

Subject Index

- Ad hoc and wireless networks
 - Local solutions for global problems in wireless networks, 395
- Ad hoc networks
 - Location tracking in mobile ad hoc networks using particle filters, 455
- Admission control
 - Admission control with advance reservations in simple networks, 491
- Algorithm
 - Algorithms for finding distance-edge-colorings of graphs, 304;
 - Computing the maximum clique in the visibility graph of a simple polygon, 524; A simple fast hybrid pattern-matching algorithm, 682
- Algorithm design
 - Cache placement in sensor networks under an update cost constraint, 422
- Algorithms
 - Parameterized matching with mismatches, 135; Algorithms for computing parameters of graph-based extensions of BCH codes, 553; Maximum agreement and compatible supertrees, 564
- Analysis of algorithm
 - Asymptotic distributions for Random Median Quicksort, 592
- Analysis of algorithms
 - Existence of a limiting distribution for the binary GCD algorithm, 176
- Approximate string matching
 - Efficient generation of super condensed neighborhoods, 501
- Approximation algorithm
 - On-line load balancing made simple: Greedy strikes back, 162;
 - Algorithms for finding distance-edge-colorings of graphs, 304;
 - Cache placement in sensor networks under an update cost constraint, 422
- Approximation algorithms
 - Approximation algorithms for the Label-Cover_{MAX} and Red-Blue Set Cover problems, 55; On the probabilistic behaviour of a heuristic algorithm for maximal Hamiltonian tours, 102; Cut problems in graphs with a budget constraint, 262; Approximating the k -traveling repairman problem with repair times, 293; Approximating Huffman codes in parallel, 479; Admission control with advance reservations in simple networks, 491; Exploiting locality: approximating sorting buffers, 729
- Arithmetic operation
 - Quantum protocols for untrusted computations, 65
- Average-case
 - Text indexing with errors, 662
- Axis parallel rectangles
 - Admission control with advance reservations in simple networks, 491
- Bin packing problem
 - Edit distance with move operations, 380
- Binary gcd algorithm
 - Existence of a limiting distribution for the binary GCD algorithm, 176
- Binomial identities
 - HyperQuick algorithm for discrete hypergeometric distribution, 341
- Biological weighted sequences
 - Algorithms for extracting motifs from biological weighted sequences, 229
- Bit-manipulation algorithms
 - Optimal leaf ordering of complete binary trees, 546
- Broadcasting
 - Broadcasting in geometric radio networks, 187
- Budget problems
 - Cut problems in graphs with a budget constraint, 262
- Cache placement problem
 - Cache placement in sensor networks under an update cost constraint, 422
- Character sets
 - Character sets of strings, 330
- Circular arc containment graphs
 - Track assignment, 250
- Circular genomes
 - A linear time algorithm for the inversion median problem in circular bacterial genomes, 637
- Codes
 - Algorithms for computing parameters of graph-based extensions of BCH codes, 553
- Combinatorial algorithms on words
 - Character sets of strings, 330
- Combinatorial computer vision
 - Efficient one-dimensional real scaled matching, 205
- Combinatorial optimization
 - Cut problems in graphs with a budget constraint, 262; Approximating the k -traveling repairman problem with repair times, 293
- Combinatorics
 - An upper bound on the hardness of exact matrix based motif discovery, 706
- Communication
 - Routing of single-source and multiple-source queries in static sensor networks, 1
- Communication complexity
 - On the communication complexity of Bar-Yehuda, Goldreich and Itai's randomized broadcasting algorithm, 323
- Comparative genomics

- Character sets of strings, 330; A linear time algorithm for the inversion median problem in circular bacterial genomes, 637
- Competitive analysis
 - A primal-dual algorithm for online non-uniform facility location, 141
- Complexity
 - Real roots of univariate polynomials and straight line programs, 471; Two-pattern strings II—frequency of occurrence and substring complexity, 739
- Computational biology
 - Maximum agreement and compatible supertrees, 564; Comparing similar ordered trees in linear-time, 696
- Computational complexity
 - On-line load balancing made simple: Greedy strikes back, 162; On the complexity of Jensen’s algorithm for counting fixed polyominoes, 348; An upper bound on the hardness of exact matrix based motif discovery, 706
- Contraction method
 - Asymptotic distributions for Random Median Quicksort, 592
- Convex fan
 - Computing the maximum clique in the visibility graph of a simple polygon, 524
- Convexity
 - Computing the maximum clique in the visibility graph of a simple polygon, 524
- Coupling
 - Path coupling without contraction, 280
- CSMA/CA
 - A station strategy to deter backoff attacks in IEEE 802.11 LANs, 436
- Cut problems
 - Cut problems in graphs with a budget constraint, 262
- Data structures
 - A note on data structures for maintaining bipartitions, 129
- Design and analysis of algorithms
 - Routing of single-source and multiple-source queries in static sensor networks, 1
- Difference constraints
 - A Zero-Space algorithm for Negative Cost Cycle Detection in networks, 408
- Directed graphs
 - Algorithms for computing parameters of graph-based extensions of BCH codes, 553
- Disk architecture
 - Failed disk recovery in double erasure RAID arrays, 115
- Distance-edge-coloring
 - Algorithms for finding distance-edge-colorings of graphs, 304
- Divide-and-conquer algorithm
 - Asymptotic distributions for Random Median Quicksort, 592
- Dominating sets
 - Local solutions for global problems in wireless networks, 395
- Dynamic programming
 - Local similarity between quotiented ordered trees, 23; Computing the maximum clique in the visibility graph of a simple polygon, 524; Regular expression constrained sequence alignment, 647
- Edit distance
 - Efficient generation of super condensed neighborhoods, 501; Text indexing with errors, 662; Comparing similar ordered trees in linear-time, 696
- Edit-distance
 - Edit distance with move operations, 380
- Erasure resilient code
 - Failed disk recovery in double erasure RAID arrays, 115
- Error-correcting code
 - Failed disk recovery in double erasure RAID arrays, 115
- Euler differential equation
 - Asymptotic distributions for Random Median Quicksort, 592
- Exact
 - Exact arithmetic on the Stern–Brocot tree, 356
- Exact/approximation algorithms
 - On shredders and vertex connectivity augmentation, 91
- Fingerprints
 - Character sets of strings, 330
- Finite automaton
 - Regular expression constrained sequence alignment, 647
- Fixed point
 - Existence of a limiting distribution for the binary GCD algorithm, 176
- Fragment statistics
 - Mass spectra alignments and their significance, 714
- Frequency
 - Two-pattern strings II—frequency of occurrence and substring complexity, 739
- Function matching
 - Generalized function matching, 514
- Game theory
 - A station strategy to deter backoff attacks in IEEE 802.11 LANs, 436
- Generalized suffix tree
 - Linear time algorithm for the longest common repeat problem, 243
- Generating function
 - Failed disk recovery in double erasure RAID arrays, 115
- Genome rearrangements
 - A linear time algorithm for the inversion median problem in circular bacterial genomes, 637
- Geometric algorithms
 - On the probabilistic behaviour of a heuristic algorithm for maximal Hamiltonian tours, 102
- Geometric routing
 - Routing of single-source and multiple-source queries in static sensor networks, 1
- Global alignment
 - Mass spectra alignments and their significance, 714
- Graph algorithms
 - Track assignment, 250
- Graph coloring
 - Track assignment, 250; On the minimum load coloring problem, 533
- Graph partitioning
 - On the minimum load coloring problem, 533
- Graph theory
 - Cut problems in graphs with a budget constraint, 262
- Grid graph
 - Maximum integer multiframe and minimum multicut problems in two-sided uniform grid graphs, 36
- Hamiltonian cycle
 - Computing the maximum clique in the visibility graph of a simple polygon, 524
- Hidden vertex set
 - Computing the maximum clique in the visibility graph of a simple polygon, 524

- Homographic
 - Exact arithmetic on the Stern–Brocot tree, 356
- Hub location
 - Steiner diagrams and k -star hubs, 622
- Huffman codes
 - Approximating Huffman codes in parallel, 479
- Hypergeometric distribution
 - HyperQuick algorithm for discrete hypergeometric distribution, 341
- Information retrieval
 - Succinct data structures for flexible text retrieval systems, 12
- Inversions
 - A linear time algorithm for the inversion median problem in circular bacterial genomes, 637
- Inverted files
 - Succinct data structures for flexible text retrieval systems, 12
- Involution
 - Routing permutations and involutions on optical ring networks: complexity results and solution to an open problem, 609
- Isomorphism and refinement relations
 - Maximum agreement and compatible supertrees, 564
- Knowledge radius
 - Broadcasting in geometric radio networks, 187
- Label Cover
 - Approximation algorithms for the Label-Cover_{MAX} and Red-Blue Set Cover problems, 55
- Lattice animals
 - On the complexity of Jensen’s algorithm for counting fixed polyominoes, 348
- Lecturer-optimal
 - Two algorithms for the Student-Project Allocation problem, 73
- Levenshtein distance
 - Text indexing with errors, 662
- Linear-time algorithm
 - Two algorithms for the Student-Project Allocation problem, 73
- Load balancing
 - On-line load balancing made simple: Greedy strikes back, 162
- Local algorithms
 - Local solutions for global problems in wireless networks, 395
- Local edition
 - Local similarity between quotiented ordered trees, 23
- Local ratio
 - Admission control with advance reservations in simple networks, 491
- Local vertex coloring
 - Local solutions for global problems in wireless networks, 395
- Local-ratio
 - Exploiting locality: approximating sorting buffers, 729
- Localization
 - Location tracking in mobile ad hoc networks using particle filters, 455
- Longest common substring (LCS)
 - Edit distance with move operations, 380
- Longest Hamiltonian cycle
 - On the probabilistic behaviour of a heuristic algorithm for maximal Hamiltonian tours, 102
- MANET
 - Location tracking in mobile ad hoc networks using particle filters, 455
- Markov chain
 - Path coupling without contraction, 280
- Markov chain Monte Carlo
 - Path coupling without contraction, 280
- Mass spectrometry
 - Mass spectra alignments and their significance, 714
- Max-Rep problem
 - Approximation algorithms for the Label-Cover_{MAX} and Red-Blue Set Cover problems, 55
- Maximum clique
 - Computing the maximum clique in the visibility graph of a simple polygon, 524
- Maximum integer multiflow
 - Maximum integer multiflow and minimum multicut problems in two-sided uniform grid graphs, 36
- Median problem
 - A linear time algorithm for the inversion median problem in circular bacterial genomes, 637
- Memory constraint
 - Routing of single-source and multiple-source queries in static sensor networks, 1
- Metric facility location
 - A primal-dual algorithm for online non-uniform facility location, 141
- Minimum multicut
 - Maximum integer multiflow and minimum multicut problems in two-sided uniform grid graphs, 36
- Monte Carlo sampling
 - Location tracking in mobile ad hoc networks using particle filters, 455
- Motif discovery
 - An upper bound on the hardness of exact matrix based motif discovery, 706
- Motif extraction
 - Algorithms for extracting motifs from biological weighted sequences, 229
- Multilinear
 - Exact arithmetic on the Stern–Brocot tree, 356
- Multiple patterns
 - Searching for a set of correlated patterns, 149
- Natural language processing
 - Character sets of strings, 330
- Negative cost cycles
 - A Zero-Space algorithm for Negative Cost Cycle Detection in networks, 408
- Network design
 - Steiner diagrams and k -star hubs, 622
- Node-connectivity augmentation
 - On shredders and vertex connectivity augmentation, 91
- NP-complete
 - Edit distance with move operations, 380
- NP-completeness
 - Searching for a set of correlated patterns, 149
- \mathcal{NP} -hard
 - Generalized function matching, 514
- On-line algorithm
 - On-line load balancing made simple: Greedy strikes back, 162
- Online algorithms
 - A primal-dual algorithm for online non-uniform facility location, 141
- Optimal leaf ordering
 - Optimal leaf ordering of complete binary trees, 546

- Ordered labeled trees
 - Local similarity between quotiented ordered trees, 23
- Ordered trees
 - Comparing similar ordered trees in linear-time, 696
- Overlaps
 - Searching for a set of correlated patterns, 149
- Parallel algorithms
 - Approximating Huffman codes in parallel, 479
- Parameterized matching
 - Parameterized matching with mismatches, 135; Generalized function matching, 514
- Parity check matrix
 - Failed disk recovery in double erasure RAID arrays, 115
- Partial k -trees
 - Algorithms for finding distance-edge-colorings of graphs, 304
- Particle filter
 - Location tracking in mobile ad hoc networks using particle filters, 455
- Path coupling
 - Path coupling without contraction, 280
- PATRICIA tree
 - Text indexing with errors, 662
- Pattern matching
 - Parameterized matching with mismatches, 135; Searching for a set of correlated patterns, 149; Efficient one-dimensional real scaled matching, 205; Generalized function matching, 514; Regular expression constrained sequence alignment, 647
- Pattern matching with mismatches
 - Parameterized matching with mismatches, 135
- Pattern-matching
 - A simple fast hybrid pattern-matching algorithm, 682
- Periodicity
 - Two-pattern strings II—frequency of occurrence and substring complexity, 739
- Permutation
 - Routing permutations and involutions on optical ring networks: complexity results and solution to an open problem, 609
- Permutations
 - Optimal leaf ordering of complete binary trees, 546
- Planar graphs
 - Algorithms for finding distance-edge-colorings of graphs, 304
- Polyhedra
 - A Zero-Space algorithm for Negative Cost Cycle Detection in networks, 408
- Polyominoes
 - On the complexity of Jensen’s algorithm for counting fixed polyominoes, 348
- Preference lists
 - Two algorithms for the Student-Project Allocation problem, 73
- Protein identification
 - Mass spectra alignments and their significance, 714
- Quadratic
 - Exact arithmetic on the Stern–Brocot tree, 356
- Quantum arithmetic protocol
 - Quantum protocols for untrusted computations, 65
- Quicksort
 - Asymptotic distributions for Random Median Quicksort, 592
- Quotiented graph
 - Local similarity between quotiented ordered trees, 23
- Radio network
 - Broadcasting in geometric radio networks, 187
- Radio networks
 - On the communication complexity of Bar-Yehuda, Goldreich and Itai’s randomized broadcasting algorithm, 323
- Railway optimization
 - Track assignment, 250
- Rational
 - Exact arithmetic on the Stern–Brocot tree, 356
- Real roots
 - Real roots of univariate polynomials and straight line programs, 471
- Real scales
 - Efficient one-dimensional real scaled matching, 205
- Recursive equation
 - Asymptotic distributions for Random Median Quicksort, 592
- Red-Blue Set Cover
 - Approximation algorithms for the Label-Cover_{MAX} and Red-Blue Set Cover problems, 55
- Regular expression
 - Regular expression constrained sequence alignment, 647
- Relaxing, zero-space
 - A Zero-Space algorithm for Negative Cost Cycle Detection in networks, 408
- Repeat
 - Linear time algorithm for the longest common repeat problem, 243
- Reversal distance
 - A linear time algorithm for the inversion median problem in circular bacterial genomes, 637
- Ring
 - Routing permutations and involutions on optical ring networks: complexity results and solution to an open problem, 609
- RNA local motifs
 - Fast detection of common sequence structure patterns in RNAs, 212
- RNA pattern matching
 - Fast detection of common sequence structure patterns in RNAs, 212
- Routing
 - Local solutions for global problems in wireless networks, 395; Routing permutations and involutions on optical ring networks: complexity results and solution to an open problem, 609
- Scaled matching
 - Efficient one-dimensional real scaled matching, 205
- Scheduling
 - Admission control with advance reservations in simple networks, 491
- Sensor networks
 - Cache placement in sensor networks under an update cost constraint, 422; Location tracking in mobile ad hoc networks using particle filters, 455
- Sequence alignment
 - Regular expression constrained sequence alignment, 647
- Sequence/structure alignments
 - Fast detection of common sequence structure patterns in RNAs, 212
- Shortest paths
 - A Zero-Space algorithm for Negative Cost Cycle Detection in networks, 408
- Shredders
 - On shredders and vertex connectivity augmentation, 91
- Simple polygon
 - Computing the maximum clique in the visibility graph of a simple polygon, 524
- Sorting algorithm

- Asymptotic distributions for Random Median Quicksort, 592
- Sorting buffers
 - Exploiting locality: approximating sorting buffers, 729
- Stable matching problem
 - Two algorithms for the Student-Project Allocation problem, 73
- Steiner trees
 - Steiner diagrams and k -star hubs, 622
- Stern–Brocot
 - Exact arithmetic on the Stern–Brocot tree, 356
- Stochastic fixed point equation
 - Asymptotic distributions for Random Median Quicksort, 592
- Straight line program
 - Real roots of univariate polynomials and straight line programs, 471
- Stressing
 - A Zero-Space algorithm for Negative Cost Cycle Detection in networks, 408
- String
 - A simple fast hybrid pattern-matching algorithm, 682; Two-pattern strings II—frequency of occurrence and substring complexity, 739
- String algorithm
 - Linear time algorithm for the longest common repeat problem, 243; An upper bound on the hardness of exact matrix based motif discovery, 706
- String matching
 - Parameterized matching with mismatches, 135
- Student-optimal
 - Two algorithms for the Student-Project Allocation problem, 73
- Sturmian
 - Two-pattern strings II—frequency of occurrence and substring complexity, 739
- Succinct data structures
 - Succinct data structures for flexible text retrieval systems, 12
- Suffix array
 - Text indexing with errors, 662
- Suffix tree
 - Text indexing with errors, 662
- Suffix trees
 - Succinct data structures for flexible text retrieval systems, 12; Efficient generation of super condensed neighborhoods, 501
- Supertrees
 - Maximum agreement and compatible supertrees, 564
- Text indexing
 - Text indexing with errors, 662
- Tf*idf
 - Succinct data structures for flexible text retrieval systems, 12
- Transcription factor binding site prediction
 - An upper bound on the hardness of exact matrix based motif discovery, 706
- Trees
 - Maximum agreement and compatible supertrees, 564
- Trie
 - Text indexing with errors, 662
- Two-pattern
 - Two-pattern strings II—frequency of occurrence and substring complexity, 739
- Untrusted computation
 - Quantum protocols for untrusted computations, 65
- Visibility graph
 - Computing the maximum clique in the visibility graph of a simple polygon, 524
- Wavelength assignment
 - Routing permutations and involutions on optical ring networks: complexity results and solution to an open problem, 609
- Wireless broadcast
 - On the communication complexity of Bar-Yehuda, Goldreich and Itai’s randomized broadcasting algorithm, 323
- Wireless LAN
 - A station strategy to deter backoff attacks in IEEE 802.11 LANs, 436
- Wireless sensor network
 - Routing of single-source and multiple-source queries in static sensor networks, 1
- Word
 - A simple fast hybrid pattern-matching algorithm, 682
- zero-space
 - A Zero-Space algorithm for Negative Cost Cycle Detection in networks, 408
