

Supplementary Materials: Influence of Anode Potentials on Current Generation and Extracellular Electron Transfer Paths of *Geobacter* Species

Souichiro Kato

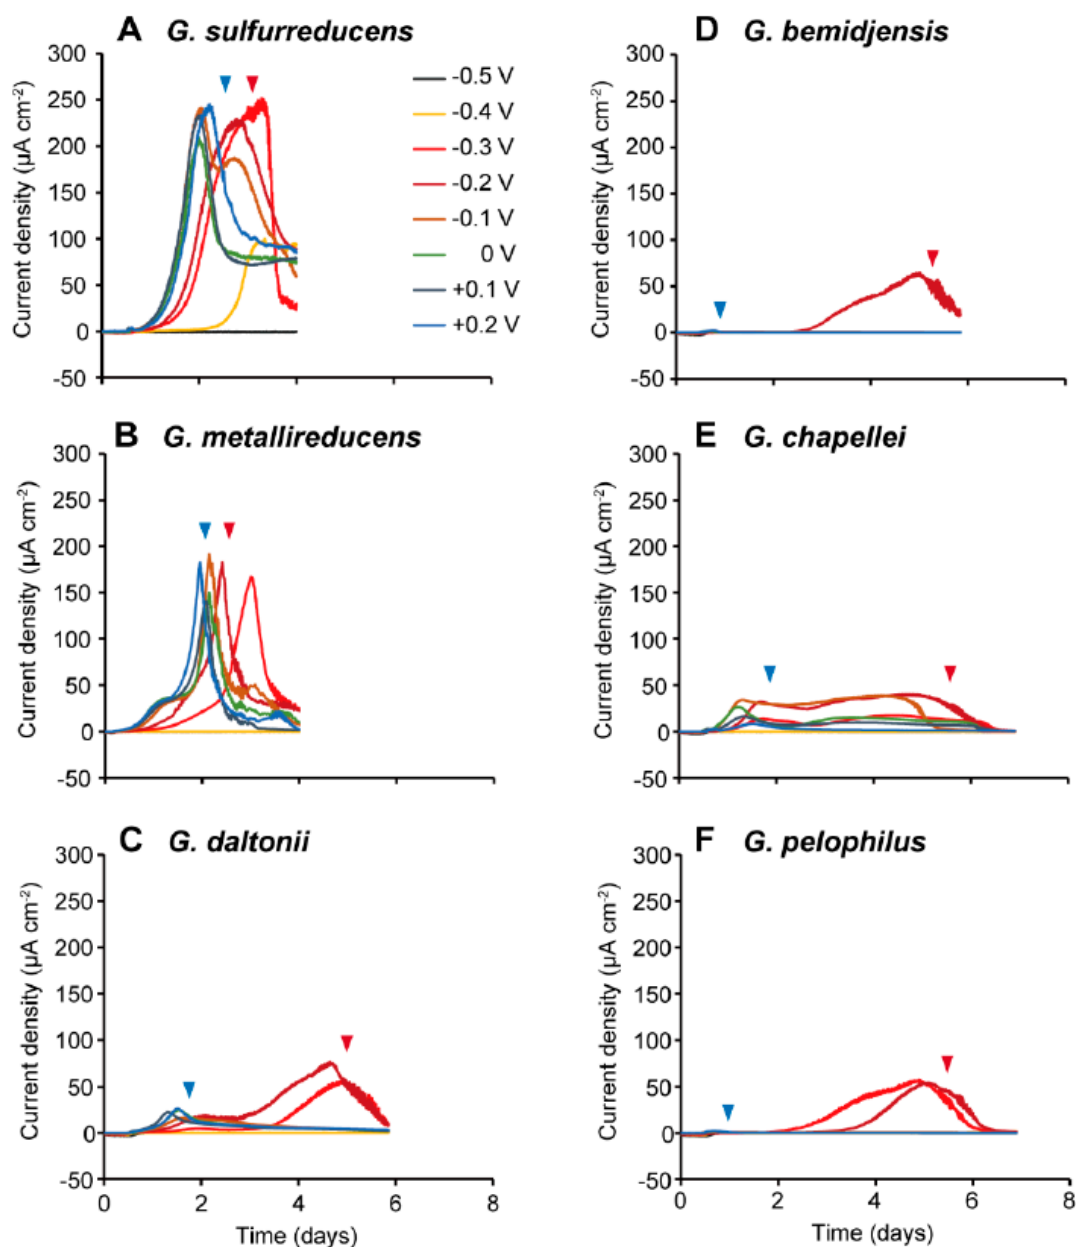

Figure S1. The current–time plots of *Geobacter* species grown with different anode potentials. Red and blue arrowheads represent the time points of linear sweep voltammetry (LSV) analyses for -0.2 and $+0.2$ V cultures, respectively. The experiments were conducted in triplicate, and the figure shows the representative one.
