

# What's Up, Doc? †

## August 2024 (Pacific Daylight Time)

Dr. Aaron B. Clevenson, Observatory Director, Insuperity Observatory

This document presents those objects are visible this next month for many Astronomical League Observing Programs. If you are working on a more advanced program, I assume you are tracking where your objects are all the time. It concentrates on the common and starter level programs. This is based on 9 PM Pacific Daylight Time at about 47° North Latitude (Seattle, WA).

## Other Clubs (of the Solar System)

**Solar System** – These are the tasks that can be done this month:

Sun – Any clear day is a good time to get those sunspots.

Sunset is 2020 mid-month.

Mercury, Mars, and Jupiter are too close to the Sun or are morning objects.
