_l(x), E_j(x')] + i\varepsilon_j{}^{kl}\partial_{x'_k}[E_i(x), A_l(x')]$
$[\Psi_i(x), \Psi_j(x')] = -\varepsilon_{ij}{}^k(\partial_{x_k} + \partial_{x'_k})\delta^3(x-x') = 0$

Thm. 3.5.5.
$\Psi = \vec{E} + i\vec{B} = \vec{E} + i\nabla\times\vec{A}$
$\Psi_i = E_i + i\varepsilon_i{}^{jk}\partial_j A_k$
$[\Psi_i(x), \Psi_j^+(x')] = i\varepsilon_i{}^{kl}\partial_{x_k}[A_l(x), E_j(x')] - i\varepsilon_j{}^{kl}\partial_{x'_k}[E_i(x), A_l(x')]$
$[\Psi_i(x), \Psi_j^+(x')] = -\varepsilon_{ij}{}^k(\partial_{x_k} - \partial_{x'_k})\delta^3(x-x') = -2\varepsilon_{ij}{}^k\partial_{(x_k - x'_k)}\delta^3(x-x')$

4 Internal component interaction of particles

4.1 Internal component interaction of photon pair

Ass. 4.1.1. $\varepsilon_{ab}(\vec{p}_1, \vec{p}_2; 0; 1) = \frac{1}{\sqrt{2}}[\varepsilon_a(\vec{p}_1, 1)\varepsilon_b(\vec{p}_2, -1) - \varepsilon_a(\vec{p}_1, -1)\varepsilon_b(\vec{p}_2, 1)]$

Ass. 4.1.2. $\varepsilon_{ab}(\vec{p}, 0; 1) = \frac{1}{\sqrt{2}}[\varepsilon_a(\vec{p}, 1)\varepsilon_b(-\vec{p}, 1) - \varepsilon_a(-\vec{p}, 1)\varepsilon_b(\vec{p}, 1)]$

Chapter34 Plane Wave Solutions for Symmetric and Antisymmetric Equations

Self comment: This chapter provides a unified solution for plane wave solutions of various fully symmetric and antisymmetric equations and also provides leading knowledge for latter physical research.

1 plane wave solutions of Bargmann-Wigner equation

1.1 Two corollaries

Cor. 1.1.1.

$$\begin{cases}\psi_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdot\cdot\eta_\varsigma}_{2s+1}}(x)=\frac{1}{(2\pi)^{3/2}}\int\limits_{\vec{p}=-\infty}^{+\infty}\sum\limits_{h=s+1/2}^{-(s+1/2)}\frac{m^{s+1/2}}{\sqrt{E}}[a(\vec{p},h)U_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdot\cdot\eta_\varsigma}_{2s+1}}(\vec{p},h)e^{ip\cdot x}+b^+(\vec{p},h)V_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdot\cdot\eta_\varsigma}_{2s+1}}(\vec{p},h)e^{-ip\cdot x}]d^3\vec{p}\\ a(\vec{p},-s-\frac{1}{2}):=\frac{c_-(\vec{p},-s)}{\sqrt{m}},a(\vec{p},h):=\frac{\sqrt{2s+1}}{\sqrt{(s+\frac{1}{2})+h}}\frac{c_+(\vec{p},h-\frac{1}{2})}{\sqrt{m}},-s+\frac{1}{2}\le h\le s+\frac{1}{2}\\ b^+(\vec{p},-s-\frac{1}{2}):=\frac{d_-(\vec{p},-s)}{\sqrt{m}},b^+(\vec{p},h):=\frac{\sqrt{2s+1}}{\sqrt{(s+\frac{1}{2})+h}}\frac{d_+(\vec{p},h-\frac{1}{2})}{\sqrt{m}},-s+\frac{1}{2}\le h\le s+\frac{1}{2}\end{cases}$$

This step proves that when $s'=s+1/2$, the proposition is established.

Step 4: Based on the above inductive reasoning, the theorem has been proved. □

3.2 An intuitive solution to plane wave solution of K-G equation?

Thm. 3.2.1.
$(-\partial^c\partial_c+m^2)A_{\underbrace{ab\cdot\cdot}_{n}}(x)=0,\delta^{ab}A_{\underbrace{ab\cdot\cdot}_{n}}(x)=0,\partial^aA_{\underbrace{ab\cdot\cdot}_{n}}(x)=0,A_{\underbrace{ab\cdot\cdot}_{n}}(x)\ \textit{fully symmetric}\Leftrightarrow$

$$\begin{cases}A_{\underbrace{ab\cdot\cdot}_{n}}(\vec{r},t)=\frac{1}{(2\pi)^{3/2}}\int\limits_{\vec{p}=-\infty}^{+\infty}\sum\limits_{h=n}^{-n}\frac{1}{\sqrt{2^nE}}[a(\vec{p},h)\varepsilon_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)e^{ip\cdot x}+b^+(\vec{p},h)\tilde{\varepsilon}_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)e^{-ip\cdot x}]d^3\vec{p}\\(p^cp_c+m^2)\varepsilon_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)=0,\delta^{ab}\varepsilon_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)=0,p^a\varepsilon_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)=0,\varepsilon_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)\ \textit{fully symmetric}\\(p^cp_c+m^2)\tilde{\varepsilon}_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)=0,\delta^{ab}\tilde{\varepsilon}_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)=0,p^a\tilde{\varepsilon}_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)=0,\tilde{\varepsilon}_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)\ \textit{fully symmetric}\end{cases}$$

Proof: Use mathematical induction to prove this theorem.
Step 1: When $n'=1$, the following is established.
$(-\partial^c\partial_c+m^2)A_a(x)=0,\partial^aA_{\underbrace{ab\cdot\cdot}_{n}}(x)=0\Leftrightarrow$

$$\begin{cases}A_a(\vec{r},t)=\frac{1}{(2\pi)^{3/2}}\int\limits_{\vec{p}=-\infty}^{+\infty}\sum\limits_{h=1}^{-1}\frac{1}{\sqrt{2E}}[a(\vec{p},h)\varepsilon_a(\vec{p},h)e^{ip\cdot x}+b^+(\vec{p},h)\tilde{\varepsilon}_a(\vec{p},h)e^{-ip\cdot x}]d^3\vec{p}\\(p^cp_c+m^2)\varepsilon_a(\vec{p},h)=0,p^a\varepsilon_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)=0\\(p^cp_c+m^2)\tilde{\varepsilon}_a(\vec{p},h)=0,p^a\tilde{\varepsilon}_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)=0\end{cases}$$

Step 2: When $n'=n$, the following is established.
$(-\partial^c\partial_c+m^2)A_{\underbrace{ab\cdot\cdot}_{n}}(x)=0,\delta^{ab}A_{\underbrace{ab\cdot\cdot}_{n}}(x)=0,\partial^aA_{\underbrace{ab\cdot\cdot}_{n}}(x)=0,A_{\underbrace{ab\cdot\cdot}_{n}}(x)$ fully symmetric $\Leftrightarrow$

$$\begin{cases}A_{\underbrace{ab\cdot\cdot}_{n}}(\vec{r},t)=\frac{1}{(2\pi)^{3/2}}\int\limits_{\vec{p}=-\infty}^{+\infty}\sum\limits_{h=n}^{-n}\frac{1}{\sqrt{2^nE}}[a(\vec{p},h)\varepsilon_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)e^{ip\cdot x}+b^+(\vec{p},h)\tilde{\varepsilon}_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)e^{-ip\cdot x}]d^3\vec{p}\\(p^cp_c+m^2)\varepsilon_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)=0,\delta^{ab}\varepsilon_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)=0,p^a\varepsilon_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)=0,\varepsilon_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)\text{ fully symmetric}\\(p^cp_c+m^2)\tilde{\varepsilon}_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)=0,\delta^{ab}\tilde{\varepsilon}_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)=0,p^a\tilde{\varepsilon}_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)=0,\tilde{\varepsilon}_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)\text{ fully symmetric}\end{cases}$$

Step 3: When $n'=n+1$,
$(-\partial^c\partial_c+m^2)A_{\underbrace{ab\cdot\cdot}_{n+1}}(x)=0,\delta^{ab}A_{\underbrace{ab\cdot\cdot}_{n+1}}(x)=0,\partial^aA_{\underbrace{ab\cdot\cdot}_{n+1}}(x)=0,A_{\underbrace{ab\cdot\cdot}_{n+1}}(x)$ fully symmetric

$\Leftrightarrow$
$$\begin{cases}(-\partial^c\partial_c+m^2)A_{\underbrace{ab\cdot\cdot}_{n}d}(x)=0,\delta^{ab}A_{\underbrace{ab\cdot\cdot}_{n}d}(x)=0,\partial^aA_{\underbrace{ab\cdot\cdot}_{n}d}(x)=0\\A_{\underbrace{ab\cdot\cdot}_{n}d}(x)=\frac{1}{n!}A_{\underbrace{\{ab\cdot\cdot\}}_{n}d}(x),A_{\underbrace{ab\cdot\cdot}_{n}d}(x)=A_{\underbrace{db\cdot\cdot}_{n}a}(x)\end{cases}$$
$\Leftrightarrow$
$$\begin{cases}A_{\underbrace{ab\cdot\cdot}_{n}d}(\vec{r},t)=\frac{1}{(2\pi)^{3/2}}\int\limits_{\vec{p}=-\infty}^{+\infty}\sum\limits_{h=n}^{-n}\frac{1}{\sqrt{2^nE}}[a_d(\vec{p},h)\varepsilon_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)e^{ip\cdot x}+b_d^+(\vec{p},h)\tilde{\varepsilon}_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)e^{-ip\cdot x}]d^3\vec{p}\\(p^cp_c+m^2)\varepsilon_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)=0,\delta^{ab}\varepsilon_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)=0,p^a\varepsilon_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)=0,\varepsilon_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)=\frac{1}{n!}\varepsilon_{\underbrace{\{ab\cdot\cdot\}}_{n}}(\vec{p},h)\\(p^cp_c+m^2)\tilde{\varepsilon}_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)=0,\delta^{ab}\tilde{\varepsilon}_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)=0,p^a\tilde{\varepsilon}_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)=0,\tilde{\varepsilon}_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)=\frac{1}{n!}\tilde{\varepsilon}_{\underbrace{\{ab\cdot\cdot\}}_{n}}(\vec{p},h)\\A_{\underbrace{ab\cdot\cdot}_{n}d}(x)=A_{\underbrace{db\cdot\cdot}_{n}a}(x),a_d(\vec{p},h):=a(\vec{p},h;1)\varepsilon_d(\vec{p},1)+a(\vec{p},h;0)\varepsilon_d(\vec{p},0)+a(\vec{p},h;-1)\varepsilon_d(\vec{p},-1)\\b_d^+(\vec{p},h):=b^+(\vec{p},h;1)\tilde{\varepsilon}_d(\vec{p},1)+b^+(\vec{p},h;0)\tilde{\varepsilon}_d(\vec{p},0)+b^+(\vec{p},h;-1)\tilde{\varepsilon}_d(\vec{p},-1)\end{cases}$$
$\Leftrightarrow$

$$\begin{cases} A_{\underbrace{ab\cdot\cdot}_{n}d}(\vec{r},t)=\frac{1}{(2\pi)^{3/2}}\int\limits_{\vec{p}=-\infty}^{+\infty}\sum\limits_{h=n}^{-n}\frac{1}{\sqrt{2^nE}}[a_d(\vec{p},h)\varepsilon_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)e^{ip\cdot x}+b_d^+(\vec{p},h)\tilde{\varepsilon}_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)e^{-ip\cdot x}]d^3\vec{p} \\ (p^cp_c+m^2)\varepsilon_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)=0,\delta^{ab}\varepsilon_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)=0,p^a\varepsilon_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)=0,\varepsilon_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)=\frac{1}{n!}\varepsilon_{\underbrace{\{ab\cdot\cdot\}}_{n}}(\vec{p},h) \\ (p^cp_c+m^2)\tilde{\varepsilon}_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)=0,\delta^{ab}\tilde{\varepsilon}_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)=0,p^a\tilde{\varepsilon}_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)=0,\tilde{\varepsilon}_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)=\frac{1}{n!}\tilde{\varepsilon}_{\underbrace{\{ab\cdot\cdot\}}_{n}}(\vec{p},h) \\ a_d(\vec{p},h)\varepsilon_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)=a_a(\vec{p},h)\varepsilon_{\underbrace{db\cdot\cdot}_{n}}(\vec{p},h),b_d^+(\vec{p},h)\tilde{\varepsilon}_{\underbrace{ab\cdot\cdot}_{n}}(\vec{p},h)=b_a^+(\vec{p},h)\tilde{\varepsilon}_{\underbrace{db\cdot\cdot}_{n}}(\vec{p},h) \\ a_d(\vec{p},h):=a(\vec{p},h;1)\varepsilon_d(\vec{p},1)+a(\vec{p},h;0)\varepsilon_d(\vec{p},0)+a(\vec{p},h;-1)\varepsilon_d(\vec{p},-1) \\ b_d^+(\vec{p},h):=b^+(\vec{p},h;1)\tilde{\varepsilon}_d(\vec{p},1)+b^+(\vec{p},h;0)\tilde{\varepsilon}_d(\vec{p},0)+b^+(\vec{p},h;-1)\tilde{\varepsilon}_d(\vec{p},-1) \end{cases}$$

This step proves that when $n'=n+1$, the proposition is established.
Step 4: Based on the above inductive reasoning, the theorem has been proved. □

Chapter35 Covariant Quantization of Massive Particles in High Dimension

Self comment: In this chapter, the covariant quantization of massive particles is generalized to the general N+1 dimensional space-time. N+1 dimensional space-time case is similar to 4-dimensional space-time case. For particles described by the Bargmann-Wigner equation or Dirac equation, it is generally possible to describe both charged complex particles and uncharged Majorana particles. The principal commutation rule in both cases is consistent, but the rest are generally zero for charged complex particles. For uncharged Majorana particles, the rest of the commutative or anti commutative brackets are naturally derived from the principal commutative rule and Majorana conditions. And they are generally not zero. In this chapter, we only discuss the case of complex particles and generally only give the principal commutation rule. The Majorana particle case is no longer specifically discussed. If we want to obtain the quantum field theory of the Majorana particle case, we only need to add the Majorana condition to the complex particle case. Then we will naturally obtain it.

1 Lorentz boost transformation in N+1 dimensional space-time

1.1 Lorentz boost transformation for vector in N+1 dimensional space-time

Def. 1.1.1. $\Omega(s) := \frac{1}{2}(\Gamma \otimes I_{l^{2s-1}} + I_l \otimes \Gamma \otimes I_{l^{2s-2}} + \cdot\cdot + I_{l^{2s-1}} \otimes \Gamma), l = 2^{[\frac{N-1}{2}]}$

Def. 1.1.2. $L = \{ \begin{bmatrix} 0 & 0&0&0&0&0&i \\ 0&0&0&0&0&0&0 \\ 0&0&0&0&0&0&0 \\ 0&0&0&0&0&0&\cdot\cdot \\ 0&0&0&0&0&0&0 \\ 0&0&0&0&0&0&0 \\ -i&0&0&\cdot\cdot&0&0&0 \end{bmatrix}, \begin{bmatrix} 0&0&0&0&0&0&0 \\ 0&0&0&0&0&0&i \\ 0&0&0&0&0&0&0 \\ 0&0&0&0&0&0&\cdot\cdot \\ 0&0&0&0&0&0&0 \\ 0&0&0&0&0&0&0 \\ 0&-i&0&\cdot\cdot&0&0&0 \end{bmatrix}, \begin{bmatrix} 0&0&0&0&0&0&0 \\ 0&0&0&0&0&0&0 \\ 0&0&0&0&0&0&i \\ 0&0&0&0&0&0&\cdot\cdot \\ 0&0&0&0&0&0&0 \\ 0&0&0&0&0&0&0 \\ 0&0&-i&\cdot\cdot&0&0&0 \end{bmatrix}, \cdot\cdot, \begin{bmatrix} 0&0&0&0&0&0&0 \\ 0&0&0&0&0&0&0 \\ 0&0&0&0&0&0&0 \\ 0&0&0&0&0&0&\cdot\cdot \\ 0&0&0&0&0&0&i \\ 0&0&0&0&0&0&0 \\ 0&0&0&\cdot\cdot&-i&0&0 \end{bmatrix}, \begin{bmatrix} 0&0&0&0&0&0&0 \\ 0&0&0&0&0&0&0 \\ 0&0&0&0&0&0&0 \\ 0&0&0&0&0&0&\cdot\cdot \\ 0&0&0&0&0&0&0 \\ 0&0&0&0&0&0&i \\ 0&0&0&\cdot\cdot&0&-i&0 \end{bmatrix} \}$

Cor. 1.1.1. $L_{\vec{v}} = e^{-\{ln[\gamma_v(1+v)]\}\hat{v}\cdot L} = 1 - \gamma_v(\vec{v}\cdot L) + \frac{\gamma_v - 1}{v^2}(\vec{v}\cdot L)^2, L_{\vec{v}}L_{-\vec{v}} = L_{-\vec{v}}L_{\vec{v}} = I$

Cor. 1.1.2. $L_{\vec{v}} \begin{bmatrix} \vec{0} \\ i \end{bmatrix} = e^{-ln[\gamma_v(1+v)]\hat{v}\cdot L} \begin{bmatrix} \vec{0} \\ i \end{bmatrix} = \begin{bmatrix} \gamma_v\vec{v} \\ i\gamma_v \end{bmatrix}, L_{\vec{v}} \begin{bmatrix} \vec{0} \\ im \end{bmatrix} = e^{-ln[\gamma_v(1+v)]\hat{v}\cdot L} \begin{bmatrix} \vec{0} \\ im \end{bmatrix} = \begin{bmatrix} \vec{p} \\ iE_{\vec{p}} \end{bmatrix}$

1.2 Lorentz boost transformation for neutrino spinor in N+1 dimensional space-time

Pro. 1.2.1. $(\vec{v}\cdot\Gamma)^2 = v^2, (\vec{v}\cdot i\vec{\gamma}\gamma_0)^2 = v^2$

Cor. 1.2.1. $\Lambda_{\varsigma\vec{v}} = e^{-\varsigma ln[\gamma_v(1+v)]\hat{v}\cdot\frac{1}{2}\Gamma} = \frac{1}{\sqrt{2(\gamma_v+1)}}(1+\gamma_v - \varsigma\gamma_v\vec{v}\cdot\Gamma), c = \frac{(1+\gamma_v)}{\sqrt{2(\gamma_v+1)}}, s = -\frac{\varsigma\gamma_v}{\sqrt{2(\gamma_v+1)}}$

1.3 Lorentz boost transformation for electron spinor in N+1 dimensional space-time

Cor. 1.3.1. $D_{\varsigma\vec{v}} = e^{-\varsigma ln[\gamma_v(1+v)]\hat{v}\cdot(\frac{i}{2}\vec{\gamma}\gamma_0)} = \frac{1}{\sqrt{2(\gamma_v+1)}}[1+\gamma_v - i\varsigma\gamma_v\vec{v}\cdot\vec{\gamma}\gamma_0]$

Cor. 1.3.2. $D_{\vec{v}} = e^{-ln\frac{E+|\vec{p}|}{m}\hat{p}\cdot(\frac{i}{2}\vec{\gamma}\gamma_0)} = \frac{m - i\gamma^a p_a\gamma_0}{\sqrt{2m(E+m)}}$

Proof: $D_{\vec{v}} = e^{-ln[\gamma_v(1+v)]\hat{v}\cdot(\frac{i}{2}\vec{\gamma}\gamma_0)} = \frac{1+\gamma_v - i\gamma_v\vec{v}\cdot\vec{\gamma}\gamma_0}{\sqrt{2(\gamma_v+1)}} = \frac{E+m-i\vec{p}\cdot\vec{\gamma}\gamma_0}{\sqrt{2m(E+m)}} = \frac{m-i\gamma^a p_a\gamma_0}{\sqrt{2m(E+m)}}$ □

1.4 Polynomial representation of Lorentz boost transformation for photon spinor in N+1-D

Cor. 1.4.1. $e^{-\varsigma ln[\gamma_v(1+v)]\hat{v}\cdot\Omega(1)} = 1 - \varsigma\gamma_v v[\hat{v}\cdot\Omega(1)] + (\gamma_v - 1)[\hat{v}\cdot\Omega(1)]^2$

1.5 Polynomial representation of Lorentz boost transformation for gravitino spinor in N+1-D

Cor. 1.5.1. $e^{-\varsigma ln[\gamma_v(1+v)]\hat{v}\cdot\Omega(\frac{3}{2})} = \frac{(\gamma_v+1)}{\sqrt{2(\gamma_v+1)}}(1 - \frac{\gamma_v-1}{4}) - \frac{2\varsigma\gamma_v v}{\sqrt{2(\gamma_v+1)}}(1 - \frac{\gamma_v - 1}{12})[\hat{v}\cdot\Omega(\frac{3}{2})]$
$+ \frac{\gamma_v^2-1}{\sqrt{2(\gamma_v+1)}}[\hat{v}\cdot\Omega(\frac{3}{2})]^2 - \frac{1}{3}\frac{2\varsigma\gamma_v v(\gamma_v-1)}{\sqrt{2(\gamma_v+1)}}[\hat{v}\cdot\Omega(\frac{3}{2})]^3$

1.6 Polynomial representation of Lorentz boost transformation for graviton spinor in N+1-D

Cor. 1.6.1. $e^{-\varsigma ln[\gamma_v(1+v)]\hat{v}\cdot\Omega(2)} = 1 - \varsigma\gamma_v(1 - \frac{\gamma_v-1}{3})[\vec{v}\cdot\Omega(2)] + \frac{\gamma_v-1}{v^2}(1 - \frac{\gamma_v-1}{6})[\vec{v}\cdot\Omega(2)]^2$
$- \frac{1}{3}\frac{\varsigma\gamma_v(\gamma_v-1)}{v^2}[\vec{v}\cdot\Omega(2)]^3 + \frac{1}{6}\frac{(\gamma_v-1)^2}{v^4}[\vec{v}\cdot\Omega(2)]^4$

2 Electron covariant quantization in N+1 dimensional space-time

2.1 Electron equation in N+1 dimensional space-time [4]

Electronic equations in even dimensional space-time:

Def. 2.1.1. $(\gamma^a\partial_a + m)\psi = 0, \psi = \begin{bmatrix}\varphi\\ \eta\end{bmatrix}, \gamma^a = (\Gamma\otimes\sigma_y, \varsigma I_*\otimes\sigma_z) = (\vec{\gamma}, \varsigma I_*\otimes\sigma_z)$

Electronic equations in odd dimensional space-time:

Def. 2.1.2. $(\gamma^a\partial_a + m)\psi = 0, \psi = \begin{bmatrix}\varphi\\ \eta\end{bmatrix}, \gamma^a = (\Gamma\otimes\sigma_y, I_*\otimes\sigma_x, \varsigma I_*\otimes\sigma_z) = (\vec{\gamma}, \varsigma I_*\otimes\sigma_z)$

2.2 Electron static and kinetic solutions in N+1 dimensional space-time

Unified writing method for electronic equation in N+1 dimensional space-time:

Def. 2.2.1. $(\gamma^a\partial_a + m)\psi = 0, \psi = \begin{bmatrix}\varphi\\ \eta\end{bmatrix}, \gamma^a = (\vec{\gamma}, \varsigma I_*\otimes\sigma_z)$

Cor. 2.2.1. $\partial_{t_0}\psi(\vec{0}) = -im\gamma_0\psi(\vec{0}) \Leftrightarrow \psi(\vec{0}) = e^{-i\gamma_0 m t_0}\psi_0, \forall\psi_0$

Cor. 2.2.2. $\psi(\vec{p}) = \frac{m - i\gamma^a p_a\gamma_0}{\sqrt{2m(E+m)}}e^{i\gamma_0(\vec{p}\cdot\vec{r}-Et)}\psi_p = \sqrt{\frac{E+m}{2m}}(1 - \frac{i\vec{p}\cdot\vec{\gamma}\gamma_0}{E+m})e^{i\gamma_0(\vec{p}\cdot\vec{r}-Et)}\psi_p$

Cor. 2.2.3. $\psi^{(+\varsigma)}(\vec{p}) = \sqrt{\frac{E+m}{2m}}(1 - \frac{i\vec{p}\cdot\vec{\gamma}\gamma_0}{E+m})\begin{bmatrix}\varphi\\ 0\end{bmatrix}e^{i\varsigma(\vec{p}\cdot\vec{r}-Et)}, \psi^{(-\varsigma)}(\vec{p}) = \sqrt{\frac{E+m}{2m}}(1 - \frac{i\vec{p}\cdot\vec{\gamma}\gamma_0}{E+m})\begin{bmatrix}0\\ \eta\end{bmatrix}e^{-i\varsigma(\vec{p}\cdot\vec{r}-Et)}$

2.3 Properties of plane wave solutions for electron in N+1 dimensional space-time

Cor. 2.3.1. $\begin{cases}[\sqrt{\frac{E+m}{2m}}(1 - \frac{i\vec{p}\cdot\vec{\gamma}\gamma_0}{E+m})]^+ = \sqrt{\frac{E+m}{2m}}(1 - \frac{i\vec{p}\cdot\vec{\gamma}\gamma_0}{E+m})\\ [\sqrt{\frac{E+m}{2m}}(1 - \frac{i\vec{p}\cdot\vec{\gamma}\gamma_0}{E+m})][\sqrt{\frac{E+m}{2m}}(1 - \frac{i\vec{p}\cdot\vec{\gamma}\gamma_0}{E+m})] = -\frac{i\gamma^a p_a\gamma_0}{m}\\ [\sqrt{\frac{E+m}{2m}}(1 - \frac{i\vec{p}\cdot\vec{\gamma}\gamma_0}{E+m})]\gamma_0[\sqrt{\frac{E+m}{2m}}(1 - \frac{i\vec{p}\cdot\vec{\gamma}\gamma_0}{E+m})] = \gamma_0\\ [\sqrt{\frac{E+m}{2m}}(1 - \frac{i\vec{p}\cdot\vec{\gamma}\gamma_0}{E+m})][\sqrt{\frac{E+m}{2m}}(1 + \frac{i\vec{p}\cdot\vec{\gamma}\gamma_0}{E+m})] = 1\end{cases}$

Pro. 2.3.1. $\begin{cases}[\sqrt{\frac{E+m}{2m}}(1 - \frac{i\vec{p}\cdot\vec{\gamma}\gamma_0}{E+m})]\begin{bmatrix}I & 0\\ 0 & 0\end{bmatrix}[\sqrt{\frac{E+m}{2m}}(1 - \frac{i\vec{p}\cdot\vec{\gamma}\gamma_0}{E+m})] = \frac{(\varsigma m - i\gamma^a p_a)\gamma_0}{2m}\\ [\sqrt{\frac{E+m}{2m}}(1 - \frac{i\vec{p}\cdot\vec{\gamma}\gamma_0}{E+m})]\begin{bmatrix}0 & 0\\ 0 & I\end{bmatrix}[\sqrt{\frac{E+m}{2m}}(1 - \frac{i\vec{p}\cdot\vec{\gamma}\gamma_0}{E+m})] = \frac{(-\varsigma m - i\gamma^a p_a)\gamma_0}{2m}\end{cases}$

Pro. 2.3.2. $\begin{bmatrix}\varphi\\ 0\end{bmatrix}^+\frac{i\vec{p}\cdot\vec{\gamma}\gamma_0}{E+m}\begin{bmatrix}\eta\\ 0\end{bmatrix} \equiv 0, \begin{bmatrix}0\\ \varphi\end{bmatrix}^+\frac{i\vec{p}\cdot\vec{\gamma}\gamma_0}{E+m}\begin{bmatrix}0\\ \eta\end{bmatrix} \equiv 0$

Pro. 2.3.3. $\begin{cases}\begin{bmatrix}\varphi\\ 0\end{bmatrix}^+[\sqrt{\frac{E+m}{2m}}(1 - \frac{i\vec{p}\cdot\vec{\gamma}\gamma_0}{E+m})][\sqrt{\frac{E+m}{2m}}(1 - \frac{i\vec{p}\cdot\vec{\gamma}\gamma_0}{E+m})]\begin{bmatrix}\eta\\ 0\end{bmatrix} = \frac{E}{m}\varphi^+\eta\\ \begin{bmatrix}0\\ \varphi\end{bmatrix}^+[\sqrt{\frac{E+m}{2m}}(1 - \frac{i\vec{p}\cdot\vec{\gamma}\gamma_0}{E+m})][\sqrt{\frac{E+m}{2m}}(1 - \frac{i\vec{p}\cdot\vec{\gamma}\gamma_0}{E+m})]\begin{bmatrix}0\\ \eta\end{bmatrix} = \frac{E}{m}\varphi^+\eta\end{cases}$

Pro. 2.3.4. $\begin{cases}\begin{bmatrix}\varphi\\ 0\end{bmatrix}^+[\sqrt{\frac{E+m}{2m}}(1 - \frac{i\vec{p}\cdot\vec{\gamma}\gamma_0}{E+m})][\sqrt{\frac{E+m}{2m}}(1 + \frac{i\vec{p}\cdot\vec{\gamma}\gamma_0}{E+m})]\begin{bmatrix}0\\ \eta\end{bmatrix} = 0\\ \begin{bmatrix}0\\ \varphi\end{bmatrix}^+[\sqrt{\frac{E+m}{2m}}(1 - \frac{i\vec{p}\cdot\vec{\gamma}\gamma_0}{E+m})][\sqrt{\frac{E+m}{2m}}(1 + \frac{i\vec{p}\cdot\vec{\gamma}\gamma_0}{E+m})]\begin{bmatrix}\eta\\ 0\end{bmatrix} = 0\end{cases}$

Pro. 2.3.5. $\begin{cases}\begin{bmatrix}\varphi\\ 0\end{bmatrix}^+[\sqrt{\frac{E+m}{2m}}(1 - \frac{i\vec{p}\cdot\vec{\gamma}\gamma_0}{E+m})]\gamma_0[\sqrt{\frac{E+m}{2m}}(1 - \frac{i\vec{p}\cdot\vec{\gamma}\gamma_0}{E+m})]\begin{bmatrix}\eta\\ 0\end{bmatrix} = \varphi^+\eta\\ \begin{bmatrix}0\\ \varphi\end{bmatrix}^+[\sqrt{\frac{E+m}{2m}}(1 - \frac{i\vec{p}\cdot\vec{\gamma}\gamma_0}{E+m})]\gamma_0[\sqrt{\frac{E+m}{2m}}(1 - \frac{i\vec{p}\cdot\vec{\gamma}\gamma_0}{E+m})]\begin{bmatrix}0\\ \eta\end{bmatrix} = -\varphi^+\eta\end{cases}$

Pro. 2.3.6. $\begin{cases}\begin{bmatrix}\varphi\\ 0\end{bmatrix}^+[\sqrt{\frac{E+m}{2m}}(1 - \frac{i\vec{p}\cdot\vec{\gamma}\gamma_0}{E+m})]\gamma_0[\sqrt{\frac{E+m}{2m}}(1 - \frac{i\vec{p}\cdot\vec{\gamma}\gamma_0}{E+m})]\begin{bmatrix}0\\ \eta\end{bmatrix} = 0\\ \begin{bmatrix}0\\ \varphi\end{bmatrix}^+[\sqrt{\frac{E+m}{2m}}(1 - \frac{i\vec{p}\cdot\vec{\gamma}\gamma_0}{E+m})]\gamma_0[\sqrt{\frac{E+m}{2m}}(1 - \frac{i\vec{p}\cdot\vec{\gamma}\gamma_0}{E+m})]\begin{bmatrix}\eta\\ 0\end{bmatrix} = 0\end{cases}$

2.4 Electron spin basis in N+1 dimensional space-time

Def. 2.4.1. $u_\varsigma(\vec{p}, h) := \sqrt{\frac{E+m}{2m}}(1 - \frac{i\vec{p}\cdot\vec{\gamma}\gamma_0}{E+m})\begin{bmatrix}1\\ 0\\ 0_{l-2}\\ 0_l\end{bmatrix}, \sqrt{\frac{E+m}{2m}}(1 - \frac{i\vec{p}\cdot\vec{\gamma}\gamma_0}{E+m})\begin{bmatrix}0\\ 1\\ 0_{l-2}\\ 0_l\end{bmatrix}, \cdot\cdot, \sqrt{\frac{E+m}{2m}}(1 - \frac{i\vec{p}\cdot\vec{\gamma}\gamma_0}{E+m})\begin{bmatrix}0_{l-2}\\ 0\\ 1\\ 0_l\end{bmatrix}$

Def. 2.4.2. $v_\varsigma(\vec{p}, h) := \sqrt{\frac{E+m}{2m}}(1 - \frac{i\vec{p}\cdot\vec{\gamma}\gamma_0}{E+m})\begin{bmatrix}0_l\\ 1\\ 0\\ 0_{l-2}\end{bmatrix}, \sqrt{\frac{E+m}{2m}}(1 - \frac{i\vec{p}\cdot\vec{\gamma}\gamma_0}{E+m})\begin{bmatrix}0_l\\ 0\\ 1\\ 0_{l-2}\end{bmatrix}, \cdot\cdot, \sqrt{\frac{E+m}{2m}}(1 - \frac{i\vec{p}\cdot\vec{\gamma}\gamma_0}{E+m})\begin{bmatrix}0_l\\ 0_{l-2}\\ 0\\ 1\end{bmatrix}$

2.5 Dirac basis is a common eigenstate of spin, helicity and charge three operators in N+1-D

Pro. 2.5.1.

$$\begin{cases}\sigma^2(\frac{1}{2})\otimes I_* u(\vec{p},h)=\frac{1}{2}(\frac{1}{2}+1)u(\vec{p},h)\\ \sigma(\frac{1}{2})\cdot\hat{p}\otimes I_* u(\vec{p},h)=(-1)^{h+1}\frac{1}{2}u(\vec{p},h)\\ \hat{Q}(\vec{p})u(\vec{p},h)=-u(\vec{p},h),h=1,2,\cdot\cdot,l\\ \frac{E+m}{2m}(1-\frac{i\vec{p}\cdot\vec{\gamma}\gamma_0}{E+m})[(\frac{l+1}{2})-\sigma_z(\frac{l-1}{2})](1+\frac{i\vec{p}\cdot\vec{\gamma}\gamma_0}{E+m})u(\vec{p},h)=hu(\vec{p},h)\\ \textit{Description electronics: } (s,h;Q)=(\frac{1}{2};h,-1)\end{cases}$$

$$\begin{cases}\sigma^2(\frac{1}{2})\otimes I_* v(\vec{p},h)=\frac{1}{2}(\frac{1}{2}+1)v(\vec{p},h)\\ \sigma(\frac{1}{2})\cdot\hat{p}\otimes I_* v(\vec{p},h)=(-1)^{h+1}\frac{1}{2}v(\vec{p},h)\\ \hat{Q}(\vec{p})v(\vec{p},h)=v(\vec{p},h),h=1,2,\cdot\cdot,l\\ \frac{E+m}{2m}(1-\frac{i\vec{p}\cdot\vec{\gamma}\gamma_0}{E+m})[(\frac{l+1}{2})-\sigma_z(\frac{l-1}{2})](1+\frac{i\vec{p}\cdot\vec{\gamma}\gamma_0}{E+m})v(\vec{p},h)=hv(\vec{p},h)\\ \textit{Description positron: } (s,h;Q)=(\frac{1}{2};h,1)\end{cases}$$

2.6 Electron spin space in N+1 dimensional space-time

2.7 Properties of electron spin basis in N+1 dimensional space-time (Also true under general representation)

Cor. 2.7.1. $\bar{u}_\varsigma(\vec{p},h)u_\varsigma(\vec{p},h')=\varsigma\delta_{hh'},\bar{v}_\varsigma(\vec{p},h)v_\varsigma(\vec{p},h')=-\varsigma\delta_{hh'},\bar{u}_\varsigma(\vec{p},h)v_\varsigma(\vec{p},h')=0,\bar{v}_\varsigma(\vec{p},h)u_\varsigma(\vec{p},h')=0$

3 Covariant quantization of B-W equation in N+1 dimensional space-time

In this section the proof can refer to the methods in 4-dimensional space-time. It is completely possible to translate the proof methods in four dimensional space-time into N+1 dimensional space time. Therefore, it is generally not provided in detail.

3.1 Properties of electron normal spin basis in N+1 dimensional space-time (Also true under general representation)

Def. 3.1.1. $u(\vec{p},h) := \begin{cases} u_+(\vec{p},h), \varsigma = 1 \\ v_-(\vec{p},h), \varsigma = -1 \end{cases}, v(\vec{p},h) := \begin{cases} v_+(\vec{p},h), \varsigma = 1 \\ u_-(\vec{p},h), \varsigma = -1 \end{cases}$

Cor. 3.1.1. $\bar{u}(\vec{p},h)u(\vec{p},h') = \delta_{hh'}, \bar{v}(\vec{p},h)v(\vec{p},h') = -\delta_{hh'}, \bar{u}(\vec{p},h)v(\vec{p},h') = 0, \bar{v}(\vec{p},h)u(\vec{p},h') = 0$

Cor. 3.1.2. $u^+(\vec{p},h)u(\vec{p},h') = \frac{E}{m}\delta_{hh'}, v^+(\vec{p},h)v(\vec{p},h') = \frac{E}{m}\delta_{hh'}, u^+(\vec{p},h)v(-\vec{p},h') = 0, v^+(\vec{p},h)u(-\vec{p},h') = 0$

Cor. 3.1.3. $\sum_h u(\vec{p},h)\bar{u}(\vec{p},h) = \frac{m-i\gamma^a p_a}{2m}, \sum_h v(\vec{p},h)\bar{v}(\vec{p},h) = \frac{-m-i\gamma^a p_a}{2m}$

Cor. 3.1.4. $\sum_h u(\vec{p},h)u^+(\vec{p},h) = \frac{(m-i\gamma^a p_a)\gamma_0}{2m}, \sum_h v(\vec{p},h)v^+(\vec{p},h) = \frac{(-m-i\gamma^a p_a)\gamma_0}{2m}$

Cor. 3.1.5. $\begin{cases} \sum_h u(\vec{p},h)\bar{u}(\vec{p},h) - v(\vec{p},h)\bar{v}(\vec{p},h)] = 1 \\ \sum_h u(\vec{p},h)\bar{u}(\vec{p},h) + v(\vec{p},h)\bar{v}(\vec{p},h)] = \frac{-i\gamma^a p_a}{m} \\ \sum_h u(\vec{p},h)u^+(\vec{p},h) + v(-\vec{p},h)v^+(-\vec{p},h)] = \frac{E}{m} \end{cases}$

3.2 Generalized polynomial theorem for spin basis of Dirac equation in N+1-D

Thm. 3.2.1.

$$\sum_{\sum n_i=2s} \frac{(2s)!}{n_1!n_2!\cdots n_l!} \underbrace{u_{\{\lambda_\varsigma}(\vec{p},1)\cdots}_{n_1}\underbrace{u_{\mu_\varsigma}(\vec{p},2)\cdots}_{n_2}\cdots\underbrace{u_{\tau_\varsigma}(\vec{p},l)\cdots_{\}}}_{n_l}\underbrace{u^+_{(\lambda'_\varsigma}(\vec{p},1)\cdots}_{n_1}\underbrace{u^+_{\mu'_\varsigma}(\vec{p},2)\cdots}_{n_2}\cdots\underbrace{u^+_{\tau'_\varsigma}(\vec{p},l)\cdots_{)}}_{n_l}$$

$$= \overbrace{\sum_{h=1}^{l} u_{\{\lambda_\varsigma}(\vec{p},h)u^+_{(\lambda'_\varsigma}(\vec{p},h)\cdots\sum_{h=1}^{l} u_{\mu_\varsigma}(\vec{p},h)u^+_{\mu'_\varsigma}(\vec{p},h)\cdots\sum_{h=1}^{l} u_{\tau_\varsigma}(\vec{p},h)u^+_{\tau'_\varsigma}(\vec{p},h)\cdots_{\})}}^{2s}$$

Cor. 3.2.1.

$$\sum_{n_1\cdots n_l} \frac{(2s)!}{n_1!n_2!\cdots n_l!} \underbrace{u_{\{i_\varsigma}(\vec{p},1)\cdots}_{n_1}\underbrace{u_{i_\varsigma}(\vec{p},2)\cdots}_{n_2}\cdots\underbrace{u_{i_\varsigma}(\vec{p},l)\cdots_{\}}}_{n_l}\underbrace{u^+_{(i'_\varsigma}(\vec{p},1)\cdots}_{n_1}\underbrace{u^+_{i'_\varsigma}(\vec{p},2)\cdots}_{n_2}\cdots\underbrace{u^+_{i'_\varsigma}(\vec{p},l)\cdots_{)}}_{n_l}$$

$$= \overbrace{\sum_{h=1}^{l} u_{\{i_\varsigma}(\vec{p},h)u^+_{(i'_\varsigma}(\vec{p},h)\cdots\sum_{h=1}^{l} u_{i_\varsigma}(\vec{p},h)u^+_{i'_\varsigma}(\vec{p},h)\cdots\sum_{h=1}^{l} u_{i_\varsigma}(\vec{p},h)u^+_{i'_\varsigma}(\vec{p},h)\cdots_{\})}}^{2s}$$

$\Leftrightarrow$

$$\sum_{n_1\cdots n_l} \frac{(2s)!}{n_1!n_2!\cdots n_l!}[u_{i_\varsigma}(\vec{p},1)u^+_{i'_\varsigma}(\vec{p},1)]^{n_1}[u_{i_\varsigma}(\vec{p},2)u^+_{i'_\varsigma}(\vec{p},2)]^{n_2}\cdots[u_{i_\varsigma}(\vec{p},l)u^+_{i'_\varsigma}(\vec{p},l)]^{n_l} = [\sum_{h=1}^{l} u_{i_\varsigma}(\vec{p},h)u^+_{i'_\varsigma}(\vec{p},h)]^{2s}$$

The above corollary happens to be the polynomial expansion theorem.

3.3 Spin basis for B-W equation in N+1 dimensional space-time

Def. 3.3.1.

$$\begin{cases} U_{\underbrace{\lambda_\varsigma\cdots\mu_\varsigma\cdots\tau_\varsigma}_{2s}}(\vec{p};n_1,n_2,\cdots,n_l) := \frac{1}{\sqrt{(2s)!n_1!n_2!\cdots n_l!}}\underbrace{u_{\{\lambda_\varsigma}(\vec{p},1)\cdots}_{n_1}\underbrace{u_{\mu_\varsigma}(\vec{p},2)\cdots}_{n_2}\cdots\underbrace{u_{\tau_\varsigma}(\vec{p},l)\cdots_{\}}}_{n_l}, n_1+n_2+\cdots n_l = 2s \\ V_{\underbrace{\lambda_\varsigma\cdots\mu_\varsigma\cdots\tau_\varsigma}_{2s}}(\vec{p};n_1,n_2,\cdots,n_l) := \frac{1}{\sqrt{(2s)!n_1!n_2!\cdots n_l!}}\underbrace{v_{\{\lambda_\varsigma}(\vec{p},1)\cdots}_{n_1}\underbrace{v_{\mu_\varsigma}(\vec{p},2)\cdots}_{n_2}\cdots\underbrace{v_{\tau_\varsigma}(\vec{p},l)\cdots_{\}}}_{n_l}, n_1+n_2+\cdots n_l = 2s \end{cases}$$

3.4 Orthogonal properties of spin basis for B-W equation in N+1 dimensional space-time (Can be seen directly)

Cor. 3.4.1.

$$\begin{cases} \bar{U}^{\overbrace{\lambda_\varsigma\cdots\mu_\varsigma\cdots\tau_\varsigma}^{2s}}(\vec{p};n_1,n_2,\cdots,n_l)U_{\underbrace{\lambda_\varsigma\cdots\mu_\varsigma\cdots\tau_\varsigma}_{2s}}(\vec{p};n'_1,n'_2,\cdots,n'_l) = \delta_{n_1n'_1}\delta_{n_2n'_2}\cdots\delta_{n_ln'_l} \\ \bar{V}^{\overbrace{\lambda_\varsigma\cdots\mu_\varsigma\cdots\tau_\varsigma}^{2s}}(\vec{p};n_1,n_2,\cdots,n_l)V_{\underbrace{\lambda_\varsigma\cdots\mu_\varsigma\cdots\tau_\varsigma}_{2s}}(\vec{p};n'_1,n'_2,\cdots,n'_l) = \delta_{n_1n'_1}\delta_{n_2n'_2}\cdots\delta_{n_ln'_l} \end{cases}$$

3.11 Summary of covariant quantization rules for B-W equation in N+1-D
Combining the proofs in the above two sections, the following important theorems are obtained.

Thm. 3.11.1.

$$[\psi_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdots}_{2s}}(x),\psi^+_{\underbrace{\lambda'_\varsigma\mu'_\varsigma\cdots}_{2s}}(x')]_{-^{2s+1}}=\frac{i}{2^{2s-1}}\frac{1}{[(2s)!]^2}\overbrace{[(m-\gamma^a\partial_a)\gamma^0]_{\{\lambda_\varsigma(\lambda'_\varsigma}[(m-\gamma^b\partial_b)\gamma^0]_{\mu_\varsigma\mu'_\varsigma}\cdots\})}^{2s}\Delta(x-x')$$

$$\Leftrightarrow [a(\vec{p},\vec{h}),a^+(\vec{p}',\vec{h}')]_{-^{2s+1}}=\delta_{\vec{h}\vec{h}'}\delta^N(\vec{p}-\vec{p}'),[b(\vec{p},\vec{h}),b^+(\vec{p}',\vec{h}')]_{-^{2s+1}}=\delta_{\vec{h}\vec{h}'}\delta^N(\vec{p}-\vec{p}'),[rest]_{-^{2s+1}}=0$$

3.12 Various physical operators of B-W equation in N+1 dimensional space-time
Thm. 3.12.1.

$$P_u(s)=\int\psi^{+\overbrace{\lambda_\varsigma\mu_\varsigma\cdots}^{2s}}(\vec{r},t)\frac{-i\partial_u(i\partial_t)^{2s-1}}{(m^2-\nabla^2)^{2s-1}}\psi_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdots}_{2s}}(\vec{r},t)d^N\vec{r}=\int\sum_{\vec{h}}p_u[a^+(\vec{p},\vec{h})a(\vec{p},\vec{h})+(-1)^{2s}b(\vec{p},\vec{h})b^+(\vec{p},\vec{h})]d^N\vec{p}$$

Chapter36 Covariate Quantization of Massless Particles in High Dimension

Self comment: In this chapter, the covariant quantization of massless particles is generalized to the general N+1 dimensional space-time. Specially, N+1 dimensional space-time case is different from four dimensional space-time case for fully symmetric Penrose equation. It is generally possible to describe both charged complex particles and uncharged Majorana particles. The principal commutation rule in both cases is consistent, but the rest are generally zero for charged complex particles. For uncharged Majorana particles, the rest of the commutative or anti commutative brackets are naturally derived from the principal commutative rule and Majorana conditions. And they are generally not zero. In this chapter, we only discuss the case of complex particles and generally only give the principal commutation rule. The Majorana particle case is no longer specifically discussed. If we want to obtain the quantum field theory of the Majorana particle case, we only need to add the Majorana condition to the complex particle case. Then we will naturally obtain it.

1 Helicity eigenfunction in N+1 dimensional space-time

1.1 Electron equation under separated representation in even N+1=2n-D space-time [4]

Def. 1.1.1. $(\gamma^a\partial_a + m)\psi = 0, \psi = \begin{bmatrix}\varphi \\ \eta\end{bmatrix}, \gamma^a = (\Gamma\otimes\sigma_y, \varsigma I_*\otimes\sigma_x) \Leftrightarrow \begin{cases}(\Gamma, -i\varsigma)^a\partial_a\varphi = im\eta \\ (\Gamma, i\varsigma)^a\partial_a\eta = -im\varphi\end{cases}$

1.2 Neutrino equation in N+1=2n even dimensional space-time [5]

When the mass m=0, it degenerates into two Weyl neutrino equations:

Cor. 1.2.1. $(\Gamma, -i\varsigma)^a\partial_a\varphi = 0, (\Gamma, i\varsigma)^a\partial_a\eta = 0$

1.3 Helicity eigenfunction along motion direction in N+1=2n even dimensional space-time

Def. 1.3.1.

$$\begin{cases}(I_*\otimes\sigma_z)\lambda(\hat{p},\frac{1}{2}) = \frac{1}{2}\lambda(\vec{p},\frac{1}{2}), (I_*\otimes\sigma_z)\lambda(\hat{p},-\frac{1}{2}) = -\frac{1}{2}\lambda(\vec{p},-\frac{1}{2}), l = 2^{[\frac{N-1}{2}]} = 2^{n-1} \\ \lambda(\begin{bmatrix}0\\ \cdot\cdot\\ 0\\ 1\end{bmatrix},\frac{1}{2};1) = \begin{bmatrix}1\\ 0\\ 0_{l/2-2}\\ 0_{l/2}\end{bmatrix}, \lambda(\begin{bmatrix}0\\ \cdot\cdot\\ 0\\ 1\end{bmatrix},\frac{1}{2};2) = \begin{bmatrix}0\\ 1\\ 0_{l/2-2}\\ 0_{l/2}\end{bmatrix}, \cdot\cdot, \lambda(\begin{bmatrix}0\\ \cdot\cdot\\ 0\\ 1\end{bmatrix},\frac{1}{2};\frac{l}{2}-1) = \begin{bmatrix}0_{l/2-2}\\ 1\\ 0\\ 0_{l/2}\end{bmatrix}, \lambda(\begin{bmatrix}0\\ \cdot\cdot\\ 0\\ 1\end{bmatrix},\frac{1}{2};\frac{l}{2}) = \begin{bmatrix}0_{l/2-2}\\ 0\\ 1\\ 0_{l/2}\end{bmatrix} \\ \lambda(\begin{bmatrix}0\\ \cdot\cdot\\ 0\\ 1\end{bmatrix},\frac{-1}{2};1) = \begin{bmatrix}0_{l/2}\\ 0_{l/2-2}\\ 0\\ 1\end{bmatrix}, \lambda(\begin{bmatrix}0\\ \cdot\cdot\\ 0\\ 1\end{bmatrix},\frac{-1}{2};2) = \begin{bmatrix}0_{l/2}\\ 0_{l/2-2}\\ 1\\ 0\end{bmatrix}, \cdot\cdot, \lambda(\begin{bmatrix}0\\ \cdot\cdot\\ 0\\ 1\end{bmatrix},\frac{-1}{2};\frac{l}{2}-1) = \begin{bmatrix}0_{l/2}\\ 0\\ 1\\ 0_{l/2-2}\end{bmatrix}, \lambda(\begin{bmatrix}0\\ \cdot\cdot\\ 0\\ 1\end{bmatrix},\frac{-1}{2};\frac{l}{2}) = \begin{bmatrix}0_{l/2}\\ 1\\ 0\\ 0_{l/2-2}\end{bmatrix}\end{cases}$$

1.4 Helicity eigenfunction along motion direction in N+1=2n-1 odd dimensional space-time

Def. 1.4.1.

$$\begin{cases}(I_*\otimes\sigma_z)\lambda(\hat{p},\frac{1}{2}) = \frac{1}{2}\lambda(\vec{p},\frac{1}{2}), (I_*\otimes\sigma_z)\lambda(\hat{p},-\frac{1}{2}) = -\frac{1}{2}\lambda(\vec{p},-\frac{1}{2}), l = 2^{[\frac{N-1}{2}]} = 2^{n-2} \\ \lambda(\begin{bmatrix}0\\ \cdot\cdot\\ 0\\ 1\end{bmatrix},\frac{1}{2};1) = \begin{bmatrix}1\\ 0\\ 0_{l-2}\\ 0_{l}\end{bmatrix}, \lambda(\begin{bmatrix}0\\ \cdot\cdot\\ 0\\ 1\end{bmatrix},\frac{1}{2};2) = \begin{bmatrix}0\\ 1\\ 0_{l-2}\\ 0_{l}\end{bmatrix}, \cdot\cdot, \lambda(\begin{bmatrix}0\\ \cdot\cdot\\ 0\\ 1\end{bmatrix},\frac{1}{2};l-1) = \begin{bmatrix}0_{l-2}\\ 1\\ 0\\ 0_{l}\end{bmatrix}, \lambda(\begin{bmatrix}0\\ \cdot\cdot\\ 0\\ 1\end{bmatrix},\frac{1}{2};l) = \begin{bmatrix}0_{l-2}\\ 0\\ 1\\ 0_{l}\end{bmatrix} \\ \lambda(\begin{bmatrix}0\\ \cdot\cdot\\ 0\\ 1\end{bmatrix},\frac{-1}{2};1) = \begin{bmatrix}0_{l}\\ 0_{l-2}\\ 0\\ 1\end{bmatrix}, \lambda(\begin{bmatrix}0\\ \cdot\cdot\\ 0\\ 1\end{bmatrix},\frac{-1}{2};2) = \begin{bmatrix}0_{l}\\ 0_{l-2}\\ 1\\ 0\end{bmatrix}, \cdot\cdot, \lambda(\begin{bmatrix}0\\ \cdot\cdot\\ 0\\ 1\end{bmatrix},\frac{-1}{2};l-1) = \begin{bmatrix}0_{l}\\ 0\\ 1\\ 0_{l-2}\end{bmatrix}, \lambda(\begin{bmatrix}0\\ \cdot\cdot\\ 0\\ 1\end{bmatrix},\frac{-1}{2};l) = \begin{bmatrix}0_{l}\\ 1\\ 0\\ 0_{l-2}\end{bmatrix}\end{cases}$$

Def. 1.4.2. $(\Gamma\cdot\hat{p})\lambda(\hat{p},\frac{1}{2};h) = \lambda(\hat{p},\frac{1}{2};h), (\Gamma\cdot\hat{p})\lambda(\hat{p},-\frac{1}{2};h) = -\lambda(\hat{p},-\frac{1}{2};h)$

1.5 Helicity $\Gamma\cdot\hat{p}$ eigenfunction in N+1 dimensional space-time

Def. 1.5.1. $r := \begin{cases}l/2, \textit{even dimensional space-time} \\ l, \textit{odd dimensional space-time}\end{cases}, l = 2^{[\frac{N-1}{2}]}$

Def. 1.5.2.

$$\begin{cases}(\Gamma\cdot\hat{p})\lambda(\hat{p},-\frac{\varsigma}{2};h) = -\varsigma\lambda(\hat{p},-\frac{\varsigma}{2};h), \lambda(\hat{p},-\frac{\varsigma}{2};h) := e^{\frac{1}{8}\vartheta^{ij}(\hat{p})[\Gamma_i,\Gamma_j]}\lambda(\begin{bmatrix}0\\ \cdot\cdot\\ 0\\ 1\end{bmatrix},-\frac{\varsigma}{2};h) \\ e^{-\frac{1}{8}\vartheta^{ij}(\hat{p})[\Gamma_i,\Gamma_j]}(\Gamma\cdot\hat{p})e^{\frac{1}{8}\vartheta^{ij}(\hat{p})[\Gamma_i,\Gamma_j]} = \Gamma_N, \Gamma\cdot\hat{p} = e^{\frac{1}{8}\vartheta^{ij}(\hat{p})[\Gamma_i,\Gamma_j]}\Gamma_N e^{-\frac{1}{8}\vartheta^{ij}(\hat{p})[\Gamma_i,\Gamma_j]}\end{cases}$$

Def. 1.5.3. $(\Gamma\cdot\hat{p})\lambda(\hat{p},\frac{1}{2};h) = \lambda(\hat{p},\frac{1}{2};h), (\Gamma\cdot\hat{p})\lambda(\hat{p},-\frac{1}{2};h) = -\lambda(\hat{p},-\frac{1}{2};h)$

Def. 1.5.4.

$$\begin{cases}(\Gamma\cdot\hat{p})\lambda(\hat{p},-\frac{\varsigma}{2};h)=-\varsigma\lambda(\hat{p},-\frac{\varsigma}{2};h),\lambda(\hat{p},-\frac{\varsigma}{2};h):=e^{\frac{1}{8}\vartheta^{ij}(\hat{p})[\Gamma_i,\Gamma_j]}\lambda(\begin{bmatrix}0\\ \cdot\cdot\\ 0\\ 1\end{bmatrix},-\frac{\varsigma}{2};h)\\ e^{-\frac{1}{8}\vartheta^{ij}(\hat{p})[\Gamma_i,\Gamma_j]}(\Gamma\cdot\hat{p})e^{\frac{1}{8}\vartheta^{ij}(\hat{p})[\Gamma_i,\Gamma_j]}=\Gamma_N,\Gamma\cdot\hat{p}=e^{\frac{1}{8}\vartheta^{ij}(\hat{p})[\Gamma_i,\Gamma_j]}\Gamma_N e^{-\frac{1}{8}\vartheta^{ij}(\hat{p})[\Gamma_i,\Gamma_j]}\end{cases}$$

1.6 Orthogonality and completeness of helicity $\Gamma\cdot\hat{p}$ eigenfunction in N+1-D

Def. 1.6.1. $\lambda(\hat{p},\frac{1}{2};h):=\lambda(\hat{p};h),\lambda(\hat{p},-\frac{1}{2};h):=\lambda(\hat{p};-h),\lambda(\hat{p},\frac{\varsigma}{2};h):=\lambda(\hat{p};h\varsigma),\lambda(\hat{p},-\frac{\varsigma}{2};h):=\lambda(\hat{p};-h\varsigma)$

Cor. 1.6.1. $\lambda^+(\hat{p};h)\lambda(\hat{p};h')=\delta_{hh'}$

$$\sum_{h=1}^{r}[\lambda(\hat{p};h)\lambda^+(\hat{p};h)+\lambda(\hat{p};-h)\lambda^+(\hat{p};-h)]=1,\sum_{h=1}^{r}[\lambda(\hat{p};h)\lambda^+(\hat{p};h)-\lambda(\hat{p};-h)\lambda^+(\hat{p};-h)]=\Gamma\cdot\hat{p}$$

Cor. 1.6.2. $\sum_{h=1}^{r}\lambda(\hat{p};h)\lambda^+(\hat{p};h)=\frac{1}{2}(\Gamma,-i)^a\hat{p}_a,\sum_{h=1}^{r}\lambda(\hat{p};-h)\lambda^+(\hat{p};-h)=-\frac{1}{2}(\Gamma,-i)^a\hat{p}_a$

Cor. 1.6.3. $\sum_{h=1}^{r}\lambda(\hat{p};h\varsigma)\lambda^+(\hat{p};h\varsigma)=-\frac{\varsigma}{2}(\Gamma,i\varsigma)^a\hat{p}_a$

1.7 High spin helicity eigenfunction in N+1 dimensional space-time

Def. 1.7.1.

$$\begin{cases}\lambda_{\underbrace{A_\varsigma\cdot\cdot B_\varsigma\cdot\cdot C_\varsigma\cdot\cdot}_{2s}}(\vec{p};n_1,n_2,\cdot\cdot,n_{2r}):=\frac{1}{\sqrt{(2s)!n_1!n_2!\cdot\cdot n_r!}}\underbrace{\lambda_{\{A_\varsigma}(\vec{p};-1\varsigma)\cdot\cdot}_{n_1}\underbrace{\lambda_{B_\varsigma}(\vec{p};-2\varsigma)\cdot\cdot}_{n_2}\cdot\cdot\underbrace{\lambda_{C_\varsigma}(\vec{p};-2r\varsigma)\cdot\cdot_{\}}}_{n_{2r}}\\ \lambda_{k_\varsigma}(\vec{p};n_1,n_2,\cdot\cdot,n_{2r}):=\frac{\sqrt{(2s)!}}{\sqrt{n_1!n_2!\cdot\cdot n_{2r}!}}\Gamma_{k_\varsigma}^{\overbrace{A_\varsigma B_\varsigma C_\varsigma\cdot\cdot}^{2s}}(s;w)\underbrace{\lambda_{A_\varsigma}(\vec{p};-1\varsigma)\cdot\cdot}_{n_1}\underbrace{\lambda_{B_\varsigma}(\vec{p};-2\varsigma)\cdot\cdot}_{n_2}\cdot\cdot\underbrace{\lambda_{C_\varsigma}(\vec{p};-2r\varsigma)\cdot\cdot}_{n_{2r}}\\ \lambda_{A_\varsigma}(\vec{p};-(r+k)\varsigma):=\lambda_{A_\varsigma}(\vec{p};k\varsigma),k=1,2,\cdot\cdot,r,\sum_{k=1}^{2r}n_k=2s\end{cases}$$

Cor. 1.7.1.

$$\begin{cases}[\sigma(s,w)\cdot\hat{p}]\lambda_\varsigma(\vec{p};n_1,n_2,\cdot\cdot,n_{2r})=-\frac{\varsigma}{2}[\sum_{k=1}^{r}(n_k-n_{r+k})]\lambda_\varsigma(\vec{p};n_1,n_2,\cdot\cdot,n_{2r})\\ \sigma(s;w)=s\bar{\Gamma}(s;w)(\Gamma\otimes I_*)\Gamma(s;w),\sum_{k=1}^{2r}n_k=2s\end{cases}$$

Cor. 1.7.2.

$$\begin{cases}[\sigma(s,w)\cdot\hat{p}]\lambda_\varsigma(\vec{p};n_1,n_2,\cdot\cdot,n_r)=-\varsigma s\lambda_\varsigma(\vec{p};n_1,n_2,\cdot\cdot,n_r),\sum_{k=1}^{r}n_k=2s\\ \lambda_{k_\varsigma}(\vec{p};n_1,n_2,\cdot\cdot,n_r):=\lambda_{k_\varsigma}(\vec{p};n_1,n_2,\cdot\cdot,n_r;0_1,0_2,\cdot\cdot,0_r)\end{cases}$$

3.3 Use mathematical induction to solve plane wave solutions of Penrose equation in N+1-D

Thm. 3.3.1. $(\Gamma,-i\varsigma)_a^{A'_\varsigma A_\varsigma}\partial^a\psi_{\underbrace{A_\varsigma B_\varsigma\cdot\cdot C_\varsigma D_\varsigma}_{2s}}(x)=0,\psi_{\underbrace{A_\varsigma B_\varsigma\cdot\cdot C_\varsigma D_\varsigma}_{2s}}(x)=\frac{1}{(2s)!}\psi_{\underbrace{\{A_\varsigma B_\varsigma\cdot\cdot C_\varsigma D_\varsigma\}}_{2s}}(x)$

$\Leftrightarrow\psi_{\underbrace{A_\varsigma B_\varsigma\cdot\cdot C_\varsigma D_\varsigma}_{2s}}(x)$

$$= \frac{1}{(2\pi)^{N/2}} \int\limits_{\vec{p}\neq 0} d^N\vec{p}|\vec{p}|^{(s-\frac{1}{2})} \sum_{n_1+\cdot\cdot+n_r}^{=2s} \lambda_{\underbrace{A_\varsigma B_\varsigma\cdot\cdot C_\varsigma D_\varsigma}_{2s}}(\vec{p};n_1,\cdot\cdot,n_r)[a_1(\vec{p};n_1,\cdot\cdot,n_r)e^{ip\cdot x} + a_2^+(\vec{p};n_1,\cdot\cdot,n_r)e^{-ip\cdot x}]$$

$$\begin{cases} |\vec{p}|^{(s-\frac{1}{2})} a_1(\vec{p};n_1,\cdot\cdot,n_r) = \frac{1}{(2\pi)^{N/2}} \int \lambda^{+\overbrace{A_\varsigma B_\varsigma\cdot\cdot C_\varsigma D_\varsigma}^{2s}}(\vec{p};n_1,\cdot\cdot,n_r)\psi_{\underbrace{A_\varsigma B_\varsigma\cdot\cdot C_\varsigma D_\varsigma}_{2s}}(x)e^{-ip\cdot x}d^N\vec{r} \\ |\vec{p}|^{(s-\frac{1}{2})} a_2^+(\vec{p};n_1,\cdot\cdot,n_r) = \frac{1}{(2\pi)^{N/2}} \int \lambda^{+\overbrace{A_\varsigma B_\varsigma\cdot\cdot C_\varsigma D_\varsigma}^{2s}}(\vec{p};n_1,\cdot\cdot,n_r)\psi_{\underbrace{A_\varsigma B_\varsigma\cdot\cdot C_\varsigma D_\varsigma}_{2s}}(x)e^{ip\cdot x}d^N\vec{r} \end{cases}$$

Proof: Using mathematical induction to prove this theorem.
Step 1: When $s' = \frac{1}{2}$, the following is established.

$$(\Gamma, -i\varsigma)_a^{A'_\varsigma A_\varsigma} \partial^a \psi_{A_\varsigma}(x) = 0, \psi_{A_\varsigma}(x) = \psi_{A_\varsigma}(x)$$

$\Leftrightarrow$

$$\psi_{A_\varsigma}(x) = \frac{1}{(2\pi)^{N/2}} \int\limits_{\vec{p}\neq 0} d^N\vec{p} \sum_{n_1+\cdot\cdot+n_r}^{=1} \lambda_{A_\varsigma}(\vec{p};n_1,\cdot\cdot,n_r)[a_1(\vec{p};n_1,\cdot\cdot,n_r)e^{ip\cdot x} + a_2^+(\vec{p};n_1,\cdot\cdot,n_r)e^{-ip\cdot x}]$$

Step 2: Assume when $s' = s$, the following is established.

$$(\Gamma, -i\varsigma)_a^{A'_\varsigma A_\varsigma} \partial^a \psi_{\underbrace{A_\varsigma B_\varsigma\cdot\cdot C_\varsigma D_\varsigma}_{2s}}(x) = 0, \psi_{\underbrace{A_\varsigma B_\varsigma\cdot\cdot C_\varsigma D_\varsigma}_{2s}}(x) = \frac{1}{(2s)!}\psi_{\underbrace{\{A_\varsigma B_\varsigma\cdot\cdot C_\varsigma D_\varsigma\}}_{2s}}(x)$$

$\Leftrightarrow$

$$\psi_{\underbrace{A_\varsigma B_\varsigma\cdot\cdot C_\varsigma D_\varsigma}_{2s}}(x) = \frac{1}{(2\pi)^{N/2}} \int\limits_{\vec{p}\neq 0} d^N\vec{p}|\vec{p}|^{(s-\frac{1}{2})}$$

$$\sum_{n_1+\cdot\cdot+n_r}^{=2s} \lambda_{\underbrace{A_\varsigma B_\varsigma\cdot\cdot C_\varsigma D_\varsigma}_{2s}}(\vec{p};n_1,\cdot\cdot,n_r)[a_1(\vec{p};n_1,\cdot\cdot,n_r)e^{ip\cdot x} + a_2^+(\vec{p};n_1,\cdot\cdot,n_r)e^{-ip\cdot x}]$$

Step 3: When $s' = s + 1/2$,

$$(\Gamma, -i\varsigma)_a^{A'_\varsigma A_\varsigma} \partial^a \psi_{\underbrace{A_\varsigma B_\varsigma\cdot\cdot C_\varsigma D_\varsigma}_{2s}}(x) = 0, \psi_{\underbrace{A_\varsigma B_\varsigma\cdot\cdot C_\varsigma D_\varsigma E_\varsigma}_{2s+1}}(x) = \frac{1}{(2s+1)!}\psi_{\underbrace{\{A_\varsigma B_\varsigma\cdot\cdot C_\varsigma D_\varsigma E_\varsigma\}}_{2s+1}}(x)$$

$\Leftrightarrow$

$$\begin{cases} \psi_{\underbrace{A_\varsigma B_\varsigma\cdot\cdot C_\varsigma D_\varsigma E_\varsigma\}}_{2s+1}}(x) = \frac{1}{(2\pi)^{N/2}} \int\limits_{\vec{p}\neq 0} d^N\vec{p}|\vec{p}|^{(s-\frac{1}{2})} \\ \sum_{n_1+\cdot\cdot+n_r}^{=2s} \lambda_{\underbrace{A_\varsigma B_\varsigma\cdot\cdot C_\varsigma D_\varsigma}_{2s}}(\vec{p};n_1,\cdot\cdot,n_r)[a_{1E_\varsigma}(\vec{p};n_1,\cdot\cdot,n_r)e^{ip\cdot x} + a_{2E_\varsigma}^+(\vec{p};n_1,\cdot\cdot,n_r)e^{-ip\cdot x}] \\ \psi_{\underbrace{A_\varsigma B_\varsigma\cdot\cdot C_\varsigma D_\varsigma E_\varsigma}_{2s+1}}(x) = \psi_{\underbrace{A_\varsigma B_\varsigma\cdot\cdot C_\varsigma E_\varsigma D_\varsigma}_{2s+1}}(x) \end{cases}$$

$\Leftrightarrow$

$$\begin{cases} \psi_{\underbrace{A_\varsigma B_\varsigma\cdot\cdot C_\varsigma D_\varsigma E_\varsigma\}}_{2s+1}}(x) = \frac{1}{(2\pi)^{N/2}} \int\limits_{\vec{p}\neq 0} d^N\vec{p}|\vec{p}|^{(s-\frac{1}{2})} \\ \sum_{n_1+\cdot\cdot+n_r}^{=2s} \lambda_{\underbrace{A_\varsigma B_\varsigma\cdot\cdot C_\varsigma D_\varsigma}_{2s}}(\vec{p};n_1,\cdot\cdot,n_r)[a_{1E_\varsigma}(\vec{p};n_1,\cdot\cdot,n_r)e^{ip\cdot x} + a_{2E_\varsigma}^+(\vec{p};n_1,\cdot\cdot,n_r)e^{-ip\cdot x}] \\ \sum_{n_1+\cdot\cdot+n_r}^{=2s} \lambda_{\underbrace{A_\varsigma B_\varsigma\cdot\cdot C_\varsigma D_\varsigma}_{2s}}(\vec{p};n_1,\cdot\cdot,n_r)a_{1E_\varsigma}(\vec{p};n_1,\cdot\cdot,n_r) = \sum_{n_1+\cdot\cdot+n_r}^{=2s} \lambda_{\underbrace{A_\varsigma B_\varsigma\cdot\cdot C_\varsigma E_\varsigma}_{2s}}(\vec{p};n_1,\cdot\cdot,n_r)a_{1D_\varsigma}(\vec{p};n_1,\cdot\cdot,n_r) \\ \sum_{n_1+\cdot\cdot+n_r}^{=2s} \lambda_{\underbrace{A_\varsigma B_\varsigma\cdot\cdot C_\varsigma D_\varsigma}_{2s}}(\vec{p};n_1,\cdot\cdot,n_r)a_{2E_\varsigma}^+(\vec{p};n_1,\cdot\cdot,n_r) = \sum_{n_1+\cdot\cdot+n_r}^{=2s} \lambda_{\underbrace{A_\varsigma B_\varsigma\cdot\cdot C_\varsigma E_\varsigma}_{2s}}(\vec{p};n_1,\cdot\cdot,n_r)a_{2D_\varsigma}^+(\vec{p};n_1,\cdot\cdot,n_r) \end{cases}$$

$\Leftrightarrow$

$$\begin{cases} \psi_{\underbrace{A_\varsigma B_\varsigma\cdot\cdot C_\varsigma D_\varsigma E_\varsigma}_{2s+1}}(x) \\ = \frac{1}{(2\pi)^{N/2}} \int\limits_{\vec{p}\neq 0} d^N\vec{p}|\vec{p}|^{s} \sum_{n_1+\cdot\cdot+n_r}^{=2s+1} \lambda_{\underbrace{A_\varsigma B_\varsigma\cdot\cdot C_\varsigma D_\varsigma E_\varsigma}_{2s+1}}(\vec{p};n_1,\cdot\cdot,n_r)[a_1(\vec{p};n_1,\cdot\cdot,n_r)e^{ip\cdot x} + a_2^+(\vec{p};n_1,\cdot\cdot,n_r)e^{-ip\cdot x}] \end{cases}$$

This step proves that when $s' = s + 1/2$, the proposition is established.
Step 4: Based on the above inductive reasoning, the theorem has been proved. □

Self comment: The above proof method is no longer based on the isochronous commutation rule, but directly based on the covariant commutation rule. It seems more difficult, but it's actually simpler. Because there is no need to find complex isochronal commutation rules. Even if it is calculated out, it is still difficult to use. The covariant commutation rule itself is known and very regular and can also be decomposed into the product of spin bases. The entire proof process basically depends on the properties of the spin base and hasn't complex calculations. The other commutative brackets can also be calculated out by using the same method and will not be listed.

3.6 Action of Bargmann-Wigner equation

Thm. 3.6.1. $S?=\int\psi^+_{A'_\varsigma B'_\varsigma\cdots}(x)\gamma_0^{A'_\varsigma Z_\varsigma}\gamma_0^{B'_\varsigma B_\varsigma}\cdots(\gamma^a{}_{Z_\varsigma}{}^{A_\varsigma}\partial_a+m\delta_{Z_\varsigma}{}^{A_\varsigma})\psi_{A_\varsigma B_\varsigma\cdots}(x)d^4x$

Chapter37 Covariate Quantization of Particles in Low Dimensional Space-time

Self comment: For particles described by the Bargmann-Wigner equation or Dirac equation, it is generally possible to describe both charged complex particles and uncharged Majorana particles. The principal commutation rule in both cases is consistent, but the rest are generally zero for charged complex particles. For uncharged Majorana particles, the rest of the commutative or anti commutative brackets are naturally derived from the principal commutative rule and Majorana conditions. And they are generally not zero. In this chapter, we only discuss the case of complex particles and generally only give the principal commutation rule. The Majorana particle case is no longer specifically discussed. If we want to obtain the quantum field theory of the Majorana particle case, we only need to add the Majorana condition to the complex particle case. Then we will naturally obtain it. The two or three dimensional space-time particles described in this chapter can be considered as the result of four dimensional space-time particles being constrained on the y, z, or z axes. Therefore it has practical significance and can be applied to condensed matter physics. In addition, two-dimensional spatiotemporal particles can also be considered as the result of further confinement of three-dimensional spatiotemporal particles on the y-axis. Three dimensional spatiotemporal particles correspond to quantum surfaces. Two dimensional spatiotemporal particles correspond to quantum wire. One dimensional spatiotemporal particles correspond to quantum dot.

1 Covariate quantization for massive particles in 3-dimensional space-time

1.1 B-W equation with mass in 3-dimensional space-time

1.1.1 Dirac equation spin basis and its plane wave solutions in 3-dimensional space-time

Def. 1.1.1. $u(\vec{p}) := \sqrt{\frac{E+m}{2m}}(1-\frac{\varsigma\sigma\cdot\vec{p}}{E+m})(\frac{1+\varsigma}{2}+\frac{1-\varsigma}{2}\sigma_x)\begin{bmatrix}1\\0\end{bmatrix}, v(\vec{p}) := \sqrt{\frac{E+m}{2m}}(1-\frac{\varsigma\sigma\cdot\vec{p}}{E+m})(\frac{1+\varsigma}{2}+\frac{1-\varsigma}{2}\sigma_x)\begin{bmatrix}0\\1\end{bmatrix}$

Cor. 1.1.1. $u(\vec{p}) = \sigma_x v^*(\vec{p}), v(\vec{p}) = \sigma_x u^*(\vec{p})$

Thm. 1.1.1. $(\gamma^a\partial_a + m)\psi = 0, \gamma^a = (-\sigma_y, \sigma_x, \varsigma\sigma_z)$

$$\psi(\vec{r},t) = \frac{1}{(2\pi)^{1/2}}\int\limits_{\vec{p}=-\infty}^{+\infty}[a(\vec{p})\sqrt{\tfrac{m}{E}}u(\vec{p})e^{i(\vec{p}\cdot\vec{r}-Et)} + b^+(\vec{p})\sqrt{\tfrac{m}{E}}v(\vec{p})e^{-i(\vec{p}\cdot\vec{r}-Et)}]d\vec{p}$$

$$a(\vec{p}) = \frac{1}{(2\pi)^{1/2}}\int\limits_{\vec{p}=-\infty}^{+\infty}\sqrt{\frac{E}{m}}u^+(\vec{p})\psi(\vec{r},t)e^{-i(\vec{p}\cdot\vec{r}-Et)}d\vec{r}, b^+(\vec{p}) = \frac{1}{(2\pi)^{1/2}}\int\limits_{\vec{p}=-\infty}^{+\infty}\sqrt{\frac{E}{m}}v^+(\vec{p})\psi(\vec{r},t)e^{i(\vec{p}\cdot\vec{r}-Et)}d\vec{r}$$

1.1.2 Properties of Dirac spin basis in 3-dimensional space-time

Cor. 1.1.2. $\begin{cases}\bar{u}(\vec{p})u(\vec{p}) = 1, \bar{v}(\vec{p})v(\vec{p}) = -1, \bar{u}(\vec{p})v(\vec{p}) = 0, \bar{v}(\vec{p})u(\vec{p}) = 0\\ u^+(\vec{p})u(\vec{p}) = \frac{E}{m}, v^+(\vec{p})v(\vec{p}) = \frac{E}{m}, u^+(\vec{p})v(-\vec{p}) = 0, v^+(\vec{p})u(-\vec{p}) = 0\end{cases}$

Cor. 1.1.3. $\begin{cases}u(\vec{p})\bar{u}(\vec{p}) = \frac{m-i\gamma^a p_a}{2m}\\ v(\vec{p})\bar{v}(\vec{p}) = \frac{-m-i\gamma^a p_a}{2m}\end{cases}$ $\begin{cases}u(\vec{p})u^+(\vec{p}) = \frac{(m-i\gamma^a p_a)\gamma^0}{2m} = \frac{m\sigma_z-(\sigma,i\varsigma)^a p_a}{\varsigma 2m}\\ v(\vec{p})v^+(\vec{p}) = \frac{(-m-i\gamma^a p_a)\gamma^0}{2m} = \frac{-m\sigma_z-(\sigma,i\varsigma)^a p_a}{\varsigma 2m}\end{cases}$

Cor. 1.1.4. $u(\vec{p})\bar{u}(\vec{p}) - v(\vec{p},h)\bar{v}(\vec{p}) = 1, u(\vec{p})\bar{u}(\vec{p}) + v(\vec{p},h)\bar{v}(\vec{p}) = \frac{-i\gamma^a p_a}{m}, u(\vec{p})u^+(\vec{p}) + v(-\vec{p},h)v^+(-\vec{p}) = \frac{E}{m}$

1.1.3 Covariant quantization rules for Dirac equation in 3-dimensional space-time

Cor. 1.1.5. $\begin{cases}\{a(\vec{p}), a^+(\vec{p}')\} = \delta(\vec{p}-\vec{p}')\\ \{a(\vec{p}), a(\vec{p}')\} = 0, \{a^+(\vec{p}), a^+(\vec{p}')\} = 0\end{cases} \Rightarrow \{\psi_{\lambda_\varsigma}(x), \psi^+_{\lambda'_\varsigma}(x')\} = i[(m-\gamma^a\partial_a)\gamma^0]_{\lambda_\varsigma\lambda'_\varsigma}\Delta(x-x')$

1.2 B-W equation in 3-dimensional space-time

1.2.1 Spin basis and its plane wave solutions of B-W equation in 3-dimensional space-time [16]

Def. 1.2.1. $U_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdot\cdot}_{2s}}(\vec{p}) := \underbrace{u_{\lambda_\varsigma}(\vec{p})u_{\mu_\varsigma}(\vec{p})\cdot\cdot}_{2s}, V_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdot\cdot}_{2s}}(\vec{p}) := \underbrace{v_{\lambda_\varsigma}(\vec{p})v_{\mu_\varsigma}(\vec{p})\cdot\cdot}_{2s}$

Cor. 1.2.1. $U_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdot\cdot}_{2s}}(\vec{p}) = \underbrace{\sigma_x\otimes\sigma_x\cdot\cdot}_{2s}V^+_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdot\cdot}_{2s}}(\vec{p}), V_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdot\cdot}_{2s}}(\vec{p}) = \underbrace{\sigma_x\otimes\sigma_x\cdot\cdot}_{2s}U^+_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdot\cdot}_{2s}}(\vec{p})$

Thm. 1.2.1. $(\gamma^a\partial_a+m)_{\kappa_\varsigma}{}^{\lambda_\varsigma}\psi_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdots}_{2s}}(\vec{r},t)=0,\psi_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdots}_{2s}}(\vec{r},t)=\frac{1}{(2s)!}\psi_{\underbrace{\{\lambda_\varsigma\mu_\varsigma\cdots\}}_{2s}}(\vec{r},t)$

$$\psi_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdots}_{2s}}(\vec{r},t)=\frac{1}{(2\pi)^{N/2}}\int_{\vec{p}=-\infty}^{+\infty}E^{s-\frac{1}{2}}\sqrt{\frac{m}{E}}^{2s}[a(\vec{p})U_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdots}_{2s}}(\vec{p})e^{i(\vec{p}\cdot\vec{r}-Et)}+b^+(\vec{p})V_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdots}_{2s}}(\vec{p})e^{-i(\vec{p}\cdot\vec{r}-Et)}]d^N\vec{p}$$

$$\begin{cases}a(\vec{p})=\frac{1}{(2\pi)^{N/2}}\int_{\vec{p}=-\infty}^{+\infty}E^{-(s-\frac{1}{2})}\sqrt{\frac{m}{E}}^{2s}U^{+\overbrace{\lambda_\varsigma\mu_\varsigma\cdots}^{2s}}(\vec{p})\psi_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdots}_{2s}}(\vec{r},t)e^{-i(\vec{p}\cdot\vec{r}-Et)}d^N\vec{r}\\ b^+(\vec{p})=\frac{1}{(2\pi)^{N/2}}\int_{\vec{p}=-\infty}^{+\infty}E^{-(s-\frac{1}{2})}\sqrt{\frac{m}{E}}^{2s}V^{+\overbrace{\lambda_\varsigma\mu_\varsigma\cdots}^{2s}}(\vec{p})\psi_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdots}_{2s}}(\vec{r},t)e^{i(\vec{p}\cdot\vec{r}-Et)}d^N\vec{r}\end{cases}$$

1.2.2 Orthogonal properties of B-W equation spin basis in 3-dimensional space-time

Cor. 1.2.2.

$$\begin{cases}\bar{U}^{\overbrace{\lambda_\varsigma\mu_\varsigma\cdots}^{2s}}(\vec{p})U_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdots}_{2s}}(\vec{p})=1,\bar{V}^{\overbrace{\lambda_\varsigma\mu_\varsigma\cdots}^{2s}}(\vec{p})V_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdots}_{2s}}(\vec{p})=1\\ \bar{U}^{\overbrace{\lambda_\varsigma\mu_\varsigma\cdots}^{2s}}(\vec{p})V_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdots}_{2s}}(\vec{p})=0,\bar{V}^{\overbrace{\lambda_\varsigma\mu_\varsigma\cdots}^{2s}}(\vec{p})U_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdots}_{2s}}(\vec{p})=0\end{cases}$$

$$\begin{cases}U^{+\overbrace{\lambda_\varsigma\mu_\varsigma\cdots}^{2s}}(\vec{p})U_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdots}_{2s}}(\vec{p})=(\frac{E}{m})^{2s},V^{+\overbrace{\lambda_\varsigma\mu_\varsigma\cdots}^{2s}}(\vec{p})V_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdots}_{2s}}(\vec{p})=(\frac{E}{m})^{2s}\\ U^{+\overbrace{\lambda_\varsigma\mu_\varsigma\cdots}^{2s}}(\vec{p})V_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdots}_{2s}}(-\vec{p})=0,V^{+\overbrace{\lambda_\varsigma\mu_\varsigma\cdots}^{2s}}(\vec{p})U_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdots}_{2s}}(-\vec{p})=0\end{cases}$$

1.2.3 Quasi projection operator of B-W equation in 3-dimensional space-time

Cor. 1.2.3.

$$\begin{cases}U_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdots}_{2s}}(\vec{p})U^+_{\underbrace{\lambda'_\varsigma\mu'_\varsigma\cdots}_{2s}}(\vec{p})=\frac{1}{(2m)^{2s}}\underbrace{[(m-i\gamma^bp_b)\gamma^0]_{\lambda_\varsigma\lambda'_\varsigma}[(m-i\gamma^cp_c)\gamma^0]_{\mu_\varsigma\mu'_\varsigma}\cdots}_{2s}\\ V_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdots}_{2s}}(\vec{p})V^+_{\underbrace{\lambda'_\varsigma\mu'_\varsigma\cdots}_{2s}}(\vec{p})=\frac{1}{(2m)^{2s}}\underbrace{[(-m-i\gamma^bp_b)\gamma^0]_{\lambda_\varsigma\lambda'_\varsigma}[(-m-i\gamma^cp_c)\gamma^0]_{\mu_\varsigma\mu'_\varsigma}\cdots}_{2s}\end{cases}$$

Cor. 1.2.4.

5 Covariate quantization for massive particles in 2-dimensional space-time

5.1 Dirac equation in 2-dimensional space-time

5.1.1 Dirac spin basis in 2-dimensional space-time

Def. 5.1.1. $u(\vec{p}) := \sqrt{\frac{E+m}{2m}}(1-\frac{\varsigma p_x\sigma_x}{E+m})(\frac{1+\varsigma}{2}+\frac{1-\varsigma}{2}\sigma_x)\begin{bmatrix}1\\0\end{bmatrix}, v(\vec{p}) := \sqrt{\frac{E+m}{2m}}(1-\frac{\varsigma p_x\sigma_x}{E+m})(\frac{1+\varsigma}{2}+\frac{1-\varsigma}{2}\sigma_x)\begin{bmatrix}0\\1\end{bmatrix}$

Cor. 5.1.1. $u(\vec{p}) = \sigma_x v(\vec{p}), v(\vec{p}) = \sigma_x u(\vec{p}), u^*(\vec{p}) = u(\vec{p}), v^*(\vec{p}) = v(\vec{p})$

5.1.2 Properties of Dirac spin basis in 2-dimensional space-time

Pro. 5.1.1. $\begin{cases}\bar{u}(\vec{p})u(\vec{p}) = 1, \bar{v}(\vec{p})v(\vec{p}) = -1, \bar{u}(\vec{p})v(\vec{p}) = 0, \bar{v}(\vec{p})u(\vec{p}) = 0\\ u^+(\vec{p})u(\vec{p}) = \frac{E}{m}, v^+(\vec{p})v(\vec{p}) = \frac{E}{m}, u^+(\vec{p})v(-\vec{p}) = 0, v^+(\vec{p})u(-\vec{p}) = 0\end{cases}$

Pro. 5.1.2. $\begin{cases}u(\vec{p})\bar{u}(\vec{p}) = \frac{m-i\gamma^a p_a}{2m}\\ v(\vec{p})\bar{v}(\vec{p}) = \frac{-m-i\gamma^a p_a}{2m}\end{cases}\quad \begin{cases}u(\vec{p})u^+(\vec{p}) = \frac{(m-i\gamma^a p_a)\gamma^0}{2m} = \frac{m\sigma_z-(\sigma,i\varsigma)^a p_a}{\varsigma 2m}\\ v(\vec{p})v^+(\vec{p}) = \frac{(-m-i\gamma^a p_a)\gamma^0}{2m} = \frac{-m\sigma_z-(\sigma,i\varsigma)^a p_a}{\varsigma 2m}\end{cases}$

Pro. 5.1.3. $u(\vec{p})\bar{u}(\vec{p}) - v(\vec{p},h)\bar{v}(\vec{p}) = 1, u(\vec{p})\bar{u}(\vec{p}) + v(\vec{p},h)\bar{v}(\vec{p}) = \frac{-i\gamma^a p_a}{m}, u(\vec{p})u^+(\vec{p}) + v(-\vec{p},h)v^+(-\vec{p}) = \frac{E}{m}$

5.1.3 Dirac equation [4] and its plane wave solutions in 2-dimensional space-time

Thm. 5.1.1. $(\gamma^a\partial_a + m)\psi = 0, \gamma^a = (-\sigma_y, \varsigma\sigma_z)$

$$\psi(\vec{r},t) = \frac{1}{(2\pi)^{1/2}}\int_{\vec{p}=-\infty}^{+\infty}[a(\vec{p})\sqrt{\tfrac{m}{E}}u(\vec{p})e^{i(\vec{p}\cdot\vec{r}-Et)} + b^+(\vec{p})\sqrt{\tfrac{m}{E}}v(\vec{p})e^{-i(\vec{p}\cdot\vec{r}-Et)}]d\vec{p}$$

$$a(\vec{p}) = \frac{1}{(2\pi)^{1/2}}\int_{\vec{p}=-\infty}^{+\infty}\sqrt{\tfrac{E}{m}}u^+(\vec{p})\psi(\vec{r},t)e^{-i(\vec{p}\cdot\vec{r}-Et)}d\vec{r}, b^+(\vec{p}) = \frac{1}{(2\pi)^{1/2}}\int_{\vec{p}=-\infty}^{+\infty}\sqrt{\tfrac{E}{m}}v^+(\vec{p})\psi(\vec{r},t)e^{i(\vec{p}\cdot\vec{r}-Et)}d\vec{r}$$

5.1.4 Covariant quantization rules for Dirac equation in 2-dimensional space-time

Cor. 5.1.2. $\begin{cases}\{a(\vec{p}), a^+(\vec{p}')\} = \delta(\vec{p}-\vec{p}')\\ \{a(\vec{p}), a(\vec{p}')\} = 0, \{a^+(\vec{p}), a^+(\vec{p}')\} = 0\end{cases} \Rightarrow \{\psi(x), \psi^+(x')\} = i(m-\gamma^a\partial_a)\gamma^0\Delta(x-x')$

5.2 B-W equation in 2-dimensional space-time

5.2.1 Spin basis and plane wave solutions of B-W equation [16] in 2-dimensional space-time

Def. 5.2.1. $U_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdot\cdot}_{2s}}(\vec{p}) := \underbrace{u_{\lambda_\varsigma}(\vec{p})u_{\mu_\varsigma}(\vec{p})\cdot\cdot}_{2s}, V_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdot\cdot}_{2s}}(\vec{p}) := \underbrace{v_{\lambda_\varsigma}(\vec{p})v_{\mu_\varsigma}(\vec{p})\cdot\cdot}_{2s}$

Cor. 5.2.1. $U_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdot\cdot}_{2s}}(\vec{p}) = \underbrace{\sigma_x\otimes\sigma_x\cdot\cdot}_{2s}V_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdot\cdot}_{2s}}(\vec{p}), V_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdot\cdot}_{2s}}(\vec{p}) = \underbrace{\sigma_x\otimes\sigma_x\cdot\cdot}_{2s}U_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdot\cdot}_{2s}}(\vec{p})$

Thm. 5.2.1. $(\gamma^a\partial_a + m)_{\kappa_\varsigma}{}^{\lambda_\varsigma}\psi_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdot\cdot}_{2s}}(\vec{r},t) = 0, \psi_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdot\cdot}_{2s}}(\vec{r},t) = \frac{1}{(2s)!}\psi_{\underbrace{\{\lambda_\varsigma\mu_\varsigma\cdot\cdot\}}_{2s}}(\vec{r},t)$

$$\psi_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdot\cdot}_{2s}}(\vec{r},t) = \frac{1}{(2\pi)^{N/2}}\int_{\vec{p}=-\infty}^{+\infty}E^{s-\frac{1}{2}}\sqrt{\tfrac{m}{E}}^{2s}[a(\vec{p})U_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdot\cdot}_{2s}}(\vec{p})e^{i(\vec{p}\cdot\vec{r}-Et)} + b^+(\vec{p})V_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdot\cdot}_{2s}}(\vec{p})e^{-i(\vec{p}\cdot\vec{r}-Et)}]d^N\vec{p}$$

$$\begin{cases}a(\vec{p}) = \frac{1}{(2\pi)^{N/2}}\int_{\vec{p}=-\infty}^{+\infty}E^{-(s-\frac{1}{2})}\sqrt{\tfrac{m}{E}}^{2s}U^{+\overbrace{\lambda_\varsigma\mu_\varsigma\cdot\cdot}^{2s}}(\vec{p})\psi_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdot\cdot}_{2s}}(\vec{r},t)e^{-i(\vec{p}\cdot\vec{r}-Et)}d^N\vec{r}\\ b^+(\vec{p}) = \frac{1}{(2\pi)^{N/2}}\int_{\vec{p}=-\infty}^{+\infty}E^{-(s-\frac{1}{2})}\sqrt{\tfrac{m}{E}}^{2s}V^{+\overbrace{\lambda_\varsigma\mu_\varsigma\cdot\cdot}^{2s}}(\vec{p})\psi_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdot\cdot}_{2s}}(\vec{r},t)e^{i(\vec{p}\cdot\vec{r}-Et)}d^N\vec{r}\end{cases}$$

5.2.2 Orthogonal properties of spin basis for B-W equation in 2-dimensional space-time

Cor. 5.2.2.
$$\begin{cases}\bar{U}^{\overbrace{\lambda_\varsigma\mu_\varsigma\cdots}^{2s}}(\vec{p})U_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdots}_{2s}}(\vec{p})=1,\bar{V}^{\overbrace{\lambda_\varsigma\mu_\varsigma\cdots}^{2s}}(\vec{p})V_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdots}_{2s}}(\vec{p})=1\\ \bar{U}^{\overbrace{\lambda_\varsigma\mu_\varsigma\cdots}^{2s}}(\vec{p})V_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdots}_{2s}}(\vec{p})=0,\bar{V}^{\overbrace{\lambda_\varsigma\mu_\varsigma\cdots}^{2s}}(\vec{p})U_{\underbrace{\lambda_\varsigma\mu_\varsigma\cdots}_{2s}}(\vec{p})=0\end{cases}$$

Cor. 5.2.3.

Chapter38 Potential Analysis of B-W Equation in N+1 Dimensional Space-time

Self comment: This chapter imitates the four-dimensional case. It conducts potential decomposition and detailed mathematical analysis on B-W equation in N+1 dimensional space time. In the spin 1 case, antisymmetric tensor fields naturally appear. And based on commutation rules for the B-W equation, the commutation rules for antisymmetric tensor field are derived. Compared with the four-dimensional case, the potential analysis of the B-W equation is much more complex in N+1 dimensional space-time. Moreover, the fully symmetric B-W equation no longer describes a single spin state, but rather describes multiple fundamental fields. It is precisely this that leads to complexity. As a result, this promotion has lost some of its aesthetic appeal and made the description ugly, which seems to imply that this promotion has become meaningless. For example, it is sufficient to directly study the basic antisymmetric tensor field in the spin-1 case. Because it is a single fundamental field, it is simpler and more fundamental. This chapter does not provide a detailed discussion on higher spin cases such as spin-$\frac{3}{2}$,2,etc. But it only provides two conjectures for the high spin case. It will be strictly proved it until I have spare time in the future.

Through the research in this chapter, I found that the fully symmetric B-W equation is no longer a good method for describing physical fields in above four-dimensional spacetime. At this point, B-W equation does not describe a basic field similar in four dimensional space time, but rather a mixed field. So at this point, it is more appropriate to directly use antisymmetric tensor field description method.

1 Dirac matrix in N+1 dimensional space-time

1.1 Conventional representation of Dirac matrix in N+1 dimensional space-time

Def. 1.1.1.

$$\begin{cases}\gamma_a(1)=(1)\\ \gamma_1(1)=1\end{cases}$$

Def. 1.1.2.

$$\begin{cases}\gamma_a(2):=(\gamma_a(1)\otimes\sigma_x,1\otimes\sigma_y)=(\sigma_x,\sigma_y),\Gamma^a(2):=[\gamma_a(1),i\varsigma]=(1,i\varsigma)\\ C(2):=\gamma_2(2)=\sigma_y,\bar{C}(2)=C^+(2)=C(2),\gamma_1(2)\gamma_2(2)=i\sigma_z=i\gamma_0(2)\\ C^T(2)=-C(2),\gamma_a(2)C(2)=[\gamma_a(2)C(2)]^T,\gamma_{[a}(2)\gamma_{b]}(2)C(2)=\{\gamma_{[a}(2)\gamma_{b]}(2)C(2)\}^T\end{cases}$$

Def. 1.1.3.

$$\begin{cases}\gamma_a(3)=[\gamma_a(2),1\otimes\sigma_z]=(\sigma_x,\sigma_y,\sigma_z)\\ C(3):=\gamma_2(3)=\sigma_y,\bar{C}(3)=C^+(3)=C(3),\gamma_1(3)\cdots\gamma_3(3)=i=i\gamma_0(3)\\ C^T(3)=-C(3),[\gamma_a(3)C(3)]^T=\gamma_a(3)C(3)\end{cases}$$

Def. 1.1.4.

$$\begin{cases}\gamma_a(4)=[\gamma_a(3)\otimes\sigma_y,I\otimes\sigma_x]=(\sigma\otimes\sigma_y,I\otimes\sigma_x),\Gamma^a(4)=[\gamma_a(3),i\varsigma]\\ C(4):=\gamma_2(4)\gamma_4(4)=-i\sigma_y\otimes\sigma_z,\bar{C}(4)=C^+(4)=-C(4),\gamma_1(4)\cdots\gamma_4(4)=I\otimes\sigma_z=\gamma_0(4)\\ [\gamma_a(4)C(4)]^T=\gamma_a(4)C(4),\{\gamma_{[a}(4)\gamma_{b]}(4)C(4)\}^T=\gamma_{[a}(4)\gamma_{b]}(4)C(4)\\ C^T(4)=-C(4),\{\gamma_{[a}(4)\gamma_b(4)\gamma_{c]}(4)C(4)\}^T=-\gamma_{[a}(4)\gamma_b(4)\gamma_{c]}(4)C(4)\\ \{\gamma_{[a}(4)\gamma_b(4)\gamma_c(4)\gamma_{d]}(4)C(4)\}^T=-\gamma_{[a}(4)\gamma_b(4)\gamma_c(4)\gamma_{d]}(4)C(4)\end{cases}$$

Def. 2.2.5.

$$\begin{cases} \sum_{i,j\in}^{even} \frac{1}{(i!j!)^2} F^{a_1\cdot\cdot a_i|b_1\cdot\cdot b_j}(x)(\gamma_{[a_1}\cdot\cdot\gamma_{a_i]}C)_{\lambda_\varsigma\mu_\varsigma}(C^+\gamma_{[c_1}\cdot\cdot\gamma_{c_k]})|_{odd}^{\eta_\varsigma\mu_\varsigma}(\gamma_{[b_1}\cdot\cdot\gamma_{b_j]}C)_{\eta_\varsigma\xi_\varsigma} = 0 \\ \sum_{i,j\in}^{even} \frac{1}{(i!j!)^2} F^{a_1\cdot\cdot a_i|b_1\cdot\cdot b_j}(x)(\gamma_{[a_1}\cdot\cdot\gamma_{a_i]}C)(C^+\gamma_{[c_1}\cdot\cdot\gamma_{c_k]})|_{odd}(\gamma_{[b_1}\cdot\cdot\gamma_{b_j]}C) = 0 \end{cases}$$

Self comment: The second-order Dirac tensor(spin-1) can be naturally decomposed into a set of antisymmetric tensors, so it concretely demonstrates spin-1 theory must be a gauge theory.

2.3 Symmetric matrix expansion in n=N+1 even dimensional space-time

Pro. 2.3.1. $X(2) = \{\frac{1}{(1!)^2}F^{a_1}\gamma_{a_1} + \frac{1}{(2!)^2}F^{a_1a_2}\gamma_{[a_1}\gamma_{a_2]}\}C$

$$\begin{cases}[\gamma^d(\varsigma)\partial_d+m]A_{\underbrace{a_1\cdot\cdot a_l|b_1\cdot\cdot b_l|c_1\cdot\cdot c_l|\cdot\cdot}_{n}[\zeta_\varsigma]}{}^{\sigma}=0\\ \delta^{a_1b_1}A_{\underbrace{a_1\cdot\cdot a_l|b_1\cdot\cdot b_l|c_1\cdot\cdot c_l|\cdot\cdot}_{n}[\zeta_\varsigma]}{}^{\sigma}=0,\gamma^{a_1}(\varsigma)A_{\underbrace{a_1\cdot\cdot a_l|b_1\cdot\cdot b_l|c_1\cdot\cdot c_l|\cdot\cdot}_{n}[\zeta_\varsigma]}{}^{\sigma}=0\\ A_{\underbrace{a_1\cdot\cdot a_l|b_1\cdot\cdot b_l|c_1\cdot\cdot c_l|\cdot\cdot}_{n}\zeta_\varsigma}{}^{\sigma}\ \textit{is fully symmetric for}\ a_1b_1c_1\cdot\cdot,\ \textit{fully antisymmetric for}\ a_1\cdot\cdot a_l,b_1\cdot\cdot b_l,c_1\cdot\cdot c_l,\cdot\cdot\\ \psi_{\underbrace{\lambda_\varsigma\mu_\varsigma\eta_\varsigma\xi_\varsigma\rho_\varsigma\tau_\varsigma\cdot\cdot\zeta_\varsigma}_{2n+1}}{}^{\sigma}=\overbrace{\mathbb{X}^{a_1\cdot\cdot a_l}_{\lambda_\varsigma\mu_\varsigma}\mathbb{X}^{b_1\cdot\cdot b_l}_{\eta_\varsigma\xi_\varsigma}\mathbb{X}^{c_1\cdot\cdot c_l}_{\rho_\varsigma\tau_\varsigma}\cdot\cdot}^{n}A_{\underbrace{a_1\cdot\cdot a_l|b_1\cdot\cdot b_l|c_1\cdot\cdot c_l|\cdot\cdot}_{n}\zeta_\varsigma}{}^{\sigma}\end{cases}$$

Self comment: The above two conjectures can be strictly proved by mathematical induction. I will talk about them later when I have time. At the same time, it also reveals that physics is far from complete. Because many interesting physical equations can be constructed, which can be infinite in principle. Therefore the development of physics is endless. And it makes people yearn for it endlessly, but also makes people despair to the extreme!

13 Analysis of electromagnetic field equations in N+1 dimensional space-time

13.1 B-W vector field equation in N+1 dimensional space-time

Chapter39 Plane Wave Solutions of Relativistic Bose String

1 Mathematical preparation

1.1 Properties of $\delta(x)$ function

Pro. 1.1.1. $\int\limits_{x=-\infty}^{+\infty} x\delta'(x)dx = -\int\limits_{x=-\infty}^{+\infty} \delta(x)dx$

Pro. 1.1.2. $x\delta'(x) = -\delta(x), x^n\delta^{(n)}(x) = (-1)^n n!\delta(x), x\delta^{(n)}(x) = -n\delta^{(n-1)}(x)$

Pro. 1.1.3. $x\delta(x) = 0, x^2\delta'(x) = 0, x^n\delta^{(n-1)}(x) = 0$

Pro. 1.1.4. $\int\limits_{k=0_-}^{0_+} \delta(k)e^{ikx}dx = 1, \int\limits_{k=0_-}^{0_+} \delta'(k)e^{ikx}dx = -ix, \int\limits_{k=0_-}^{0_+} \delta^{(n)}(k)e^{ikx}dx = (-ix)^n$

1.2 $\delta(x)$ function solution of algebraic equation

Pro. 1.2.1. $xf(x) = 0 \Leftarrow f(x) = c\delta(x)$

Pro. 1.2.2. $\psi(k,E)(E^2-k^2) = 0 \Leftarrow \psi(k,E) = a(k,E)\delta(E^2-k^2)$

Pro. 1.2.3. $\psi(k,E)(E^2-k^2) = 0 \Leftarrow \psi(k,E) = c_{00}\delta(E)\delta(k) + c_{01}\delta(E)\delta'(k) + c_{10}\delta'(E)\delta(k) + c_{11}\delta'(E)\delta'(k)$

Pro. 1.2.4. $\psi(k,E)(E^2-k^2) = 0 \Leftarrow \psi(k,E) = \sum\limits_{n=0}^{\infty}[c_{1n}\delta^{(n)}(E+k)\delta(E-k) + c_{2n}\delta^{(n)}(E-k)\delta(E+k)]$

Pro. 1.2.5. $\psi(0,E)(E^2) = 0 \Leftarrow \psi(0,E) = c\delta(E^2)$

2 Plane wave solutions of bose string with different boundary conditions [42,44]

2.1 Wave function expansion for bose closed string equation(Free closed string)

Thm. 2.1.1. $X^u(\tau,\sigma) = \int\limits_{k=-\infty}^{+\infty}\int\limits_{E=-\infty}^{+\infty} X^u(k,E)e^{i(k\sigma-E\tau)}dkdE, X^u(\tau,\sigma) = X^u(\tau,\sigma+2\pi)$
$\Leftrightarrow X^u(\tau,\sigma) = \int\limits_{E=-\infty}^{+\infty}\sum\limits_{n=-\infty}^{\infty}\phi^u(n,E)e^{i(n\sigma-E\tau)}dE$

Proof: $X^u(\tau,\sigma) = \int\limits_{k=-\infty}^{+\infty}\int\limits_{E=-\infty}^{+\infty} X^u(k,E)e^{i(k\sigma-E\tau)}dkdE, X^u(\tau,\sigma) = X^u(\tau,\sigma+2\pi)$
$\Leftrightarrow \int\limits_{k=-\infty}^{+\infty}\int\limits_{E=-\infty}^{+\infty} X^u(k,E)(e^{i2\pi k}-1)e^{i(k\sigma-E\tau)}dkdE = 0$
$\Leftrightarrow X^u(k,E)(e^{i2\pi k}-1) = 0$
$\Leftrightarrow X^u(k,E) = \phi^u(k,E)\delta(e^{i2\pi k}-1)$
$\Leftrightarrow X^u(k,E) = \sum\limits_{n=-\infty}^{\infty}\phi^u(n,E)\delta(k-n)$
$\Leftrightarrow X^u(\tau,\sigma) = \int\limits_{k=-\infty}^{+\infty}\int\limits_{E=-\infty}^{+\infty}\sum\limits_{n=-\infty}^{\infty}\phi^u(n,E)\delta(k-n)e^{i(k\sigma-E\tau)}dkdE$
$\Leftrightarrow X^u(\tau,\sigma) = \int\limits_{E=-\infty}^{+\infty}\sum\limits_{n=-\infty}^{\infty}\phi^u(n,E)e^{i(n\sigma-E\tau)}dE$ □

Self comment: Fourier expansion and Fourier transformation can be regarded as identities.

Thm. 2.1.2. $\partial_+\partial_-X^u(\tau,\sigma) = 0, X^u(\tau,\sigma) = X^u(\tau,\sigma+2\pi)$
$\Leftrightarrow X^u(\tau,\sigma) = x^u + \frac{p^u}{2\pi T}\tau + \frac{i}{\sqrt{4\pi T}}\sum\limits_{n\neq 0}\frac{1}{n}[\alpha_n^u e^{-in(\tau-\sigma)} + \bar{\alpha}_n^u e^{-in(\tau+\sigma)}]$

Proof: $\partial_+\partial_- X^u(\tau,\sigma)=0, X^u(\tau,\sigma)=X^u(\tau,\sigma+2\pi)$

$\Leftrightarrow \int\limits_{E=-\infty}^{+\infty}\sum\limits_{n=-\infty}^{\infty}\phi^u(n,E)(E^2-n^2)e^{i(n\sigma-E\tau)}dE=0$

$\Leftrightarrow \phi^u(n,E)(E^2-n^2)=0$

$\Leftrightarrow \phi^u(n,E)=\begin{cases}a^u(n,E)\delta(E^2-n^2), \delta(E^2-n^2)=\frac{1}{2|n|}[\delta(E-n)+\delta(E-n)], n\neq 0\\ a^u(0,0)c\delta(E)-a^u(0,0)\delta'(E), n=0\end{cases}$

$\Leftrightarrow X^u(\tau,\sigma)=a^u(0,0)c+ia^u(0,0)\tau+\sum\limits_{n=-\infty}^{\infty}\frac{1}{2|n|}[a^u(n,n)e^{in(\sigma-\tau)}+a^u(n,-n)e^{in(\sigma+\tau)}]$

$\Leftrightarrow X^u(\tau,\sigma)=a^u(0,0)c+i\alpha^u(0,0)\tau+\sum\limits_{n=-\infty}^{\infty}\frac{1}{2|n|}[a^u(n,n)e^{-in(\tau-\sigma)}+a^u(-n,n)e^{-in(\sigma+\tau)}]$

$\Leftrightarrow X^u(\tau,\sigma)=x^u+\frac{p^u}{2\pi T}\tau+\frac{i}{\sqrt{4\pi T}}\sum\limits_{n\neq 0}\frac{1}{n}[\alpha^u_n e^{-in(\tau-\sigma)}+\bar{\alpha}^u_n e^{-in(\tau+\sigma)}]$

$x^u=a^u(0,0)c, p^u=i2\pi Ta^u(0,0), \alpha^u_n=-i\sqrt{\pi T}\frac{n}{|n|}a^u(n,n), \bar{\alpha}^u_n=-i\sqrt{\pi T}\frac{n}{|n|}a^u(-n,n)$ □

Thm. 2.1.3. $\partial_+\partial_- X^u(\tau,\sigma)=0, X^u(\tau,\sigma)=X^u(\tau,\sigma+2\pi), X^u(\tau,\sigma)=X^{*u}(\tau,\sigma)$

$\Leftrightarrow X^u(\tau,\sigma)=x^u+\frac{p^u}{2\pi T}\tau+\frac{i}{\sqrt{4\pi T}}\sum\limits_{n\neq 0}\frac{1}{n}[\alpha^u_n e^{-in(\tau-\sigma)}+\bar{\alpha}^u_n e^{-in(\tau+\sigma)}], \alpha^u_{-n}=\alpha^{*u}_n, \bar{\alpha}^u_{-n}=\bar{\alpha}^{*u}_n$

Self comment: The wave function expansion of the bose closed string equation is the foundation of the entire bose string theory.

2.2 Wave function expansion for bose N-open string equation(Symmetric closed string)

Thm. 2.2.1. $X^u(\tau,\sigma)=x^u+\frac{p^u}{2\pi T}\tau+\frac{i}{\sqrt{4\pi T}}\sum\limits_{n\neq 0}\frac{1}{n}[\alpha^u_n e^{-in(\tau-\sigma)}+\bar{\alpha}^u_n e^{-in(\tau+\sigma)}], X'^u(\tau,\sigma)|_{\sigma=0,\pi}=0$

$\Leftrightarrow X^u(\tau,\sigma)=x^u+\frac{p^u}{2\pi T}\tau+\frac{i}{\sqrt{4\pi T}}\sum\limits_{n\neq 0}\frac{1}{n}[\alpha^u_n e^{-in(\tau-\sigma)}+\bar{\alpha}^u_n e^{-in(\tau+\sigma)}], \alpha^u_n=\bar{\alpha}^u_n$

Proof: $X^u(\tau,\sigma)=x^u+\frac{p^u}{2\pi T}\tau+\frac{i}{\sqrt{4\pi T}}\sum\limits_{n\neq 0}\frac{1}{n}[\alpha^u_n e^{-in(\tau-\sigma)}+\bar{\alpha}^u_n e^{-in(\tau+\sigma)}], X'^u(\tau,\sigma)|_{\sigma=0,\pi}=0$

$\Rightarrow \frac{-1}{\sqrt{4\pi T}}\sum\limits_{n\neq 0}[\alpha^u_n e^{-in(\tau-\sigma)}-\bar{\alpha}^u_n e^{-in(\tau+\sigma)}]|_{\sigma=0,\pi}=0$

$\Leftrightarrow \sum\limits_{n\neq 0}[\alpha^u_n e^{-in\tau}-\bar{\alpha}^u_n e^{-in\tau}]=0, \sum\limits_{n\neq 0}[\alpha^u_n e^{in\pi}e^{-in\tau}-\bar{\alpha}^u_n e^{-in\pi}e^{-in\tau}]=0,$

$\Leftrightarrow \alpha^u_n=\bar{\alpha}^u_n$

$\Rightarrow X^u(\tau,\sigma)=x^u+\frac{p^u}{2\pi T}\tau+\frac{i}{\sqrt{4\pi T}}\sum\limits_{n\neq 0}\frac{1}{n}[\alpha^u_n e^{-in(\tau-\sigma)}+\bar{\alpha}^u_n e^{-in(\tau+\sigma)}], \alpha^u_n=\bar{\alpha}^u_n$ □

Thm. 2.2.2. $X^u(\tau,\sigma)=x^u+\frac{p^u}{2\pi T}\tau+\frac{i}{\sqrt{4\pi T}}\sum\limits_{n\neq 0}\frac{1}{n}[\alpha^u_n e^{-in(\tau-\sigma)}+\bar{\alpha}^u_n e^{-in(\tau+\sigma)}], X^u(\tau,\sigma)=X^u(\tau,-\sigma)$

$\Leftrightarrow X^u(\tau,\sigma)=x^u+\frac{p^u}{2\pi T}\tau+\frac{i}{\sqrt{\pi T}}\sum\limits_{n\neq 0}\frac{1}{n}\alpha^u_n e^{-in\tau}cosn\sigma, \alpha^u_n=\bar{\alpha}^u_n$

Proof: $X^u(\tau,\sigma)=x^u+\frac{p^u}{2\pi T}\tau+\frac{i}{\sqrt{4\pi T}}\sum\limits_{n\neq 0}\frac{1}{n}[\alpha^u_n e^{-in(\tau-\sigma)}+\bar{\alpha}^u_n e^{-in(\tau+\sigma)}], X^u(\tau,\sigma)=X^u(\tau,-\sigma)$

$\Rightarrow x^u+\frac{p^u}{2\pi T}\tau+\frac{i}{\sqrt{4\pi T}}\sum\limits_{n\neq 0}\frac{1}{n}[\alpha^u_n e^{-in(\tau-\sigma)}+\bar{\alpha}^u_n e^{-in(\tau+\sigma)}]=x^u+\frac{p^u}{2\pi T}\tau+\frac{i}{\sqrt{4\pi T}}\sum\limits_{n\neq 0}\frac{1}{n}[\alpha^u_n e^{-in(\tau+\sigma)}+\bar{\alpha}^u_n e^{-in(\tau-\sigma)}]$

$\Leftrightarrow \alpha^u_n=\bar{\alpha}^u_n$

$\Rightarrow X^u(\tau,\sigma)=x^u+\frac{p^u}{2\pi T}\tau+\frac{i}{\sqrt{4\pi T}}\sum\limits_{n\neq 0}\frac{1}{n}[\alpha^u_n e^{-in(\tau-\sigma)}+\bar{\alpha}^u_n e^{-in(\tau+\sigma)}], \alpha^u_n=\bar{\alpha}^u_n$ □

Cor. 2.2.1. $X^u(\tau,\sigma)=x^u+\frac{p^u}{2\pi T}\tau+\frac{i}{\sqrt{4\pi T}}\sum\limits_{n\neq 0}\frac{1}{n}[\alpha^u_n e^{-in(\tau-\sigma)}+\bar{\alpha}^u_n e^{-in(\tau+\sigma)}], X'^u(\tau,\sigma)|_{\sigma=0,\pi}=0$

$\Leftrightarrow X^u(\tau,\sigma)=x^u+\frac{p^u}{2\pi T}\tau+\frac{i}{\sqrt{4\pi T}}\sum\limits_{n\neq 0}\frac{1}{n}[\alpha^u_n e^{-in(\tau-\sigma)}+\bar{\alpha}^u_n e^{-in(\tau+\sigma)}], X^u(\tau,\sigma)=X^u(\tau,-\sigma)$

$\Leftrightarrow X^u(\tau,\sigma)=x^u+\frac{p^u}{2\pi T}\tau+\frac{i}{\sqrt{4\pi T}}\sum\limits_{n\neq 0}\frac{1}{n}[\alpha^u_n e^{-in(\tau-\sigma)}+\bar{\alpha}^u_n e^{-in(\tau+\sigma)}], \alpha^u_n=\bar{\alpha}^u_n$

Self comment: The equivalence of the N-condition and the symmetric condition also means that the two branches merge into one, and the three are equivalent to each other.

Cor. 2.2.2. $\partial_+\partial_- X^u(\tau,\sigma)=0, X^u(\tau,\sigma)=X^u(\tau,\sigma+2\pi), X'^u(\tau,\sigma)|_{\sigma=0,\pi}=0$

$\Leftrightarrow \partial_+\partial_- X^u(\tau,\sigma)=0, X^u(\tau,\sigma)=X^u(\tau,\sigma+2\pi), X^u(\tau,\sigma)=X^u(\tau,-\sigma)$

2.3 Wave function expansion for bose D-open string equation(Antisymmetric closed string)

Thm. 2.3.1. $X^u(\tau,\sigma)=x^u+\frac{p^u}{2\pi T}\tau+\frac{i}{\sqrt{4\pi T}}\sum_{n\neq 0}\frac{1}{n}[\alpha_n^u e^{-in(\tau-\sigma)}+\bar{\alpha}_n^u e^{-in(\tau+\sigma)}],\dot{X}^u(\tau,\sigma)|_{\sigma=0,\pi}=0$

$$H=\frac{1}{2}\int_{\vec{k}=-\infty}^{+\infty}\int_{E=-\infty}^{+\infty}\int_{E'=-\infty}^{+\infty}(\vec{k}^2+m^2-EE')a(\vec{k},E)a(-\vec{k},E')e^{-i(E+E')t}d^3\vec{k}dEdE'$$
$$=\frac{1}{4}\int_{\vec{k}=-\infty}^{+\infty}[a(\vec{k},\omega_k)a(-\vec{k},-\omega_k)+a(-\vec{k},-\omega_k)a(\vec{k},\omega_k)]d^3\vec{k}$$

Chapter40 Preliminary Study on Simple Supersymmetry Theory

1 Electromagnetic field in two dimensions

1.1 Light cone coordinates and derivatives in two dimensions

Def. 1.1.1. $z \equiv \tau + \sigma, \tilde{z} \equiv \tau - \sigma, \tau = \frac{1}{2}(z + \tilde{z}), \sigma = \frac{1}{2}(z - \tilde{z}), z_\varsigma := \tau + \varsigma\sigma, \bar{z}_\varsigma := \tau - \varsigma\sigma$

Def. 1.1.2. $\begin{bmatrix} z \\ \tilde{z} \end{bmatrix} = \begin{bmatrix} 1 & -i \\ -1 & -i \end{bmatrix} \begin{bmatrix} \sigma \\ i\tau \end{bmatrix}, \begin{bmatrix} \sigma \\ i\tau \end{bmatrix} = \frac{1}{2} \begin{bmatrix} 1 & -1 \\ i & i \end{bmatrix} \begin{bmatrix} z \\ \tilde{z} \end{bmatrix}$

Cor. 1.1.1. $\begin{cases} dz = d\tau + d\sigma, d\tilde{z} = d\tau - d\sigma \\ \partial_z = \frac{1}{2}(\partial_\tau + \partial_\sigma), \partial_{\tilde{z}} = \frac{1}{2}(\partial_\tau - \partial_\sigma) \end{cases} \quad \begin{cases} d\tau = \frac{1}{2}(dz + d\tilde{z}), d\sigma = \frac{1}{2}(dz - d\tilde{z}) \\ \partial_\tau = \partial_z + \partial_{\tilde{z}}, \partial_\sigma = \partial_z - \partial_{\tilde{z}} \end{cases}$

Cor. 1.1.2. $dz \wedge d\tilde{z} = 2d\sigma \wedge d\tau$

Def. 1.1.3. $P_z \equiv -i\partial_z, P_{\tilde{z}} \equiv -i\partial_{\tilde{z}}, P_\tau \equiv i\partial_\tau, P_\sigma \equiv -i\partial_\sigma$

Cor. 1.1.3. $P_z = -\frac{1}{2}(P_\tau - P_\sigma), P_{\tilde{z}} = -\frac{1}{2}(P_\tau + P_\sigma), -P_\tau = P_z + P_{\tilde{z}}, P_\sigma = P_z - P_{\tilde{z}}$

Cor. 1.1.4. $e^{i(P_\sigma \sigma - P_\tau \tau)} = e^{i(P_z z + P_{\tilde{z}} \tilde{z})}$

1.2 Electromagnetic field in two dimensions

Def. 1.2.1. *Field potential:* $A_a = (A_\sigma, A_\pi) = (A_\sigma, iA_\tau)$, *Field strength:* $F_{ab} = \partial_a A_b - \partial_b A_a, : E = -iF_{\sigma\pi}$

Def. 1.2.2. *Light cone field potential:*$\partial_z ? = (\partial_\tau + \partial_\sigma), \partial_{\tilde{z}} ? = (\partial_\tau - \partial_\sigma), A_z \equiv A_\tau + A_\sigma, A_{\tilde{z}} \equiv A_\tau - A_\sigma, A'_z = e^{-\varepsilon} A_z, A'_{\tilde{z}} = e^{\varepsilon} A_{\tilde{z}}$

Def. 1.2.3. *Light cone field source:* $J_z \equiv J_\tau + J_\sigma, J_{\tilde{z}} \equiv J_\tau - J_\sigma, J'_z = e^{-\varepsilon} J_z, J'_{\tilde{z}} = e^{\varepsilon} J_{\tilde{z}}$

Cor. 1.2.1. $F_{\sigma\pi} = \partial_\sigma A_\pi - \partial_\pi A_\sigma = i(\partial_\sigma A_\tau + \partial_\tau A_\sigma) = i(\partial_z A_z - \partial_{\tilde{z}} A_{\tilde{z}}) = iE$

Cor. 1.2.2. $E = \partial_z A_z - \partial_{\tilde{z}} A_{\tilde{z}}, F_{ab} = i\varepsilon_{ab} E$

So in two dimensions, the electric field E is a scalar, and there is no magnetic field, and the field strength F_{ab} can be seen as both a tensor and a scalar.

Cor. 1.2.3. *Electromagnetic field equation:* $\partial^a F_{ab} = -J_b \Leftrightarrow \begin{cases} \partial_\tau E = J_\sigma \\ \partial_\sigma E = -J_\tau \end{cases} \Leftrightarrow \begin{cases} \partial_z E = -\frac{1}{2} J_{\tilde{z}} \\ \partial_{\tilde{z}} E = \frac{1}{2} J_z \end{cases}$

Cor. 1.2.4. *Lorentz condition:* $\partial^a A_a = 0 \Leftrightarrow \partial_z A_z + \partial_{\tilde{z}} A_{\tilde{z}} = 0$

Cor. 1.2.5. $\begin{cases} \partial^a F_{ab} = -J_b \\ \partial^a A_a = 0 \end{cases} \Rightarrow \begin{cases} \partial_z^2 A_z = -\frac{1}{4} J_{\tilde{z}}, \partial_z \partial_{\tilde{z}} A_{\tilde{z}} = \frac{1}{4} J_{\tilde{z}} \\ \partial_{\tilde{z}}^2 A_{\tilde{z}} = -\frac{1}{4} J_z, \partial_z \partial_{\tilde{z}} A_z = \frac{1}{4} J_z \end{cases}$

Cor. 1.2.6. $\begin{cases} \partial^a F_{ab} = 0 \\ \partial^a A_a = 0 \end{cases} \Leftrightarrow \begin{cases} \partial_z A_z = \frac{1}{2} E_0 \\ \partial_{\tilde{z}} A_{\tilde{z}} = -\frac{1}{2} E_0 \end{cases} \Leftrightarrow \begin{cases} A_z = f(\tilde{z}) + \frac{1}{2} E_0 z \\ A_{\tilde{z}} = g(z) - \frac{1}{2} E_0 \tilde{z} \end{cases}$

Cor. 1.2.7. $S = \int dz d\tilde{z} \{-\frac{1}{4} F_{ab} F^{ab}\} = \int dz d\tilde{z} \{\frac{1}{2} E^2\} = \int dz d\tilde{z} \{\frac{1}{2}(\partial_z A_z - \partial_{\tilde{z}} A_{\tilde{z}})^2\}$

Cor. 1.2.8. *Guage transformation:* $\delta A_a = \partial_a \theta \Leftrightarrow \begin{cases} \delta A_z = 2\partial_{\tilde{z}} \theta \\ \delta A_{\tilde{z}} = 2\partial_z \theta \end{cases} \Rightarrow \delta S = 0$

1.3 Vector spinor supersymmetry in two dimensions [45]

Thm. 1.3.1. $S=\int dzd\tilde{z}\{(\partial_z A_z)^2+\bar{\varphi}\partial_z\bar{\varphi}\},\begin{cases}\delta A_z=\bar{\epsilon}(\tilde{z})\bar{\varphi}\\ \delta\bar{\varphi}=-\bar{\epsilon}(\tilde{z})\partial_z A_z\end{cases}\Rightarrow \delta S=0$

Cor. 1.3.1. $\begin{cases}[\delta_{\bar{\epsilon}_1(\tilde{z})},\delta_{\bar{\epsilon}_2(\tilde{z})}]A_z=2\bar{\epsilon}_1(\tilde{z})\bar{\epsilon}_2(\tilde{z})\partial_z A_z\\ [\delta_{\bar{\epsilon}_1(\tilde{z})},\delta_{\bar{\epsilon}_2(\tilde{z})}]\bar{\varphi}=2\bar{\epsilon}_1(\tilde{z})\bar{\epsilon}_2(\tilde{z})\partial_z\bar{\varphi}\end{cases}$

Thm. 1.3.2. $S=\int dzd\tilde{z}\{(\partial_{\tilde{z}} A_{\tilde{z}})^2+\varphi\partial_{\tilde{z}}\varphi\},\begin{cases}\delta A_{\tilde{z}}=\epsilon(z)\varphi\\ \delta\varphi=-\epsilon(z)\partial_{\tilde{z}} A_{\tilde{z}}\end{cases}\Rightarrow \delta S=0$

Cor. 1.3.2. $\begin{cases}[\delta_{\epsilon_1(z)},\delta_{\epsilon_2(z)}]A_{\tilde{z}}=2\epsilon_1(z)\epsilon_2(z)\partial_{\tilde{z}} A_{\tilde{z}}\\ [\delta_{\epsilon_1(z)},\delta_{\epsilon_2(z)}]\varphi=2\epsilon_1(z)\epsilon_2(z)\partial_{\tilde{z}}\varphi\end{cases}$

Thm. 1.3.3. $S=\int dzd\tilde{z}\{(\partial_z A_z)^2+(\partial_{\tilde{z}} A_{\tilde{z}})^2+\bar{\varphi}\partial_z\bar{\varphi}+\varphi\partial_{\tilde{z}}\varphi\},\begin{cases}\delta A_z=\bar{\epsilon}(\tilde{z})\bar{\varphi},\delta A_{\tilde{z}}=\epsilon(z)\varphi\\ \delta\varphi=-\epsilon(z)\partial_{\tilde{z}} A_{\tilde{z}},\delta\bar{\varphi}=-\bar{\epsilon}(\tilde{z})\partial_z A_z\end{cases}\Rightarrow \delta S=0$

Thm. 1.3.4. $S=\int dzd\tilde{z}\{(\partial_z A_z-\partial_{\tilde{z}} A_{\tilde{z}})^2+\bar{\varphi}\partial_z\bar{\varphi}+\varphi\partial_{\tilde{z}}\varphi\},\begin{cases}\delta A_z=\bar{\epsilon}(\tilde{z})\bar{\varphi},\delta A_{\tilde{z}}=\epsilon(z)\varphi\\ \delta\varphi=-\epsilon(z)(\partial_{\tilde{z}} A_{\tilde{z}}-\partial_z A_z)\\ \delta\bar{\varphi}=-\bar{\epsilon}(\tilde{z})(\partial_z A_z-\partial_{\tilde{z}} A_{\tilde{z}})\end{cases}\Rightarrow \delta S=0$

1.4 Majoran-Weyl anyon equation and its corresponding action in two dimensions

Cor. 1.4.1. $[s\partial_a+iS_{ab}(s)\partial^b]\psi(s)=0,\psi'(s)=e^{\frac{i}{2}\vartheta^{ab}S_{ab}(s)}\psi(s)=e^{-s\varepsilon}\psi(s),iS_{ab}(s)=\begin{bmatrix}0&is\\-is&0\end{bmatrix}$
$\Leftrightarrow \partial_z\psi(s)=0$

Cor. 1.4.2. $S=\int dzd\tilde{z}\psi(1-s)\partial_z\psi(s)$

Cor. 1.4.3. $[-s\partial_a+iS_{ab}(s)\partial^b]\psi(s)=0,\psi'(s)=e^{-s\varepsilon}\psi(s),iS_{ab}(s)=\begin{bmatrix}0&is\\-is&0\end{bmatrix}\Leftrightarrow \partial_{\tilde{z}}\psi(s)=0$

Cor. 1.4.4. $S=\int dzd\tilde{z}\psi(-1-s)\partial_{\tilde{z}}\psi(s)$

Cor. 1.4.5. $[s\partial_a+iS_{ab}(-s)\partial^b]\psi(-s)=0,\psi'(s)=e^{s\varepsilon}\psi(-s),iS_{ab}(-s)=\begin{bmatrix}0&-is\\is&0\end{bmatrix}\Leftrightarrow \partial_{\tilde{z}}\psi(-s)=0$

Cor. 1.4.6. $S=\int dzd\tilde{z}\psi(-1+s)\partial_{\tilde{z}}\psi(-s)$

Cor. 1.4.7. $[-s\partial_a+iS_{ab}(-s)\partial^b]\psi(-s)=0,\psi'(s)=e^{s\varepsilon}\psi(-s),iS_{ab}(-s)=\begin{bmatrix}0&-is\\is&0\end{bmatrix}\Leftrightarrow \partial_z\psi(-s)=0$

Cor. 1.4.8. $S=\int dzd\tilde{z}\psi(1+s)\partial_z\psi(-s)$

1.5 Majoran-Weyl anyon action in two dimensions?

Cor. 1.5.1. $S=\sum_s\int dzd\tilde{z}[\psi(s+1)\partial_z\psi(-s)+\psi(s-1)\partial_{\tilde{z}}\psi(-s)]$

1.6 Classical construction of Dirac equation in two dimensions

Massless Dirac equation in two dimensions:

Cor. 1.6.1. $S=\int i\bar{\psi}\gamma^a\partial_a\psi d\sigma d\tau,(\gamma^a,\gamma^3)=(\sigma_x,\sigma_y,\sigma_z)$
$S=\int i\psi^T\sigma_y(\sigma_x\partial_\sigma+\sigma_y\partial_{i\tau})\psi d\sigma d\tau=\int\psi^T(\sigma_z\partial_\sigma+\partial_\tau)\psi d\sigma d\tau$
$=\int[\psi_1(\partial_\tau+\partial_\sigma)\psi_1+\psi_2(\partial_\tau-\partial_\sigma)\psi_2]d\sigma d\tau=\int(\psi_1\partial_z\psi_1+\psi_2\partial_{\tilde{z}}\psi_2)dzd\tilde{z}$

Neutrino equation in two dimensions:

Cor. 1.6.2. $S=\int i\bar{\psi}\frac{1+\gamma^3}{2}\gamma^a\partial_a\psi d\sigma d\tau,(\gamma^a,\gamma^3)=(\sigma_x,\sigma_y,\sigma_z)$
$S=\int\psi_1(\partial_\tau+\partial_\sigma)\psi_1 d\sigma d\tau=\int\psi_1\partial_z\psi_1 dzd\tilde{z}$

Anti neutrino equation in two dimensions:

Cor. 1.6.3. $S=\int i\bar{\psi}\frac{1-\gamma^3}{2}\gamma^a\partial_a\psi d\sigma d\tau,(\gamma^a,\gamma^3)=(\sigma_x,\sigma_y,\sigma_z)$
$S=\int\psi_2(\partial_\tau-\partial_\sigma)\psi_2 d\sigma d\tau=\int\psi_2\partial_{\tilde{z}}\psi_2 dzd\tilde{z}$

2 Left supersymmetric string [42, 44, 45]

2.1 Action and motional equation of left supersymmetric string

Thm. 2.1.1. $S=\int(\partial_z X^u\partial_{\tilde z}X_u+\varphi^u\partial_{\tilde z}\varphi_u)dzd\tilde z,\begin{cases}\delta X^u=\epsilon(z)\varphi^u\\ \delta\varphi^u=-\epsilon(z)\partial_z X^u\equiv-\frac{1}{2}\epsilon(z)(1,i)^a\partial_a X^u\end{cases}\Rightarrow\delta S=0$

Proof: $\delta S=\delta\int(\partial_z X^u\partial_{\tilde z}X_u+\varphi^u\partial_{\tilde z}\varphi_u)dzd\tilde z$
$\Leftrightarrow\delta S=\int(\partial_z\delta X^u\partial_{\tilde z}X_u+\partial_z X^u\partial_{\tilde z}\delta X_u+\delta\varphi^u\partial_{\tilde z}\varphi_u+\varphi^u\partial_{\tilde z}\delta\varphi_u)dzd\tilde z$
$\Leftrightarrow\delta S=\int\{\partial_z[\epsilon(z)\varphi^u]\partial_{\tilde z}X_u+\partial_z X^u\partial_{\tilde z}[\epsilon(z)\varphi_u]+[-\epsilon(z)\partial_z X^u]\partial_{\tilde z}\varphi_u+\varphi^u\partial_{\tilde z}[-\epsilon(z)\partial_z X_u]\}dzd\tilde z$
$\Leftrightarrow\delta S=\int\{\partial_z[\epsilon(z)\varphi^u]\partial_{\tilde z}X_u+\partial_z X^u\epsilon(z)\partial_{\tilde z}\varphi_u+[-\epsilon(z)\partial_z X^u]\partial_{\tilde z}\varphi_u+\varphi^u[-\epsilon(z)\partial_{\tilde z}\partial_z X_u]\}dzd\tilde z$
$\Leftrightarrow\delta S=\int\{\partial_z[\epsilon(z)\varphi^u]\partial_{\tilde z}X_u+\epsilon(z)\varphi^u\partial_z\partial_{\tilde z}X_u\}dzd\tilde z$
$\Leftrightarrow\delta S=\int\partial_z[\epsilon(z)\varphi^u\partial_{\tilde z}X_u]dzd\tilde z$
$\Rightarrow\delta S=0$ □

Closure of supersymmetric transformation:

Cor. 2.1.1. $S=\int(\partial_z X^u\partial_{\tilde z}X_u+\varphi^u\partial_{\tilde z}\varphi_u)dzd\tilde z\equiv\int(\frac{1}{2}\partial^a X^u\partial_a X_u+\varphi^u(-1,i)^a\partial_a\varphi_u)d\tau d\sigma$

$$\begin{cases}[\delta_{\epsilon_1(z)},\delta_{\epsilon_2(z)}]X^u=2\epsilon_1(z)\epsilon_2(z)\partial_z X^u\equiv\frac{1}{2}[\epsilon_1(z)(1,i)^a\epsilon_2(z)-\epsilon_2(z)(1,i)^a\epsilon_1(z)]\partial_a X^u\\ [\delta_{\epsilon_1(z)},\delta_{\epsilon_2(z)}]\varphi^u=2\epsilon_1(z)\epsilon_2(z)\partial_z\varphi^u+\partial_z[\epsilon_1(z)\epsilon_2(z)]\varphi^u\\ \equiv\frac{1}{2}[\epsilon_1(z)(1,i)^a\epsilon_2(z)-\epsilon_2(z)(1,i)^a\epsilon_1(z)]\partial_a\varphi^u+\partial_z[\epsilon_1(z)\epsilon_2(z)]\varphi^u\end{cases}$$

Cor. 2.1.2. $S=\int(\partial_z X^u\partial_{\tilde z}X_u+\varphi^u\partial_{\tilde z}\varphi_u)dzd\tilde z\equiv\int(\frac{1}{2}\partial^a X^u\partial_a X_u+\varphi^u(-1,i)^a\partial_a\varphi_u)d\tau d\sigma$

$$\begin{cases}[\delta_{\epsilon_1},\delta_{\epsilon_2}]X^u=2\epsilon_1\epsilon_2\partial_z X^u\equiv\frac{1}{2}[\epsilon_1(1,i)^a\epsilon_2-\epsilon_2(1,i)^a\epsilon_1]\partial_a X^u\\ [\delta_{\epsilon_1},\delta_{\epsilon_2}]\varphi^u=2\epsilon_1\epsilon_2\partial_z\varphi^u\equiv\frac{1}{2}[\epsilon_1(1,i)^a\epsilon_2-\epsilon_2(1,i)^a\epsilon_1]\partial_a\varphi^u\end{cases}$$

Cor. 2.1.3. $[\delta_{\epsilon_1},\delta_{\epsilon_2}]=2\epsilon_1\epsilon_2\partial_z\equiv\frac{1}{2}[\epsilon_1(1,i)^a\epsilon_2-\epsilon_2(1,i)^a\epsilon_1]\partial_a$

Def. 2.1.1. $\delta_\epsilon Y=[\epsilon Q,Y],\partial_a Y=i[P_a,Y]$

Cor. 2.1.4. $[\delta_{\epsilon_1},\delta_{\epsilon_2}]Y=[\epsilon_2 Q,\delta_{\epsilon_1}Y]-[\epsilon_1 Q,\delta_{\epsilon_2}Y]=[\epsilon_2 Q+,[\epsilon_1 Q,Y]]-[\epsilon_1 Q,[\epsilon_2 Q,Y]]=[[\epsilon_2 Q,\epsilon_1 Q],Y]$

Cor. 2.1.5. $[[\epsilon_2 Q,\epsilon_1 Q],Y]=2\epsilon_1\epsilon_2 i[P_z,Y]\Rightarrow Q^2=iP_z\Rightarrow[Q,P_z]=0$

2.2 Local bose transformation of left supersymmetric string action

Thm. 2.2.1. $S=\int\partial_z X^u\partial_{\tilde z}X_u dzd\tilde z,\delta X^u=v(z)\partial_z X^u\Rightarrow\delta S=0$

Proof: $\delta S=\delta\int\partial_z X^u\partial_{\tilde z}X_u dzd\tilde z$
$\Leftrightarrow\delta S=\int(\partial_z\delta X^u\partial_{\tilde z}X_u+\partial_z X^u\partial_{\tilde z}\delta X_u)dzd\tilde z$
$\Leftrightarrow\delta S=\int\{\partial_z[v(z)\partial_z X^u]\partial_{\tilde z}X_u+\partial_z X^u\partial_{\tilde z}[v(z)\partial_z X_u]\}dzd\tilde z$
$\Leftrightarrow\delta S=\int\{\partial_z[v(z)\partial_z X^u]\partial_{\tilde z}X_u+v(z)\partial_z X^u\partial_z\partial_{\tilde z}X_u\}dzd\tilde z$
$\Leftrightarrow\delta S=\int\partial_z[v(z)\partial_z X^u\partial_{\tilde z}X_u]dzd\tilde z$
$\Rightarrow\delta S=0$ □

Thm. 2.2.2. $S=\int\varphi^u\partial_{\tilde z}\varphi_u dzd\tilde z,\delta\varphi^u=v(z)\partial_z\varphi^u\Rightarrow\delta S?=0$

Proof: $\delta S=\delta\int\varphi^u\partial_{\tilde z}\varphi_u dzd\tilde z$
$\Leftrightarrow\delta S=\int\delta\varphi^u\partial_{\tilde z}\varphi_u+\varphi^u\partial_{\tilde z}\delta\varphi_u dzd\tilde z$
$\Leftrightarrow\delta S=\int[v(z)\partial_z\varphi^u]\partial_{\tilde z}\varphi_u+\varphi^u\partial_{\tilde z}[v(z)\partial_z\varphi_u]dzd\tilde z$
$\Leftrightarrow\delta S=\int v(z)\partial_z[\varphi^u\partial_{\tilde z}\varphi_u]dzd\tilde z$ □

2.3 Global bose transformation of left supersymmetric string action

Cor. 2.3.1. $S=\int\partial_z X^u\partial_{\tilde z}X_u dzd\tilde z,\delta X^u=v\partial_z X^u\Rightarrow\delta S=0$

Cor. 2.3.2. $S=\int\varphi^u\partial_{\tilde z}\varphi_u dzd\tilde z,\delta\varphi^u=v\partial_z\varphi^u\Rightarrow\delta S=0$

Proof: $\delta S=\delta\int\varphi^u\partial_{\tilde z}\varphi_u dzd\tilde z$
$\Leftrightarrow\delta S=\int\delta\varphi^u\partial_{\tilde z}\varphi_u+\varphi^u\partial_{\tilde z}\delta\varphi_u dzd\tilde z$
$\Leftrightarrow\delta S=\int[v\partial_z\varphi^u]\partial_{\tilde z}\varphi_u+\varphi^u\partial_{\tilde z}[v\partial_z\varphi_u]dzd\tilde z$
$\Leftrightarrow\delta S=\int\partial_z[v\varphi^u\partial_{\tilde z}\varphi_u]dzd\tilde z$
$\Rightarrow\delta S=0$ □

2.4 Global transformation closure of left supersymmetric string

Def. 2.4.1. $\delta_v Y = i[vP_z, Y] = v\partial_z$

Cor. 2.4.1. $[\delta_{\epsilon_1}, \delta_{\epsilon_2}]Y = 2i\epsilon_1\epsilon_2[P_z, Y]$

Cor. 2.4.2. $[\delta_{v_1}, \delta_{v_2}]Y = [[iv_2P_z, iv_1P_z], Y] = 0$

Cor. 2.4.3. $[\delta_{v_1}, \delta_{\epsilon_2}]Y = [[\epsilon_2 Q, iv_1P_z], Y] = 0$

Cor. 2.4.4. $[Q, Q] = 2iP_z, [Q, P_z] = 0, [P_z, P_z] = 0$

3 Right supersymmetric string [42, 44, 45]

3.1 Action and motional equation of right supersymmetric string

Thm. 3.1.1. $S = \int(\partial_z X^u \partial_{\tilde{z}} X_u + \bar{\varphi}^u \partial_z \bar{\varphi}_u)dzd\tilde{z}, \begin{cases}\delta X^u = \bar{\epsilon}(\tilde{z})\bar{\varphi}^u \\ \delta\bar{\varphi}^u = -\bar{\epsilon}(\tilde{z})\partial_{\tilde{z}}X^u \equiv -\frac{1}{2}\bar{\epsilon}(\tilde{z})(-1,i)^a\partial_a X^u\end{cases} \Rightarrow \delta S = 0$

Closure of supersymmetric transformation:

Cor. 3.1.1. $S = \int(\partial_z X^u \partial_{\tilde{z}} X_u + \bar{\varphi}^u \partial_z \bar{\varphi}_u)dzd\tilde{z} \equiv \int(\frac{1}{2}\partial^a X^u \partial_a X_u + \bar{\varphi}^u(1,i)^a\partial_a\bar{\varphi}_u)d\tau d\sigma$

$|0\rangle = (\frac{1}{\sqrt{\pi}})^l e^{-\frac{1}{2}\sum\limits_{i=1}^{l} x_i^2}, |n_1,\cdot\cdot,n_l\rangle = (\frac{1}{\sqrt{\pi}})^l (\frac{1}{\sqrt{2}})^{\sum\limits_{i=1}^{l} n_i} \frac{1}{\sqrt{n_1!\cdot\cdot n_l!}}(x_1-\partial_{x_1})^{n_1}\cdot\cdot(x_l-\partial_{x_l})^{n_l} e^{-\frac{1}{2}\sum\limits_{i=1}^{l} x_i^2}$

1.4 Coordinate representation of infinite harmonic oscillators

Pro. 1.4.1. $a_i = x_i + \partial_{x_i}, a_i^+ = x_i - \partial_{x_i}$

Pro. 1.4.2. $a_i|0\rangle = 0, i = 1,\cdot\cdot,l \Rightarrow$

$|0\rangle = \lim\limits_{l\to\infty}(\frac{1}{\sqrt{\pi}})^l e^{-\frac{1}{2}\sum\limits_{i=1}^{l} x_i^2}, |n_1,\cdot\cdot,n_\infty\rangle = \lim\limits_{l\to\infty}(\frac{1}{\sqrt{\pi}})^l (\frac{1}{\sqrt{2}})^{\sum\limits_{i=1}^{l} n_i} \frac{1}{\sqrt{n_1!\cdot\cdot n_l!}}(x_1-\partial_{x_1})^{n_1}\cdot\cdot(x_l-\partial_{x_l})^{n_l} e^{-\frac{1}{2}\sum\limits_{i=1}^{l} x_i^2}$

1.5 Visual representation of infinite harmonic oscillator in coordinates

Pro. 1.5.1. $a_i = x_i + \partial_{x_i}, a_i^+ = x_i - \partial_{x_i}$

Pro. 1.5.2. $a_i|0\rangle = 0, i = 1,\cdot\cdot,+\infty \Rightarrow$

$|0\rangle = (\frac{1}{\sqrt{\pi}})^{+\infty} e^{-\frac{1}{2}\sum\limits_{i=1}^{+\infty} x_i^2}, |n_1,\cdot\cdot,n_\infty\rangle = (\frac{1}{\sqrt{\pi}})^{+\infty} (\frac{1}{\sqrt{2}})^{\sum\limits_{i=1}^{+\infty} n_i} \frac{1}{\sqrt{n_1!\cdot\cdot n_\infty!}}(x_1-\partial_{x_1})^{n_1}\cdot\cdot(x_\infty-\partial_{x_\infty})^{n_\infty} e^{-\frac{1}{2}\sum\limits_{i=1}^{+\infty} x_i^2}$

1.6 Coordinate representation of infinite harmonic oscillator in quantum field theory

Ass. 1.6.1. $a(x) = \frac{1}{\sqrt{2}}[\phi(x) + \frac{\delta}{\delta\phi(x)}], a^+(x) = \frac{1}{\sqrt{2}}[\phi(x) - \frac{\delta}{\delta\phi(x)}]$

Pro. 1.6.1. $a_i|0\rangle = 0, i = 1,\cdot\cdot,l \Rightarrow$

$|0\rangle = e^{-\frac{1}{2}\int\phi^2(x)dx}, |n_1,\cdot\cdot,n_\infty\rangle = \lim\limits_{l\to\infty}(\frac{1}{\sqrt{\pi}})^l (\frac{1}{\sqrt{2}})^{\sum\limits_{i=1}^{l} n_i} \frac{1}{\sqrt{n_1!\cdot\cdot n_l!}}(x_1-\partial_{x_1})^{n_1}\cdot\cdot(x_l-\partial_{x_l})^{n_l} e^{-\frac{1}{2}\sum\limits_{i=1}^{l} x_i^2}$

2 Sequence representation of DNA

2.1 Mathematical description of DNA sequences

Def. 2.1.1. $R := R_1^{l_1}R_2^{l_2}R_3^{l_3}R_4^{l_4}\cdot\cdot R_n^{l_n}, R_i \in \{A,G,T,C\}, l_i > 0, R_i \neq R_{i+1}; N := l_1 + l_2 + \cdot\cdot + l_n$

Def. 2.1.2. $\bar{R} := \bar{R}_1^{l_1}\bar{R}_2^{l_2}\bar{R}_3^{l_3}\bar{R}_4^{l_4}\cdot\cdot\bar{R}_n^{l_n}, \bar{R}_i \in \{A,G,T,C\}, l_i > 0, \bar{R}_i \neq \bar{R}_{i+1}; N := l_1 + l_2 + \cdot\cdot + l_n$

Def. 2.1.3. $RNA := R = R_1^{l_1}R_2^{l_2}R_3^{l_3}R_4^{l_4}\cdot\cdot R_n^{l_n}, DNA := \frac{R}{\bar{R}} = \frac{R_1^{l_1}R_2^{l_2}R_3^{l_3}R_4^{l_4}\cdot\cdot R_n^{l_n}}{\bar{R}_1^{l_1}\bar{R}_2^{l_2}\bar{R}_3^{l_3}\bar{R}_4^{l_4}\cdot\cdot\bar{R}_n^{l_n}}$
