NETGEAR®

Orthogonal Frequency Division Multiple Access (OFDMA)

Using the OFDMA¹ feature of WiFi 6, the WiFi traffic is managed much more efficiently since data is transmitted from different devices concurrently, rather than having each device's data wait for its turn. This results in an efficient use of air-time, reduced latency, and increased bandwidth to add more devices to your network.

Ultra-powerful AX-optimized Quad-core Processor

The Nighthawk Tri-band WiFi 6 Mesh System, powered by a 1.5GHz quad-core processor, is built for performance at an ultimate level. The ultra-fast processor enables the router to seamlessly handle data-intensive applications such as 4K UHD video streaming, VR/AR gaming, as well as provide a stronger, more reliable WiFi experience. This powerful processor is optimized for AX making intelligent spontaneous decisions to schedule data traffic to maximize WiFi bandwidth utilization.

Nighthawk App

The NETGEAR Nighthawk® App makes it easy to set up your Nighthawk Tri-band Mesh WiFi 6 System and get more out of your WiFi. With the app, you can install your Tri-band Mesh WiFi 6 Router and Satellite in a few steps—just connect your mobile device to the router network and the app will walk you through the rest.
