On behalf of the Organising Committee, we would like to extend to you our warmest welcome to the 15th IEEE Conference on Industrial Electronics and Applications (ICIEA 2020), 9-13 November 2020, Kristiansand, Norway. Established in 2006, the ICIEA series of annual conferences have served as an excellent forum for scientists, researchers, engineers and industrial practitioners from around the world to network and to share the latest technology advancements and future trends in industrial electronics and its board applications. This year, it marks the 15th Anniversary of the ICIEA conferences.

ICIEA 2020 is organized by the University of Agder, Norway, the IEEE Industrial Electronics Chapter of Singapore, and the IEEE Singapore Section. It is sponsored both technically and financially by the IEEE Industrial Electronics Society.

Kristiansand is considered the capital of Southern Norway and the heart of the region. It is the fifth largest city in Norway, with 92,000 inhabitants. The city is home to global leaders in the oil and gas service industry, which has helped put Kristiansand on the world map and make Vest-Agder Norway's largest export county per capita. Through innovation, this industry has successfully maintained its position in the global market. Kristiansand has been a driving force in promoting positive city and town development and was awarded Staten's pris for Attraktiv By (the Government's Attractive City Award) in 2018.

University of Agder (UiA) has 13,000 students and 1,400 faculty and staff members. It is one of the most modern universities in Norway, and it is still growing and consolidating its position for its high-quality research and study programs both on the national and international level. UiA seeks to be an open and inclusive university that is characterized by a culture of cooperation and aims to be on the cutting edge of innovation, education and research.

ICIEA 2020 received overwhelming responses with more than 510 submissions from 31 countries/regions. All submitted papers were processed by the Technical Program Committee and rigorously peer-reviewed by a select panel of international researchers. Its technical program consists of 342 papers arranged in 50 regular/invited/special sessions. In addition to the parallel technical sessions, there are three Keynotes to be delivered by internationally renowned professors and researchers. The official conference proceedings will be published by IEEE and included in the IEEE Xplore database.

We are extremely honoured to have Professor Miroslav Krstic from University of California San Diego, USA, Professor Haizhou Li from National University of Singapore, Singapore, and Professor Ing. Armando Walter Colombo from University of Applied Sciences Emden/Leer as the keynote speakers. We would like to express our sincere appreciation to our Keynote speakers for their support and contribution to ICIEA 2020.

It is our honour to have the opportunity to thank all organisers of the special sessions and invited sessions and the numerous researchers worldwide who have helped to review and comment the submitted papers. We are thankful for the invaluable advice, support and assistance rendered by the members of our distinguished International Advisory Committee. We would like to express our sincere acknowledgement of the technical sponsorship provided by the IEEE Industrial Electronics Society and IEEE Singapore Section.

We thank all delegates for your long-lasting and strong support, without which the success of ICIEA is not imaginable. We are grateful to our friends, colleagues and family members who have helped the conference directly or indirectly, one way or another.

We wish all of our delegates a fruitful, rewarding, enjoyable and memorable virtual conference experience on-line.

Abstract

Industry 4.0 is a collective term for technologies, concepts and novel business approaches, formalized under the DIN Specification 91345 RAMI4.0, that covers the whole industrial value chain, combining Cyber-Physical Systems, the Internet-of-Things and the Internet-of-Services. After presenting the scientific and technical background behind Industrial-Cyber-Physical- Systems (ICPS), the audience/participants of the Plenary Keynote will get a deep view about: – Digitalization and Networking of the economy. Principles. – Building industrial eco-systems of digitalized and networked things/assets. Industry 4.0. – Formalizing the digitalization and networking principles with the DIN Specification 91345 RAMI4.0 – Understanding why and how to navigate the 3D-model RAMI4.0 in order to fulfilling the major requirements for engineering the digitalization of the industrial value stream and the life cycle of ICPS? – Understanding how to migrate from Industry 3.0 to Industry 4.0 environments. Analysis and discussion of results of exemplary innovation projects. – Overviewing a core curriculum for educating engineers at Master Level in Industry4.0 / Industrial Cyber-Physical Systems. Master on Industrial Cyber-Physical Systems of the DAAD / CUA-DAHZ, Germany-Argentina.

Keynote Speech II	Speech Processing at Cocktail Party
Date/Time	10 Nov 2020 / 10:00 – 11:00 hrs
Speaker	Professor Haizhou Li <i>Department of Electrical and Computer Engineering, National University of Singapore, Singapore Bremen Excellence Chair Professor, University of Bremen, Germany</i>
Chair	Prof. Wenjian Cai

Biography

Haizhou Li is a Professor at the Department of Electrical and Computer Engineering, National University of Singapore, and a Bremen Excellence Chair Professor at the University of Bremen, Germany. His research interests include speech information processing, natural language processing, and neuromorphic computing. Professor Li has served as the Editor-in-Chief of IEEE/ACM Transactions on Audio, Speech and Language Processing (2015-2018), the President of the International Speech Communication Association (ISCA, 2015-2017), and the President of Asia Pacific Signal and Information Processing Association (APSIPA, 2015-2016). He is a Fellow of the IEEE and the ISCA.

Abstract

Humans have a remarkable ability to pay their auditory attention only to a sound source of interest, that we call selective listening, in a multi-talker environment or a Cocktail Party. However, signal processing approach to speech separation and/or speaker extraction from multi-talker speech remains a challenge for machines. In this talk, we study the deep learning solutions to monaural speech separation and speaker extraction that enable selective listening, speech recognition, speaker recognition at Cocktail Party. We discuss the computational auditory models, technical challenges and the recent advances in the field.

Keynote Speech III	Extremum Seeking and its Applications
Date/Time	11 Nov 2020 / 15:00 – 16:00 hrs

He has received the SIAM Reid Prize, ASME Oldenburger Medal, Nyquist Lecture Prize, Paynter Outstanding Investigator Award, Ragazzini Education Award, IFAC Nonlinear Control Systems Award, Chestnut textbook prize, Control Systems Society Distinguished Member Award, the PECASE, NSF Career, and ONR Young Investigator awards, the Schuck ('96 and '19) and Axelby paper prizes, and the first UCSD Research Award given to an engineer. Krstic has also been awarded the Springer Visiting Professorship at UC Berkeley, the Distinguished Visiting Fellowship of the Royal Academy of Engineering, and the Invitation Fellowship of the Japan Society for the Promotion of Science. He serves as Editor-in-Chief of Systems & Control Letters and has been serving as Senior Editor in Automatica and IEEE Transactions on Automatic Control, as editor of two Springer book series, and has served as Vice President for Technical Activities of the IEEE Control Systems Society and as chair of the IEEE CSS Fellow Committee. Krstic has coauthored thirteen books on adaptive, nonlinear, and stochastic control, extremum seeking, control of PDE systems including turbulent flows, and control of delay systems.

Abstract

Extremum seeking (ES) is a method for solving optimization problems without the knowledge of the operating map, using only the measurements of the output of the map. Tackling similar problems as evolutionary/genetic algorithms, ES was invented half a century earlier within the early control community and is well suited for real-time implementation on plants with significant dynamics. Modern ES algorithms, developed since 2000, are capable of guaranteeing stability, and even prescribed rates of convergence in spite of the plant model and the performance index function being unknown. I will overview some fundamental ES results, including deterministic and ES algorithms, ES for non-cooperative games, and extensions of ES from gradient to Newton based updates. Many hundreds of applications of ES have emerged since 2000. I will highlight source seeking for autonomous vehicles in GPS-denied environments, MPPT for solar and wind energy sources, liquid tin droplet targeting by lasers in semiconductor photolithography, and a Mars Rover application.
