Publishing Information

Meeting the Challenge: A History of Adult Education, From the Beginnings to the Twenty-first Century was written by Linda L. West, Outreach and Technical Assistance Network (OTAN), for the Adult Education Office, Secondary, Postsecondary, and Adult Leadership Division, California Department of Education. This publication was edited by Sheila Bruton and Faye Ong, working in cooperation with Linda West. It was designed and prepared for printing by the staff of CDE Press, with the cover and interior design created and prepared by Paul Lee. Typesetting was done by Jeannette Reyes. It was published by the Department of Education, 1430 N Street, Sacramento, CA 95814-5901. It was distributed under the provisions of the Library Distribution Act and *Government Code* Section 11096.

OTAN activities are funded by a contract under Public Law 105-220 and are administered by the Adult Education Office.

A MESSAGE FROM THE STATE SUPERINTENDENT OF PUBLIC INSTRUCTION

Adult education has been an important part of California’s education system since the early 1850s. As John Dewey reminded us, “Education is not preparation for life; education is life itself.” Learning does not end when adulthood begins. An adult education student may be a nineteen-year-old young woman interested in getting a high school equivalency certificate or a ninety-year-old man who wants to take a computer class. *Meeting the Challenge: A History of Adult Education in California, From the Beginnings to the Twenty-first Century* presents information about adult education during the last 150 years in California.

Through its adult education programs, California offers learners a diverse range of knowledge and skills necessary to participate effectively as citizens, workers, parents, and family and community members. Adult students are served by providers as diverse as the students themselves—school districts, community colleges, community or faith-based organizations, volunteer literacy organizations, public or private nonprofit agencies, public libraries, state agencies, correctional facilities, the California Conservation Corps, the California Youth Authority, and the California Department of Developmental Services.

The California Department of Education first commissioned this history in 1957 in honor of the adult education program’s centennial. This most recent update looks at how adult education has evolved as our state has changed.

I hope that this publication will continue to be a useful resource for those who care about adult education in this state.

JACK O’CONNELL

State Superintendent of Public Instruction

Acknowledgments

The California Department of Education thanks the numerous educators who contributed to the 1995 publication of *Meeting the Challenge* and to this revised edition.

Special thanks go to Raymond G. Eberhard, Administrator of the Adult Education Policy and Planning Unit, and the late Lynda T. Smith, Consultant, who initiated the 1995 publication *Meeting the Challenge* and the video that preceded it.

The Department also thanks those adult education professionals who contributed information to the revised edition, read drafts, and made suggestions. Thanks are especially due to Lee W. Clark, Margaret Kirkpatrick, Cuba Z. Miller, Joan Dailey Polster, Dennis Porter, J. Corinne Price, Patricia L. Rickard, and Susan Sundell, the consultant who guided the revised edition through the Department. Mary Tobias Weaver, former Assistant Superintendent, Education Support Systems Division, and State Director of Adult Education, made contributions to the text and supported the project.

Linda West deserves special recognition for her skill in recording the history of adult education in California. The Department appreciates the time and attention she devoted to this project as the archivist and librarian of California adult education.

Note: The titles of persons named here were current at the time this document was developed.

Beginnings Through the Wartime Forties

Adult education in California has a proud history of being responsive to community, state, and national needs.

From a simple beginning in 1856, during the early years of statehood, adult education in California grew with the expanding population of the state and was particularly responsive to the needs of California's immigrant populations. After gaining in professionalism in the 1920s, the adult education system progressed and expanded through the difficulties of the Great Depression and the challenges of two world wars.

Beginnings

The tradition of adult education in California can be traced to the early beginnings of the state. The first recorded adult school was sponsored by the San Francisco Board of Education in 1856. Evening classes were taught in the basement of St. Mary's Cathedral. Then, as now, many adult students were immigrants. In those days most students were from Ireland, Italy, or China. Subjects taught included elementary-level academic subjects and vocational subjects, such as drafting and bookkeeping.

John Swett

By 1870 the evening adult schools in San Francisco had enrollments of more than 1,000 students and were a permanent part of the school system. John Swett, one of the first volunteer teachers and principal of the first evening school from 1868 to 1871, convinced the school district's governing board to make the school tuition-free, beginning another tradition that endured.

The last half of the nineteenth century saw evening adult schools established in several California cities. Early records show that in 1872 classes were being held in Sacramento to teach English to Chinese adults. A few years later courses included a full range of academic subjects, bookkeeping, and even electrical science. By the 1880s Oakland and San Jose reported holding classes for immigrant adults, sometimes along with their children. Beginning with a class taught by William Mellick in 1885, evening schools in Los Angeles grew steadily. In 1898 a night school for girls was opened there. By the turn of the century, evening schools in California were well established as elementary schools and vocational schools and as centers for Americanization, as they were called at the time.

In the nineteenth century mandated support for secondary education in the California Constitution was inconsistent, discouraging the development of high schools of any type. The situation changed in 1902 when an amendment to the state constitution, with accompanying legislation, formed the basis of the development of a high school system in California. In 1910 a new provision to the state constitution required the Legislature to first set aside funds for the support of the public school system. The concept of free public education had come of age, and adult education was a part of it.

The establishment of evening adult high schools was tested in the courts in 1907 (*Board of Education v. Hyatt*, 152 Cal. 515). California Superintendent of Public Instruction Edward Hyatt had refused to grant funds to the Humboldt Evening School, established in 1896-97 by the San Francisco Board of Education. Finally, the State Supreme Court affirmed the right of an evening school to exist as a separate entity with rights to state appropriations. In 1912 a similar case (*San Francisco v. Hyatt*, 163 Cal. 346) upheld the four-hour minimum day for state funding of evening students.

During the early years of the twentieth century, community demand for adult education resulted in dramatic growth, facilitated by legislation passed during that period. Mary S. Gibson, a member of the California Commission on Immigration and Housing, had become interested in educating foreign-born women as a key step in the Americanization of their families. As a result of Mrs. Gibson's efforts, Governor Hiram Johnson signed the Home Teacher Act into law in 1915. School boards could employ teachers to instruct students in their homes on nutrition, sanitation, government,

Ethel Richardson, in 1919, was appointed Assistant Superintendent of Public Instruction in charge of Americanization. ... Through her influence legislation favorable to adult education was passed.

and citizenship. Another key piece of legislation was the Part Time Education Act of 1919, which mandated that schools provide continuation education for minors and basic education classes for adults.

Efforts to mobilize the population during World War I called attention to the thousands of aliens in America who needed instruction in English. To meet this need, Ethel Richardson, later Assistant Superintendent in charge of Americanization, wrote a methodology book titled *A Discussion of Methods for Teaching English to Adult Foreigners*. Demand for adult education continued following World War I because returning veterans had increased regard for education. During the second decade of the century, evening high schools would spread to many small cities in the state, as shown by the listings in early California school directories.

Roaring Twenties

In 1920 E. R. Snyder, California's first Commissioner of Industrial and Vocational Education, reported that 74,000 adult students throughout California were enrolled in 108 day high schools, with special day and evening classes for adults, and in 33 evening high schools. During the 1920s California's Americanization program expanded and became more professional. At the same time adult education programs progressed from serving immigrants to meeting the educational needs of all adults.

That progress is generally credited to Ethel Richardson, who, in 1919, was appointed Assistant Superintendent of Public Instruction in charge of Americanization by Will C. Wood, the Superintendent of Public Instruction. Through her influence legislation favorable to adult education was passed. A law enacted in 1921 required school boards to establish Americanization classes when 25 or more people requested them. That mandate for adult education is still a part of the California *Education Code* (Section 52540).

Classes were conducted in neighborhoods where foreign-born residents lived or worked. Sometimes classes were held in rented store buildings or community centers. Classes were scheduled at times convenient to the students—morning, afternoon, or evening. The California tradition of education on demand—any time, any place, and any pace—had been established.

Courses for training teachers for Americanization classes were developed, a special credential was issued, and special techniques for teaching adults were recognized. The State Department of Education issued bulletins on teaching methods, and textbooks were published. California colleges, such as Mills College, Occidental College, and the University of California, Berkeley, sponsored staff development efforts.

Many Californians, most notably Leon Richardson, Director of the University of California's Extension Division, and Ethel Richardson (no relation), were participants in the growing national adult education movement. They attended meetings in 1925 and 1926, proceedings which resulted in the organization of the American Association for Adult Education.

A "State Plan for Adult Education" was presented by Ethel Richardson in 1926 during a conference at Asilomar. The plan marked a change in the official goal of adult education from policies to remove educational handicaps toward the concept of organizing resources to improve the community. As a part of the provisions in the state plan, the California Association for Adult Education was formed to promote the goals of adult education. This organization continued its activities until 1937, with offices in Los Angeles and Berkeley.

When the State Department of Education was reorganized in 1927, the Division of Adult Education was created, a move signifying the statewide importance of adult education. Mrs. Ethel (Richardson) Allen, the first chief, served until 1930. The bureaus in the division were Immigrant Education, Avocational Education, and Child Study and Parental Education (formerly known as the Bureau of Parent Education, which was first formed in 1926).

By the end of the decade, adult education in California had broadened in scope. The Americanization and vocational programs had evolved into evening high schools. Forums on current topics in government, politics, literature, and science had also become a part of adult education programs. Lectures were often accompanied by discussion groups. In rural areas agricultural evening schools had begun. Annual participation in adult classes had increased to more than a quarter of a million students.

Depression Thirties

When the decade of the thirties and the Great Depression began, setbacks occurred in the adult education program in California. During the early part of the decade, several statewide studies recommended that adult education programs be closed or consolidated or absorbed into the junior college system. Use of public funds for adult education "frills" was criticized. Some evening schools were closed, and programs were curtailed in others. The role of the junior college in providing adult education grew during the decade.

Adult education advocates in the California Association for Adult Education and the California Teachers Association conducted surveys and published rebuttals. Their efforts, along with the strong leadership of George C. Mann, combined to silence the detractors. Mann

George C. Mann

Breadlines,
New York City, 1932

had been appointed in 1934 to succeed L. B. Travers as Chief of the Division of Adult Education.

A survey of the adult education programs in California conducted in 1931 by Lyman Bryson, Executive Director of the California Association for Adult Education, collected responses from about 30 percent of the officially reported student enrollment for the year. The survey indicated that one-third of the adult students were unemployed and three-fourths would be unable to pay tuition. The types of classes taken were (in order of size of enrollment) parent education and academic subjects, commercial courses, Americanization courses, homemaking, trade, socio-civics, and agriculture.

Also in 1931 legislation was passed that provided supplemental funds for high schools maintained for adults and, until 1945, formed the basis for regulations governing separate adult schools. A significant regulation was that the adult school principal could not have a day school assignment and had to work at least twice the number of hours during which the evening school was open, with the result that the evening schools had professional leadership. Contributing further to professionalizing adult education in the thirties was the availability to teachers of conferences, workshops, and university classes on adult education. The first state handbook on adult education was published in 1937.

Beginning in 1933 during the depression and continuing until 1942, the federal government operated a supplemental adult education program in California, serving about 175,000 students per year. Its primary purpose was to provide work for unemployed teachers. Operated by the Works Progress Administration and supervised by the State Department of Education, the program included literacy classes, vocational training, parent education, and nursery schools. Instructors were also sent to the camps of the Civilian Conservation Corps, where they organized evening high schools.

Because the federal classes were held where no adult schools had previously existed, the federal program caused the regular state program to expand. Other contributions of the federal program included pioneering methods of instruction for adults and developing teaching materials. The federal program encouraged the expansion of adult forums, in which four or more meetings were held, led by a credentialed teacher or a famous speaker.

Participation in adult education in California grew steadily during the second half of the decade, and by 1940 annual enrollment exceeded half a million people. At that time the population of the state was about eight million, a figure that included about five million adults. The attendance of one in ten adults in some type of adult education class during the 1939-40 school year shows a remarkable demand for services.

Wartime Forties

With the 1940s came the specter of worldwide war. Adult education in California faced new challenges, which it met with flying colors. In 1940 the federal government requested schools to train defense workers. George Mann, still Chief of the Division of Adult Education, participated in planning the response of the California State Department of Education until he was activated to the navy in 1942. Leadership of the division was temporarily passed to E. Manfred Evans, Supervisor of Adult Education, Los Angeles Public Schools, who served until George Mann returned in 1945.

E. Manfred Evans

From 1940 to 1945 nearly one million California workers were trained in classes related to defense. Preemployment training prepared students to work in factories, farms, and offices. Civilian defense and first-aid classes were taught for the general population. Training in military services programs included such subjects as principles of flying, office skills, and truck driving and maintenance.

During the war years the California Council for Adult Education (CCAEE) was formed. Membership included administrators, teachers, classified support staff, students, and community leaders who advocated and supported adult education. One of CCAEE's early activities was maintaining a speakers' bureau. The organization has been a strong influence in developing a quality adult education program in California.

At the end of the war in 1945, the California State Department of Education was reorganized by the new Superintendent of Public Instruction, Roy E. Simpson. Adult Education became a bureau within the Division of Instruction, and George Mann returned to continue as chief.

Also in 1945 adult schools were authorized to collect fees, and *Education Code* Section 12140 required the establishment of an adult education credential (Miller 1990, 11). In response to the need of adult education teachers for in-service training courses to renew their credentials, the State Department of Education, in coordination with the University of California's Extension Division, organized a series of teacher-training institutes. The sessions were offered on Friday afternoons and Saturday mornings at various locations around the state.

Women riveters,
World War II

During the postwar period California experienced a startling growth in population. Adult education saw a corresponding emphasis on parent education, and interest in homemaking education increased. The Americanization program was modified to meet the needs of persons displaced by the war and newly arrived in the United States. Citizenship education began to emphasize intercultural understanding. Participation in adult education continued to grow, and by the close of the decade, annual enrollment was more than 800,000 students.

Chapter II

The California Adult Education Program in *the Fabulous Fifties*

Americanization
class

The California Adult Education Program in the Fabulous Fifties

Adult education programs were run by secondary school districts under the supervision of the Bureau of Adult Education, State Department of Education. Annual enrollment in classes for adults during the fifties grew steadily to more than one million.

During the 1950s adult education in California grew in proportion to the astounding growth of the population. Adult education programs were found in both secondary school districts and junior college districts, and classes were offered days, evenings, and weekends. Adult education was funded from a combination of local property taxes and state apportionment based on attendance. The types of classes offered had expanded far beyond high school, English, and citizenship courses to include a broad range of human knowledge.

Adult Education Governance in the Fifties

California experienced a population explosion during the fifties, with a corresponding growth in all levels of public education. The accompanying demand for adult education increased at even greater rates (State Advisory Committee 1961, 1).

By the 1955-56 school year, adult education programs existed in 358, or 80 percent, of the secondary school districts in California (Mann et al. 1957, 49), and in 1957-58 the number of districts offering adult education had increased to 380 (State Advisory Committee 1961, 6). Annual

enrollment in classes for adults during the fifties grew steadily to more than one million (Mann et al. 1957, 33; State Advisory Committee 1961, 6).

During the fifties California secondary school districts could be unified school districts, high school districts, or junior college districts. Junior colleges could be a part of a unified school district or high school district or a separate junior college district. Adult education programs were run by secondary school districts under the supervision of the Bureau of Adult Education, State Department of Education. Several types of local organization of adult programs were common.

Separate “evening” high schools in the fifties were not strictly night schools. Classes could be offered at any hour of the day or night and on Saturdays. These schools were specifically for adults, with a separate administration and a counseling program. Courses were taught in certain designated areas, or a vocational curriculum was offered with related English, mathematics, and science courses. Smaller schools had principals, and larger schools typically had several principals and a director responsible to the district superintendent.

Separate “evening” junior colleges were organized in the same way as were the evening high schools. Two-year evening colleges were restricted to giving credit for junior college subjects. Four-year evening colleges could give credit for subjects in both junior colleges and high schools. In the fifties a new type of organization developed—the adult education division within the junior college. The administrator of the program might be called the director of adult education, the dean of an adult education division, or vice-president for adult education.

In the rural areas of California, the demand for adult education often did not justify having a separate adult school in conjunction with either a day high school or a junior college. Although a full range of courses could not be maintained, some classes designated for adults were usually offered, and the same regulations and procedures for attendance accounting applied.

The State Department of Education had several responsibilities to school districts offering adult education. To meet those needs, the Bureau of Adult Education was staffed by a chief and three consultants. For administrators of programs, information on the *Education Code* and regulations for new and exemplary practices in adult education was provided through publications and meetings. In-service training activities for teachers were organized, and handbooks on methods and materials were compiled. A library in the bureau loaned research reports, course outlines, and bibliographies. Leadership was provided to develop standards, evaluate programs, and identify improvements needed.

On November 30, 1956, George Mann retired from his position as Chief of the Bureau of Adult Education after 22 years of distinguished

Farmers class

Americanization students
in their native costumes

service (CCAЕ January 1957, 1). Dr. Mann was replaced by Stanley E. Sworder, who had been with the bureau as a consultant since 1948 (CCAЕ October 1957, 1).

In February, 1954, the State Advisory Committee on Adult Education was reactivated to coordinate more effectively the various segments of public education delivering services to adults. A product of the committee was a document titled “Guiding Principles for Adult Education in California Publicly Supported Institutions,” which functioned as the policy framework for coordination among the segments (State Advisory Committee 1961, 1, 37–39).

According to “Guiding Principles,” the following responsibilities were given to both junior colleges and high school adult education programs: supplemental and cultural classes, short-term vocational and occupational training, citizenship, English language, homemaking, parent education, civic affairs, gerontology, civil defense, and driver education. Additional responsibilities of the evening high schools and adult education divisions were programs leading to diplomas of graduation at elementary school and high school levels. Additional responsibilities of the junior colleges were lower division courses in liberal arts and preprofessional training for those students planning to continue their college education. Junior colleges could provide work leading to high school graduation if requested by the local high school administration.

Adult Education Finance in the Fifties

In the fifties there were two principal sources of financial support for adult education in California—state funds and school district funds. Federal support was confined to certain vocational education classes. Tuition could be charged in classes in which other than elementary subjects, English for the foreign born, and citizenship were taught. Federal support and tuition were negligible.

State support, or apportionment, was determined on the basis of average daily attendance (a.d.a.). Apportionment could be collected only for students in classes with an educational purpose, not for students in classes for recreation or entertainment. Attendance was computed on the basis of three hours being equal to one day of attendance. Therefore, the total number of hours of student attendance in all classes divided by three equaled the total number of days of attendance. The number of units of a.d.a. could be computed by dividing the number of days of attendance by 175. Since one unit of a.d.a. was equal to 525 hours (3 hours x 175 days) of attendance, one could also compute units of a.d.a. by dividing the total number of student hours by 525 (Mann et al. 1957, 53–54). The calcula-

Stanley E. Sworder

tion of units of a.d.a. for purposes of apportionment is the same today. To arrive at the state apportionment total, the units of a.d.a. are multiplied by the dollar per unit apportionment. In the fifties state support of adult education amounted to about 45 percent of the local budget (State Advisory Committee 1961, 25).

In the forties junior colleges and, later, adult schools had been authorized to collect fees for classes. State support for adult classes offered in either segment was about the same from 1947 to 1953. In 1953, in an effort to control growth, legislation was passed curtailing financial support for adult education. Classes for *defined adults*, or students twenty-one years or older enrolled for fewer than ten class hours per week, were supported at a lower rate than were classes for minors or other students not defined as adults. The result was that classes in adult schools received a lower rate of support than did the same classes offered in junior colleges. Junior college growth was again accelerated because programs grow when more funds become available, and by 1955 there were 52 junior colleges throughout California serving 210,000 students (Bureau of Adult Education 1957, 33; Dawson 1990, 7; Dawson 1991, 3-3).

Local support for adult education became the major source of funds for adult education in the fifties, averaging 55 percent (State Advisory Committee 1961, 25). Districts with low assessed property evaluation carried a lower percentage of the cost of their adult education programs than did wealthy districts (Mann et al. 1957, 54).

Adult Education Programs in the Fifties

The focus of adult education in the fifties was the local community, which had “the responsibility for planning, establishing, and maintaining a program” to “further the general welfare of the community” (Mann et al. 1957, 58). The range of classes that could be offered was as great as “the range of human learning” (77).

The following were the designated areas for adult education courses in the fifties. The separate adult school with a general program would offer courses in at least six of these curriculum areas:

Agriculture
 Arts and crafts
 Business education
 Engineering and technological subjects
 Health and physical education
 Homemaking education
 Language and speech arts

Mathematics
 Music
 Science
 Sociocivic education, including citizenship
 Trade and industrial arts

Adult high school graduation

During the fifties a marked increase occurred in the number of individuals earning high school diplomas through adult education. For example, in 1955 high school diplomas were issued to 7,712 students in California through adult education programs (Mann et al. 1957, 55).

Also during the fifties interest in issues concerning older adults was increasing. In response to a conference in 1951 on the problems of aging, the adult education community developed classes for retired persons and for aged persons. Courses included health education, foods, financial management, psychology of aging, crafts, and other creative activities (Ibid., 77).

Programs in parent education grew during the fifties, supported from 1954 and continuing through the early sixties by annual leadership-training workshops for both professional and lay parent educators. The conferences lasted ten days, and the location alternated between Davis and Santa Barbara. In Santa Barbara conferences were held in conjunction with the Santa Barbara Workshops in Adult Education. The workshop programs included information of importance to parents and the principles of group dynamics and community action programming (Babitz, 1960, 1961, 1962).

Lecture series and forum series continued to be popular formats. Lecture topics varied widely and might feature family living, leadership training, agriculture, business, travel, or literature. Forum series dealt with public issues and might include foreign affairs, current events, sociology, or economics. The forums included at least four sessions on a given topic (Mann et al. 1957, 79).

During the fifties the curriculum areas that grew most in adult enrollment were academic subjects, citizenship, English for the foreign born, business education, trade and industrial arts, parent education, fine arts, and music, in that order (Ibid.).

THE NEW FEDERAL ROLE AND ADULT PROGRAM GROWTH IN THE SIXTIES

THE GOAL OF THE FEDERAL ADULT EDUCATION LEGISLATION WAS TO REMEDY THE INEQUITIES OF EDUCATIONAL DISADVANTAGES OF MILLIONS OF ADULTS BY ADDRESSING THE NEEDS OF THOSE FOR WHOM THE CIVIL RIGHTS ACT OF 1964 COULD NOT REMOVE BARRIERS TO THE LABOR MARKET.

The sixties were characterized by a greatly enlarged federal role in adult education. Federal legislation resulted in new sources of funds for adult basic education and vocational education programs and the corresponding growth of those programs. Also during this period the California Master Plan for Higher Education was enacted, and the governance of the junior (community) colleges was moved from the State Department of Education to the new Board of Governors of the California Junior Colleges. The availability of funds and relatively few restrictions on operations made the sixties a golden age of expansion and innovation in adult education.

FEDERAL ADULT BASIC EDUCATION INITIATIVES

During the sixties the federal role in adult education leadership expanded because a heightened national consciousness had emerged concerning the need to improve the economic conditions of disadvantaged persons. This change in federal policy needs to be understood in the context of the Kennedy and Johnson eras as a part of the antipoverty program and the civil rights movement.

Adult illiteracy was identified by President John F. Kennedy, in his speech on education in 1962, as a tragedy passed from generation to generation and linked with dependence (Rose 1991, 11). Although the first bills for categorical federal support of adult basic education (ABE) were introduced in that year, their passage was blocked by concerns about the states' rights to control education and about conflicts with new federal programs providing basic education in vocational or workplace contexts (Rose 1992, 22). For two years the National Association for Public School Adult Education (NAPSAE) and the National Education Association (NEA) led lobbying efforts, until Title II B of the Economic Opportunity Act of 1964 was finally passed (Rose 1991, 12–14; Rose 1992, 21–22).

The goal of the federal adult education legislation was to remedy the inequities of educational disadvantages of millions of adults by addressing the needs of those for whom the Civil Rights Act of 1964 could not remove barriers to the labor market (National Advisory Council 1980, 9–10). The target group of Title II B was rather narrow—"persons 18 years old and older whose inability to read or write the English language constitutes a substantial impairment of their ability to obtain or retain employment." Each state was required to have a plan for administration of the program by the state educational agency. Funds could be used by local educational agencies for direct instruction, for pilot projects in program improvement or development of materials, and for staff development. State educational agencies could use the funds to develop technical and supervisory services (National Advisory Council 1980, 11–12).

In response to the federal legislation, the Department of Education developed the "1964–66 California Plan for Adult Basic Education." Federal funds were allocated to the states on the basis of census information. The 1960 census figures indicated the tremendous need in California to address educational skills. Functional illiterates made up approximately 14 percent of California's population over the age of twenty-five years. More than 1.3 million adults had completed less than eight years of education (Bureau of Adult Education 1967, *California Plan*, 1).

When the Economic Opportunity Act came up for renewal in 1966 with several other antipoverty programs, all the states had begun basic adult education programs, submitted plans, and received funds. Federal support for continuation of those programs was ensured by the revised Adult Education Act, which was passed as Title III of the 1966 Amendments to the Elementary and Secondary Education Act of 1965. Modifications included transferring the program to the supervision of the U.S. Office of Education, broadening the purpose of the Act, and deemphasizing the vocational focus. Special projects and staff development were stressed. Significantly, although the federal government would pay up to 90 percent of the costs for establishing or expanding programs, the states

John F. Kennedy

Lyndon B. Johnson

were required to maintain their previous levels of funding (Rose 1991, 14–16).

California's revised state plan of 1967 was divided into two parts. The first part provided funds to improve local ABE instruction. Training of personnel, student recruitment procedures, instructional materials, and program administration were targeted areas. The second part provided funds for demonstration and pilot projects to evaluate materials, equipment, and methods of teacher training (Bureau of Adult Education 1967, *California Plan*, 1).

The organization chart submitted with the plan showed that the Assistant Chief of the Bureau of Adult Education was designated as the State Director of Adult Basic Education. Roy W. Steeves, the first California State Director of Adult Basic Education, was supported by a staff of consultants, whose positions were established with federal funds (Bureau of Adult Education 1967, *Adult Basic Education*, 2).

The California plan identified criteria that local programs should observe to achieve the plan's objectives. The program was designed to include instruction at the elementary level (grades one through eight) in mathematics, reading, writing, listening, and speaking. The context of instruction was to be citizenship, civic education (federal, state, and local), health, consumer knowledge, home and family living, and human relations (Ibid., Addendum B, 1). Discrimination on the basis of race, color, or national origin was not permitted, and low-income areas were to be targeted with classes.

Adult basic education class

A local educational agency (LEA) could apply to the state for funds for an ABE program. If a program had been approved for funding, the LEA had to operate it within the federal guidelines; allow the state to evaluate it; and submit the required reports on enrollment, attendance, achievement, curriculum, materials, and staff competence (Bureau of Adult Education 1967, *Adult Basic Education*, 10–11). Some LEAs were not willing to submit to state controls on their operations and did not apply for ABE funds (Attebery interview 1992, 9–10).

The infusion of federal money into the ABE program in California coincided with the state's significant growth in population. This combination of increased funding and greater need shifted the emphasis toward adult education programs to benefit people who were educationally and economically disadvantaged. The goal was to give those adults access to the American dream while strengthening the entire society as disadvantaged people became full partners. California has consistently had the largest state-administered federal ABE program.

Comparisons of enrollments show the dramatic increase in growth. During the 1961-62 school year, 8.85 percent (60,391) of the students in California's adult education program were enrolled in ABE and English classes (Bureau of Adult Education 1962, 2). By 1965-66 the percentage had grown, with 10 percent (more than 73,000 students) enrolled, one-third of whom were in the federal program (Bureau of Adult Education 1967, *California Plan*, 1). By 1971 enrollment had increased to 11.22 percent, and the number of students had exploded to 138,294 (Smith 1972, 2).

In some cases special populations were targeted. In 1968 a series of workshops was cosponsored by the California State Department of Education and the U.S. Office of Education (through the Southwestern Cooperative Educational Laboratory). Participants at the workshops studied the educational needs of mobile (migrant) non-English-speaking adults, specifically Mexican-American adults. Recommendations to meet their needs included using bilingual staff, developing and disseminating appropriate learning materials, selecting instructors with cultural sensitivity, valuing the students' cultural attitudes while developing students' skills for success within the dominant culture, and involving the students in planning instruction (Bureau of Adult Education, 1969).

With the influx of federal funds, staffing for the Bureau of Adult Education increased, and support for the improvement of instructional methodology became more active. The growth in programs created a need for more in-service training for teachers. Panels of experts were convened under the direction of the bureau, and teachers' handbooks for the part of ABE now called English as a second language (ESL) were produced (Steeves 1966, 1969). The term *Americanization-literacy*, the historic title for these courses, was relegated to parentheses in the new titles but did not disappear entirely until the middle seventies. California ESL teachers in the sixties were urged to treat their students with dignity and were exposed to modern teaching methods (pattern practice and the audio-lingual approach). These methods were to help teachers effectively and efficiently teach the English language to persons with limited skills in English who were seeking social acceptance, equality, and full employment (Steeves 1966, 1).

GROWTH OF VOCATIONAL EDUCATION

Federal initiatives passed during the sixties also spurred the growth of adult vocational education in California, where enrollments in vocational education doubled in all segments, from just under a half million students to nearly one million. The number of occupations served by vocational education quadrupled (Smith 1979, 45, 49).

FEDERAL
INITIATIVES PASSED
DURING THE SIXTIES
ALSO SPURRED THE
GROWTH OF ADULT
VOCATIONAL
EDUCATION IN
CALIFORNIA.

Three significant federal vocational education training initiatives were enacted into law during the sixties: the Manpower Development and Training Act of 1962, the Vocational Education Act of 1963, and the Work Incentive Program. These initiatives were characterized by a “wonderful simplicity,” leading to the development of programs and the delivery of corresponding services to persons needing training for employment. The initiatives also began a tradition of interagency cooperation between adult education and governmental agencies with responsibilities for manpower programs (Johnson interview 1993, 56–57). California was a prime example. Legislation in California further extended vocational training opportunities by enabling the development of regional occupational centers and regional occupational programs.

THE MANPOWER DEVELOPMENT AND TRAINING ACT OF 1962

The first of the federal acts, the Manpower Development and Training Act (MDTA) of 1962, provided federal funds to train unemployed low-skilled workers. Programs in basic education and prevocational education as well as in vocational training were authorized. In California MDTA was jointly administered by the State Employment Agency and the State Department of Education’s Vocational Education Section. Contracts were issued to public and private educational agencies. Thousands of individuals received training funded through MDTA during its 12-year existence (Attebery interview 1992, 1–5; Bureau of Adult Education 1966, 28; Dawson 1991, 3-4; Smith 1979, 46).

One component of MDTA was manpower English as a second language, or MESL. The Area Manpower Institute for the Development of Staff (AMIDS) organized task forces for program improvement. Products of the task forces were position papers on creative methodology for combining ESL and vocational training to meet the need for manpower (Robles 1971).

MDTA programs shifted the focus of vocational training in California. Programs targeting hard-core disadvantaged adults were developed. In addition, evening and part-time programs were reshaped to provide around-the-clock instruction, a model that would endure in future years (Johnson interview 1993, 55–57; Smith 1979, 46).

THE VOCATIONAL EDUCATION ACT OF 1963

The second significant federal vocational training act passed during the 1960s was the Vocational Education Act (VEA) of 1963, also known later as the Carl Perkins Act. This legislation signaled a federal involvement in vocational education, a role that has continued into the nineties. The 1963 Act focused on vocational training and retraining for high school

youths, adults who needed to complete their formal education or to upgrade their skills or learn new ones, and people with special educational handicaps (Smith 1979, 48). Significant funding was directed toward the maintenance, extension, and improvement of existing vocational education programs and the development of new ones (\$225 million was allocated to California in 1967 alone). VEA funds could be spent on instruction, facilities, teacher training and supervision, evaluation of programs, development of materials, and state administration (Bureau of Adult Education 1966, 32; Dawson 1991, 3-4).

In response to the VEA legislation, California adopted its first state plan for vocational education in 1964. Districts determined their local priorities for training and submitted proposals to the state. Prior restrictions that training must be of “less than college grade” (originating with the Smith-Hughes Act of 1917) had been removed, and the expansion of vocational training was limited only by the ingenuity of the vocational educators (Johnson interview 1993, 54–55; Smith 1979, 48–49; Zimmerman interview 1992, 29–32).

The Vocational Education Act has progressed through numerous revisions and continues to be significant legislation in the nineties. The revisions of 1968 bolstered the emphasis on vocational education for persons with handicaps by allocating a “set-aside” of 25 percent of funds for those persons with physical, socioeconomic, or academic handicaps, thus beginning a new tradition in federal funding. The new Act also required that at least 15 percent of the funds be used for adults who had left school without graduating or who had completed high school. The regulation presented no problem for California, which traditionally allocated 50 percent of federal vocational education funds for adults through the adult education and community college segments (Smith 1979, 51).

Vocational education class

THE WORK INCENTIVE PROGRAM

The third significant federal vocational training legislation passed during the 1960s was the Work Incentive Program. Employability training for adults receiving federal Aid to Families with Dependent Children (AFDC) was established under Public Law 90-248, Social Security Amendments of 1967, called the Work Incentive Program (WIN). In California the public school portion of the program was administered by the Department of Education. Program components were enrollee evaluation and testing, development of an employability plan, referral to public or private educational agencies for training, and assistance to find and retain employment (Smith 1972, 15–16).

REGIONAL OCCUPATIONAL CENTERS AND REGIONAL OCCUPATIONAL PROGRAMS

The development of the Regional Occupational Centers (ROCs) and Regional Occupational Programs (ROPs) in California was an outgrowth of federal encouragement to develop vocational training to solve the problems of unemployment. State legislation passed in 1965 enabled school districts or counties to form ROCs and receive apportionment for students attending part-time vocational classes. Start-up of the new centers was encouraged by a permissive (optional) tax of 15 cents per \$100 of assessed valuation for operation and construction of the centers (Smith 1979, 55). Because ROCs were not practical in rural areas, new legislation passed in 1968 permitted the development of ROPs, which could offer vocational training at multiple sites, not just at one center. Governance was provided by school district governing boards (Dawson 1991, 3-4).

Twenty-four ROPs/ROCs were operational by 1970, and 28,000 youths and adults were being served. The typical multidistrict ROP enrolled students in their junior or senior year of high school or adults. The programs offered either advanced training related to basic courses taught in the home school or specialized programs that a single high school could not feasibly provide. The classes did not duplicate, supplant, or replace those in the home school. The positive results of opportunities for students in ROPs/ROCs were expanded options for occupational training and increased flexibility and responsiveness to the changing job market (Smith 1979, 55).

SEPARATION OF COMMUNITY COLLEGES

During the sixties the governance of community or junior colleges underwent changes that affected their adult education programs. Historically, the colleges had been a part of the public unified or high school districts. In the fifties adult education in the junior colleges had grown, encouraged by the higher rate of state reimbursement for adult classes offered in the college setting. During most of the sixties, the Bureau of Adult Education continued to supervise classes for *defined adults* offered in the community colleges. Courses were approved by the bureau, and enrollment and attendance were reported through the Department of Education. The same administrative regulations applied. From 1957 through 1967 a Bureau of Junior College Education was a part of the Department of Education's Division of Higher Education, and the Department of Vocational Education provided significant support (Smith 1979, 56).

In 1960 the Donohoe Act implemented the California Master Plan for Higher Education, which recognized the junior colleges as the third segment (with state universities and state colleges) of postsecondary education in the state. Included in the plan was the mandate that all new junior col-

AND STATE
COLLEGES) OF
POSTSECONDARY
EDUCATION IN
THE STATE.

leges were to be independent of unified school districts or high school districts (Dawson 1991, 3-3).

In 1967 the Stiern Act created a state coordinating agency called the Board of Governors of the California Junior Colleges. The State Department of Education was no longer responsible for governance of the junior colleges, which, by 1970, were called community colleges (Smith 1967, 56). In 1967 there were 66 college districts and an enrollment of 610,000 students (Dawson 1991, 3-3). The change in governance is dramatized by comparing the contents of the 1966 *Handbook on Adult Education in California* with the 1972 revision, in which no mention of community colleges can be found.

After the separation of the junior colleges, a dialogue intensified in many communities over the appropriate segment to manage adult education classes. In some communities, including San Diego, San Francisco, and Santa Barbara, the school districts gave up their rights to the program, and the colleges became the sole providers of adult education. The rationale was that the students were adults, not children, and the most appropriate setting for classes was the college rather than the high school. In contrast, the rationale for retaining adult education with the high school and unified school districts was that instruction was below college level and that programs should remain as close to the community as possible. Part of the competition for adult education was financial because adult education programs could be run cost effectively and were an asset to a district's fiscal operation. Junior colleges responsible for adult education typically had two divisions—the college division and the adult and continuing education division (Bradshaw interview 1992, 12–18; Dyer interview 1992, 1–7; Johnson interview 1993, 68–72).

A problem resulting from the separation in governance between adult education programs offered in high schools and those offered in community colleges was how to meet the requirement that only one state board could be responsible for the federally supported vocational education program. The solution was to create a Joint Committee on Vocational Education composed of three designees of the State Board of Education and three designees of the Board of Governors of California Community Colleges. The State Board of Education retained statutory responsibilities for policy and accountability, and each board had responsibility for operations within its jurisdiction. This model became a prototype for other states facing jurisdictional problems in complying with federal funding guidelines (Smith 1979, 56). The problem of how to administer federal adult education funds was solved differently, with the Department of Education maintaining jurisdiction over those funds allocated to noncredit programs in community colleges.

AFTER THE SEPARATION OF THE JUNIOR COLLEGES, A DIALOGUE INTENSIFIED IN MANY COMMUNITIES OVER THE APPROPRIATE SEGMENT TO MANAGE ADULT EDUCATION CLASSES.

ADULT EDUCATION FUNDS IN THE SIXTIES

As discussed previously, federal funds for certain categories of adult education programs—especially basic education for the educationally disadvantaged, English as a second language for immigrants, and vocational training for the unemployed—increased dramatically during the sixties. However, the major sources of funds for adult education continued to be local and county taxes and state apportionments.

In 1968 school districts were authorized to impose a special tax not to exceed ten cents to meet the current expenses of adult education classes. The tax could be supplemented by a variety of fees for tuition, incidental expenses, sale of materials, and nonresident tuition (Smith 1972, 44). The tax was optional, and some districts used only part of it or did not impose it at all (Clark 1993).

State apportionment continued to be calculated in much the same way, but new definitions and regulations were added by statute to the categories of adult students. *Defined adults* were persons twenty-one years of age and over and enrolled in fewer than ten periods of not less than 40 minutes each per week (*Education Code Section 5756*). *Nondefined adults* were minors and other adults not defined, that is, persons enrolled in ten class periods or more. The apportionment for nondefined adults was significantly higher than that for defined adults (Smith 1972, 46–47). This differential in reimbursement led to shifts in the program to maximize funds (Division of Continuing Education 1981, 2).

CHARACTERISTICS OF ADULT EDUCATION IN THE SIXTIES

The rapid progress, profound change, and excitement in adult education that occurred in California during the sixties may never be matched in future decades (Smith 1979, 45). During these “golden years” funds were available, and administrators were comparatively free of restrictions when evaluating the needs of their communities and establishing new and innovative programs to meet those needs (Zimmerman interview 1992, 2–3).

The growth of adult education was a part of the idealism of the sixties. Meeting the needs of adults for both basic education and vocational training was considered a positive approach to alleviating unemployment and poverty (Price 1985, 4). The 1966 *Handbook on Adult Education in California* states that “the major goal of programs in adult education is to provide opportunities for participants to become proficient in meeting their responsibilities to themselves, their families, and their communities” (Bureau of Adult Education 1966, 4).

Discussion group

During the sixties the categories of programs offered in adult education included elementary subjects (changed to adult basic education [ABE], including English as a second language late in the decade); English and speech arts; foreign languages; mathematics; sciences; social sciences; Americanization (earlier including English for the foreign born and later meaning citizenship); business education; fine arts and music; homemaking; parent education; industrial education and agriculture; civic education; crafts and decorative arts; health and physical education; and forum and lecture series (Bureau of Adult Education 1962, 2; 1966, 1–2; Smith 1972, 2).

Comparisons of enrollments in 1961, 1965, and 1970 in only the adult high school and adult school programs (omitting community college numbers) show dramatic growth in most areas. As discussed previously, enrollments in ABE and English more than doubled. In vocational subjects enrollments in business education doubled, and those in industrial education and agriculture increased more than one and one-half times. At the same time interest in crafts, both avocational and vocational, tripled, and attendance at the forums and lecture series remained strong.

Enrollments in parent education, a strong adult education program in California since the twenties, also increased one and one-half times during this decade. As with ABE and vocational education, the direction of parent education was influenced by federal legislation, in this case being focused on the education and guidance of preschool children and their parents. The Head Start Child Development Center Program (1964) provided education and health services for disadvantaged preschool-age children and ancillary services for their families. The Compensatory Education Act (1965) provided special programs for educationally disadvantaged children. Children of migrant families received federal assistance under the Economic Opportunity Act of 1964 (Smith 1967, 8–10).

Although programming for older adults was not recognized as a special category during the sixties, 20 percent of adult schools had special programs to meet the needs of older people; and it was estimated that 10 percent of all adult students were more than sixty years old. Older adults enrolled in every type of class. Titles of special classes included Planning Your Estate, Nutrition, Mental Health, Understanding More About Cancer, Your Health, Our American Heritage, and International Affairs (Babitz 1963, 21). Impetus for the special programming came from the Governor's Council on Aging, held in Sacramento in 1960 (22).

During the sixties the need for special adult education guidance services was recognized. The Bureau of Adult Education sought the advice of experienced counselors working in California adult schools and

COMPETENCIES.

compiled a handbook on the development and administration of guidance services. Basic concepts of guidance and the physiological and psychological changes in adults were included. Guidelines for an effective program were given, including assessment, counseling, certification, group guidance, and the role of the teacher (DeGabriele 1961).

What characterized adult classes? In rural areas programs infused with federal money offered building construction, welding, farming, and nursing programs to a multicultural mixture of adult students (Zimmerman interview 1992, 35–37). In urban areas programs experimented with new formats called “open-entry, open-exit,” in which students could begin class at any time, attend at their own rate, and complete when they had mastered the necessary competencies (Johnson interview 1993, 109–11). Vocational training was offered in “carousel” fashion, with related programs, such as typing, filing, and ten-key operation in business education, offered at different stations. Students “could get on the carousel [and] ride as many horses as they wanted to for as long as they wanted to” until they had learned a set of skills for employment. Homemaking classes, such as clothing construction, and other classes to meet the needs of new families were popular (Zimmerman interview 1992, 34–36).

In Oakland the first totally decentralized adult education program in California, the Neighborhood Centers Adult School, opened and was still operating in the nineties.

Teachers recognized the need in the academic area to develop curriculum appropriate for adults rather than use only textbooks intended for young persons. Efforts toward curriculum development were supported by the State Department of Education and commercial publishers (Attebery interview 1992, 12–15).

The sixties represented a transitional time for the types of classes offered in adult education. For instance, it was the end of the era when adult classes were needed in tuberculosis and polio wards of county hospitals. Also in the last stages were civil defense classes, which, during these Cold War years, still received apportionment based on a.d.a. New priorities appeared for adult education programs. Classes for incarcerated adults could be maintained by secondary school districts. The educational needs of adults with handicaps were served by adult school and workshop programs (Bureau of Adult Education 1966, 19–21).

Adult school teaching during the sixties continued to be mostly part-time work. A survey in 1960 by the Research Committee of the California Association of Adult Education Administrators revealed that the typical teacher taught one or more evenings per week and was paid by the hour. Forty-four percent who taught were full-time day teachers from another instructional level. Others came from a variety of backgrounds in business

and the community. All had appropriate state credentials for the classes they taught (Damon 1960, 3). Hourly rates ranged from \$4 to \$7, with larger urban programs typically paying more (Ibid., 4–6).

A survey of adult school administrators by the same group in 1967 showed contrasting data. Whether in a small adult school, a large adult school, or a community college, the adult education administrator usually held a full-time position. The salary was comparable to that of principals in the district. Administrators rarely had experience in adult education before being appointed. The administrators typically worked long hours and performed a wide range of duties. The administrator's responsibilities included supervising the faculty and office staff, providing in-service training plans, developing new courses and curricula, budgeting, and becoming involved in community organizations (Azevedo et al. 1967, 1–15).

During the sixties county offices of education often provided consultant and coordination services to the adult education programs in their areas. The County Coordinator of Adult Education might be responsible for planning conferences, providing a professional library and preview center for textbooks, evaluating instructional materials, providing coordination between junior college and adult school programs, providing information on state and federal laws and regulations, and, in coordination with the State Department of Education, disseminating information and materials and collecting data, including enrollment statistics (Babitz 1965, 13–14).

Changes in Governance and Finance in the Seventies

The 1970s brought almost yearly changes in funding formulas and ended with major restructuring of the public education system.

B. Dawson, Funding for Today and Tomorrow

The seventies were characterized by frequent changes in funding formulas, the most devastating of which were those resulting from the passage of Proposition 13. During the same period public school districts and community colleges struggled to delineate their roles in the provision of adult education. The decade also brought enhanced professionalism in adult education through the leadership of the Bureau of Adult Education and the teacher and administrator organizations.

The Roller Coaster of Funding in the Seventies

Changes in funding during the seventies occurred almost yearly. The uncertainty that dominated the decade seemed like a roller-coaster ride, ending with a tremendous slide after California voters passed Proposition 13, an event that completely restructured the provision of educational funds in the state.

The adult education community was proactive throughout the decade through the legislative efforts of the adult education professional organizations. In the early seventies the adult education system was able to hold on to the hard-won ten-cent permissive tax (CCAET fall 1970, 1); however, this source of funds was lost in 1973 with the passage of Senate Bill 90, through which the Legislature sought to give relief to property-tax payers.

The concept of base revenue limit (the dollar amount attached to each unit of a.d.a.) was established. Cost-of-living adjustments (COLAs), or yearly adjustments for inflation, were also introduced (Dawson 1991, 3-4; Division of Continuing Education 1981, 2). COLAs in adult education were implemented erratically, and the percentages were inconsistent with those given to the kindergarten-through-grade-twelve program. The revenue limit for *defined adult* classes was significantly lower than that for *other than defined adult* classes.

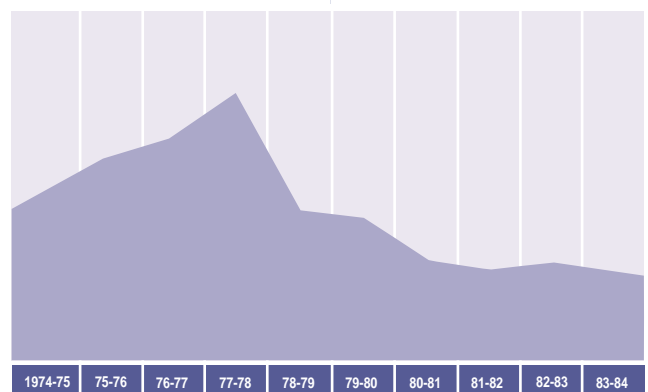

In response to Senate Bill 90, school administrators implemented income averaging—the growth of low-cost programs offset expenses for high-cost programs. Efforts continued to shift programs from *defined adult* to *other than defined adult*, a category for which reimbursement would be higher. A trend was also developing of shifting adult education resources to the general fund for kindergarten through grade twelve (Dawson 1991, 3-4; Division of Continuing Education 1981, 2).

Adult education continued to grow, depleting the state school fund and causing legislative concern. In 1975 Governor Jerry Brown placed a 5 percent growth cap on adult education while the problem was studied (Division of Continuing Education 1981, 2).

The next year Senate Bill 1641 and Assembly Bill 65 were passed. The *other than defined adult* category was eliminated, and an *adult* was defined as a person nineteen years or older not concurrently enrolled in high school. Adult education revenue limits were set up through the use of data for average state expenditures. The revenue limits of programs were gradually equalized because programs with higher than average revenue limits were not given COLAs as were programs with lower revenue limits. Provisions were made for implementing programs for concurrently enrolled high school students. The effect was to control the growth of adult education, especially in programs with start-up costs higher than those for the average state program (Dawson 1991, 3-4; Division of Continuing Education 1981, 3).

In 1978 California voters passed Proposition 13, a drastic property-tax reform initiative that immediately reduced property taxes by more than 50 percent. Those taxes no longer provided half of the funds for education or were even a significant source of revenue. The Legislature immediately responded with Assembly Bill 2190 and Senate Bill 154 (Dawson 1991, 3-5; Division of Continuing Education 1981, 3).

The effects on adult education of Proposition 13 and the resulting legislation were disastrous. A typical example was the Metropolitan Adult Education Program, a joint powers association combining the resources of

Student enrollments from 1974 to 1984

five adult schools in the San Jose area. That program lost 54 percent of its 8,000 a.d.a. in the first year after the passage of Proposition 13 (Clark 1993). The adult education revenue limits were eliminated, and money for adult education came to the districts as a part of block grants. Adult education revenues were reduced by \$80 million, and districts were allowed to spend adult education money for general fund purposes. The scope of the program was reduced to seven instructional areas: elementary basic skills, secondary basic skills, adult substantially handicapped, short-term vocational education, citizenship, apprenticeship programs, and parent education, a course that was added in trailer legislation. The first year after the passage of Proposition 13, funds for adult education were reduced by \$363 million, 500,000 fewer adult students were served, and 10,000 teachers were laid off (Division of Continuing Education 1981, 3; Adult Education Field Services Section 1979).

In 1979 “cleanup” legislation (AB 8) reestablished adult school revenue limits according to expenditure rates for 1977-78. Funds for adult education continued to be “capped” by the formulas for COLAs and an annual growth limit of 2.5 percent. Two program areas were reestablished: ESL and programs for older adults. Unexpended adult education revenue could still be folded into a district’s general fund, but previous levels of service in mandated programs had to be maintained to avoid penalties (Dawson 1991, 3-5, 3-6; Division of Continuing Education 1981, 3).

Marilyn Matthews

As the disastrous effects of Proposition 13 and the legislation that followed became apparent, adult educators and advocates marshalled their forces to lobby the Legislature for adult education. One of the early efforts was an advocacy group called the Pro-Active Committee on Public School Adult Education, which became active under the sponsorship of the California Council for Adult Education (CCAЕ). The committee prepared a pamphlet titled *The Case for California Public Schools* (1979), which provided supportive data to prove that public school adult education was cost effective, needed, wanted, and endangered. CCAЕ also began to publish *Fingertip Facts on Public School Adult Education in California*, thereafter revised periodically.

Lee Clark

During the early eighties the Pro-Active Committee, under the leadership of CCAЕ President Marilyn Matthews, among others, and the Association of California School Administrators (ACSA) Adult Committee, then chaired by Lee Clark, won legislative compromises that started public school adult education in California on the road to recovery. However, adult education enrollments have never again reached the levels for 1978. It took the adult education reform legislation of 1992 to address the legacies of the late seventies; that is, inequities in the funding formulas and the freeze on the start-up of new adult education programs.

Del ineation of Functions of Adult Programs in School Districts and Community Col leges

One of the major issues during the seventies was to determine the delineation of functions of adult education programs in school districts and community colleges. In the 1970-71 school year, adult education programs were offered by 183 school districts and 94 community college districts. The California State Department of Education reported 929,976 unduplicated enrollments, and the Chancellor's Office of the Community Colleges reported 532,860 (ACSA 1972, 1). During the early seventies, at the direction of the Legislature, the two segments engaged in a dialogue to accomplish a delineation of functions to avoid duplication of efforts.

Senate Bill 765 (Alquist and Rodda) mandated a delineation of functions for both agencies and set April 1, 1972, as the date by which the State Board of Education and the Chancellor's Office were to resolve the issue (CCAЕ September-October 1971, 1). The Adult Education Advisory Committee to the California State Board of Education studied the matter and issued a recommendation: "High school and unified school districts should be responsible for providing educational and training opportunities for all adults and out-of-school youth functioning at below thirteenth grade level, [and] Community College Districts should be responsible for [those] functioning at the thirteenth and above grade levels" (Adult Education Advisory Committee 1971, "Summary," 3).

Curriculum areas that the Adult Education Advisory Committee wanted reserved for school district adult schools were basic education, citizenship, literacy, English as a second language, high school completion, entry-level vocational education, parent and family life education, homemaking, consumer education, personal development, and community and cultural development. Community colleges would be confined to offering courses leading to an Associate in Arts degree, courses required for students to transfer to the California state colleges or the University of California, and vocational courses needed for skills at the technician level (Adult Education Advisory Committee 1971, "Summary," 3).

Eugene M. DeGabriele, Chief, Bureau of Adult Education, presented the Department's point of view in a statement during a conference on October 5, 1971. It differed from the Advisory Committee's recommendation in recognizing the existing locations in which school districts either had given up or might give up their rights to run adult education programs. School districts other than those that had relinquished their responsibilities for providing adult education programs should provide adult basic education, ESL, and citizenship courses, courses required for a high school diploma, and vocational and occupational training and retraining

Eugene M.
DeGabriele

Wilson Riles

programs normally one year or less in duration and not requiring a high school diploma nor involving course content at the thirteenth or fourteenth grade level. The community colleges would provide classes “at the thirteenth and fourteenth grade level leading to an Associate in Arts degree or a vocational-technical training program of two-year duration” (Adult Education Advisory Committee 1971, “Annual Report,” 55–56).

Both segments would share responsibility for general programs, such as parent education, consumer education, civic education, the arts, and the humanities. One of the main points of DeGabriele’s statement was that reimbursement from state funds should be identical for identical classes offered in either segment (Ibid., 56–57).

In the fall of 1972, Senate Bill 94, the legislation for delineation of functions, was signed by the governor and took effect in March 1973 (CCAЕ October, 1972, 2). Area coordinating councils were established to implement the legislation. To offer noncredit instruction within a kindergarten-through-grade-twelve school district, community colleges were required to have a formal agreement on delineation of functions.

Xavier A. Del Buono

Community colleges were not prohibited, as were adult schools in 1979, from starting up new programs. But as the population expanded during the eighties, many areas of the state remained largely unserved by adult education programs because many school districts were reluctant to give up their rights to offer adult education (Dawson 1991, 3–6, 3–7). The issue of equality of state reimbursement for identical programs offered by public school districts and community colleges has never been fully resolved.

Leadership in the Seventies

Leaders from the Bureau of Adult Education and the professional organizations continued to work to improve the quality of adult education and the professionalism of adult education teachers.

Donald A. McCune

In 1970 Stan Sworder retired from the Bureau of Adult Education after 14 years of strong leadership as chief during a period of many changes and rapid growth. His tenure reached back to that of George C. Mann. Sworder’s successor was Eugene M. DeGabriele, another career adult educator, who had been both a consultant and assistant chief in the bureau. DeGabriele, who provided leadership through the fiscal and legislative uncertainties of the early seventies, retired in 1974. During his tenure the Department of Education was reorganized by Superintendent of Public Instruction Wilson Riles, and the title *Bureau* disappeared. Roy W. Steeves, who had been DeGabriele’s assistant and State Director of Adult Basic Education since 1967, briefly succeeded DeGabriele as Program Administrator of Adult Education.

Steeves worked under the direction of the new Associate Superintendent of Public Instruction and Manager, Adult and Community Education, Xavier A. Del Buono. In 1975 Donald A. McCune was appointed Director of the Adult Education Field Services Division. The team of Del Buono and McCune led adult education in California through dramatic changes and a number of department reorganizations until Del Buono's retirement and McCune's untimely death in the summer of 1986.

Several professional organizations continued in the seventies to be strong advocates of adult education. The Association of California School Administrators (ACSA) was formed in 1971 with a strong adult education contingent. The California Association of Adult Education Administrators (CAAEEA) disbanded. Some of the CAAEEA groups affiliated with ACSA and some with the California Council for Adult Education (CCAEE) (CCAEE spring 1971, 2; September-October 1971, 1).

The State Department of Education continued its close association with both the Adult Education Committee of ACSA and with CCAEE, the only organization to represent all participants in adult education—administrators, teachers, classified personnel, and students. A representative from the Department usually sat *ex officio* on both boards, and some consultants held elective or appointive offices in CCAEE.

George C. Mann, who had been retired for 14 years from his long-time position as Chief of the Bureau of Adult Education, passed away in 1971. In 1972 the CCAEE board voted to give annual awards to outstanding adult educators in the name of Mann, who had been one of CCAEE's founders.

California adult educators had been active in the National Association for Public School Adult Education (NAPSAE) since its beginning in the fifties. The first president had been E. Manfred Evans (Los Angeles). Involvement of Californians was particularly strong in the seventies, when the name was changed to the National Association for Public Continuing and Adult Education (NAPCAE). In 1970 Californians made up 10 percent of the organization's membership (CCAEE fall 1970, [5]), and many assumed leadership roles. Presidents from California in the seventies were Raymond T. McCall (San Jose), Jud Bradshaw (San Diego), Tom Damon (Palo Alto), and Bob Rupert (Los Angeles). In 1971 the national conference was held in Los Angeles, and in 1981 it was held in Anaheim.

In 1983 NAPCAE merged with the Adult Education Association of the U.S.A. to become the American Association for Adult and Continuing Education (AAACE). The national conference returned to Anaheim in 1992.

Leaders in the early seventies were concerned with professionalism and program quality. Like their predecessors, they wanted to improve both

Judson P. Bradshaw

the preservice and in-service preparation of adult education staff. In California funds from the federal Adult Education Act were used to identify exemplary programs using quality methods of recruitment, assessment, and instruction. These techniques were captured in three manuals sponsored by the Department in 1974 (developed by the ABC Adult School, Bassett Unified School District, and Garden Grove Unified School District) and later used for in-service training programs.

A new California state credential for adult education teachers, the Designated Subjects Credential, was approved in 1974. Requirements for teachers of academic subjects included a bachelor's degree with a minimum of 12 units of course work in the subject to be taught, and five years of work experience were required for teachers of vocational subjects. Four semester units of preservice or in-service training in adult education were required to earn a part-time credential, and nine semester units were required for a full-time credential. Preliminary credentials for those having all requirements except for the training in professional preparation were valid for two years (CCAЕ June-July 1974). This new credential did not address the continuing problem of providing training for teachers whose elementary or secondary credentials authorize but do not prepare them to teach adults.

Each year from 1975 through 1978, a series of summer institutes in adult basic education was sponsored by San Diego State University, and a master's degree program in adult education was instituted there (Huls 1978).

In 1977 the California State Department of Education activated an Adult Education Ad Hoc Advisory Committee to meet the need for an adult education planning process to give direction to adult education in the state. The process, which involved contributions from the field, produced a philosophy statement and a number of recommendations. The report of the committee was published immediately following the passage of Proposition 13.

Some practices were changed because of recommendations of the Ad Hoc Advisory Committee, such as increased programming for older adults and persons with handicaps and incentives and procedures for in-service training of staff. However, the fiscal and political difficulties of that time diluted much of the committee's influence. Some thorny policy issues, such as alternatives to reimbursement for seat time to allow for creative programming and equitable funding of programs for concurrently enrolled high school students, had been concerns in previous decades and surfaced later in the adult education strategic planning process of the eighties.

An additional result of the planning process during the late seventies was the publication of a series of leadership monographs by the State Department of Education. The monographs provided the field with valuable information on subjects such as needs assessment, publicizing of programs, guidance services, parent education programs, and evaluation of student progress.

Chapter V

The Birth of Competency- Based Education in *the Seventies*

Students learning
consumer skills

The Birth of Competency-Based Education in the Seventies

The acceptance of CBAE in California was an outgrowth of the national movement and contributed to the wider acceptance of CBAE as an educational framework relevant to the practical needs of adults.

The national competency-based adult education movement in the seventies both influenced and was influenced by California. The State Department of Education used federal funds available under the Adult Education Act to develop field-based staff development and curriculum support projects. The life-skills-oriented curriculum was particularly well suited to the needs of the large numbers of Southeast Asian refugees who filled the ESL and ABE classes during the latter part of the decade. While adult vocational education programs grew because of generous federal support, classes in art, music, crafts, drama, foreign languages, forum, and civic education were lost because of the passage of Proposition 13 in 1978. These programs earlier had represented 50 percent of adult education enrollment.

The Competency-Based Education Movement

California played an integral role in the national competency-based adult education (CBAE) movement that dominated the seventies. The acceptance of CBAE in California was an outgrowth of the national movement and contributed to the wider acceptance of CBAE as an educational framework relevant to the practical needs of adults.

Underlying the CBAE movement were the concepts of *andragogy*, for which Malcolm S. Knowles, in publications and seminars during the

late sixties and the seventies, was the chief American spokesperson. Andragogy is a model of adult learning theory based on several assumptions: Adults are responsible for their own lives and are capable of self-direction. They need to understand the reason for learning something. They come to a learning situation with more experience and a different quality of experience than young people have. Adults are ready and eager to learn what is needed for them to cope with situations in real life. They are task-centered or problem-centered in their learning. Adults are motivated to learn by extrinsic factors (better jobs) and intrinsic factors (self-esteem), but their motivation can be blocked by internal problems (a negative self-concept), external problems (barriers), and instruction that is not consistent with adult learning theory (Knowles 1989, 79–85).

The CBAE efforts became a *movement* in the mid-seventies when several important projects demonstrated positive results. The New York External Diploma Program was the first to award adults diplomas solely on the basis of demonstrated competency. At the same time the Adkins Life Skills program was developing sites and training educators to assist adults to become employable through competency development. In 1975 the Adult Performance Level (APL) Project published a report on its survey of adult functional competencies. Copies of the report containing the outcomes and implications of the survey were widely disseminated by the U.S. Office of Education (Parker and Taylor 1980, i).

The APL Project, sponsored by the University of Texas at Austin, took a new approach to the definition of adult literacy. Instead of reporting adult literacy according to scores based on achievement in child-based grade levels, the project's staff proposed a three-level scale for writing and reading tasks that adults need to be able to perform to function independently. Tasks were identified in five functional competency areas—occupational knowledge, consumer economics, health, government and law, and community resources. The study indicated that 20 percent of the participating adults functioned with difficulty (*APL Survey, Final Report, 1977*; Miller 1991, 50).

In 1974 the first statewide CBAE conference was held in San Diego, California, under the auspices of the federal Region IX ABE Staff Development Project. The California State Department of Education cosponsored the event. Over 120 ABE administrators and teachers—primarily from California but also from Arizona, Nevada, and Hawaii—explored the possibilities of implementing CBAE (San Francisco State University and Far West Laboratory 1974; Tibbetts and Westby-Gibson 1976, *Project Summary*, 8). John Tibbetts and Dorothy Westby-Gibson of San Francisco State University chaired that first conference and two other national CBAE conferences in California in 1977 and 1979. They went on to present papers at other national conferences, reporting CBAE research and development

John W. Tibbetts

efforts (Parker and Taylor 1980, iv; Tibbetts and Westby-Gibson 1980, 49; Kasworm and Lyle 1978; USOE 1978; Leahy 1991, 28–29).

A curriculum that included ABE lesson plans based on APL guidelines was developed in Hawaii and disseminated in California under the sponsorship of the Far West Laboratory for Educational Research and Development (Far West Laboratory 1975). Concurrently, California adult school staff developed curriculum for local use.

The California Adult Competency Survey, also known as the NOMOS project, was completed in 1977. The NOMOS project was a replication of the APL survey. The state-level study confirmed the findings of the national study: In California, as well as in the nation, one out of five adults lacked basic skill competencies (McCune 1979).

The dialogue on CBAE was evident during professional conferences at the national (AEA/NAPCAE) and regional levels; the agendas for those conferences included many workshops on the topic (Parker and Taylor 1980, ii). The 1978 amendments to the federal Adult Education Act clearly revealed the influence of the dialogue. The purpose of the Act was redefined as ensuring “that all adults acquire basic skills necessary to function in society.” A competency-based approach to assessment and programming was adopted at the federal level. Adult functional competencies were identified as alternatives to school-based measures of literacy (Division of Adult Education and Literacy 1991, [2]).

Federal I y Funded State Projects

The California State Department of Education’s Adult Education Field Services Unit increasingly encouraged the development of CBAE by funding new projects with the monies provided through sections 309 and 310 of the Adult Education Act. The process to improve the delivery of adult education in California featured building a field-based model. Involvement and recommendations from the field became integral parts of CBAE staff development, curriculum support, and assessment projects.

The following are examples of staff development projects:

- The California Adult Competency Education (CACE) project was an outgrowth of the 1974 Region IX ABE Staff Development Project (Tibbetts and Westby-Gibson 1976, *Project Summary*, 8–9). CACE provided staff development in CBAE for teachers, counselors, and administrators from 1976 through 1980. The project developed an implementation guide entitled *CBAE: Process Model*.
- The California Competency (CALCOMP) project designed and field-tested a process model for a competency-based high school diploma. Seven field-test sites were designated throughout the state: Clovis Adult School, Hacienda La Puente Unified School District, Los

Angeles Unified School District, Montebello Unified School District, Salinas Adult School, San Diego Community College, and San Francisco Community College.

- The Watts ABE Outreach Program (1975–79), Los Angeles Unified School District, piloted innovative methods of recruiting and retaining native-speaking adult basic education students.

Three CBAE curriculum projects were developed, field-tested by the state, and later commercially distributed:

- Project CLASS (competency-based live-ability skills), contracted by Clovis Adult School, developed ABE and ESL modules to teach reading, writing, and computation concurrently with life-skill topics. Materials developed for the project were later marketed under the title *LifeSchool*.
- ICB-VESL (integrated competency-based vocational English as a second language) was sponsored by the Chinatown Resources and Development Center in San Francisco. The curriculum combined CBAE with bilingual vocational ESL and included cultural notes translated into four languages. Materials developed from ICB-VESL were published under the title *English That Works*.
- The Competency-Based Adult Diploma Project at Los Angeles Unified School District developed the Los Angeles Competency-based Achievement Packets (LA CAPs), which integrated life-skill competencies with the required and elective units needed for a high school diploma. The commercial version of the packets was also called *Competency Achievement Packet*, or *CAP*.

From 1976 through 1980 the Information, Collection, and Dissemination Service (ICDS) developed repositories of competency-based resources and curriculum materials in five county offices of education. ICDS was sponsored by the San Diego Community College District.

Although the projects described previously had broad scope and achieved wide dissemination, many other federally funded projects in curriculum development and in-service training were developed during the same period (see Appendix F). By the end of the decade, CBAE in California was solidly based and ready to move on to developing an assessment component.

Educational Needs of Refugees

The specter of the increasingly unpopular and agonizing Vietnam War hovered gloomily over the United States in the early seventies. When the war ended in 1975, American veterans came home to an uncertain

ICDS

welcome; and not far behind them came increasingly large numbers of Southeast Asian refugees searching for freedom and a better life.

California, with its congenial climate, western location, and existing Asian communities, was particularly affected by secondary migrations from the original refugee settlements all over the country. By 1991, of the 995,300 refugees who, since 1975, had come from Vietnam, Laos, and Cambodia, 396,200 (39.8 percent) were calling the Golden State home (Office of Refugee Resettlement 1992, 50).

The influx of refugees had reached flood proportions by the end of the seventies. The social and educational profiles of the later refugees differed radically from the profiles of the first refugees to reach Camp Pendleton in 1975. Refugees arriving in 1975 had been primarily military personnel and other professionals with extensive formal education and some knowledge of English. The typical refugees in later years had little education and were usually fishermen, farmers, or shopkeepers. They not only spoke no English but also might be illiterate in their own languages or represent a culture with no written language. The Southeast Asian languages differed linguistically from English, and the cultures differed significantly from American norms. Adult educators in California had a tremendous challenge to meet. As in past crises, they not only met the local challenge in an exemplary fashion but also provided a leadership role at the national level.

Large groups of refugees clustered in Los Angeles, Orange, and San Diego counties in southern California and in San Jose in central California. Eager for education, the new immigrants sometimes caused disruptions to local programs for adults and students in kindergarten through grade twelve. On the day to register for ESL classes, the adult refugees would line up at the office very early in the morning; sometimes they took all the available spaces, leaving no room for the other students, typically Latino, who ordinarily attended classes. Program directors had to devise creative solutions to be fair to all groups and to prevent ethnic tensions (Attebery interview 1992, 66–69; Zimmerman interview 1992, 45–48).

The life-skills-oriented curriculum developed by the CBAE projects discussed in the preceding section was particularly well suited to the needs of the Southeast Asian refugees. A special curriculum was also developed by the noncredit division of the San Diego Community College District, and its products were distributed through the county offices of education. San Diego continued to develop curriculum especially targeting the literacy level. Eventually this locally developed curriculum was published in a document entitled *English for Adult Competency* (Miller 1991, 60).

Refugee evacuation, 1975

The enrollment in adult vocational training programs of numerous refugees with limited English skills accelerated the development of the new specialty known as Vocational English as a Second Language (VESL). VESL programs trained students to use the general language needed for getting and keeping a job, such as that taught in the ICB-VESL project, and the occupation-specific language required for succeeding in training programs and later in employment.

The federal government supported refugee resettlement with grants to school districts around the country. In the late seventies VESL curriculum-development projects were funded in California (in the Hacienda La Puente Unified School District, the Los Angeles Unified School District, Long Beach Community College, San Diego Community College, and City College of San Francisco) as well as in other states, such as Florida, Illinois, Michigan, and Wisconsin. Curriculum was developed to support students in dozens of entry-level occupations.

The various VESL projects not only met the needs of their own students but also shared curriculum with each other through regional networking and a national clearinghouse. From 1979 through 1982 California also used part of its federal Adult Basic Education funds to sponsor curriculum development and staff development projects to promote VESL and cultural awareness (see Appendix F). Materials from those projects were widely distributed. In 1987 the federal Refugee Materials Center was closed and its functions distributed to other national clearinghouses. Recognizing the need for continued sharing of unpublished VESL curriculum, California's Adult Education Unit, in 1992, funded a VESL/Workplace Clearinghouse through its Outreach and Technical Assistance Network.

Characteristics of Adult Education in the Seventies

Discussions about adult education in the seventies focus on events that happened before and after Proposition 13 was passed in 1978 because drastic changes occurred after the tax reform initiative became law.

During the early part of the decade, the dramatic increases in enrollment of the sixties and the view of adult education as a change agent continued. Also continuing to flourish was the concept from the fifties that adult education would provide community education in a society committed to lifelong learning (Adult Education Ad Hoc Advisory Committee 1979, 6–9).

The 16 curriculum areas in adult education continued to reflect the broad scope of community needs. Enrollments soared during much of the decade, doubling overall from 1971 through 1978 to 1,822,540. Included

was a 34 percent increase in 1974-75, an event that led to the governor's 5 percent cap on growth. For example, from 1971 through 1978, enrollment in fine arts grew 74 percent, forums 128 percent, ESL 131 percent, crafts 150 percent, and civic education (including classes for handicapped persons and older adults) 283 percent (Adult Education Ad Hoc Advisory Committee 1979, Appendix E).

After the passage of Proposition 13, whole categories of classes, representing nearly 50 percent of enrollment in programs for adults during 1977-78, were no longer supported by state apportionment: art, music, crafts, drama, foreign languages, forums, and civic education.

Health careers class

Vocational education in California continued to grow during the seventies through the increasingly generous support of the federal government, and adult vocational education programs represented about 30 percent of the enrollments. In 1973 the federal Comprehensive Employment and Training Act (CETA) was enacted to succeed MDTA, targeting the hard-core unemployed for training and retraining services. In 1975 Assembly Bill 1821 established Regional Adult Vocational Education Councils (RAVECs), which met bimonthly to delineate functions among service providers (high schools, adult schools, community colleges, and private postsecondary schools) and to produce planning reports. The ROP/ROC vocational training delivery system grew 475 percent, to an enrollment of 162,483 students in 65 jurisdictions, during the first half of the decade. That dramatic growth ended in 1975, when a cap was placed on the growth of ROP/ROC and other educational programs (Smith 1979, 70-78).

Data from a survey conducted by NAPCAE in May, 1971, representing 123 adult education programs in California, give an interesting picture of the programs. Eighty percent operated during the day as well as at night. Nearly half had some facilities to be used exclusively for the programs. Use of community facilities, including churches, libraries, industrial plants, and senior citizen centers, was widespread. All schools offered ESL classes, nearly all had vocational training, and two-thirds had summer programs. Because new courses could be approved quickly, the adult school could be particularly responsive to special and changing community needs, and experimental and short-term classes could be offered (ACSA 1972, 1-2).

Although 90 percent of adult school teachers worked part time, the numbers of full-time teachers increased from 1,084 in 1971 to 2,566 in 1978 (Adult Education Ad Hoc Advisory Committee 1979, Appendix E). Teachers were usually professionals from other fields, but adult school teaching was becoming recognized as a career in itself (ACSA 1972, 2).

The influence of the competency-based education movement was being felt in all aspects of adult education in California during the seventies. The components of a competency-based program were in various stages of implementation throughout the period: curriculum based on students' needs; instruction incorporating the preexisting knowledge of the students, including their motivation and learning styles; assessment related to instruction; and supportive management and guidance services.

Chapter VI

Institutionalization of Competency- Based Education in *the Early Eighties*

Students in a
CBAE class

INSTITUTIONALIZATION OF COMPETENCY-BASED EDUCATION IN THE EARLY EIGHTIES

IN 1982 THE PRACTICE OF CBAE IN CALIFORNIA BECAME MORE FOCUSED WHEN THE STATE DEPARTMENT OF EDUCATION'S ADULT EDUCATION FIELD SERVICES UNIT MANDATED THE USE OF A COMPETENCY-BASED APPROACH IN THE PROVISION OF BASIC EDUCATION SERVICES TO ADULTS.

INVESTING IN CHANGE: COMPETENCY-BASED ADULT
EDUCATION IN CALIFORNIA

Through the use of federal funds available under the Adult Education Act, the California State Department of Education encouraged the institutionalization of competency-based education (a performance-based process leading to demonstrated mastery of skills that adults need to function independently) in programs serving adults. Agencies applying for federal funds were mandated to initiate a plan to implement a competency-based approach to education in their programs. Federal funds also made possible the provision of a statewide support system of staff development, assessment, and curriculum dissemination to assist agencies in implementing the mandate.

THE CBAE MANDATE

During the seventies many components of the competency-based approach to adult education (CBAE) were being developed in programs throughout California, but the efforts were fragmented. In 1982 the Adult Education Field Services Unit of the State Department of Education required agencies applying for federal supplemental monies through Section 306 of the Adult Education Act to show that they were implementing CBAE practices. In addition, federal funds available through Section 310 of the Act were distributed to support projects focused on activities to assist

agencies adopting the components of CBAE. These requirements resulted in a mandate to use the CBAE in California (Miller 1991, 53–54; San Francisco State University Foundation 1987, 1–5).

In preparation for submission, in 1982, of the *California State Plan for Adult Basic Education*, the Adult Education Field Services Unit surveyed adult education programs in the state and identified a number of deficiencies. Weaknesses included extremely large numbers of students per instructor, excessive class sizes, outmoded curriculum procedures and content, inadequate implementation of technology, little staff development, little program evaluation, and few guidance and counseling services (San Francisco State University Foundation 1987, 4).

The leaders of the Adult Education Field Services Unit were committed to the belief that CBAE was the best way to solve the problem of adult functional illiteracy. In consultation with adult education project directors and practitioners around the state, they developed *The California State Plan—1982 Submission*. This State Plan stipulated that funds provided through Section 306 would be distributed only to agencies that could ensure quality programming, which would include the following provisions:

- Class sizes that do not exceed an average ratio of 30 students to one certificated employee
- Curriculum design and content based on the philosophy, process, and procedures of competency-based learning
- A student assessment system that is competency-based
- A program of ongoing staff development for all certificated staff involved with the federal program
- Counseling and guidance services to ensure that all students are properly placed in the appropriate competency level and that their progress is monitored with appropriate assessment instruments

A three-year period was allowed to phase in competency-based education (Miller 1991, 53; San Francisco State University Foundation 1987, 1, 4–5).

In addition, a statewide support system was implemented to assist the local agencies with the requirements of the mandate. Additional monies available through Section 310 of the Adult Education Act were used to develop coordinated support projects in the areas of assessment, staff development, and dissemination (Miller 1991, 54; San Francisco State University Foundation 1987, 5).

During 1984–85, the third year of the State Plan, a study was undertaken “to determine the effects of the CBAE mandate on the functioning of Section 306 programs” (San Francisco State University Foundation 1987, 1). The report of the study, titled *Investing in Change*, described

THE LEADERS OF THE ADULT EDUCATION FIELD SERVICES UNIT WERE COMMITTED TO THE BELIEF THAT CBAE WAS THE BEST WAY TO SOLVE THE PROBLEM OF ADULT FUNCTIONAL ILLITERACY.

encouraging findings on the nine key elements of the implementation of CBAE in California (19–20). The following is a summary of those findings:

1. Approximately one-half of the state’s agencies funded through Section 306 had gone through the process of identifying competencies.
2. The number of agencies that had developed student profiles had increased.
3. There was a substantial increase in the use of CASAS tests to monitor progress.
4. Tracking of individuals attaining competency remained problematic.
5. Most agencies had established a system for placing students into programs.
6. ABE and high school diploma students were counseled more often for movement and change in program than were ESL students.
7. Use of appropriate instructional materials based on organized course outlines had increased but remained low.
8. The variety of instructional strategies used needed improvement.
9. Instructors’ participation in staff development programs had increased.

The findings and recommendations reported in *Investing in Change* influenced the direction of the State Department of Education’s CBAE support system through 1988. The Adult Education Program Services Unit continued its change-oriented philosophy in developing the California State Plan for Adult Basic Education for 1985 through 1988. That plan required essentially the same commitments of agencies (pages 18–19) as did the 1982 plan.

CBAE ASSESSMENT—CASAS

The California Adult Student Assessment System (CASAS)

has been the most enduring and transportable of the interrelated projects developed in California to support the implementation of CBAE at the local level. With the completion of the process model and curriculum projects by the end of the seventies, curriculum and instruction were in place, and adult educators turned their attention to the missing assessment component.

CASAS was originally established in 1980 as a consortium of local educational agencies that provided adult basic education programs through funds available under Section 310 of the Adult Education Act. The San Diego Community College District was the leading agency in the consortium, and Patricia Rickard was the director. CASAS’s goals were to develop “a comprehensive educational assessment system for adults” and “to assist adult education programs in implementing an assessment system designed to reflect competency-based curricula occurring in local instructional pro-

grams” (CASAS 1982, *Summer Institute Notebook*, “Abstract of Section 310 Project, 1981-82”). By the end of 1988, the consortium had grown to include representatives from 40 agencies in California as well as representatives from other states.

Between 1980 and 1982 the consortium developed the basic assessment system, including a list of competency content areas that was rooted in the Adult Performance Level (APL) Project of the 1970s and was consistent with the CBAE curriculum being used in the agencies. Test items were written and field-tested. In compliance with one of the components mandated in the 1982 state plan, CASAS provided life-skills survey achievement tests to the State Department of Education for the use of agencies receiving federal funds through Section 306. California agencies, as one condition of their supplemental ABE grants, were required to pretest and post-test a representative sample of their ABE/ESL students (CASAS 1987, *Summer Institute Notebook*, “Program History and Description,” 2–4).

The *CASAS Competency List* originally was divided into five content areas: consumer economics, community resources, health, occupational knowledge, and government and law. Sources for competency statements were the Adult Performance Level Project, the External Diploma Program, and Project CLASS; the statements were validated by consortium agencies. Computational and domestic skills were added later to the content areas.

During its 13 years of existence, the CASAS “item bank” has grown to several thousand test items “that have been developed, field-tested, and calibrated to measure life-skill competency statements along a continuum of difficulty levels. Each item is coded to specify the content, competency area, competency statement, and task being measured” (CASAS 1987, *Summer Institute Notebook*, “Program History and Description,” 3).

The *CASAS Curriculum Index and Matrix* is updated annually and links assessment with competency-based curricula. Instructional materials with a CBAE focus are cross-referenced to the competency statements.

The strength of CASAS was its field base, its committee work. Frequently, the committees produced curricula in specialized areas and developed new or expanded sections of the competency lists or item bank, related types of assessment, or manuals. Committees focused on applied performance assessments, special assessment needs in vocational or workplace settings, and writing assessments. The consortium also developed a CASAS assessment bridge to low-level standard assessments used with persons with developmental disabilities on the one hand and a high-level assessment link to adult high school students on the other.

Class for persons with developmental disabilities

Beginning in 1982 and extending into the 1990s, CASAS instruments for pretesting and post-testing have been an integral part of the California Department of Education's accountability system for local adult basic education programs. The tests have been used to report student progress and outcomes, such as goal attainment, to the state and federal governments. Systematic data collection and analysis over a period of time have "provided essential information about student achievement, goal attainment, barriers to education, demographic characteristics, and trends" (CASAS 1987, *Summer Institute Notebook*, "Program History and Description," 5).

CASAS, which now has independent nonprofit status, changed its name in 1986 to the Comprehensive Adult Student Assessment System. It has been validated by the U.S. Department of Education. The federal National Diffusion Network provides funds to disseminate information about CASAS to states and agencies that might want to adopt the system. CASAS has been adapted to assess the needs of youths and adults in settings such as special education, vocational training, corrections, welfare reform, workplace literacy, and family literacy.

CBAE STAFF DEVELOPMENT

The goal of the CBAE Staff Development project, in operation from 1982 through 1988, was to assist local California adult education agencies in designing and implementing competency-based adult education programs. The project included a number of key components, both processes and products.

The CBAE Staff Development project was managed by codirectors John Tibbets and, first, Dorothy Westby-Gibson, then David Hemphill. The sponsoring agency was the San Francisco State University Foundation. The project put together a consortium of experts from around the state who gave the project direction.

The *agency team* concept emphasized teamwork at the local level. Agency teams consisted of management, guidance, and instruction personnel and were responsible for a three-year plan to implement local CBAE programming. A special staff development fund, called an implementation grant, was allocated to the agencies in accord with their plans. The *Institutional Self-Assessment Measure (ISAM)*, originally authored by John Wise of Elsinore, was a self-evaluation instrument designed to yield a profile of CBAE implementation and to assist agencies with planning (Miller 1991, 25–27; Tibbets 1983–88).

Staff development was delivered in a variety of modes during the life of the project. Regional workshops assisted agencies in the beginning

stages of implementing CBAE. Later, training was delivered in seven regions and was based on assessment of regional needs. The *advanced staff developers* who conducted the training were practitioners who had been identified for expertise in specific areas—instruction, assessment, guidance, and management—and had been given special training in the CBAE process and techniques of facilitation (Miller 1991, 25–27; Tibbetts 1983–88).

Products of the project included a *Handbook on CBAE Staff Development* (1983) and a series of training manuals. The handbook included overviews of CBAE and the process of change, chapters on the four components (management, assessment, guidance, and instruction), and extensive appendixes. The training manuals covered the implementation of a competency-based approach to adult education in ESL, VESL, and ABE classes. Facilitator outlines, participants' materials, and videotapes were included with the manuals. The training manuals were still being distributed in the nineties by the Outreach and Technical Assistance Network.

The *Teaching Improvement Process* (TIP) was another enduring product of the project. TIP is a classroom observation instrument that identifies six categories of teaching behaviors, with subpoints. The use of TIP as a staff training instrument continued after the CBAE Staff Development project ended.

During its later years the project introduced several initiatives that were indicative of the next generation of federal projects. A leadership institute concentrated on skill building for persons holding the resource teacher/coordinator positions, working as a team with their administrators. An ABE Institute concentrated on networking among and support of adult basic education instructors. A process to develop regional demonstration sites for competency-based education was also established. These sites were precursors of the regional resource centers later sponsored by the Outreach and Technical Assistance Network.

In 1985 the ESL Teacher Institute was developed from an earlier ESL staff development project. K. Lynn Savage was the first director. A skill-based training program for new teachers, the ESL Teacher Institute produced training modules for a variety of ESL teaching techniques and provided the training sessions. Four half-day sessions were spaced over several weeks, and teachers were encouraged to put their training into effect during the interim. The project sought to ensure support for the teachers at the local level by requiring, as a condition of the ESL teachers' attendance at an institute, that the coordinators of the teachers participate in an orientation session. Agencies were encouraged to facilitate peer coaching (teachers observing each other in the classroom and providing feedback) to support teachers practicing new techniques. Training and

ESL TEACHER INSTITUTE

certification of the institute's trainers became an important component. Videotapes demonstrating the use of the targeted technique were developed for all institute modules.

DISSEMINATION NETWORK FOR ADULT EDUCATORS

California's Dissemination Network for Adult Educators (DNAE) operated from 1981 through 1988. It was modeled after the National Diffusion Network, the federal agency that disseminates information about exemplary programs and provides funds to adopt or adapt them. The Association of California School Administrators (ACSA) was the fiscal agent for DNAE, and Jane Zinner was the director. Any adult educator could nominate programs for inclusion in the network. A program's exemplary status was verified by review of materials and site visits (Miller 1991, 63).

Descriptions of selected programs were listed in the DNAE catalog, which was updated semiannually. Local educational agencies participating in the supplemental federal ABE grant program could then adapt or adopt a program. DNAE reimbursed the exemplary program for expenses incurred in sharing the program (Miller 1991, 63; DNAE 1982–88).

DNAE also disseminated program information through a newsletter and mailings and maintained a library of products, such as reports, curriculum materials, and videotapes.

GED TEACHER ACADEMY

Another significant and enduring staff development initiative that began in the mid-eighties was the California GED Teacher Academy.

The General Education Development (GED) certificate is widely accepted as proof of educational skills at the secondary level for students who do not have a high school diploma. Adult schools often prepare students for the examination, which has several sections, and the schools may serve as test sites. Preparing students includes assessing the student's competence in each skill area, followed by instruction to make up any deficiencies.

A survey of GED teachers during the early eighties established that they had little information about appropriate methodologies, curriculum, resources, and classroom management strategies. In addition, the instructors experienced an unusual degree of isolation and were in need of peer support (GED Unit 1985).

The GED Teacher Academy was instituted in 1985, first through the Dissemination Network for Adult Education and later through the San Juan Unified School District with the use of federal funds (under Section

310 of the Adult Education Act). Kim Edwards, Program Coordinator for the GED Unit, and Kit Marshall, an outside consultant, developed the training. Instructor-leaders were Margaret Rogers, San Juan Unified School District; Rosanne Seitz, Hacienda La Puente Unified School District; and Louise Proctor-Cain, Sweetwater Union High School District. Academy facilitators were trained in the summer; the first six academies were held simultaneously in the fall in different regions of the state (GED Unit 1985).

Like the ESL Teacher Institute, the GED Teacher Academy consisted of several half-day sessions two weeks apart. Successful features of the training included peer facilitators, video models, a sequenced curriculum, and detailed participants' notebooks (GED Unit 1986).

The GED Teacher Academy continued its fall and spring sessions into the nineties under the sponsorship of the California Council for Adult Education and the California Department of Education. The academy was particularly useful in assisting instructors when the GED test underwent major modifications in 1988. During the nineties two other teacher academies were developed on the GED model to serve instructors in parent education programs and programs for older adults.

JOB-TRAINING INITIATIVES

During the mid-eighties the California adult education system was heavily involved in job-training initiatives, some of which were in response to such federal programs as the Job Training Partnership Act (JTPA) of 1983 and the Job Opportunities and Basic Skills Training Program (JOBS), a welfare reform measure. The California version of JOBS, an educational initiative targeting welfare recipients, preceded the JOBS program in 1985 and was called GAIN, or Greater Avenues to Independence.

The (federal) JTPA program in California was administered largely by the Employment Development Department and partly by the Department of Education. JTPA's objective was to provide the support services, job training, and education necessary to enable low-income and unemployed persons to prepare for economic self-sufficiency. Private Industry Councils (PICs) were instituted, marking a new era of coordination between private employers and public education.

Federal and state employment-related programs of the eighties had an impact on both the curriculum and management of adult education programs. More and more emphasis was placed on teaching employment-related basic skills and English. For example, JTPA projects expanded and adopted the Adult Competency Education (ACE) program, which the San

Printing trainees

Mateo County Office of Education had started in the seventies as a CBAE curriculum project. ACE identified basic mathematical, reading, and writing skills embedded in job-related tasks and featured a vocational guidance curriculum.

In response to the need for appropriate assessment instruments for placement and certification in JTPA-funded programs, the CASAS Vocational Committee developed the *Employability Competency System* (ECS), which was widely used (CASAS 1987, *Employability Competency System*). CASAS also developed customized placement tests used by the GAIN program.

Counselor and student

Attendance at adult education programs in previous decades had been almost entirely voluntary, but now a larger percentage of the adult students were required to attend such programs as a part of their welfare or other support program. Examples of federally funded education programs supported by state agencies were JTPA programs (run by the Employment Development Department) and refugee programs (run by the Department of Social Services). Career counseling and job development services became an integral part of the program for students who were participating in the adult education system in California. Adult education programs with employment components became accountable not only for students' progress in academics or vocational education but also for the placement of students in jobs.

Chapter VII

Response to Social, Economic, and Political Changes Through *the Eighties*

ESL class

Response to Social , Economic, and Political Changes Through the Eighties

Al though more than 79 percent of Cal ifornia's workforce for the year 2000 was al ready empl oyed in 1988, studies indicated that an al arming number of workers were unprepared for the future requirements of their jobs.

By the late eighties the country was coming to grips with a changing workplace significantly affected by the demands of the technology explosion and a workforce characterized by increasing percentages of disadvantaged minority and limited-English-proficient workers. In addition, the percentage of single-parent families had increased dramatically. The need for ESL classes in the state tripled as a result of the education requirements connected with the federal Immigration Reform and Control Act, and other state and federal legislation was enacted to fund educational programs for the growing number of incarcerated persons and welfare recipients. New leadership in the California Department of Education directed adult education through a sunset review by the Legislature and led a strategic planning process to meet future needs for adult education.

Social and Economic Changes

Studies of the changing workplace of the eighties projected several significant trends. There was a decline in the number of jobs requiring only minimal educational competence, but the number of jobs demanding more technical skill was growing (Johnston and Packer 1987, 96–101). In the American manufacturing industries, new technology was changing the nature of work, creating new jobs, and altering others. Production workers' jobs were being eliminated as computer-controlled equipment proliferated. At the same time industry was adjusting to increased foreign competition and the demand for high-quality goods.

The workplace was further challenged by the changing demographics of the period. One factor was the increasing shortage of entry-level workers. Nationwide, the population growth was declining, so the workforce was becoming older. The average age of workers was projected to increase from thirty-six to thirty-nine years by the year 2000 (U.S. DOL and U.S. DOE 1988, 5). And although more than 79 percent of California's workforce for the year 2000 was already employed in 1988, studies indicated that an alarming number of workers were unprepared for the future requirements of their jobs (Adult Education Advisory Committee 1989, *Summary Report*, 6).

Another significant demographic factor was that the increase in the state's population was primarily the result of immigration from Mexico and Asia. These migration patterns and higher birthrates by nonwhite populations were leading to a dramatic shift in the number and proportion of ethnic groups in California, which was becoming a true pluralistic society. The Hispanic and white populations were expected to be almost equal by 2020, with the Asian and "Other" groups next in size, followed by blacks (Best 1992, 8).

Changes in family life had also reached dramatic proportions by the eighties. Higher rates of teenage pregnancies and divorces were leading to a growing number of single-parent families. The percentage of working-age women holding jobs had reached 55.3 percent in 1986, and a continued increase was projected (Ibid., 14–16).

Proportionately more minorities, immigrants, and women entered the workforce during the eighties; these groups were subject to labor market handicaps of various kinds, including educational deficiencies. A study released by SRA Associates in 1987 estimated that more than 15 percent of adults in California had a significant *literacy performance deficit* (below-standard ability to read and write) as defined by competency measures—a staggering three million persons (Dixon et al. 1987, 27–28).

Dependent populations were also increasing. Medical advances had resulted in a dramatic increase in the number of people who were very old. The need for programs for older adults was large and projected to expand further (Best 1992, 11–14). The number of developmentally disabled adults receiving services from the Department of Social Services also grew during the eighties, increasing the demand for educational services (Best 1992, 32). The California state prison and county jail populations grew much faster during the eighties than did the general state population, with a corresponding increase in educational programs in correctional facilities (Best 1992, 32–33; Stern 1989, 24–27).

Health class for older adults

Class for adults with developmental disabilities

The major literacy provider groups in California were adult schools, community colleges, library programs, and community-based organizations.

Literacy Initiatives

During the decade of the eighties, the deficit in adult literacy became a national preoccupation and led to a variety of new federal initiatives. Research reports indicated that literacy performance deficits, as shown by scores below the mean on competency indicators, among Californians over fourteen years of age varied significantly on the basis of ethnicity and race. In 1987 the rate of deficit, or percentage of persons who performed below the standard, was 9.8 percent for whites, 23.9 percent for Hispanics, 28.2 percent for Asians, and 26.5 percent for blacks. Although minority ethnic groups had the highest percentage of persons with literacy deficits, white persons with competency deficiencies were by far the largest in number (Dixon et al. 1987, 27–28).

In response to national concerns and the overwhelming needs in the state, literacy courses dominated the adult education programming of all the major service provider groups: adult schools, community colleges, library programs, and community-based organizations. By the middle of the decade, there were approximately 1,095 literacy service providers in California. They served more than 880,000 adults annually. Adult schools served 75 percent of that number; community colleges served 21 percent; and library and community-based programs served the remainder (Ibid., 38–39).

One federal initiative, the Library Services and Construction Act, brought a commitment of \$2.5 million in 1983 to begin the California Literacy Campaign (CLC). All public libraries in the state were invited to apply to the California State Library for funds. The CLC program began with 27 libraries (Dixon et al. 1987, 60). Funds for the campaign increased annually, and by 1989 the CLC program had more than doubled in size (Stern 1989, 56). The library programs relied on trained volunteer tutors, who usually delivered one-on-one instruction under the supervision of a paid literacy program director or coordinator. The programs were designed to both supplement and serve as a referral service to other literacy providers. For example, “in 1987-88, some 8,300 volunteer tutors served 9,700 adult learners and made 6,100 referrals to other agencies providing literacy training” (Stern 1989, 56).

The largest community-based organization providing literacy services in California was California Literacy, Inc. (Cal Lit). Affiliated with Laubach Literacy International, Cal Lit trained tutors and sold instructional materials. There was extensive coordination between Cal Lit and the library programs. Literacy Volunteers of America (LVA), another national volunteer literacy tutoring group, also had a significant presence in the state (Ibid., 56–57).

The 1984 amendments to the federal Adult Education Act reflected the goals of the Reagan era—reduced federal involvement and an emphasis on the private sector and volunteers. The National Adult Literacy Initiative was a federal effort to raise public awareness of adult illiteracy and promote collaboration between the public and private sectors to address the problem. The National Literacy Coalition was composed of more than 50 national associations, both public and private. The coalition set literacy policy and funded a national toll-free number. Project Literacy U.S. (PLUS) was a collaboration between the American Broadcasting Company and the Public Broadcasting Company to use television to promote literacy education. The Business Council for Effective Literacy was instituted to involve the public sector in fighting illiteracy (Adult Education Unit 1987, 49).

The California Alliance for Literacy, another result of the National Adult Literacy Initiative, was started in the mid-eighties with the purpose of coordinating at the state level the efforts of literacy service providers in California. The State Department of Education and the State Library were co-conveners of the Alliance. Members included the California Chamber of Commerce; the Chancellor's Office for California Community Colleges; the Employment Development Department; the Department of Corrections; California Literacy, Inc.; the U.S. Department of Education Region IX; the Association of California School Administrators' Adult Education Committee; the California Council for Adult Education; and business representatives, such as Times Mirror (Stern 1989, 57).

The 1988 amendments to the federal Adult Education Act represented the most distinct departure from earlier legislation since the changes in 1978 that identified literacy in terms of adult functional competencies (Rose 1991, 25). The purpose of the Act was restated to focus on the improvement of educational opportunities for adults who lacked the level of literacy necessary for effective citizenship and productive employment. The amount of federal funds that would be available to the states under the Act was increased, and special programs were instituted for family literacy and workplace literacy. Also added were categorical programs for immigrants and migrant farmworkers and for the renewal of commercial truck drivers' licenses (26).

Educational Programs in Correctional Facilities

The number of incarcerated persons in California tripled in the eighties (Stern 1989, 25), a situation that led to a nearly corresponding growth in educational programming, both academic and vocational, in

The National Adult Literacy Initiative was a federal effort to raise public awareness of adult illiteracy and promote collaboration between the public and private sectors to address the problem.

The purpose of the educational programs was to help the inmates function better in the facility and, on release, be better prepared to integrate into society.

correctional facilities. By the end of the decade, about 18 percent of the institutionalized population was enrolled in educational programs (Stern, 1989, 25). California Department of Corrections (CDC) and Youth Authority programs represented 11 percent of the adult education expenditures in the state (12).

Classes for inmates could be offered by CDC personnel. In many cases school districts or other educational agencies contracted to provide the educational services. For example, since the early seventies Hacienda La Puente Unified School District had contracted to provide the educational program for all the Los Angeles County jails. County offices of education ran jail programs in Contra Costa, Marin, and Riverside (Stern 1989, 27).

Both traditional and unique programs were offered. Academic programs included ESL, adult basic education, preparation for the General Education Development (GED) examination, and instruction for the high school diploma. Depending on the location, inmates might study one of 56 occupations, including apprenticeship and licensure programs, and receive job development and placement services on release. Nonacademic programs, such as music, health and fitness, parenting, and television production, were sometimes available. Unique programs included prerelease training and courses on substance abuse prevention, AIDS education, and victims' rights (Ibid., 25).

The purpose of the educational programs was to help the inmates function better in the facility and, on release, be better prepared to integrate into society. The profile of the students indicated that one-third were non-English speaking, and more than 50 percent did not have a high school diploma and read below the ninth grade level. In the 1987-88 school year, 4,616 inmates obtained diplomas (elementary school, high school, or literacy), and 2,960 earned vocational certificates (Stern 1989, 26). Problems encountered in the correctional programs included staff burnout and discrepancies between budget increases and the growing number of inmates.

Greater Avenues for Independence (GAIN)

The phenomenon of long-term dependency on the welfare system by unskilled and unemployed persons with children had reached troubling proportions; in many families generation after generation was on welfare. To address the problem, the California Legislature enacted the Greater Avenues for Independence (GAIN) program (AB 2580, Ch. 1025) in September, 1985. The intent of the legislation was to encourage recipients of Aid to Families with Dependent Children (AFDC) to participate in programs providing basic and secondary education, vocational training,

self-esteem-building activities, job-search skills, and job development services. The goal was to enable the recipients to secure and retain unsupported employment and, therefore, exit the county welfare system (CASAS 1990, *GAIN Appraisal Program*, 13).

Local implementation of the GAIN program was the responsibility of the county welfare office, with the assistance of the California Department of Social Services. County plans, which followed various models, were submitted and implemented during a three-year period beginning in 1986; generally, the smaller counties were among the first to implement their plans.

Assessment was an important part of the GAIN model, and CASAS developed a GAIN Appraisal Program to determine whether applicants lacked basic mathematical, reading, or functional listening comprehension skills. On the basis of scores achieved on the appraisal test, students were referred to local educational agencies for appropriate instruction in adult basic education, GED, or high school diploma subjects. In some cases, to fund GAIN programs, the Legislature made supplemental apportionments available to local educational agencies that had exceeded their spending limits.

Demographic data collected by CASAS as a part of the GAIN Appraisal Program provide a profile of the typical person being served by the program. By the 1989-90 implementation period, the typical GAIN student was female (64.2 percent), under thirty-five years of age (67.5 percent), and either Caucasian (44.7 percent) or Hispanic (25.3 percent). She was English speaking (83.7 percent) and had not completed high school (54.3 percent) (Ibid., 3-4).

Programs for Amnesty Applicants

The education requirements for obtaining status as a legal resident under the federal Immigration Reform and Control Act (IRCA) of 1986 had a heavy impact on adult ESL programs in the state for four school years, beginning in 1987-88. Under the Act amnesty was granted to undocumented persons who could prove their unbroken residence in the country since before January 1, 1982 (referred to as *pre-1982s*). Persons who had worked in agricultural jobs for at least 90 days between May, 1985, and May, 1986, were eligible for legal residence as seasonal agricultural workers, or SAWs (YAAES 1987, 1). A temporary residence card, valid for 30 months, was issued to qualified applicants. During that time the applicant had to demonstrate knowledge of basic English and U.S. history and government. Competency in those areas was demonstrated by passing a test or by attending an approved class for 40 hours and earning a Certificate of Satisfactory Pursuit, after which the applicant was eligible for permanent residence.

High school basic skills student

More than 50 percent (1.6 million) of the amnesty applicants nationwide lived in California. Almost all were Spanish speakers, and most were from Mexico. The Greater Los Angeles area was home to 64 percent of the pre-1982s and 38 percent of the SAWs in the state. Enrollment figures from 1987-88 through 1990-91 showed that more than one million students were served in California. Programs whose growth had been “capped” for years could use State Legalization Impact Assistance Grants (SLIAG), which were federal funds provided to the state, to meet the needs of this new student group. During the peak year, 1988-89, more than 600,000 eligible adults were served by 244 service providers, most of which were adult schools, but the number included community colleges and private nonprofit agencies (California SDE 1989; CASAS 1992, *Three Years of Amnesty Education*, 1–2).

The impact on local adult education programs was extreme, especially in the 1988-89 and 1989-90 school years. Many programs tripled in size and carried long waiting lists. Administrators solved space problems by entering into new agreements with churches, community centers, and libraries to find classrooms. Weekend classes were instituted, and some sites in Los Angeles had ESL classes available in three-hour blocks nearly 24 hours a day.

Often the instructors who were recruited to teach new classes had no experience in adult education or in teaching English as a second language, leading to an increased need for staff development. The ESL Teacher Institute developed a series of four training sessions for new teachers, introducing them to the principles of competency-based adult education, lesson planning, and two specific ESL teaching techniques. Other staff development was provided directly through the Amnesty Education Office, which became a part of the new Migrant and Amnesty Education Division of the State Department of Education (Amnesty Education Office 1989).

Because of the time limitations of the program (30 months for the students to obtain 40 hours of instruction) and the necessary emphasis on history and government, there was an urgent need for a specialized curriculum. Commercial publications were not available until late 1989, but several large agencies in southern California, notably Hacienda La Puente Adult Education and the San Diego Community College District, developed their own curriculum, which they shared with other agencies at regional and state conferences. The ESL history and government materials developed by Hacienda La Puente, first written at the intermediate level (Collins et al. 1987) and later at the beginning level (Collins et al. 1988), were self-published. The materials were purchased by 213 California agencies and by 29 agencies from other states. In northern California the

San Francisco Bay Area Coalition for Immigrant and Refugee Rights and Services provided funds for similar curriculum development efforts (Miller 1991, 62–63).

Another urgent need of the amnesty program was for assessment instruments targeting competencies in history and government. As a part of the California SLIAG state plan, CASAS developed course objectives for different levels of instruction and a preenrollment appraisal test with reading, listening, and writing components. The appraisal instrument was used by local agencies for placement at the appropriate level and by the state for data collection (CASAS 1990, *Amnesty Education Report*; CASAS 1990, *Curriculum Guide and Index and Matrix for IRCA ESL Programs*; CASAS 1989, *Survey of Newly Legalized Persons in California*; CASAS 1992, *Three Years of Amnesty Education*; YAAES 1987).

By the 1991-92 school year, the crest of amnesty programs had passed; but a new population of adult students needing educational services had been introduced to the adult education system. The mean years of education for these students in their native countries was 5.6 years. Almost all were working full time in the United States. More than 50 percent of the newly legalized immigrants had never before used educational services in the United States. They had been required to attend only 40 hours of instruction, but almost all planned to attend classes in the future. Their goals were to continue improving their English, to train for a better job, or to obtain a GED or high school diploma (CASAS 1992, *Three Years of Amnesty Education*, 3–4).

repair class

Legislation and Finance in the Eighties

California's adult educators in the eighties continued to be politically proactive, attempting to regain the losses that followed the disastrous effects of Proposition 13 and succeeding legislation. Funds for adult schools were still based on revenue derived from 1977-78 expenditure rates; that is, annual growth in funds was zero or fixed at a low percentage, which the Legislature changed each year as it did cost-of-living adjustments (COLAs). Start-up of new programs was prohibited. In 1980 Assembly Bill 2196 added a new concern by including adult education on the list of programs to be "sunsetting" (that is, the applicable sections of the *Education Code* would become null and void) on June 30, 1982.

In 1982 the state legislation reauthorizing adult education added health and safety and home economics to the permissible areas of instruction. These two categories and the eight other areas of allowable

al though there were strong arguments on both sides about why adult education, or sections of it, should be exclusive to one segment or the other, the issue was not settled, and the status quo continued.

instruction—elementary and secondary basic skills, ESL, citizenship, substantially handicapped, apprenticeship, vocational education, older adults, and parent education—endured into the nineties.

Other legislation in 1982 implemented general, wide-ranging educational reform in California (SB 813). High school graduation requirements were strengthened statewide. Adult educators at the state and local levels also examined the adult high school diploma program, leading to new guidelines that encouraged appropriate instructional strategies for the mature learner (Adult Education Program Services Unit 1986; Adult Education Unit 1987, 31).

The struggle to delineate functions in the kindergarten-through-grade-twelve adult schools and the community colleges continued into the eighties, and governance issues were the subject of much legislative maneuvering. The shortage of funds of the post-Proposition 13 era had rekindled old rivalries.

In 1980 Assembly Bill 2020 established the Adult Education Policy Commission and charged it with “preparing policy recommendations on delineation of functions and review” (Behr 1981 [transmittal letter included with *Report*]). It became known as the Behr Commission, named after Chairperson Peter Behr. Although there were strong arguments on both sides about why adult education, or sections of it, should be exclusive to one segment or the other, the issue was not settled, and the status quo continued. Existing local agreements remained in force; in some communities the kindergarten-through-grade-twelve segment was responsible for adult education, and in other communities the community colleges were responsible.

The arguments for fiscal parity in the commission’s report did influence legislation. Assembly Bills 2196 and 1626 changed the provision of funds for community colleges by establishing a distinction between credit programs and noncredit programs (the ten authorized adult education areas). Noncredit programs were funded at a lower figure, more closely related to the funds provided for kindergarten-through-grade-twelve adult schools.

The issue of governance reemerged in 1984 when Senate Bill 1570 created the Commission for the Review of the Master Plan for Higher Education. In 1985 Senate Bill 2064 directed the commission to first study the community colleges. The noncredit and fee-based programs, including the issue of whether ESL should be considered a remedial course, were the subject of hours of testimony and negotiation. The commission’s final report recognized “the historical confusion” about which courses should be offered by each segment and the funding inequalities involved and recommended additional study. Local agreements on delineation of func-

tions were confirmed (Commission for the Review, 1986, 7–12). During this period most adult education classrooms were so crowded that arguments about which segment should be serving the needs of students became increasingly irrelevant.

As the eighties progressed, the demand for adult education continued to increase, fueled by such phenomena as the influx of refugees from Southeast Asia and other troubled areas of the world, the start-up of GAIN programs, and the huge number of amnesty applicants requiring English-language services. Districts that exceeded their spending caps were eligible for supplemental ESL or GAIN funds, which provided some necessary but unreliable relief.

In 1988 California voters, concerned about the quality of education and what was perceived as chaos in the funding of education in California, approved Proposition 98. That proposition mandated a priority for adequate funds for education and might be seen as a correction to Proposition 13. Proposition 98 contained provisions for the minimum funding of education, setting the amount at a percentage of the general fund, with 1986-87 as the base year, but gave no direction about how that money should be distributed among the segments of education (elementary, secondary, adult, and community college). Proposition 98 also stressed the accountability of the providers for the quality of programs (Dawson 1991, 3-11, 3-12).

Administration of Adult Education in the Eighties

During the late eighties several changes in the Department of Education affected the state leadership of adult education. In 1987, following the retirement of Xavier Del Buono and the untimely death of Donald A. McCune the year before, State Superintendent of Public Instruction Bill Honig appointed Gerald H. Kilbert as Assistant Superintendent of General Education, a position which included serving as Director of Adult Education. Claude G. Hansen, Manager of the Adult Education Program Services Unit under Donald McCune, continued in that position until 1988, when Raymond G. Eberhard was appointed administrator of the Adult Education Unit.

Other staff of the Adult Education Unit during the later seventies and the eighties included between four and eight consultants as well as support staff, with the majority of the positions funded by federal monies. The consultants provided assistance to local agencies within geographic regions, monitored local agencies through coordinated compliance reviews, and held statewide responsibilities in different program areas.

Raymond G. Eberhard

Concurrent Enrollment of high school students in adult education programs became more common.

In 1987 the Adult Education Unit became a part of the Youth, Adult, and Alternative Educational Services (YAAES) Division. All units in the division, many of which were alternative programs to meet the needs of high-risk youth, advocated competency-based programs. The *A* was officially dropped from CBAE as a descriptor of state adult programs in 1988 in favor of the more generic CBE acronym (Miller 1991, 50).

During the eighties concurrent enrollment of high school (and, in some cases, junior high school) students in adult education programs became more common. The major reasons for allowing concurrent enrollment, as it was originally envisioned and practiced, were to provide opportunities for makeup and remediation and to use it as part of a dropout prevention strategy (Stiles 1984). As the concurrent enrollment program evolved, students took classes that would not fit into their regular school schedules (supplemental) or were not offered in the regular high school curriculum (remedial or enrichment); or they took classes to gain employability skills (career) when such programs were not available in the regular program (Thornton 1987). Reimbursement to adult schools for serving concurrently enrolled students was at the regular kindergarten-through-grade-twelve revenue limit, and the concurrent program did not have a spending cap. Those revenue implications served as an incentive to districts to provide the service (Stiles 1984).

The Department of Education, as a part of its strategy of dropout prevention, encouraged local adult education programs to develop “courses of study that are based on sound district policy regarding enrollment and educational services for high school dropouts and high-risk youths” (Adult Education Unit 1987, 74). Examples of guidelines for such programs were as follows: (1) students had to be enrolled in their secondary school program for the minimum hours required to be a full-time student; (2) each program area (not class) had to generate 51 percent adult enrollment and a.d.a.; (3) courses had to be listed in the program handbook and be open to the general public; and (4) programs had to give priority to enrollment of adults (Thornton 1987).

As a part of the sunset review process, comprehensive reports on California’s adult education system were prepared for the Legislature in 1981 and 1987. The statistical sections (for 1979-80 and for 1985-86) show a streamlined program that was very limited compared to the program of the seventies before Proposition 13 was passed. In response to the large immigrant and refugee populations, English as a second language had become the largest adult school program, exploding from a rate of 27.4 percent of adult school attendance in 1980 to 37.6 percent in 1986. Holding steady, elementary and high school basic skills programs combined to make up 15 percent of the attendance. Short-term vocational programs with high employment potential were the next largest program

area, although the percentage of attendance slipped from 24.8 percent in 1980 to 16.65 percent in 1986. Programs for persons with substantial handicaps rated fourth in attendance at 20.5 percent in 1980 and 15.6 percent in 1986. Although a smaller program in size, parent education saw a slight growth in attendance during the period, from 3.9 percent to 4.2 percent, and programs for older adults expanded with the aging population, growing from 3.6 percent in attendance in 1980 to 9.5 percent in 1986. Apprenticeship programs and, later, health and safety and home economics programs were very small; each drew less than one percent in attendance (Del Buono 1981, Attachment A; Adult Education Unit 1987, 35).

Some sources of data included in the sunset review report to the Legislature, even though incomplete, give insight into the type of student served by the California adult education system during the eighties. California's federal adult basic education program data include ethnic group. The program areas included in the federal report were elementary basic skills and English as a second language, which together constituted over half the state's adult program. In the sample week of March 3–7, 1986, the data showed that Hispanics made up more than half of the enrollments (52.5 percent), with Asians the next largest group (32.4 percent), followed by Caucasians (11.3 percent), blacks (2.6 percent), and others (1.3 percent) (Adult Education Unit 1987, 40). Although the statistics demonstrated that Caucasians and blacks were underrepresented in the ABE program, the sunset review report concluded that the program was serving the "least educated, most-in-need population" by providing an opportunity for them to improve their educational levels, to learn basic and survival skills, to obtain employment, and to improve their quality of life (Ibid., viii).

In 1985 the U.S. Department of Education instituted a new policy of recognizing outstanding adult education and literacy programs by presenting the Secretary's Award to such programs in each of the ten federal regions. Three California programs were recipients of the awards—Sweetwater Union High School District for 1988, Baldwin Park Unified School District for 1990, and Merced Adult School for 1992.

Sunset Review and Strategic Planning

The adult education program was scheduled to "sunset" on June 30, 1989. As a part of the sunset review process, the State Department of Education studied adult education and submitted a report to the Legislature in March, 1988. The report was then reviewed by the Legislative Analyst's Office. A separate report was submitted in February by the Legislature's Sunset Review Advisory Committee IV.

Adult education was reauthorized for another four years, but the review process identified a number of problems with the delivery of California's

Hispanics made up more than half of the enrollments (52.5 percent), with Asians the next largest group (32.4 percent), followed by Caucasians (11.3 percent), blacks (2.6 percent), and others (1.3 percent).

The four goals that were identified for planning an adult education system to meet the needs of the future were as follows:

1. Improving access to users
2. Improving accountability
3. Improving program quality and responsiveness
4. Improving planning and coordination

adult education system and included a variety of recommendations to correct the problems. One problem was the inadequate provision of funds across the program, especially in parent education and vocational education programs and programs for persons with disabilities. Another was the lack of equitable access to programs throughout the state because of the historical cap on expenditures and the freeze on start-up of new adult education programs. Although the Department presented data on the effectiveness of the program, the Legislative Analyst found the data to be limited (Office of the Legislative Analyst 1988, 10–13).

As a result, in fall, 1988, State Superintendent Bill Honig appointed a 26-member Adult Education Advisory Committee and charged it with “assessing future needs for adult education, reviewing the performance of existing adult education programs, and proposing a long-term plan that ensures that all California adults have the opportunity to obtain the knowledge and skills that will be needed in coming decades” (Adult Education Advisory Committee 1989, *Adult Education for the 21st Century*, ii). Adult education in California had entered into a strategic planning process. The project was administered by the Adult Education Unit, and consulting services were provided by Pacific Management and Research Associates (PMRA).

The committee reviewed two background papers prepared for it: *Adult Education Needs for a Changing State: Discussion Paper on Long-term Adult Education and Training Needs in California* (Best 1992) and *The California Adult Education System: Background Paper on the Response of Adult Education Institutions to the Needs of Californians* (Stern 1989). The committee then established long-term planning goals and developed proposals to implement the goals. The goals and proposals were published in the committee’s report, *Adult Education for the 21st Century: Strategic Plan to Meet California’s Long-Term Adult Education Needs* (1989).

The four goals that were identified for planning an adult education system to meet the needs of the future were as follows:

1. Improving access to users
2. Improving accountability
3. Improving program quality and responsiveness
4. Improving planning and coordination

Fourteen proposals relating to the goals identified the components of a future adult education system (see accompanying box). The proposals were later developed into position papers and work plans by members of the Interim Steering Committee together with staff of the Adult Education Institute for Research and Planning (AEI).

Outline of Recommendations

IMPROVE ACCESS TO USERS:

- (1) Funding to Meet Today's Needs
- (2) Funding for Innovation and Performance
- (3) Community Adult Education Information Services
- (4) EduCard[™] (Adult Education Access Card)
- (5) Linkage of Support Services to Increase Access

IMPROVE ACCOUNTABILITY:

- (6) Procedures for Adjusting Instructional Priorities
- (7) Quality Standards and Performance Measures
- (8) Integrated Adult Education Data System

IMPROVE QUALITY AND RESPONSIVENESS:

- (9) Program and Staff Development Support
- (10) Teacher Certification Appropriate to Adult Education
- (11) Facilities for the Future
- (12) Special Grants to Test Program Innovations

IMPROVE PLANNING AND COORDINATION:

- (13) Collaborative Planning
- (14) Adult Education Research and Planning Institute

*Source: Adult Education Advisory Committee, *Adult Education for the 21st Century: Strategic Plan to Meet California's Long-Term Adult Education Needs* (1989 Edition). Sacramento: California Department of Education, 1989, p. viii.*

Adult Education Access Card

Another product of the Adult Education Advisory Committee was the *California State Plan for Adult Basic Education, July 1, 1989, to June 30, 1993*, which focused on ways to meet the needs of California's adults for literacy or basic skills and provided a legal basis for receiving federal allocations under the Adult Education Act, Public Law 100-297. The plan, which reiterated the goals and proposals described previously, recommended continued collaboration among California's 1,100 literacy service providers, an increased emphasis on networking and linking through

electronic technology the various consortia and providers, refinement of assessment services and procedures, increased funds for literacy education for incarcerated adults, continued support for ESL programs, and increased services for illiterate English-speaking adults (Adult Education Unit 1989, *Executive Summary*, 11–13).

California's adult education community approached the decade of the nineties with energy and with the steps for improving access, accountability, quality, and coordination clearly articulated in both the *Strategic Plan* and the *California State Plan for Adult Basic Education*.

Innovative Strategies to Improve Literacy in the Nineties

By the year 2000 every adult American will be literate and will possess the knowledge and skills necessary to compete in a global economy and exercise the rights and responsibilities of citizenship.

U.S. Department of Education,
America 2000: An Education Strategy

During the nineties adult education in California focused on the attack on illiteracy called for in *America 2000: An Education Strategy* (U.S. DOE 1991), the report on the national education goals. Integral to reaching the goals was the implementation of the strategic and state plans for adult education. Reform legislation addressed inequities in adult school finance and provided for new programs in unserved areas. Innovative strategies emerged for using contextualized approaches to education for adults with literacy problems. An increased focus on family literacy programs was designed to break the cycle of intergenerational illiteracy by educating parents and children together. The rising use of the Internet made possible the wider use of technology for professional networking, for dissemination of information about best practices, and for instructional applications.

Toward a Literate Citizenry

The attack on adult illiteracy continued to be a state and federal priority in the nineties. In early 1990 State Superintendent of Public Instruction Bill Honig released the report of the California Education

CALIFORNIA
EDUCATION

Summit. Background papers for the summit restated the statewide gap between the skills and knowledge requirements of the future and the educational attainment of adults in California: “Estimates indicate that shifts in the distribution of ethnic-racial groups could cause the proportion of the California population over age fourteen who have literacy deficiencies to increase from an estimated 15.1 percent in 1987 to 18.6 percent in 2020” (California Education Summit 1990, 25).

The summit report established a goal of decreasing the extent of adult illiteracy by 5 percent per year for each of the next ten years, or reducing the adult illiteracy rate by 50 percent by the year 2000. To accomplish the goal, the report called on the state’s education leadership and the Legislature to “forge a bold partnership among key providers and those who need literacy skills to meet future challenges,” “provide adequate resources to reduce adult illiteracy,” “expand and enhance literacy programs,” and “expand the teaching force and enhance staff development” (Ibid., 25–26).

The adult education section of the summit report, *Meeting the Challenge—The Schools Respond*, called for federal recognition of the adult literacy crisis (p. 26). On April 18, 1991, President George H. Bush did just that when he released *America 2000: An Education Strategy*, a plan to move every community in America toward national education goals. Goal 5, adult literacy and lifelong learning, states that “by the year 2000, every adult American will be literate and will possess the knowledge and skills necessary to compete in a global economy and exercise the rights and responsibilities of citizenship” (U.S. DOE 1991, 64).

One study resulting from the federal America 2000 effort was particularly influential on the development of adult education in the nineties. The Secretary’s Commission on Achieving Necessary Skills (SCANS) studied changes in the world of work and the implications of those changes for learning. The research showed that workers needed different competencies than those that ordinarily were taught in high schools or adult education and that schools must develop new standards for preparing learners for the workplace. The SCANS report defined and detailed five competency areas and a three-part foundation of skills and personal qualities that lie at the heart of job performance. The five competency areas were resources, interpersonal, information, systems, and technology. The three-part foundation encompassed basic skills (reading, writing, mathematics, listening, speaking), thinking skills (creative thinking, decision making, problem solving, visualizing, knowing how to learn, reasoning), and personal qualities (responsibility, self-esteem, sociability, self-management, integrity, honesty) (SCANS 1991).

The National Adult Literacy Survey, a nationwide study of adult literacy, was conducted by the Educational Testing Service and released in 1993. The survey revealed the continuing challenges faced by educators as

citizens live and work in a society that grows more technological every day. More than 26,000 persons sixteen years and older were assessed on tasks related to reading prose and technical and quantitative information at five levels of complexity. Approximately half the adults tested scored in the two lowest categories, demonstrating low levels of literacy that would limit their use of print to learn, achieve goals, and function in society. As might be predicted, those with the lowest literacy levels were disproportionately more likely to be immigrants, have fewer years of education, have a disabling condition, be older adults, or be incarcerated.

In California, adult education in the early nineties focused on implementing the strategic and state plans.

Implementation of the Strategic Plan

The Adult Education Institute for Research and Planning was the federally funded state project responsible for implementing the research and planning portions of California's strategic and state plans for adult education in the early nineties. The Adult Education Interim Steering Committee, a policy development group, developed the 14 proposals outlined in the strategic plan into position papers and work plans.

Three major initiatives were pursued in the first part of the decade. One was the development of Learning Networks, which included planning for a statewide adult education data system and piloting the use of a learner access card. Another strategic plan initiative was the development of model program standards and program implementation documents for all major program areas. A third involved California's workplace learning initiative.

The Learning Networks initiative combined collaborative partnerships with the innovative use of information technology to make learning opportunities more accessible to adults. The partnerships involved the stakeholders providing adult education in California, including adult schools, community colleges, regional occupational programs/centers, job-training programs (e.g., through the Job Training Partnership Act and the Employment Training Panel), community-based organizations, libraries, volunteer literacy programs, and social service agencies. The learning network concept had four components: collaborative planning, a community information service, the learner access card, and an integrated data system.

The first component, implemented in the early nineties, was the collaborative planning process conducted by local consortia composed of instructional providers, public agencies, businesses, and learners. Local planning consortia, with representation from the multiple stakeholders,

held meetings in nine areas (Baldwin Park, Cerritos, Merced, Napa, National City, Plumas County, Riverside, Sacramento, and Santa Clara). A statewide coordinating group guided the research and development. These stakeholder collaboratives and the sharing and trust building that they modeled became a useful precursor to the one-stop information centers and local workforce boards of the early twenty-first century.

The second component was the community information service. The one-stop computerized information centers were intended to allow learners, businesses, and public agencies to have easy access to comprehensive, objective, and comparable information about all instructional programs. One key component was a user-friendly query system designed to provide information on educational and training services and the time, place, requirements, and modes of instruction (television, lectures, tutorials, and others). Building easily accessible electronic directories of education, training, and support services by using common data definitions and formats remains a challenge in many communities.

The learner access card, designed like a credit card with an embedded microprocessor (smart card), was the third component. The card was to contain electronic transcripts in a common format to store educational records, goals, and assessment scores. The cards were intended to assist learners to move easily among programs and be a symbol of learning opportunity. The learner access card was first used on March 5, 1992, in a pilot program at Merced Adult School. The pilot test revealed that the smart card and card-embossing technologies were not advanced enough, and the project proved too expensive in the nineties.

The fourth learning network component, the integrated data system, was envisioned as a tool to support community planning and coordination by storing data and transferring information through telecommunications. The plan called for the community system to be linked to a statewide electronic network for sharing data. The integrated data system was still an unrealized vision at the turn of the century.

The second major strategic plan initiative was the development of model program standards. Model program standards for English-as-a-second-language (ESL) adult programs had been under development for several years, and the document *English-as-a-Second-Language Model Standards for Adult Education Programs* was published in 1992. Task forces were convened to develop program standards for elementary adult basic skills, secondary adult basic skills, parent education programs, and programs for older adults and adults with disabilities. The task forces included field experts from adult schools and community colleges and staff from both the California Department of

Students in ESL class

Education and the Chancellor's Office of the California Community Colleges.

After publication of the *Model Program Standards for Adult Basic Education* and *Model Program Standards for Adult Secondary Education* (Adult Education Unit 1996a, 1996b), work on model standards for parent education, for older adults, and for adults with disabilities was suspended for several years. However, through a contract with WestEd, beginning in 2000, field committees resumed work on crafting model standards in five areas: English as a second language, adult basic education, adult secondary education, parent education, and older adults. Earlier versions needed to be updated and expanded to include performance indicators.

In the third strategic plan initiative (workplace learning), the California Department of Education and the Chancellor's Office of the California Community Colleges jointly developed four documents: (1) *Workplace Learning: Background Paper for California's Workplace Learning Plan*, a review of workplace learning literature, research, and program experiences throughout the United States; (2) *California's State Plan for Workplace Learning*, 13 interrelated recommendations; (3) *Implementation and Outreach Plan for Workplace Learning*, ways for providers and employers to overcome the barriers to developing workplace learning programs; and (4) *Workplace Learning Provider's Manual: Practical Steps for Developing Programs*, step-by-step procedures for workplace learning providers to use as guidance in developing workplace learning programs. The advisory group of the initiative included representatives from adult schools, community colleges, service providers, labor unions, public television, community-based organizations, and businesses.

Federal Iy Funded State Projects in the Early Nineties

In the early nineties the California Department of Education used a portion of its federal supplemental funds to support statewide projects on technology development, communication systems, student assessment, and program evaluation. Collaborative programs with professional associations provided staff development for teachers and administrators.

The *Outreach and Technical Assistance Network* (OTAN), with Hacienda La Puente Unified School District as contractor and John Fleischman as director, was designed to provide technical assistance, staff training, and information for adult education providers. An important part of OTAN was the field-based direction of staff development through regional resource centers, strategically located in adult education agencies around the state. The number of resource centers varied from five to 11 during the four-year funding cycle. Agencies serving as centers were Baldwin Park Adult School, Grant Joint Union High School District,

Hayward Adult School, Merced Adult School, Metropolitan Adult Education Center, Mid-City Adult Learning Center (Los Angeles Unified School District), Rancho Santiago Community College, Riverside Adult School, Sacramento City Unified School District, Sweetwater Union High School District, Ventura Adult School, and Watsonville Adult School.

The OTAN training component involved brokerage of staff development sessions through OTAN's regional resource centers, through training institutes, and by satellite. The staff development topics most frequently sponsored through regional resource centers included assessment, ESL and literacy teaching techniques, learning styles, implementation of technology, and workplace literacy. Serial institutes of two to four training sessions were sponsored by the ESL Teacher Institute or Adult Literacy Instructors' Training Institute. In a distance-learning initiative transmitted by satellite, OTAN collaborated with the Educational Telecommunications Network to organize the Adult Learning Channel for the delivery of adult basic education and ESL teacher training. Thirty downlink sites around the state received the telecasts.

OTAN's network component met the communication needs of California's adult educators by providing a statewide electronic mail system for adult educators and by supporting an electronic forum for the exchange of information. The "accessing information" component of OTAN maintained a national network of information sources to make the latest research and innovations in adult education practice available electronically. Other activities included facilitating the development of libraries in OTAN's regional resource centers to serve adult educators, developing the California Adult Education Archives (a historical collection useful to practitioners, researchers, and policymakers), collecting vocational ESL and workplace materials developed with public funds and making them available to educators, and providing an educational technology library for the dissemination of information on new and emerging technology and learning resources.

The *Comprehensive Adult Student Assessment System* (CASAS) began in 1980 as a consortium of California adult education agencies supported by federal funds under the Adult Education Act. Its goal was to provide appropriate assessment tools relevant to the life-skills needs of adults in a multicultural society. By the nineties CASAS, still led by Patricia Rickard, had evolved into a nonprofit organization under the auspices of the Foundation for Educational Achievement. CASAS provided learner-centered assessment, curriculum management, and evaluation systems to many public and private education and training programs around the country and housed a data bank of more than two million adult learners. In the early nineties the CASAS system was used by more than 1,000 agencies in 49 states.

ESL
TEACHER
INSTITUTE

CASAS continued to play several important roles in California. CASAS assessment instruments were used to monitor student progress and develop a demographic database of students in the agencies receiving federal grants for instructional services in adult basic education. Specialized assessment instruments developed by CASAS were also used for placing students, measuring their progress, showing accountability, and collecting demographic information in programs related to the Immigration Reform and Control Act (amnesty recipients), Greater Avenues for Independence (welfare recipients), and the Job Training Partnership Act (job trainees) (CASAS 1992, *Overview*).

The *Adult Literacy Instructors' Training Institute* (ALIT) was formed to improve the quantity and quality of services for English-speaking adults. The purpose of ALIT was to train literacy instructors and coordinators so that they could better address the needs of native English-speaking students studying basic education subjects. The objectives of ALIT were to select and certify a cadre of teacher trainers, develop a process for training trainers for certification, design and conduct state-wide and regional workshops for literacy instructors, and write materials to be used in training literacy instructors and coordinators.

The *ESL Teacher Institute* continued into the nineties with the Association of California School Administrators as contractor. The institute focused on developing new training products, maintaining and expanding the cadre of regional institute trainers, and establishing an ESL mentor-teacher training system. Techniques of cooperative learning were emphasized in developing trainers and new training products. Through a contract with Longman Publishing Group, the ESL Teacher Institute's field-tested modules were published commercially as *Teacher Training Through Video*.

The California Department of Education collaborated with the California Council of Adult Education (CCAIE) and the Association of California School Administrators (ACSA) to sponsor two programs to enhance the leadership skills of adult education administrators. The *Adult Leadership Training Program* each year selected 25 applicants, typically new or aspiring adult education administrators, to begin the three-year program. For the first two years, the participants attended annual summer institutes and half-day sessions associated with three major state conferences: ACSA, CCAIE, and CBE (competency-based education). The curriculum included management styles, strategic planning, group processes, communication, funds for adult education, legislative process, program standards, staff development, history of adult education, and current trends and issues. Third-year participants developed an independent project.

The *Executive Development Program* (EDP) was designed for chief administrators of adult education programs with at least five years' experience. Workshops were held on "futuring," paradigm shift, and strategic planning. The Professional Resource Outreach System, an outgrowth of EDP, was a network of peer administrators sharing their expertise.

The *Evaluation and Training Institute* conducted written surveys, on-site visits, and telephone interviews; analyzed the data; and provided annual formative and summative evaluations to the Adult Education Unit, including conclusions and recommendations that had significant effects on the development of the other federally funded projects.

Adult Education Reform Legislation of 1992

The 1991-92 California legislative session saw the passage of the most significant package of adult education reform legislation since funding formulas for adult education were designed in the fifties. The Adult Education Unit convened a blue-ribbon committee to study a number of issues and to recommend legislative solutions. The issues were (1) the inequitable range (approximately \$1,500 to \$3,000 per unit of average daily attendance [a.d.a.]) of adult education apportionment among districts; (2) the freeze on the start-up of new adult education programs and a corresponding need for new programs; (3) the challenge to implement innovative and alternative delivery systems as set forth in the strategic plan; (4) the need to respond to perceived abuses in the implementation of the concurrent enrollment program; and (5) the need to protect funds for adult education in a recession economy.

The committee drafted legislation, and a sponsor was found to carry the bill in the 1990-91 session. Concurrently, CCAE and ACSA sponsored other forms of adult education reform legislation. At the insistence of the chairs of both the Assembly and the Senate Education Committees, and after much negotiation, the three bills were amended and ultimately cojoined (passage of each was linked to passage of the other two). The Department of Education, the professional associations, and the major adult education programs forged a strong coalition, which saw that the bills were passed and were signed by the Governor in 1992 (AB 1321 [Wright], Ch. 1193, Stats. 1992; AB 1891 [Woodruff], Ch. 1195, Stats. 1992; AB 1943 [Lee], Ch. 1196, Stats. 1992). Most provisions became effective on July 1, 1993.

Several provisions of the bills addressed issues related to concurrently enrolled high school students. High school students may no longer be enrolled in adult education courses for older adults, adults with disabilities, and apprentices or in adult education programs in health and safety and home economics. Before a student's initial enrollment in an

Start-up of new programs was another important issue addressed by the new legislation.

adult education course, the student's school record must include written documentation of a counseling session attended by the pupil, a certificated representative of the high school, and the pupil's parent or guardian. The student's record must also include a statement that the enrollment is voluntary to "enhance the pupil's progress toward meeting the educational requirements for graduation from high school" (AB 1321 Wright). All adult education courses must be listed in the district's catalog of adult education classes provided to the public and be under the supervision and jurisdiction of the adult education administrator. Adults must have priority over other students for admission to any adult education class before the publicized enrollment period. No course required for high school graduation or necessary to maintain satisfactory academic progress may be offered exclusively through the adult education program, and all enrollments must be for sound educational purposes. All teachers of adult education classes must be a part of the adult school faculty and under the direct supervision of the adult education director. School districts are prohibited from claiming apportionment for high school pupils enrolled in adult education courses in physical education, driver's training and education, music, band, drama, preparation of a school yearbook or newspaper, summer camps for athletics, cheerleading, student government, or extracurricular student clubs.

Start-up of new programs was another important issue addressed by the new legislation. Union high school or unified school districts that had not operated or received funds for an adult education program in the preceding year and that entered into a delineation of functions agreement with the community college could now apply to the Department of Education for approval to start a new adult education program. These new programs were required to give priority to elementary and secondary basic skills, ESL, and citizenship programs. Assembly Bill 1891 set aside \$4.25 million in 1993-94 and an additional \$4.25 million in 1994-95 for the start-up of new programs. Approximately 160 new programs were added to the more than 220 existing kindergarten-through-grade-twelve adult school programs. In 1993 California had a total of 405 unified or high school districts; nearly all supported adult schools.

Provisions of the new bills also addressed distribution of funds for adult education in a move toward equalizing revenue limits among adult schools. Beginning in 1993-94 a new revenue limit on adult education would be calculated for every school district; the new limits would be an average weighted by the respective a.d.a. of the district's current adult revenue limit, the district revenue limit, the independent study revenue limit, and the revenue limit for supplemental adult a.d.a. The new adult revenue limits would be either increased over two years to a floor of \$1,775 per unit of a.d.a. or decreased over three years to a ceiling of \$2,050 per unit of a.d.a. No allowance for growth would be provided until 1995-96, and

no cost-of-living adjustment would be given until 1996-97. The new cost-of-living adjustment would be distributed on a sliding scale, with low-revenue-limit districts receiving the larger percentage increase. At the same time a cap on the a.d.a. of concurrently enrolled students would be set at no more than 10 percent of the district's a.d.a. of students in grades nine through twelve. To help districts that exceeded this figure, the excess a.d.a. would be reduced an equal amount over three years.

The bills were revenue-neutral because no additional General Fund cost was generated and only existing sources of adult education funds would be used to fund the new revenue limits and the new programs. If those funds were found to be insufficient, the funding of equalization would be "deficited" (reduced by the percentage of the shortfall), and, conversely, any excess funds would be distributed to districts for expansion of existing adult education programs. The provisions regarding percentages of direct and indirect expenditures that school districts were able to charge against the Adult Education Fund proved to be controversial and had to be revised in legislation the following year.

The legislation also addressed innovative and alternative delivery systems. Adult independent study became a part of the adult education program commencing in January 1993. The a.d.a. divisor was 525, and districts were prohibited from claiming district apportionment for independent study for adults beyond the adult education revenue limit. Districts were encouraged to apply for permission to use up to 5 percent of the adult education entitlement for "adult education innovation and alternative instructional delivery" (AB 1943 Lee).

Program and Finance Issues of the Late Nineties

Although the state reform legislation addressed many inequities and created a fiscal framework for providing adult education services in California into the twenty-first century, related program and finance issues continued to be a challenge.

Concerns on the part of the Department of Education, the State Controller's Office, and the Department of Finance regarding an apparently high ratio of concurrently enrolled high school students and a possible violation of attendance accounting rules by up to 63 adult schools led to years of negotiation beginning in 1994. In 1997 the State Controller's Office performed recalculation audits at 25 schools for the 1990-91 and 1991-92 school years (Price 2002). The concurrent audit issues continued to affect legislative resolution of adult education funding issues into the twenty-first century.

One of the provisions of the reform legislation of 1992 was that the Department of Education would report to the Governor and the Legislature

on the “implementation of the adult education program and the fiscal aspects of the adult education program for the period of July 1, 1993, to June 30, 1995” (AB 1943 Lee). The *Special Report to the Legislature on Adult Education Reforms* concluded that “the intent of the reform legislation has been realized. As a result of the new laws, massive changes in the financing and operation of adult education programs have occurred since 1991-92” (Adult Education Policy and Planning Unit 1996, ii). Some of the changes reported were a 62 percent decline in high school concurrent enrollment; a reduction in a.d.a. claimed by kindergarten-through-grade-twelve programs serving adult-aged students through independent study; progress on equalization of adult education base revenue limits without severe disruption of the program; the start-up of new adult schools in previously unserved areas; and an innovative and alternative delivery program with considerable potential (Adult Education Policy and Planning Unit 1996).

In the *Special Report* the Adult Education Policy and Planning Unit recommended that adult education be removed from the status of a categorical program under the provisions of statutory “sunset” laws (p. vi). This suggestion was realized in legislation in 1996 (AB 2255 Cuneen) that removed the sunset on adult education programs, but the bill also required the Department of Education to review periodically the effectiveness of the adult education program, beginning in 2002 (“Sunset on Adult Education Programs Gone” 1996, 3).

The new adult schools struggled to be viable programs within the limitations of their a.d.a. allotment. They started at 15 units of a.d.a., and the plan was to increase their a.d.a. every year as funding permitted (Belomy interview 2001, 22-23). In the *Special Report* the Adult Education Policy and Planning Unit recommended a minimum of 50 units of a.d.a. (Adult Education Policy and Planning Unit 1996, p. vi). However, by the 2001-02 school year, the smallest schools were still at only 36 units of a.d.a. (Adult Education Office 2001a). (See details in Table 1.)

Small schools, especially those below the size (100 a.d.a.) for which a half-time administrator is required (5 CCR 10560 [c]), typically have high staff turnover and difficulty in developing quality programs. The California Staff Development Institute sponsored a Small-Schools Initiative during the four years from 1996 to 2000. During the first two years, representatives of small-school programs identified problem areas and needs. For example, small-school administrators wanted to learn how to assess local needs and offer quality programs that would be successful. In 1998-99, of the 157 new adult schools, 74 percent (116) failed to reach the cap on their a.d.a. allocation of 33. These schools were typically small, rural, and geographically isolated.

Table 1

Size of California Public Adult Schools, by 2001-02 a.d.a.

<i>A.d.a. (Size range)</i>	<i>Administrative requirement</i>	<i>Number of schools</i>
32–37	1 day per year per unit of a.d.a.	143
38–99	1 day per year per unit of a.d.a.	40
100–199	1/2 FTE	32
200–299	1 FTE	22
300–999	See formula in 5 CCR 10560(c)	56
1,000–2,999	See formula in 5 CCR 10560(c)	44
3,000–7,136	See formula in 5 CCR 10560(c)	16
	Total adult schools	353
65,410	See formula in 5 CCR 10560(c) (Los Angeles Unified School District)	1

During the third year networks of small schools were identified in the five regions with the largest number of low-performing small schools: Central Valley, Imperial Valley, Inland Empire, North Coast, and Northern California East. State consultants and field colleagues provided targeted technical assistance to administrators of small schools who attended regional meetings and professional conferences (Ehlers 1999). Five county offices of education piloted a creative solution to the administrative problems of small schools by operating adult education programs on behalf of all or some of the districts maintaining a secondary education program. Participating counties were Colusa, Glenn, Inyo, Mono, and Sutter (Ehlers 2000).

The “squeeze and freeze” legislation, as the reform bills were nicknamed, was successful for about eight years in nearly equalizing to approximately \$2,196 the revenue limit by which adult schools were reimbursed for a.d.a. (Belomy interview 2001, 22–23; Adult Education Office 2001a). An inequity that remained past the end of the decade was the effect of the limited growth cap both on the new adult schools and on other small schools that experienced large population growth during the eighties and nineties. Primarily because of population shifts in the state, some programs did not “make their cap” while others were “over cap” or had serious unmet needs. Several times during the late nineties and into the twenty-first century, the Department of Education petitioned the Legislature for one-time redistributions of unused cap funds to the “over cap” schools. The Department also collaborated with professional organizations to propose long-term legislative solutions for the inequities resulting from the growth cap system.

Several issues related to teacher employment continued to affect adult education negatively in the late nineties and into the twenty-first century. Personnel figures provided by the California Basic Educational Data System indicated that 16,500 to 18,500 teachers were employed in adult education in the nineties, of which approximately 85 percent were part time (Adult Education Office 2000). Some part-time adult education teachers also worked a full-time job in kindergarten-through-grade-twelve education or in the private sector. Other part-time teachers combined assignments at several neighboring schools and were known as “freeway flyers” because they traveled from one school to the next. Teachers working part time in several agencies had problems combining their service credits in the State Teachers Retirement System; they typically had reduced or no health and vacation benefits. Anecdotal information indicated that annual turnover of both teaching and administrative staffs in adult education was about 30 percent. Working with a part-time, frequently changing staff presented adult schools with serious concerns in meeting professional development needs and, ultimately, in maintaining professionalism and program quality.

During the nineties the California Commission on Teacher Credentialing made changes in the requirements of the designated subjects adult education credential. In 1993 standards of program quality and effectiveness were adopted and two levels of professional preparation identified, including a course on the use of computers in an instructional setting (Commission on Teacher Credentialing 1993). In 1996 a two-level adult education teaching credential was implemented. Individuals who met the academic or the experience requirements or both for categories of the designated subjects adult education credential applied for a preliminary credential through an employing school district or through a local educational agency (LEA). The preliminary credential authorized up to five years of teaching while satisfying the requirements of the professional clear credential. During the first two years that teachers held preliminary adult education credentials, they were required to complete at least the level I requirements and to acquire verified teaching experience in an adult education setting (Commission on Teacher Credentialing 2001).

Twenty-two LEAs (five California State Universities, three Universities of California, eleven county offices of education, two school districts, and one adult school) had programs approved to satisfy the requirements of the designated subjects adult education credential. After the new credential standards were adopted and professional development requirements were implemented during the first years of teaching, trainers working in professional preparation programs noticed an improvement in the retention of new teachers in adult education (Clark interview 2002; Price interview 2002).

Federal Adult Education Reform Legislation

In the 1990s states administered their adult education programs under the requirements of the Elementary and Secondary Education Act (ESEA), first signed into law in 1966. The goals for adult education in early 1990 remained essentially the same as the initial goals: (1) to enable adult learners to acquire basic education skills necessary for functional literacy to meet their responsibilities in the family and community; (2) to provide adults with sufficient basic education to enable them to benefit from job-training and retraining programs; and (3) to enable adults to continue their education to the completion of the secondary school level at least. Because the authorizing federal adult education legislation was part of ESEA, the state educational agencies responsible for the vast array of state-administered elementary and secondary programs also served in most states as the *sole state agency* responsible for the administration and supervision of the adult education program.

In 1998, however, President William J. Clinton signed Public Law 105-220, the Workforce Investment Act (WIA). Section 251(a)(1) of WIA *repealed* the Adult Education Act and replaced it with the Adult Education and Family Literacy Act. The new authority for adult education contained in WIA legislation made clear the congressional message: the adult education system needed strengthening to meet the job-training demands under the newly created workforce investment system. While retaining the commitment to the broad purposes of educating adults to function better in the family, in the community, and at work, Congress envisioned that adult education providers—local educational agencies, community colleges, community-based organizations, libraries, churches, and other nonprofit organizations—would be more actively involved in the development of a state job-training system. Ultimately, the goal of WIA is to help remove the barriers of low literacy skills from people who are seeking training and employment.

The federal legislation brought a series of reform efforts, most notably a shift in accountability. It established the National Reporting System to assess the effectiveness of eligible agencies in achieving continual improvement of adult education and literacy activities supported with federal funding. The system consisted of specific core indicators of effective performance, and states began to report their successes annually to the U.S. Department of Education. The core indicators were as follows: (1) demonstrated improvements in reading, writing and speaking English, numeracy, problem solving, and English-language acquisition; (2) placement in, retention in, or completion of postsecondary education, training, unsubsidized employment, or career advancement; and (3) receipt of a secondary school diploma or its recognized equivalent. The data that states

submitted to the U.S. Department of Education became a part of a national report given to Congress.

The Workforce Investment Act required states to make a significant shift in the distribution of their federal funds. In the early 1990s states dedicated at least 15 percent of their entitlement to special experimental demonstration and teacher-training projects. During this era the California Department of Education used well over 20 percent of its resources to develop and maintain an infrastructure that carried adult education into the twenty-first century. Under WIA, however, California was subject to a maximum expenditure of 12.5 percent for state leadership programs (discussed later) and the minimum of 82.5 percent for grants and contracts to local providers. The early investment in leadership infrastructure provided the basis for implementing the provisions of WIA, including those of the National Reporting System.

Federally Funded Projects in the Later Nineties

The oldest of California's federally funded adult education leadership projects, CASAS, continued through the turn of the century its essential role of providing "learner centered curriculum management, assessment, and evaluation systems to education and training programs" (CASAS 1997, "Mission Statement"). The CASAS assessment systems continued to be used in life-skills, correctional, welfare-to-work, special education, and secondary education programs. The project responded to the needs of the nineties with several new initiatives. From 1992 to 1998 CASAS was a part of the Immigration and Naturalization Service citizenship testing program. Through centers located in as many as 224 public and nonprofit agencies, CASAS administered its *Basic Citizenship Skills Examination* to thousands of immigrants who wanted to become citizens (CASAS 1997, 1998). It developed a workforce learning system to help companies design and implement basic-skills training programs and assess the results. The project incorporated technology in its systems by implementing Teaching of Programs and Students (TOPSpro), a computerized database to automate CASAS scoring, collect student demographic data, and track student progress. In addition, the *Instructional Materials Guide* was converted from an annually updated print reference tool to a searchable database.

The California Department of Education moved the largest federally funded leadership project, the Outreach and Technical Assistance Network (OTAN), to the Sacramento County Office of Education in 1994. The mission of OTAN at the county office (1994–2005) was to provide electronic collaboration, access to information, and technical assistance for literacy and adult education providers. Most of the professional development functions that OTAN had performed in the early nineties became the

responsibility of a new project, the California Staff Development Institute, also housed at the county office.

The *Staff Development Institute* (SDI) consolidated staff development projects that previously were funded separately: the ESL Teacher Institute, the Adult Literacy Instructors' Training Institute, the Adult Education Leadership Training Program, and the Professional Resources Outreach System. The primary goals of SDI were providing professional development for implementing the model standards for adult education, offering models for the use of technology, targeting change agents for training, and establishing mentoring systems.

The institute facilitated hundreds of professional development activities for thousands of adult education instructors and administrators from 1994 to 2000. It utilized new technologies for distance learning and multimedia learning for delivering staff development training and developed online modules on topics such as family literacy, instructional software evaluation, and classroom use of SCANS competencies. The Adult Education Leadership Institute evolved and expanded under SDI. A process for identifying exemplary adult programs was established, and 34 Programs of Excellence were recognized in 1997-98, 1998-99, and 1999-2000 (SDI 1998, 1999, and 2000).

California also used its federal leadership dollars in the mid to late nineties to fund several specialized statewide projects. Two of the projects developed products designed to help adult education teachers meet the special needs of ethnic/racial groups that were heavily represented in the population lacking literacy skills. The Center for Applied Cultural Studies and Educational Achievement Adult Education Project produced *Seizing the Power of Experience: Utilizing Culture in the Achievement of Educational Excellence for African American Adults*. It was a manual of professional development materials "to provide educators of African American adult learners with a broad knowledge base of the culture, history, and language of African American people, and a set of research-based principles and strategies to utilize in the development of culturally consistent curriculum and teaching" (Mann, Buford, and Dent-Bryan 1996, preface). The manual contained two components: information on the history, culture, and language of African Americans and case studies of effective teaching in classes consisting primarily of African American adult learners. The materials were field-tested through a related project named Project AWARE.

The Latino Adult Education Services Project developed and field-tested 30 resource modules for teachers of immigrants and native-born educationally disadvantaged adults. Its goal was to assist "adult educators to empower adult learners and provide them with the tools they need to better manage their lives—personally, socially and economically" (LAES 1998, introduction). The title of the curriculum was *Tierra de oportunidad* (*Land*

of Opportunity). The modules addressed how adults function at work, as family members, as community members, and as lifelong learners. Each module included a list of SCANS competencies to be emphasized, teaching points, sample learning activities, resources, and a sample lesson plan.

The Adult English-as-a-Second-Language Assessment Project was funded for three years, ending in 1995, at the University of California, Los Angeles, Center for the Study of Evaluation. The goal of the project was to identify various placement instruments for adult education agencies to use in implementing the *English-as-a-Second-Language Model Standards for Adult Education Programs* (Adult Education Unit 1992). Two commercial tests were eventually recommended for inclusion in the proposed menu: the *Basic English Skills Test* and the *New York State Place Test*. A test development plan was created in the third year to address the need for additional tests (Kahn et al. 1995, 1–3).

Founded in 1995, the California Distance Learning Project (CDLP) was the state leadership project charged with implementing an infrastructure to deliver distance-based adult learning authorized under the adult education reform legislation. The project's goals were to develop a distance-learning knowledge base, provide technical assistance to agencies conducting distance learning, foster product development through partnerships, and establish a statewide technology infrastructure (Porter 1995). Later, CDLP pursued the goal "to help expand learner access to adult education services in California" (Porter 1998a, 1). The tasks were to build and promote a distance-learning knowledge base, provide technical assistance in implementing distance learning, test new instructional delivery methods, and help create a statewide distance-learning infrastructure (Ibid.). Programs that encouraged adult schools to use innovative and alternative instructional delivery were known as 5 percent projects. The "5 percent" referred to the amount of adult a.d.a. that could be allocated to innovative instructional programs for adults, such as distance learning. In addition, CDLP created a Web home page and distance-learning instruction, identified distance-learning models, and distributed products.

The National Literacy Act of 1991 authorized federal funding for state literacy resource centers (SLRCs), and these centers were established in many states. Because California has a multiple-provider system for adult literacy, the State Collaborative Literacy Council represented the California Department of Education, the Chancellor's Office of the California Community Colleges, the State Library, the California Conservation Corps, the Employment Development Department, the Governor's Office of Child Development and Education, and California Literacy, Inc.

During fiscal years 1994-95 and 1995-96, California used a part of its federal funds for a California SLRC office at the Sacramento County

Office of Education. The California SLRC coordinated the California regional resource centers during its two years of operation. The centers were known as regional literacy resource centers. Through SLRC funding, depository libraries at these regional resource centers were enriched with collections of family literacy and workplace literacy materials. After closure of the California SLRC office at the Sacramento County Office of Education, the Staff Development Institute coordinated the activities of the regional resource centers.

The National Institute for Literacy was also created by the National Literacy Act of 1991 and was reauthorized by the Workforce Investment Act of 1998. An interagency group consisting of the Secretaries of Education, Labor, and Health and Human Services governs the institute, which has a nonpartisan ten-member advisory board. The institute facilitated activities to develop national, regional, and state literacy services. In 1994 the institute developed a pilot site for literacy on the Internet named LINCS (Literacy Information and Communication System). In 1995 the institute funded three LINCS regional hubs, including the Western/Pacific LINCS; OTAN and the California State Literacy Resource Center collaborated as the lead site. The other sites were in the Midwest and the South; in 1996 a site was established in the East (NIFL 2001a).

A significant LINCS initiative of the late nineties was the development of special collections of literacy materials for use in adult education and literacy programs. California agencies were responsible for developing several collections: California Literacy, Inc., developed a collection for English as a second language; Western/Pacific LINCS developed one for science and numeracy; and the Sacramento County Office of Education developed one for technology training. Other collections in the LINCS system were assessment, correctional education, family literacy, health and literacy, literacy and learning disabilities, policy and legislation, and workforce education (NIFL 2001b).

State literacy resource centers were no longer specifically included in the federal budget after fiscal year 1996, and their fate varied from state to state. In California the State Collaborative Literacy Council, with the California State Library as the lead agency, continued to sponsor some services of the SLRC, and California continued to host the western hub.

The Effect of Welfare Reform on Adult Education

Welfare reform was accomplished at the federal level in the Personal Responsibility and Work Opportunity Reconciliation Act (PRWORA) of 1996. The Temporary Assistance for Needy Families (TANF) program

replaced the Aid to Families with Dependent Children program. Adults receiving cash assistance through TANF had an 18- to 24-month limit on aid, during which time they had to engage in a set number of hours of work or work-related activity. Work-related activity could include education. There was also a five-year lifetime limit on aid.

Another significant feature of the law was a severe limit on legal immigrants' access to public benefits, including TANF, food stamps, Supplemental Security Income (SSI), and Medicaid. This restriction was controversial, and legislative action in 1997 restored limited SSI and food stamp benefits for some populations in residence prior to 1996. Other benefits considered for restoration, such as food stamp eligibility for immigrants in residence over five years, were debated during the PRWORA reauthorization process in 2002. The Act increased the incentive for legal immigrants to naturalize; consequently, a huge influx of immigrants became citizens after its passage (The Brookings Institution 2002).

The Regional Workforce Preparation and Economic Development Act, also known as the Welfare-to-Work Act of 1997 (Assembly Bill 1542), established welfare reform in California. It replaced the previous program (GAIN) that had entitled recipients to aid with few limits. The new program implementing Assembly Bill 1542 became known as CalWORKs, an acronym for California Work Opportunity and Responsibility to Kids. CalWORKs ensured that welfare was a temporary support in times of crisis, not a way of life. It rewarded and encouraged accountability and personal responsibility by recipients and fostered a "work first" attitude by imposing strict work requirements (California Department of Social Services 1997a).

The imposition of strict time limits on cash assistance led to a systemic change in all agencies providing services to welfare recipients, and the role of education and training was deemphasized in welfare-to-work programs. Many welfare recipients were placed in low-wage, entry-level jobs. Educators were concerned that participants with low skills not addressed by education would not retain their jobs or would be trapped in employment that offered few options for advancement (Imel 2000).

In the first few years that states implemented TANF, the results showed a startling success. The number of families receiving cash welfare declined 50 percent—from 4.4 million in August 1996 to 2.2 million as of June 2000. Studies in most states showed that most adults who stayed off the welfare rolls had some type of employment. National data in 1999 showed that of the adults continuing to receive some form of welfare, 25 percent were working, compared with 17 percent in 1999. However, as the program matured, concerns arose about removing the very real barriers to employment of the hardest-to-serve individuals remaining on the

welfare rolls. Consequently, modifications were made to the “work first” programs, and the focus shifted to strategies for service delivery (Fagnoni 2001).

In California each county was responsible for administering benefit payments and providing work and supportive activities to welfare recipients. A collaboration of service agencies established performance measures, identified data collection methods, and developed data collection standards. Counties collected and reported data to the California Department of Social Services. Incentives were established for reducing the welfare rolls, and penalties were assigned for failures to meet goals (California Department of Social Services 1997b).

By fiscal year 1999-2000, an analysis of county CalWORKs applications indicated increased collaboration between education and community stakeholders. CalWORKs funding levels for education agencies were determined locally by collaborative planning. Counties were allocated funds based on the number of welfare recipients; the funds were distributed to different education programs based on demographic information, participant needs, and county goals. The California Department of Education distributed approximately \$40 million annually in CalWORKs funding to public education adult schools and regional occupational programs/centers. Adult schools provided basic education, preparation for the high school diploma or *General Educational Development (GED)* test, courses in English as a second language, job readiness and employability skills, and vocational skills to almost 40,000 welfare recipients (Adult Education Office 2001b).

New Instructional Paradigms of the Nineties

During the nineties innovative strategies emerged for using contextualized approaches to literacy education for adults.

Equipped for the Future (EFF) was an initiative of the National Institute for Literacy. It was created in response to Goal 6 of *America 2000* (U.S. DOE 1991) and followed a ten-year timeline that included a series of pilots, some in California. Its purpose was to develop a standards-based system to improve the outcomes of the adult education system. The initiative recognized that adults need life skills as citizens, workers, and parents as well as basic academic skills (NIFL 2000).

From 1994 to 1998 the EFF content framework expanded, and four purposes for learning were established: access—to gain access to information and resources; voice—to express ideas and opinions with confidence; action—to solve problems and make decisions independently; and bridge to the future—learning to learn to keep up with changes. Key activities for each of the three adult roles (citizen, worker, and parent) were identified

and validated, and core skills and knowledge were also identified. During 1998-99 content standards were drafted and reviewed. The period from 2000 to 2004 was designated for identifying assessment standards, benchmarks, and levels of performance and for developing tools to assess learners' performance (NIFL 2000).

Family literacy programs, also known as intergenerational programs, grew in number and support during the nineties. The programs represented a paradigm change since they required close cooperation between adult educators and early childhood educators. The goal was to break the cycle of intergenerational illiteracy by educating both the parents and their children (Division of Adult Education and Literacy 1998). Researchers, such as Thomas Sticht of the Consortium for Workforce Education and Lifelong Learning, produced evidence of the relationship between parent and child literacy and postulated that the most important factor in improving the educational performance of children is improving the parents' literacy (Sticht 1995).

The success in the eighties of model family literacy programs, such as Kentucky's Parent and Child Education program, led to the foundation of the National Center for Family Literacy (NCFL) in 1989. The National Center, supported by the Keenan Charitable Trust, was active in the nineties and into the next century in providing information about family literacy, training and technical assistance, research and evaluation, and advocacy and policy development (NCFL 2002a).

To support family literacy efforts, California used federal funding opportunities, such as the Elementary and Secondary Education Act (including the Reading Excellence Act), Even Start, and Head Start (NCFL 2002b). The Workforce Investment Act (1998) included in Title II the reauthorization of the National Literacy Act, which was renamed the Adult Education and Family Literacy Act. The *California State Plan 1999–2004* for Title II of the Workforce Investment Act included a set-aside of 7.4 percent of its local assistance grants for family literacy priorities (Adult Education Office 1999a).

The California State Library was the lead agency in California for coordinating literacy services for families in the eighties and early nineties. State resources included the Families for Literacy Program that began in 1984 and continued into the next century. Local public libraries applied for state grants to coordinate family literacy services. The California Children and Families Act of 1998 created a state-level network of county commissions to provide early childhood development programs, which included family literacy services (NCFL 2002b).

A new source of funds that became available to California public schools led to an increase in family literacy programming. The funds were

the result of a fiercely contested voter proposition (Proposition 227 in 1998) questioning the outcomes of the bilingual education program of the California Department of Education. The voters approved the initiative, rejecting the existing bilingual education program and designating \$50 million to be set aside annually in state general funds for the Community-Based English Tutoring (CBET) program. Adults who participated in the programs had to pledge to provide personal tutoring to limited-English-proficient pupils. Pledge records were required to be available for monitoring purposes. The law also required that CBET be funded for ten years, until 2008 (Language Policy and Leadership Office 1999).

Through CBET local educational agencies (LEAs) provided adult English-language instruction free of charge or subsidized to parents or other community members who pledged to provide personal English-language tutoring to English learners. Under *Education Code* Section 315 and the *California Code of Regulations, Title 5, Section 11305*, LEAs could use CBET funds for direct program services, community notification processes, transportation services, and background checks required of the tutors who volunteer in public schools (Language Policy and Leadership Office 1999).

By the third full year of CBET implementation, 164,621 English learners were enrolled in 7,936 courses at 485 LEAs. A survey in the 2000-01 school year indicated significant progress by adults in speaking and literacy skills, more competence by parents in assisting children in school, and increased participation in school activities. The CBET funds could be used for the purchase of instructional equipment (including computers) and software programs set up in computer labs in new locations that were convenient for parents. Thus modern technology would reach populations that previously had no access to it (Language Policy and Leadership Office 2001).

Innovative Uses of Technology

During the nineties California, along with the rest of the United States, experienced a rapid expansion of technology infrastructure and a parallel decrease in costs. There was an unprecedented growth in the personal and educational uses of computers. The Internet changed the way information was acquired and used in every part of life. At the same time, however, Americans with lower education and income typically had less access to the Internet than more affluent Americans did, a situation that became known as “the Digital Divide” (Levy, Kleger, and McConnaughey 1999). The explosion of information technology had profound implications for adult education management, instruction, and professional development (Kissam and Intili 1996).

Two of California's federally funded leadership projects, the Outreach and Technical Assistance Network (OTAN) and the California Distance Learning Project (CDLP), were directly involved in implementing new technologies in the late nineties. The Department of Education decided to eliminate the closed e-mail system, OTAN Online, when most adult education administrators had e-mail through their school districts or other agencies. In January 1999 OTAN introduced a no-cost Web site with new features. Member registration was connected to a database system in which valuable statistics were kept for site improvement and a platform provided for electronic networking between members whose jobs were alike or who worked in neighboring regions. The OTAN Web site also encouraged collaboration among adult educators by subscribing to e-mail discussion groups that members could read online, hosting discussion bulletin boards, and facilitating online work groups.

The Department of Education used OTAN for disseminating information on funding opportunities, hosting electronic surveys, and streamlining the course approval system. Other leadership projects used OTAN for technical support and information dissemination. The OTAN electronic knowledge base was transferred to the new platform, was expanded, and was improved; membership in OTAN and usage of the site grew. The OTAN Web site was recognized nationally as the best adult education gateway in the United States (Alamprese 2001).

During the nineties the California Department of Education invested in ESL instructional materials intended for distance-learning applications.

The Department partnered in the development of video-based ESL instructional materials with the U.S. Department of Education, three other states (New York, Illinois, and Florida), and a commercial video and "tele-course" producer, Intelcom. The ESL video series *Crossroads Café* comprised 26 episodes centered on everyday life problems that adult ESL learners might have. The content was also applicable to family literacy, workplace literacy, citizenship, and school-to-work programs (Porter 1998b). A second collaborative series that focused more on citizenship programs, *On Common Ground*, followed in 1999.

One objective of the CDLP was to provide support, research, and development for the California Department of Education's 5 percent program, which encouraged adult schools to use innovative and alternative instructional delivery. In 1996 and 1997 the CDLP distributed 440 sets of videos and made one set of the *Crossroads Café* ESL video series available to California literacy providers. The video series was available free of charge to California providers because California had partnered with several states to help underwrite and develop it. Agencies were required to purchase correlated print materials. In 1997 the Staff Development Institute offered training free of charge in the use of the videos for distance learning.

In 1998 the CDLP surveyed agencies that had received the videos; 45 percent of the agencies surveyed responded. During the first year instructional usage was 73 percent classroom-based, and satisfaction with the series was high. The other 27 percent reported nontraditional usage of the video series, including supplemental (lab) instruction, tutoring, video checkout, and instructional television (Porter 1998b). When *On Common Ground* was released, the CDLP distributed the videos to California adult education agencies. In a report summarizing the anecdotal and statistical data from 1995 to 2000, the first five years of California's 5 percent project, researchers found that the most common delivery methods were video checkout and computer-assisted instruction. Where standardized testing (CASAS) was implemented, gains by learners in distance-learning programs were consistent with or slightly above historical normative gains (Porter 2001).

OTAN completed two statewide adult education technology infrastructure surveys, one in 1995 and one in 1998. By 1998 California adult education agencies were reporting widespread use of computers in instruction; basic skills and literacy programs had the highest usage, followed by ESL, pre-GED/GED, high school, and vocational programs. Internet connectivity exceeded 80 percent; more than 50 percent of agencies reported high-speed connections. The Internet was more commonly used for administrative purposes and for teacher preparation, while classroom use of the Internet lagged behind. The number one barrier to greater use of instructional technology was the lack of staff training (OTAN 1995, 1998). The implications for professional development were clear.

This need for staff development in technology informed the activities of OTAN and the Staff Development Institute through the turn of the century. OTAN provided training at conferences, regional centers, and local educational agencies on the topics of orientation to the Internet, use of the OTAN Web site as a gateway to Internet resources, and techniques of downloading files from the Internet (Alamprese 2001). The Staff Development Institute developed and delivered professional development modules on technology planning, software selection, and the instructional use of e-mail. OTAN and the institute collaborated to pilot the Web-based instructional modules *Making the Connection: Children's Books, Adult Learners and Family Literacy*; *Evaluating Instructional Software*; and *Integrating SCANS Competencies into Instruction* (SDI 2000).

Leadership of Adult Education in the Nineties

Adult education leadership changed frequently at the California Department of Education during the nineties. Therefore, the role of professional organizations that partnered with the Department became increasingly important.

Delaine Eastin

Robert A. Cervantes

Theodore H. Zimmerman

State Leadership

During the nineties administrative changes in the California Department of Education affected the leadership of adult education. Delaine Eastin was elected State Superintendent of Public Instruction and served two terms, from 1995 to 2002. There were two Directors of Adult Education during Eastin's first term: Robert A. Cervantes (1995-1996) and Theodore H. (Ted) Zimmerman (1996-1997). Cervantes refocused the Staff Development Institute's mission from the training of individual teachers to a train-the-trainer mode for cost-effectiveness. During Zimmerman's tenure the name of the division housing adult education was changed to Adult Education, Educational Options, and Safe Schools Division, and the units were reorganized.

During the Cervantes/Zimmerman period, adult education entered a strategic planning period in response to the federal and state emphasis on educating the workforce and increasing accountability. In 1996 a field-based strategic planning committee was convened, and two working papers were commissioned (Intili and Kissam 1996; Kissam and Intili 1996). In the same year the Department of Education sponsored a summer leadership institute for program directors of adult education programs, regional occupational programs, and educational options programs in California. Participants focused on topics presented in five concept papers: Performance-Based Accountability; Career Development and Workforce Preparation; Implementing One-Stop Career Centers; Building Successful Community Collaboratives; and Shaping Our Delivery Systems to Meet Changing Societal Needs (California Department of Education 1996). In 1997 the Department of Education moved the Career Development and Work Force Preparation Division to the Specialized Programs Branch to make stronger connections with vocational education and career development programs.

In 1999 adult education was the subject of program and fiscal inquiries from state and federal agencies. State Superintendent Eastin asked Mary Tobias Weaver to assume the responsibilities of division director and in early 1998 formally appointed Weaver as Division Director and Assistant Superintendent. Weaver changed the name of the division to Education Support Systems, bringing together a diverse set of programs. The new division mission expanded from that of providing leadership in creating and addressing educational opportunities for lifelong learning to "providing leadership and resources to local education agencies so that every student has equitable access to the services and programs needed to succeed as a learner, parent, worker, and community member." She provided oversight to the work in the Adult Education Unit to develop and implement accountability measures and funding processes that addressed the program and fiscal issues of the mid-1990s and changed the name of

the unit to Adult Education Office. New resources focused on the unique needs of community-based organizations in their work to empower newcomers to the United States.

Joan Dailey Polster, on loan from the Staff Development Institute, was appointed Administrator of the Adult Education Office in 1998. She also served as Director of Adult Education and was the first woman to lead adult education in California since 1930. Polster provided strong leadership in developing effective communication between local agencies and the Department of Education. She also guided a positive response to federal and state demands for increased program accountability. During Polster's tenure staff developed the *California State Plan, 1999–2004* (Adult Education Office 1999a) and submitted it to the U.S. Department of Education. In 2000 Polster accepted a position as Assistant Superintendent for Adult Education with the Sacramento City Unified School District.

Weaver then assumed the position of Director of Adult Education and subsequently represented California in the development of two new distance-learning series—*Madison Heights* and *Lifelines*. In February 2001 Weaver appointed Kathy Block-Brown, on loan from the Contra Costa County Office of Education, Correctional Education, as Administrator of the Adult Education Office. When that contract ended in 2002, Jean L. Scott was appointed as the administrator of the Adult Education Office.

Although many changes occurred in the administration of adult education in the 1990s, sufficient stability in the late nineties allowed a smooth implementation of Title II of the Workforce Investment Act. The state and federal reviews also decreased, and the adult education program was viewed to have successfully met the challenges of audits and old concerns about program practices.

Professional Associations

As a legacy of the successful collaboration on adult education reform legislation of 1992, three professional organizations representing adult educators continued to play an important role in advising the California Department of Education on policy issues. These were the California Council for Adult Education; the Association of California School Administrators, Adult Education Committee; and a new organization named the California Adult Education Administrators' Association (CAEAA), which was established in 1990 by a group of adult education administrators who wanted to take an active role in developing legislation. CAEAA was one of the three groups that sponsored the adult education reform bills. Through newsletters it informed members of important issues requiring action, and it sponsored an annual conference at which adult education issues were featured (CAEAA 2001).

Mary T. Weaver

Joan D. Polster

Kathy Block-Brown

Jean L. Scott

Another professional organization joined the California Department of Education as a partner for the advancement of adult education. The California State Consortium for Adult Education (CSCAE), established in 1984, was a nonprofit association of California adult schools. Its major goal was to raise the public's awareness of the services available at local adult schools. Member adult schools were assessed one dollar for each unit of a.d.a., and annual membership in the consortium varied between 110 and 200 agencies. The consortium was best known for its directory of California adult schools that it published annually and distributed to all adult education providers free of charge. Other activities included sponsoring an annual Drop-in Day for Dropouts in January and an Adult Education Week in the spring. Sample publicity articles and public service announcements suitable for local television were available free of charge to adult schools, and a toll-free hot line was sponsored to refer prospective students to local adult school programs by zip code. In 1997 the CSCAE newsletter *Insider* began publication and was circulated to 1,700 California adult school administrators and coordinators. In the late nineties the CSCAE Web site made products available electronically, including a searchable version of the directory that members could update online (CSCAE 2002).

Characteristics of Adult Education in the Nineties

During the nineties the adult education program in California grew both in enrollment and in documented positive outcomes. A combination of factors contributed to greater participation in adult education: increases in immigrant populations requiring English-language, citizenship, and vocational services; state welfare reform programs resulting in referrals of welfare recipients for academic and vocational program services; federal supplemental funding set aside for adult literacy programs, including English language and citizenship; and the California adult education reform legislation that allowed for the start-up of new programs and a growth formula. Table 2 provides a summary of adult school enrollments in the nineties. From 1992-93 to 1998-99 the total apportionment base nearly doubled, from 1,216,698 to 2,395,825.

English as a second language was the largest single program, followed by high school subjects and vocational education. Adult student participation in high school subjects nearly doubled, and the number of diplomas issued annually increased from more than 10,000 to nearly 15,000. California's older adult population grew numerically due to longevity, and services to active older adults engaged in lifelong learning doubled during the period. Classes for older adults that featured the use of computers and the Internet were very popular.

Table 2

Summary of Adult School Enrollments, 1992-99

<i>Course areas</i>	<i>Student enrollment</i>						
	<i>1992-93</i>	<i>1993-94</i>	<i>1994-95</i>	<i>1995-96</i>	<i>1996-97</i>	<i>1997-98</i>	<i>1998-99</i>

Chapter IX

Accountability
and
Outcomes
in the
*Twenty-first
Century*

Accountability and Outcomes in the Twenty-first Century

A large number of adults throughout the U.S. are not fully prepared to participate successfully in the “new” workforce. Increasingly higher levels of accountability are also necessary to document to stakeholders the continuous improvement that local adult education agencies are making in assisting adults to acquire the skills they need for the workplace.

Adult Education Office, California Department of Education
Understanding California's Past to Prepare for the Future

New terminology was born: *standards-based education*, *performance-based accountability*, the *National Reporting System*, and *benchmarks*. By the beginning of 2000, accountability initiatives originating in the late nineties had affected all programs in California adult education. The federal government initiated funding for particular programs to meet the needs of immigrants in classes such as English literacy and civics education. To qualify for federal monies, schools had to demonstrate that students were advancing. State and federal initiatives included a more rigorous *General Educational Development (GED)* test in 2002 and the *California High School Exit Examination*—initiatives that challenged adult secondary education programs. Advances in technology improved communication among adult education providers and created opportunities for enhancing instruction to meet the challenges of the new century. Each of the changes and emerging trends affected adult education by bringing higher expectations of student performance, and adult schools were held accountable for students’ performance.

Accountability Legislation

During the late nineties policymakers and the general public had concerns about the quality and outcomes of educational programs. The interest in the comparison of programs and the return on public investment led to federal and state legislation that increased accountability requirements for local programs. The new assessment processes were implemented in fiscal year 1999-2000.

State and Federal Programs

Senate Bill 394 established a performance-based accountability system in California in 1997 that was intended to measure the performance of state and federally funded education and training programs. A state council representing the various agencies and programs was given the responsibility of identifying data elements and establishing the acceptable format and time frames for data submission. The law also provided for the development of performance standards and the issuance of program “report cards.”

On the federal level the Workforce Investment Act of 1998 (WIA) reauthorized the employability services formerly provided through hundreds of programs, including the Job Training Partnership Act (through Title I of the JTPA), and reauthorized the services of the National Literacy Act (formerly the Adult Education Act) in Title II, naming it the Adult Education and Family Literacy Act. These measures led to significant changes in the management of state programs that used supplemental federal funds provided by the WIA. The Act established an accountability requirement that programs meet designated performance levels for specific core indicators: improvements in literacy skill levels (e.g., speaking, reading, and writing English; numeracy; and problem solving), receipt of a high school diploma or equivalent, college enrollment, and job placement or advancement. The new federal law required states to submit plans for using the supplemental funding. The plans had to include an assessment of the need for adult education services and a description of how progress on the core indicators would be measured and documented.

The U.S. Department of Education’s Division of Adult Education and Literacy (DAEL) responded to the legislation by establishing the National Reporting System, a process for collecting data on the outcomes of adult education programs. State directors of adult education worked with the DAEL and the American Institutes for Research to define the parameters of the system. The collaboration defined performance measures, established software standards for reporting, and developed training materials and activities (Condelli 1999).

To apply for the supplemental funds available through the WIA, California submitted a new state plan for adult education titled *The Workforce*

Investment Act, Title II, Adult Education and Family Literacy Act: California State Plan, 1999–2004. The plan described the education needs of California’s adult population and identified five areas for the federal supplemental program: adult basic education (ABE), English as a second language (ESL), workplace education, family literacy, and adult secondary education (ASE). It also established agency performance measures and core indicators to measure levels of performance (Adult Education Office 1999a).

Practitioners and administrative personnel recommended the following priorities in adult education in California: (1) ABE and ESL learners at the lowest level as defined by the National Adult Literacy Survey (NALS); (2) learners in the workplace who function at NALS literacy levels 1 and 2; (3) ABE and ESL learners in school settings at NALS literacy level 2; (4) family literacy that expands an adult’s ability to work with his or her children in educational enhancements; and (5) adult secondary education, students at NALS level 3 and above (Ibid.).

The California Department of Education expanded the first three priorities to include an emphasis on civics participation after Congress provided additional funds for English literacy and civics education services through the Adult Education and Family Literacy Act (AEFLA), pursuant to Section 1000(a)(4) of the federal consolidated Appropriations Act (PL 106-113), which set aside AEFLA funds for grants in fiscal year 2000 (CASAS 2000b, Executive Summary).

Accountability Measures

California had long used the Comprehensive Adult School Assessment System (CASAS) for reporting outcome data on adult education students to the U.S. Department of Education, as required under the National Literacy Act. The reporting was based on a statistical sample that did not include every student in every program. When faced with the new state and federal requirements for data in the 1999-2000 fiscal year, California adult education undertook the herculean task of using CASAS to collect data on *all* students who attended a minimum of 12 hours of instruction in all program areas during the entire fiscal year. Previous accountability systems relied on a sample of students at a specified two-week period for reporting student performance.

After a challenging first year of establishing an assessment system in all adult education programs, agency providers began capturing complete and more accurate data on the number of students served and the outcomes. The new data and accountability system resulting from Title II of the WIA provided for the first time a more accurate view of the size of the adult education delivery system and included an unduplicated count of student participants in the program and the extent of learner gains from the

instructional program. Some of the accountability requirements, however, were so arduous for some previously funded adult education agencies that they declined federal funding. Table 3 shows how the adult education system expanded after the start-up of Title II.

Student outcomes (i.e., core performance indicators) in the federal program consisted of educational gains, including receipt of a GED certificate or high school diploma; employment attainment or retention; and advancement to postsecondary education or training. Each state negotiated with the U.S. Department of Education to set performance levels for the core performance indicators. In turn the Department reported the actual annual performance of each state to Congress in an annual “report card” for adult education. California negotiated its expected performance levels based on the historical data collected by CASAS in previous years. Although the transition to reporting on student outcomes was slow, by the third year of WIA implementation, California had met all Title II-negotiated performance goals.

Table 3

Agencies Receiving Federal Funds for Adult Education, by Agency Type

Provider type	2002-03		2001-02 ^a		2000-01 ^a		1999-00 ^a

^a Includes only agencies that submitted complete year-end data; therefore, comparisons with prior reports may differ.

^b One county office of education was reclassified as a Section 225 agency; therefore, comparisons with prior reports may differ.

Benchmarks were established to measure student successes by educational gains. When students learned sufficient content to make specified learning gains between pre- and post-tests, the U.S. Department of Education credited programs with a benchmark. Federal funding for local adult education programs in California is set according to the number of benchmarks earned. Table 4 shows the benchmarks attained by the various adult education programs (CASAS 2003, CASAS 2004).

Table 4

Benchmarks, by Program Type

<i>Year</i>	<i>ABE</i>	<i>ESL</i>	<i>ESL -citizenship</i>	<i>ASE</i>	<i>Total</i>
2001-02	22,515	183,081	4,015	28,539	238,150
2002-03	22,795	194,988	4,967	45,011	267,761

Sources: CASAS 2003, CASAS 2004.

Note: Agencies are funded under Title II of the WIA.

Federal program areas were adult basic education, ESL, including ESL-citizenship, and adult secondary education. State-funded programs were adult basic education, ESL, citizenship, high school diploma/GED preparation, vocational education, adults with disabilities, health and safety, home economics, parent education, and older adults. These program areas remain fairly consistent from the nineties. The *California State Plan, 1999–2004*, developed under the WIA, added authorization for up to 10 percent of federal funds to be used for adult secondary education (Adult Education Office 1999a).

English Literacy and Civics Education

Federal welfare reform authorized by the Personal Responsibility and Work Opportunity Reconciliation Act and other legislation reduced or eliminated welfare benefits for legal immigrants, prompting many special-interest groups to press for programs to help legal immigrants to obtain citizenship. The federal government responded by expanding English-language and literacy services in connection with civics education in the federal fiscal year 2000-01 under the Budget Appropriation Act. This provision for English literacy and civics (shortened to EL civics) education and set-aside funding (contained in the WIA, Title II, appropriation) was intended to support programs that would allow legal immigrants “to participate effectively in the education, employment, and civic opportunities of this country, adult English language learners . . . [to] master English and be able to understand and navigate American institutions and systems,

such as government, education, workplace, banking, and health care” (Adult Education Office 2002, 1).

When an increase of \$7.6 million was earmarked for the new EL civics program, the California Department of Education amended the *California State Plan* to include a description of the EL civics program and a statement on how funds would be spent to support the new congressional priority. In the following year Congress allocated an even larger amount to be set aside for EL civics, and California received \$20 million to implement EL civics education programs. The Department initiated local grants, assistance to providers in implementing programs, and a novel outcome-based accountability model that required providers to submit “deliverables” for funding. Providers of adult education programs received \$17,850,000 to implement an EL civics class, to fund enrichment activities for such a class, or to support a citizenship preparation program (Adult Education Office 2002, 2–3).

Through the EL civics funding, the California Department of Education reimbursed funded agencies for “capacity-building activities” that expanded the infrastructure for accountability and operations of EL civics programs. The Department encouraged programs to develop additional assessments to measure student attainment of EL civics priorities that could not be measured by standardized CASAS tests. Agencies identified or developed the additional assessment tools (or did both), administered the assessments, analyzed the assessment results, and used the results at the local level. Programs experimented with performance-based assessments, process assessments (simulations or role plays), and product assessments—projects, journals, portfolios, written descriptions, reflections, or analyses/evaluations (Adult Education Office 2002, 7). CASAS staff provided the training in both standardized and performance-based assessment techniques.

EL civics grantees also developed an agency technology plan as a part of their grant requirements. The Adult Education Office used the focus on technology in the EL civics legislation to emphasize technology planning in the grant’s foundation funding. Staff from OTAN and the California Distance Learning Project collaborated with field representatives to identify resources, develop training, and provide technical support for agencies needing assistance.

Influence of Technology on Instruction

Technology is an essential component of solutions to meet the needs of adult learners. It has been viewed as a major means of recruiting to adult education those adults who function at low literacy levels but do not have access to formal education programs. In 2000 the National Institute

for Literacy hosted a National Literacy Summit. The summit report, *From the Margins to the Mainstream: An Action Agenda for Literacy*, identified technology as the key to success in serving the large and increasingly diverse adult population (National Literacy Summit 2000). By the turn of the century, California adult education had developed a formal technology plan. Advances in technology improved communication among California Department of Education staff and providers and created opportunities for significant enhancement of instruction for adult learners.

The Adult Education Office, through OTAN, solicited suggestions from adult education practitioners for developing a statewide technology plan for adult education. The resulting plan, *California Adult Education Technology Plan, 2001–2004*, established a vision and defined the practical steps to achieve that vision. The vision was that “California adult education will address the changes to society brought on by technology that is inherent to the lifelong learning process” (OTAN 2001, 7). The plan identified the challenges to California adult education and the role of technology in addressing the challenges. The plan comprised three general areas: (1) infrastructure—resources and access; (2) uses for technology—instructional, assessment, and student information systems; and (3) approaches to creating learning environments—distance learning, professional development, and communication (OTAN 2001).

The Adult Education Office redesigned its Web site to coordinate better with the California Department of Education’s main site. People entering either site could obtain adult education information related to general news, program data, compliance requirements, leadership projects, and program resources. Because nearly all local providers were online, the California Department of Education used the Internet to communicate efficiently with local agencies. The course approval system, once a cumbersome process, now involved only the completion of an online form. Agencies that sought funds could now complete and submit their requests electronically. The Department used the Web to post information about compliance issues and to notify providers by e-mail of reporting dates. Online surveys became a way to determine users’ satisfaction with new systems.

Technology projects also received federal support in the early twenty-first century. The U.S. Department of Education funded a project called CyberStep to develop multimedia learning tools for adults. The partners were Los Angeles Unified School District (LAUSD), the Adult Literacy Media Alliance of New York, the Sacramento County Office of Education, and Aguirre International of San Mateo, California. The project ended in 2001 with four new multimedia products for ESL and basic skills instruction. *English for All*, a product of LAUSD, was a complete, integrated ESL program for high-beginning learners; it contained a 20-part video series, a

CD-ROM, an instructional Web site, and print materials. This video series joined two other ESL instructional series, *Crossroads Café* and *On Common Ground*, that were developed through a partnership with Intelcom (a nonprofit educational media organization) and the Departments of Education of several states, including California. Through the California Distance Learning Project, the California Department of Education disseminated, on request, master copies of all the tapes in the three series at no cost to California adult education programs. Video was used by 65 percent of the California adult schools that had a California distance-learning program and was by far the most popular media type (D. Porter 2001).

The other CyberStep products were computer based. The Adult Literacy Media Alliance produced the TV411 Web site, an extension of the award-winning video series. The Sacramento County Office of Education produced Read TV News, a Web site where actual television news stories were used in a series of CD-ROM and Web-based learning modules. It also produced *The Study Place*, an online authoring tool for teachers to develop Web-based lessons using simple forms and featuring references to content standards and framework resources. *The Lesson Place*, produced by the Sacramento County Office of Education, was a CyberStep CD-ROM that provided step-by-step guidance for developing computer-based lessons by using simple forms.

Although the number of technology products for enriching instruction increased, there were barriers to universal access and the use of these materials. The most significant barrier to the increased use of technology in instruction was a lack of professional development for instructors (OTAN 1998). In response to this need for training and to implement the *California Adult Education Technology Plan*, OTAN worked to develop and evaluate professional development models for instructors to implement computer-assisted and Web-based instruction by adult learners. Seven local educational agencies participated in the OTAN pilot study during fiscal years 2000-01 and 2001-02. An outside evaluator helped identify components that led to a change in the progressive integration of technology into instruction. The preliminary model was a four-year process with the following stages: awareness, self-assessment, and planning; staff training; expansion with mentors; and institutionalization of professional development. An evaluation report detailed the research process and the model, and the information was disseminated at statewide conferences (P. Porter 2001).

Adult Secondary Education Issues

At the turn of the century, two events affected adult secondary education in California. One was the release of a major revision to the *General*

Educational Development (GED) test in 2002. The other event was Senate Bill 2 (1999) that established the *California High School Exit Examination (CAHSEE)*; the legislation requires anyone wishing to obtain a high school diploma after January 2004 to pass a test of minimum competencies. Both events involved significant program change and extensive professional development and preparation for teachers.

Since the advent of academic content standards in English–language arts, history–social science, mathematics, and science, the 2002 series *GED* tests has changed in both content and format. Major changes included demonstration of skills in academic subjects; increased emphasis on critical thinking and problem solving; increased use of authentic, real-life documents; use of visuals on four of the tests; alternative answer formats and use of the calculator on the mathematics test; and a new scoring rubric for the essay portion of the language arts writing test (American Council on Education 2001).

Anticipating the need to prepare instructors for the *GED* 2002, the California Department of Education formed the California GED Collaborative and worked with the California Adult Literacy Professional Development Project (CALPRO) and the GED Teacher Academy established by the California Council for Adult Education. The Adult Education Office of the Department of Education funded CALPRO, beginning in 2001, as the successor to the Staff Development Institute in providing professional development services to California adult literacy providers. CALPRO established seven regional resource centers. Three centers continued operations: Baldwin Park Adult and Continuing Education (with Hacienda La Puente Adult Education collaborating), Sacramento City Unified School District Adult Education, and Santa Ana College. The four new centers were located at Berkeley Adult School (with New Haven Adult School collaborating), Fresno Adult School, San Bernardino Adult School, and San Diego County Office of Education (with Sweetwater Adult School collaborating). CALPRO provided training-of-trainers sessions on the *GED* 2002 to professional development specialists; the GED Academy offered hands-on training for instructors (Corley 2001). The GED Collaborative efforts led to a smooth transition for California adult GED learners.

Another product of the increased emphasis on standards-based education and accountability was the *CAHSEE*. The purpose of the *CAHSEE* was to improve student achievement in high school. It also was intended to ensure that students who received a high school diploma could demonstrate competency in the state content standards for reading, writing, and mathematics. The examination affected adult secondary education programs because adult education students were also required to take it to receive a high school diploma. Adult students who enrolled in a program

leading to a high school diploma and who anticipated completing their high school studies in the 2003-04 school year or each school year thereafter were required to pass the *CAHSEE* as a condition of receiving a high school diploma. The *CAHSEE* regulations in *California Code of Regulations, Title 5, Section 1200 (f)*, states that an “eligible adult student is a person who is enrolled in an adult school operated by a school district and who has not passed either the English–language arts section or the mathematics section of the high school exit examination” (*CCR, Title 5, Division 1, Chapter 2, Subchapter 6*).

Adult schools, like the comprehensive high schools, prepared to align the curriculum with the state academic standards adopted by the State Board of Education. Algebra was subsequently added to the adult secondary education curriculum because it was included on the *CAHSEE*.

Governance Issues Revisited

Governance of adult education in California had been a subject of legislation and negotiation between the public education adult school program and the community college provider groups since the Donohoe Act (1960) divided the community colleges from the California Department of Education. Although the Department’s adult school program had a longer history and was larger, the noncredit programs in many community colleges were similar in program offerings and standards by the late nineties.

In addition, when Congress enacted the WIA, it deliberately removed adult education from the Elementary and Secondary Education Act to emphasize the contributions adult education makes to an informed and skilled workforce. This decision affected adult education programs nationally, and many states moved governance of those programs from kindergarten-through-grade-twelve education to community colleges and other state entities.

In July 1997 members of the State Board of Education and the Governing Board of the Community College system agreed to form a Joint Board Committee on Noncredit & Adult Education to begin work on policy issues related to the delivery of adult education in California. The committee consisted of six members (three from the Governing Board and three from the State Board of Education) and two co-chairs. It focused on how to address current, unmet needs and how to ensure a cost-effective and integrated system. The system had to be accessible in all California communities and maintain consistent quality in all programs. Staff of the community college system and the adult education system formed an Interagency Coordinating Team to support the effort. Research, public hearings, and deliberations over an 18-month period led

**Joint
on Non**

to a report addressing 12 policy issues. The recommendations in the report were as follows:

1. Clarify joint authorization to offer noncredit and adult education.
2. Create a formal structure for joint development and implementation of a policy for noncredit and adult education.
3. Develop strategies for ensuring student success.
4. Redistribute unused existing resources.
5. Encourage school and community college districts to make fair-share distributions.
6. Determine the cost of implementing endorsed changes.
7. Equalize reimbursement rates within and among segments of the adult education system, the kindergarten-through-grade-twelve system, and the community college credit and noncredit system.
8. Finalize and distribute program standards.
9. Develop a coordinated data system.
10. Clarify the scope of authorized instructional categories.
11. Permit reimbursement for work-based education.
12. Establish reciprocity for instructors in noncredit and adult education.

The recommendations and action items in the Joint Board report received minimal attention because funding was lacking for the Joint Board to hold meetings and staff the subsequent work; consensus between the Legislature and the Governor on solutions was also lacking. However, the California Department of Education and the Chancellor's Office of the California Community Colleges cooperatively worked to review, update, and finalize model standards in five program areas: English as a second language, adult basic education, adult secondary education, parent education, and older adult education.

In 2000 the California Legislature impaneled the Joint Committee to Develop a Master Plan for Education—Kindergarten through University. The joint committee formed seven working groups. One group—the Working Group on Emerging Modes of Delivery, Certification, and Planning—specifically addressed adult education issues. Representing adult education in the group were State Director of Adult Education Mary Tobias Weaver and former State Director and Assistant Superintendent for Adult and Continuing Education Joan Dailey Polster at Sacramento City Unified School District. After months of research, testimony, and deliberation, the group presented its final report in March 2002, and the joint committee presented its draft report in May 2002.

The report addressed standards, accountability, funding, reciprocity, and governance issues. The work group called for an adequate funding base, the reorganization of the ten program areas into four broad and flexible categories, the inclusion of student performance measures in course standards, an accountability system emphasizing student performance, ongoing professional development, and a review of the governance structure and reciprocity of instructional credentials (Joint Committee 2002b, 27–33).

The California Master Plan for Education (Joint Committee 2002c) went even further and recommended that “the State should direct the California Community Colleges and California Department of Education to collaborate in developing a transition plan to consolidate administrative oversight for adult education within the community college system and should submit that plan to the Legislature for adoption.” Although the draft called for an end to administrative bifurcation in the adult education provider system, it recognized that “it would be wise to continue utilizing current venues for delivery of adult education services” to prevent “significant disruption from the administrative change” (Joint Committee 2002c, 57). The adult education community raised sufficient protest that the final master plan report declined to state where the governance of adult education should rest—with the kindergarten-through-grade-twelve adult education system or the community college system. Instead, it called for the creation of a legislatively appointed task force that would further explore the best way to govern adult education in California.

A Look Forward

How will the classroom of California change for adult learners in the twenty-first century? It may consist of a portable computer, a television, or a van. It may be located in a school, a college, a storefront, a community center, a library, a hospital, a prison, or a factory. Skills centers will be in any location, as close to the people as possible. Learners will have access to instruction on the Internet at any time convenient to them. These events will be possible through the collaboration of multiple stakeholders and the infusion of technology into instruction.

California’s adult schools may look different as the twenty-first century progresses; but as they change in response to the needs of a changing society, they will be carrying on a proud tradition. From that one San Francisco classroom in 1856, a multiple-provider system has grown, meeting the challenge and serving the needs of more than two million adults every year.

Appendixes

A group of approximately 15 people, including men in suits and women in formal dresses, are standing in a grand, ornate hall. The hall features a large, arched doorway in the background, supported by a wooden truss structure. The lighting is warm and focused on the group, creating a formal and elegant atmosphere. The word "Appendixes" is overlaid in a large, white, serif font across the center of the image.

Adult Education Management Staff in the California Department of Education

Ethel Richardson Allen 1919–30

Assistant Superintendent, Americanization *1919–26*
Chief, Division of Adult Education *1926–30*

Edna Strangland Kasch 1930

Chief, Division of Adult Education

L. B. Travers 1930–34

Chief, Division of Adult Education

George C. Mann 1934–56

Chief, Division of Adult Education *1934–45*
Chief, Bureau of Adult Education *1945–56*

E. Manfred Evans 1942–45

Acting Chief, Division of Adult Education

Stanley E. Sworder 1956–70

Chief, Bureau of Adult Education

Eugene M. DeGabriele 1970–74

Chief, Bureau of Adult Education *1970–72*
Program Administrator, Adult Education *1973–74*

Roy W. Steeves 1967–75

Consultant and State Director of Adult Basic Education *1967–73*
Program Administrator, Adult Education, and
State Director of Adult Education *1974–75*

Xavier A. Del Buono 1974–86

Deputy Superintendent of Public Instruction 1974–83
Manager, Adult and Community Education 1974–82
Director of Vocational Education, Division of Vocational
and Continuing Education 1983
Deputy Superintendent for Specialized Programs 1984–86

Donald A. McCune 1975–86

Director, Adult Education Field Services Division 1975–83
Director, Division of Adult, Alternative, and Continuation
Education Services 1983–86
State Director of Adult Basic Education 1975–84

Claude G. Hansen 1984–88

Manager, Adult Education Program Services Unit 1984–88
State Director of Adult Basic Education 1985–86

Gerald H. Kilbert 1986–1995

Acting Director, Division of Adult, Alternative, and Continuation
Education Services; and Acting State Director of Adult
Education 1986–87
Director, Youth, Adult, and Alternative Educational Services
Division; Assistant Superintendent; and State Director of Adult
Education 1987–1995

Raymond G. Eberhard 1988–1997

Administrator, Adult Education Unit 1988–93
Administrator, Adult Education Policy and Planning Unit 1993–96
Administrator, Adult Education Unit 1997

Albert N. Koshiyama 1993–1994

Administrator, Adult Education Field Services Unit 1993–94

Susan Bennett 1995–1996

Administrator, Adult Education Field Assistance Unit 1995–96

Robert A. Cervantes 1995–1996

Director, Youth, Adult, and Alternative Educational Services Division;
and State Director of Adult Education 1995–1996

Theodore H. (Ted) Zimmerman 1996–1997

Assistant Superintendent and Director, Adult Education, Educational
Options and Safe Schools Division; and State Director of Adult
Education 1996–1997

Mary Tobias Weaver 1998–2003

Acting Director, Adult Education, Educational Options, and
Safe Schools Division 1998

Assistant Superintendent and Director, Education Support Systems
Division 1998–2003

State Director of Adult Education 2000–2003

Richard L. Stiles 1998

Acting Administrator, Adult Education Unit 1998

Joan Dailey Polster 1998–2000

Administrator, Adult Education Office; State Director of Adult
Education 1998–2000

Kathy Block-Brown 2001–2002

Administrator, Adult Education Office 2001–2002

Jean L. Scott 2003–

Administrator, Adult Education Office 2003–

- a. Figures for the years 1930-31 through 1956-57 include adults enrolled in elementary school, high school, and junior college programs and are found in Mann et al. (1957, 27, 33). No additional research was done.
- b. Figures for the years 1957-58 through 1961-62 include adults enrolled in unified school districts, high school districts, and junior college programs and represent a different method of calculation, making comparisons difficult. The figures are a combination of the October and March reports detailed by Magnuson and Tashnovian in articles titled “Enrollment in California Public Schools . . .” appearing twice a year in *California Schools* (vols. 29–32).
- c. Statistics for 1962-63 through 1966-67 continue to include community college figures and represent an estimate calculated by the Bureau of Adult Education after the October and March reports were studied. These figures were reported by Bureau Chief S. E. Sworder in articles printed in *California Schools* (vols. 32–33) and *California Education* (vols. 1–3). The 1966-67 figures are found in a memo to the field now preserved in the California State Archives, Chief of the Bureau of Adult Education’s file.
- d. Statistics for 1967-68 and 1968-69 are estimated figures derived by doubling the fall enrollment figures in a report by the California State Department of Education (1970, 25); the document is located in the California State Library.
- e. The large drop in numbers beginning in 1969-70 represents the removal of the community college figures. Statistics for 1969-70 and 1970-71 are found in DeGabriele [1971].
- f. Figures for 1971-72 through 1977-78 are reported in Adult Education Ad Hoc Advisory Committee (1979).
- g. Figures for 1978-79 through 1979-80 were reported to the field by the Adult Education Field Services Division in adult education fact sheets. Figures from 1978 show the steep drop in adult education enrollments following the passage of Proposition 13.
- h. The current CBEDS system of reporting adult education enrollment data began in 1980 and represents unduplicated enrollees rather than class enrollments (which may be duplicated).
- i. Statistics for 1989-90 and 1990-91 include concurrently enrolled high school students.
- j. Beginning in 1995-96, the number includes enrollments in classes of other providers participating in California’s federally funded adult education program. “Other providers” included community colleges, community-based organizations, and library literacy programs. Enrollments varied widely from a high of 663,143 in 1995-96 to a low of 77,276 in 1999-2000, the year that more restrictive federal accountability standards were implemented.
- k. Beginning in 1999-2000, the CBEDS system no longer included adult education enrollment. For comparison purposes, in 1999-2000, the California Department of Education Enrollment report (J-18/J-19A) was used. Fee-based class enrollment was included in the totals from 1991-92 through 1998-99 and accounted for 195,623 to 239,596 enrollments annually. Fee-based class enrollment is not included in the 1999-2000 figure.
- l. Enrollments for 2000-01 and 2001-02 are taken from annual CASAS data based on student entry records. Enrollments in classes of other providers participating in California’s federally funded adult education program are included, but fee-based class enrollment is not.

Appendix F

Time Line of Significant Events in Adult Education in California

1856	<ul style="list-style-type: none"> The first adult evening school opened in the basement of St. Mary's Cathedral, San Francisco.
1872	<ul style="list-style-type: none"> Sacramento Adult Evening School began.
1879	<ul style="list-style-type: none"> A provision was added to the state constitution authorizing day and evening elementary, secondary, technical, and normal or teachers' schools.
1885-86	<ul style="list-style-type: none"> Los Angeles, Oakland, and San Jose began evening schools.
1891	<ul style="list-style-type: none"> The union high school district law was passed.
1902	<ul style="list-style-type: none"> The state constitution was amended to ensure support of high schools.
1907	<ul style="list-style-type: none"> The courts ruled to give evening high schools the same status as regular high schools and the right to exist as separate legal entities. The Legislature authorized postgraduate courses in high schools.
1910	<ul style="list-style-type: none"> The first public junior college in California opened in Fresno.
1911	<ul style="list-style-type: none"> The first private junior college, Los Angeles Pacific College, was established.
1912	<ul style="list-style-type: none"> <i>San Francisco v. Hyatt</i> upheld the four-hour minimum day for state funding of evening students.
1913	<ul style="list-style-type: none"> The appointment of a commissioner of vocational education was authorized, with Edwin R. Snyder as the first commissioner.
1914	<ul style="list-style-type: none"> The federal Smith-Lever Act was passed for the support of agricultural education.
1915	<ul style="list-style-type: none"> The Home Teacher Act was signed into law by Governor Hiram Johnson through the efforts of Mary Gibson. It provided for instruction of children and adults in their homes. World War I gave impetus to English-for-foreign-born and citizenship classes.
1917	<ul style="list-style-type: none"> Legislation authorized regular day high schools to maintain special day and evening classes for persons eighteen through twenty-one years not attending day school. The federal Smith-Hughes Vocational Education Act was passed.
1919	<ul style="list-style-type: none"> The Part Time Education Act mandated continuation education for minors and basic education classes for adults. Adult education was recognized at the state level by the appointment of Ethel Richardson as Assistant Superintendent of Public Instruction in charge of Americanization.

1920	<ul style="list-style-type: none"> • Seventy-four thousand students enrolled in adult education statewide.
1921	<ul style="list-style-type: none"> • Legislation required high school districts to offer Americanization classes when requested by 25 or more people—the first such mandated program, one still in effect. • Extensive training programs for teachers of adults were initiated. • A law providing for independent union college districts was passed, and Modesto formed the first junior college district. • The American Association of Junior Colleges was formed.
1926	<ul style="list-style-type: none"> • The Department of Parent Education was formed in the California State Department of Education. • The first State Plan for Adult Education was presented by Ethel Richardson at Asilomar. • The California Association for Adult Education was formed and existed until 1937.
1927	<ul style="list-style-type: none"> • The Division of Adult Education was formed, with Ethel Richardson Allen as its first chief.
1931	<ul style="list-style-type: none"> • The “Dorsey Report” was the first in a series of examinations of adult education and gave the rationale for public support. The report suggested that tuition be charged for certain courses that were not academic or vocational in nature. No tuitions were mandated by the Legislature at this time.
1933	<ul style="list-style-type: none"> • During the Depression the State Emergency Relief Administration established a program of adult education. Adult programs sponsored by the Works Progress Administration provided work for unemployed teachers. Evening high schools were organized for the Civilian Conservation Corps.
1936	<ul style="list-style-type: none"> • Public support of adult education was questioned in the Legislature. The State Board of Education thereafter adopted the regulation that each class in adult education must have an educational purpose and that the class period must be devoted to instruction.
1937	<ul style="list-style-type: none"> • The federal George-Deen Act extended vocational education.
1940	<ul style="list-style-type: none"> • Adult enrollment in California was more than 500,000 in a population of five million (one in 10 adult Californians was taking a class).
1941	<ul style="list-style-type: none"> • Enrollment swelled to more than 900,000 because of national defense classes, military training classes, and preemployment training. • Separate evening junior colleges were authorized.
1944	<ul style="list-style-type: none"> • Legislation was passed permitting tuition to be charged in adult education, except for classes in English as a second language, citizenship for foreigners, and elementary subjects. • The California Council for Adult Education was formed.

1946	<ul style="list-style-type: none"> The State Board of Education placed limitations on physical education classes and forums. It also set requirements for the appointment of adult education principals according to the size of the program.
1947	<ul style="list-style-type: none"> New financing methods made it advantageous for school districts to have large adult programs, and adult education began to grow again.
1950	<ul style="list-style-type: none"> Adult education enrollment topped 900,000.
1953	<ul style="list-style-type: none"> The Legislature attempted to curtail financial support for adult education. Classes for <i>defined adults</i> were supported at a lower rate.
1957	<ul style="list-style-type: none"> The Bureau of Junior College Education was formed.
1960	<ul style="list-style-type: none"> Under the Donohoe Act, California Master Plan for Higher Education, junior colleges were made a part of postsecondary education. The Coordinating Council for Higher Education was established. More than one million people participated in adult education in California.
1962	<ul style="list-style-type: none"> The Western College Association became the Western Association of Schools and Colleges (WASC) and took over as an accrediting agency. Separate commissions for high schools, junior colleges, and colleges and universities were established. The federal Manpower Development and Training Act (MDTA) provided funds to train unemployed low-skilled workers.
1963	<ul style="list-style-type: none"> All statutes dealing with junior colleges were placed in a separate section in the <i>Education Code</i>. The federal Vocational Education Act (VEA) was passed to assist youths and adults who need to upgrade their education and skills and those who are educationally handicapped.
1964	<ul style="list-style-type: none"> Adult education legislation was included in the federal Economic Opportunity Act under Title II B. The first [federal] California State Plan for Adult Basic Education was formulated.
1965	<ul style="list-style-type: none"> Enabling legislation was passed establishing Regional Occupational Centers (ROCs). Oakland established the Neighborhood Centers Adult School, the first wholly decentralized adult education program in California.
1966	<ul style="list-style-type: none"> The federal Adult Education Act was passed to assist persons whose lack of basic skills kept them from getting or retaining jobs.
1967	<ul style="list-style-type: none"> The Work Incentive Plan (WIN) established under the Social Security Amendments provided employment training for adults. The Stiern Act created the Board of Governors of California Junior Colleges.
1968	<ul style="list-style-type: none"> Junior colleges were removed from the State Board of Education's governance. Legislation authorized a ten-cent tax for adult education. Legislation was passed permitting Regional Occupational Programs (ROPs).

1972	<ul style="list-style-type: none"> • The State Department of Education was reorganized, and the Bureau of Adult Education disappeared. • “Delineation of function” legislation was passed to help resolve growing conflicts between high school district and community college adult education programs.
1975	<ul style="list-style-type: none"> • More than 2,000,000 students enrolled in adult education programs in California. • Governor Jerry Brown placed a 5 percent cap on growth of adult education programs and community colleges. • Assembly Bill 1821 established Regional Adult Vocational Education Councils (RAVECs). • The Adult Performance Level (APL) Project report was published on the functional competency approach to adult literacy. • Federal adult basic education (ABE) funds were used in California to encourage the development of competency-based adult education projects. • The end of the Vietnam War led to a wave of Southeast Asian refugees needing educational services.
1977	<ul style="list-style-type: none"> • The Adult Education Ad Hoc Advisory Committee, activated by the California State Department of Education, developed the first strategic plan for adult education.
1978	<ul style="list-style-type: none"> • Proposition 13 (property-tax reform initiative) was passed by California voters. • Legislation was passed limiting the types of classes to be funded by the state and putting a cap on the amount of a.d.a. to be funded by the state. Funds for adult education were a part of block grants to districts. There was a dramatic decrease in adult education enrollments and an increase in the number of classes partially or totally funded by student fees.
1979	<ul style="list-style-type: none"> • Assembly Bill 8 established eight mandated program areas in adult education and established caps on growth and cost-of-living adjustments (COLAs) for adult schools. Separate adult education revenue limits were established according to 1977-78 levels of funding.
1980	<ul style="list-style-type: none"> • The Adult Education Policy Commission (Behr Commission) was created to prepare policy recommendations on delineation of functions, revenue, and fiscal parity in adult education in community colleges and kindergarten-through-grade-twelve adult schools. • The California Adult Student Assessment System was established.
1982	<ul style="list-style-type: none"> • Legislation increased the number of adult education program categories to ten. • Local educational agencies in California receiving supplemental monies under the Adult Education Act were required by the California state plan to implement CBAE practices. • All adult education support projects receiving funds through Section 310 of the Adult Education Act were to focus on the components of CBAE.
1983	<ul style="list-style-type: none"> • The California Literacy Campaign began.

1984	<ul style="list-style-type: none"> • The Commission for the Review of the Master Plan for Higher Education was created. • The California State Consortium for Adult Education (CSCAE) was formed.
1985	<ul style="list-style-type: none"> • The Legislature enacted Greater Avenues for Independence (GAIN) legislation prescribing educational programs for recipients of Aid to Families with Dependent Children (AFDC).
1986	<ul style="list-style-type: none"> • The federal Immigration Reform and Control Act (IRCA) caused explosive growth in adult ESL programs for the succeeding four school years because of its education requirements for amnesty recipients.
1988	<ul style="list-style-type: none"> • The Proposition 98 initiative mandated a priority for providing adequate funds for education. • The sunset review of adult education was in process. The Adult Education Advisory Committee was appointed, and it developed the <i>Strategic Plan to Meet California's Long-term Adult Education Needs</i>.
1989	<ul style="list-style-type: none"> • National Center for Family Literacy was founded in Louisville, Kentucky.
1990	<ul style="list-style-type: none"> • OTAN Online, an electronic communication system linking California adult education service providers, was established. • The California Adult Education Administrators' Association (CAEAA) was formed.
1991	<ul style="list-style-type: none"> • National adult literacy needs were recognized in Goal 5 of the report <i>America 2000</i>. • The National Literacy Act reauthorized the Adult Education Act and created the National Institute for Literacy and a system of state and regional literacy resource centers.
1992	<ul style="list-style-type: none"> • The California adult education access card was first used on March 5 in Merced. • <i>English-as-a-Second-Language Model Standards for Adult Education Programs</i> was published. • Adult education reform legislation was passed, including provisions for the first start-up of new adult schools since the passage of Proposition 13; funds designed to alleviate apportionment inequalities; changes in the regulation of concurrently enrolled students; and alternative and innovative delivery systems. • The National Adult Literacy Survey found that 25 percent of California adults function at the lowest level of literacy.
1993	<ul style="list-style-type: none"> • The California Commission on Teacher Credentialing adopted standards for a Designated Subjects Teaching Credential with two levels of professional preparation.
1994	<ul style="list-style-type: none"> • The Outreach and Technical Assistance Network (OTAN) leadership project moved to the Sacramento County Office of Education. • California Staff Development Institute (SDI) leadership project began six years of operation at the Sacramento County Office of Education.

1994	<ul style="list-style-type: none"> • The California State Literacy Resource Center began two years of operation at the Sacramento County Office of Education. • The National Institute for Literacy began work on Equipped for the Future, a standards-based curriculum framework designed to improve the outcomes of adult education.
1995	<ul style="list-style-type: none"> • The California Distance Learning Project (CDLP) began operation at the California State University Institute.
1996	<ul style="list-style-type: none"> • Congress passed welfare reform legislation, the Personal Responsibility and Work Opportunity Reconciliation Act, a part of the Social Security Act. The new legislation replaced the Aid to Families with Dependent Children program with the Temporary Assistance for Needy Families program. The new legislation placed a greater emphasis on “work first.” • The California Department of Education published <i>Model Program Standards for Adult Basic Education</i> and <i>Model Program Standards for Adult Secondary Education</i>. • The California Commission on Teacher Credentialing implemented a two-level adult education teaching credential. • Assembly Bill 2255 (Cuneen 1996) was signed into law, repealing the “sunset” on California adult education but requiring the Department of Education to review the effectiveness of adult education every five years, beginning in 2002. • The <i>Crossroads Café</i> ESL video series was released by Intelecom and distributed free of charge to California adult education providers through CDLP.
1997	<ul style="list-style-type: none"> • The Welfare to Work Act of 1997 (Assembly Bill 1542) established welfare reform in California. The resulting program was known as CalWORKs (California Work Opportunity and Responsibility to Kids). • Congress reauthorized the Individuals with Disabilities Education Act. • Senate Bill 394 (Johnston) authorized school-to-career opportunities: job-training funds and an education and job-training report card program to assess the accomplishments of California’s workforce preparation system. A comprehensive performance-based accountability system was developed.
1998	<ul style="list-style-type: none"> • Congress passed the Workforce Investment Act of 1998, including Title II, the Adult Education and Family Literacy Act, a reauthorization of the National Literacy Act. Program accountability, including student performance measures, was the new emphasis. The National Reporting System was established. Title I had job-training provisions and replaced the Job Training Partnership Act and many other federal jobs programs. In response to the legislation, California created a Workforce Investment Board to plan and coordinate employment and training initiatives. • Congress reauthorized the Carl D. Perkins Vocational and Applied Technology Education Act, including secondary and postsecondary program support. The legislation stressed improvement by integrating academics with vocational and technical education programs through a coherent sequence of courses to ensure learning in the core academic, vocational, and technical subjects.

1998	<ul style="list-style-type: none"> • California voters passed Proposition 227, which resulted in a set-aside of \$50 million per year for ten years from state general funds for the Community-Based English Tutoring Program. • <i>Tierra de oportunidad (Land of Opportunity)</i> was published by the Latino Adult Education Services Project for the California Department of Education’s Adult Education Unit. • The Joint Boards Task Force on Noncredit and Adult Education, a collaborative effort of the California State Board of Education and the Board of Governors of the California Community Colleges, after 18 months of work, submitted a Final Report with 12 recommendations.
1999	<ul style="list-style-type: none"> • The <i>California State Plan for Adult Education, 1999–2004</i>, was submitted to the U.S. Department of Education. • <i>On Common Ground</i>, a civics education video series, was released by Intelcom and distributed free of charge to California adult education providers through CDLP. • OTAN completed transition of its electronic knowledge base to the Internet and unveiled a free, membership-based Web site with collaborative features.
2000	<ul style="list-style-type: none"> • The National Literacy Summit was held in Washington, D.C. • English literacy and civics education were added to the services funded under Title II of the Workforce Investment Act. • The California State Senate Joint Committee to Develop a Master Plan for Education—Kindergarten through University released a framework to guide its work to develop a master plan for education, kindergarten through university.
2001	<ul style="list-style-type: none"> • The California Department of Education released the <i>California Adult Education Technology Plan, 2001–2004</i>. • The six working groups of the California State Senate Joint Committee to Develop a Master Plan for Education—Kindergarten through University submitted final reports for public comment.
2002	<ul style="list-style-type: none"> • The GED Testing Service of the American Council on Education released a radically revised <i>General Educational Development</i> test (2002 Series <i>GED</i> Tests). The test correlated to national content standards and included critical thinking skills. • The CyberStep project at the Sacramento County Office of Education released the <i>English for All</i> video series for ESL students, and copies were distributed free of charge to California adult education providers.

Appendix G

Federal Adult Education Projects

The following special projects were and are financed with federal funds under sections 309, 310, and 353 of the Adult Education Act, Public Law 100-297 (formerly PL 91-230), as amended:

<i>Years Funded</i>	<i>Project</i>	<i>Contractor</i>
1975–1976	Development of a Bilingual Living Skills Curriculum Process of Educating Adults in Reading-Language Survival English	Montal Education Associates Far West Laboratory Fairfield-Suisun Unified School District
1975–1978	Adult Basic Education Comprehensive Institute Teacher Training Project in Adult Basic Education	San Diego State University California State University, Fullerton
1975–1979	Watts ABE Outreach Program	Los Angeles Unified School District
1976–1977	Reading Vocabulary in Action: A Basic Writing Program Student Centered Analysis of Need (SCAN)	Los Angeles Unified School District Elsinore Union High School District
1976–1978	Community Organization to Optimize Learning (COOL) Video Tape Bank—ESL/ABE Classroom Strategies A Special Experimental Demonstration Project: An Educational Training Program for Filipino- Americans Special Experimental Demonstration and Teacher Training—Needs Assessment Model	Elsinore Union High School District Palomar College Philippine-American Cultural and Educational Society of Sacramento (PACESS) Spanish Speaking Unity Council
1976–1980	California Adult Competency Education (CACE) A Model ABE/ESL Information Collection and Dissemination System (ICDS) to Implement an Adult Performance Level Program	San Francisco State University San Diego Community College District

This list is derived from Miller 1991, Appendix I, “California Adult Education: Special Projects.”

<i>Years Funded</i>	<i>Project</i>	<i>Contractor</i>
1976–1981	A Functional Competency-Based Curriculum for Adult Basic Education/Competency-Based Live-Ability Skills (CLASS)	Clovis Unified School District
1977–1978	Competency-Based/APL Staff Training Project Urban Test Site for COOL	Northwest Regional Educational Laboratory Riverside Unified School District
1977–1979	APL Game Plan Community Education ABE/ESL Recruiting Project	Elsinore Union High School District Vista Unified School District, Santa Maria Joint Union High School District, and Bassett Unified School District
1977–1980	Integrated Competency-Based Bilingual Vocational ESL	Chinatown Resources Development Center
1977–1981	Adult Education Staff Development Competency-Based Adult Diploma Project	Association of California School Administrators (ACSA), California Council on Adult Education (CCAЕ), and California Adult Basic Education League (CABEL) Los Angeles Unified School District
1978–1979	Diagnostic/Prescriptive Strategies for Students with Learning Disabilities Teaching Reading In-service Program (TRIP) Recruiting and Retaining Low-Literate ABE/ESL Students Through Outreach and Peer Tutoring	Berkeley Unified School District Fremont Union High School District San Diego Community College District
1978–1980	Special Experimental Demonstration Tutored Videotape Instruction for Adult Basic Education Funny Bone Family Saga	College of the Desert Elsinore Union High School District
1978–1981	Needs Assessment of Adult Basic Competencies in California	NOMOS Institute

<i>Years Funded</i>	<i>Project</i>	<i>Contractor</i>
1979–1980	A Vocational Education Approach to English as a Second Language The Missing Link CALCOMP Projects	Ceres Adult School Elsinore Union High School District Clovis Adult School, Hacienda La Puente Unified School District, Los Angeles Unified School District, Montebello Adult School, Salinas Adult School, San Diego Community College District, and San Francisco Community College District
1979–1981	Diagnostic Reading Test for ESL Students Techniques for Effective Language Learning (TELL) Innovative Application of Samoan Culture to Adult Education Approach	Fremont Union High School District Grossmont Union High School District Office of Samoan Affairs
1980–1981	La Familia: A Family Education/Interagency Project for Rural and Limited-English-Speaking Families in California Vocational ESL Staff Development Project ESL Outreach Program for Unemployed and Underemployed Adults: A Partnership with Industry	Butte County Schools Office Chinatown Resources Development Center, Inc. Fremont Union High School District
1980–1982	Telecentered Learning Experiences (TELex) ESL Staff Development/ABE-ESL Staff Development	Elsinore Union High School District Association of California School Administrators

<i>Years Funded</i>	<i>Project</i>	<i>Contractor</i>
1980–1985	California Adult Student Assessment System (CASAS)	San Diego Community College District, Continuing Education Centers CALCOMP project sites listed under 1979–1980 as well as the following were the original consortium districts: Alhambra Adult School, Burbank Adult School, Pajaro Valley Unified School District, San Jose Unified School District, and Vallejo City Unified School District. Consortium membership grew to approximately 40 agencies.
1981–1982	Cultural Awareness Training Project	Chinatown Resources Development Center, Inc.
1981–1988	Dissemination Network for Adult Educators (DNAE)	Association of California School Administrators
1982–1988	Competency-Based Adult Education Staff Development	San Francisco State University
1985–1994	ESL Teacher Institute Adult Education Leadership Training Programs	Association of California School Administrators California Council for Adult Education
1986–1989	Comprehensive Adult Student Assessment System (CASAS)	San Diego Community College District Foundation, Inc.
1988–1989	CBAE Regional Demonstration Sites	Hacienda La Puente Adult Education

<i>Years Funded</i>	<i>Project</i>	<i>Contractor</i>
1990–1994	Adult Education Institute for Research and Planning (AEI) Executive Development Program (EDP) Outreach and Technical Assistance Network (OTAN)	Pacific Management and Research Associates Association of California School Administrators Hacienda La Puente Adult Education
1990–1995	Adult Literacy Instructors' Training Institute (ALIT) Comprehensive Adult Student Assessment System (CASAS) Evaluation of Four-Year Plan	Los Angeles Adult and Occupational Education Foundation for Educational Achievement Evaluation and Training Institute (ETI)
1993–1995	Adult English-as-a-Second-Language Assessment Project	Center for the Study of Evaluation, UCLA Graduate School of Education and Information Studies
1994–1996	African American Adult Education Project	Center for Applied Cultural Studies and Educational Achievement
1994–2000	Staff Development Institute (SDI)	Sacramento County Office of Education
1994–2002	Outreach and Technical Assistance Network (OTAN)	Sacramento County Office of Education
1995–1998	Latino Adult Education Services (LAES) California Distance Learning Project (CDLP)	California State University Institute and Hacienda La Puente Adult Education California State University Institute
1995–2000	Comprehensive Adult Student Assessment System (CASAS)	Foundation for Educational Achievement
1998–2000	California Distance Learning Project (CDLP)	California State University Institute

<i>Years Funded</i>	<i>Project</i>	<i>Contractor</i>
2000–2001	California Distance Learning Project (CDLP)	California State University, Dominguez Hills
2000–2003	Model Standards for Adult Basic Education, Adult Secondary Education, English as a Second Language, Older Adults, and Parent Education	WestEd Regional Educational Laboratory
2000–2003	Comprehensive Adult Student Assessment System (CASAS) and English Literacy and Civics Education California Adult Literacy Professional Development Project (CALPRO)	Foundation for Educational Achievement Pelavin Research Center of the American Institutes for Research (AIR)
2002–2004	California Distance Learning Project (CDLP)	California State University, Dominguez Hills
2002–2005	Outreach and Technical Assistance Network (OTAN)	Sacramento County Office of Education

Appendix H

The California Adult Education Oral History Repository

The California Department of Education began an Adult Education Oral History Project in 1992. Adult education leaders were interviewed to preserve their recollections of the significant events and issues that shaped the development of adult education.

The oral history project started with a small group of leaders whose careers began in the 1950s and 1960s and who influenced important events in the development of the nation's largest adult education program. Twenty-seven educators whose careers span 70 years have participated. They represent the varying professional roles, organizations, and geography of California's diverse adult education programs.

Full transcripts were typed and indexed. The cassette tapes and bound transcripts have been deposited in the California State Archives, where they are available for researchers.

The Oral History Project Web site <http://www.otan.dni.us/caehistory/> features a photo of each interviewee, the table of contents of the interview, and a brief audio excerpt.
