要旨

SARSやトリインフルエンザのような感染症の発生を早期に発見し、監視・追跡するには、様々な言語で書かれたWeb上のローカルニュースを、各国の政府が責任を持ってモニターする必要がある。BioCasterプロジェクトでは、最新のテキストマイニング技術を応用して多言語のニュース記事をフィルタリングし、構造化された形式で現地語に翻訳するWebポータルを開発する。特に、(1) 多言語知識リソース（オントロジー）、(2) 高性能クラスタコンピュータおよびストレージシステム、(3) 感染症に関するニュース記事と、研究文献や遺伝子データベースにある最新の研究成果をナビゲートする、知的なリンクージシステム等の構築に焦点を当てる。

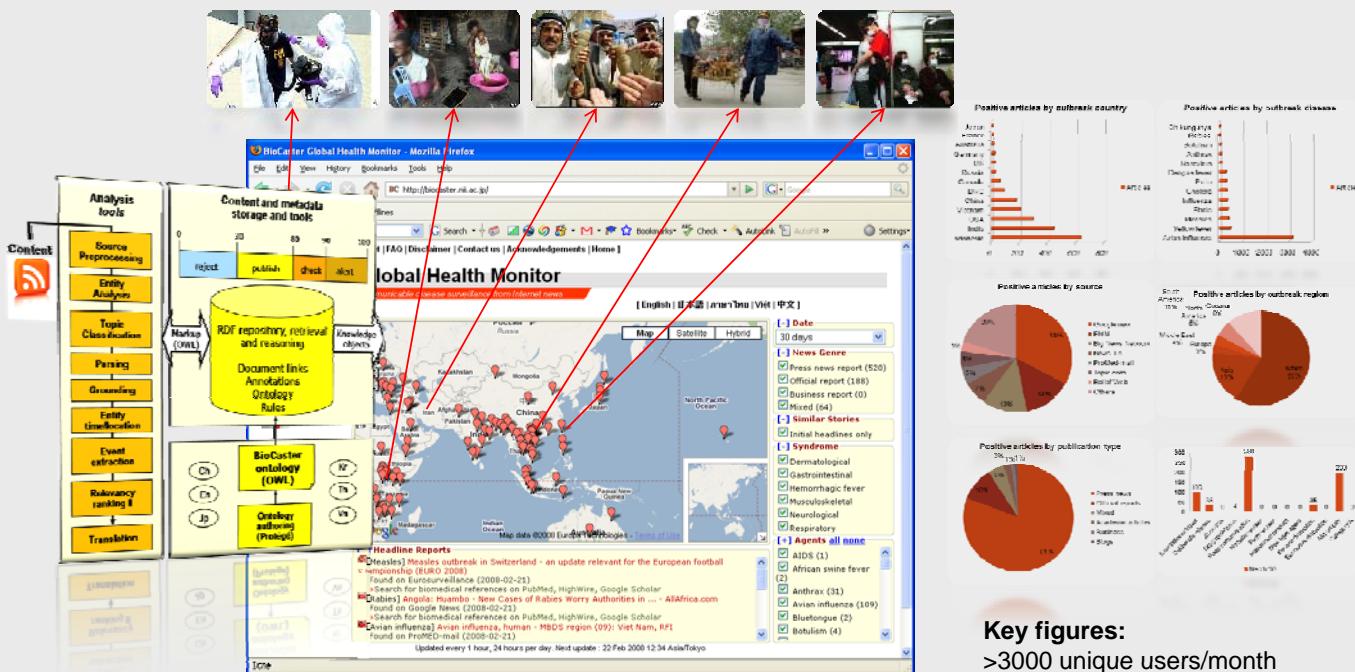

Summary

Early detection and tracking of a possible disease outbreak such as SARS or Avian influenza is a responsibility for governments who are faced with monitoring massive quantities of local news on the WWW in several languages. In BioCaster we are developing a web-portal using the latest text mining technology that can filter news reports in various regional languages and present a summarized translation in the local language. Research is focusing on creating: (1) a multi-lingual knowledge resource (ontology), (2) a high-performance text mining system, (3) an intelligent linkage system for navigating between news about diseases and the latest research findings in the literature and genetics databases.

Purpose

- Enable timely access to disease outbreak news to raise government and public health expert's awareness
- Access to multi-lingual news reports on the Internet using text mining technology
- Integration of bio-geographic information to aid in the analysis of disease spread
- Automatic email alerts to registered users for news items on key topics of interest
- Linkage of rich information sources to help users decide on the significance of the outbreak

System Features

Find out more at: <http://biocaster.nii.ac.jp>

Key figures:

>3000 unique users/month
>1700 news sources
8000 news reports analysed/day

日本語ニュースの例

茨城、埼玉両県の養鶏場で昨年流行したH5N2型の鳥インフルエンザで、厚生労働省は1日、感染の疑いのある人が最終的に93人になったと発表した。H5N2型は毒性が弱いうえ、発症者もおらず、2次感染の恐れはないという。（産経Web）

English news

The Ministry of Health in Viet Nam has confirmed a further case of human infection with H5N1. The avian influenza case occurred in a 35-year-old man from Hanoi who was hospitalized with respiratory symptoms on 26 October and died on 29 October. (WHO)

Semantic Markup in News Articles

■ BioCaster system recognizes and semantically marks up important entities mentioned in the news text, which are related to disease outbreak event. Examples of such entity classes:

TIME (時間) : <TIME>29 July 2005</TIME> <TIME>4月6日夜</TIME>

LOCATION (場所) : <LOC>Viet Nam</LOC> <LOC>名古屋市</LOC> <LOC>スマトラ島</LOC>

ORGANIZATION (組織) : <ORG>World Health Organization</ORG> <ORG>世界保健機関</ORG>

PERSON (人物) : <PERSON>more than 70 people</PERSON> <PERSON>18歳の女性</PERSON>

DISEASE (疾病) : <DISEASE>SARS</DISEASE> <DISEASE>A型肝炎</DISEASE>

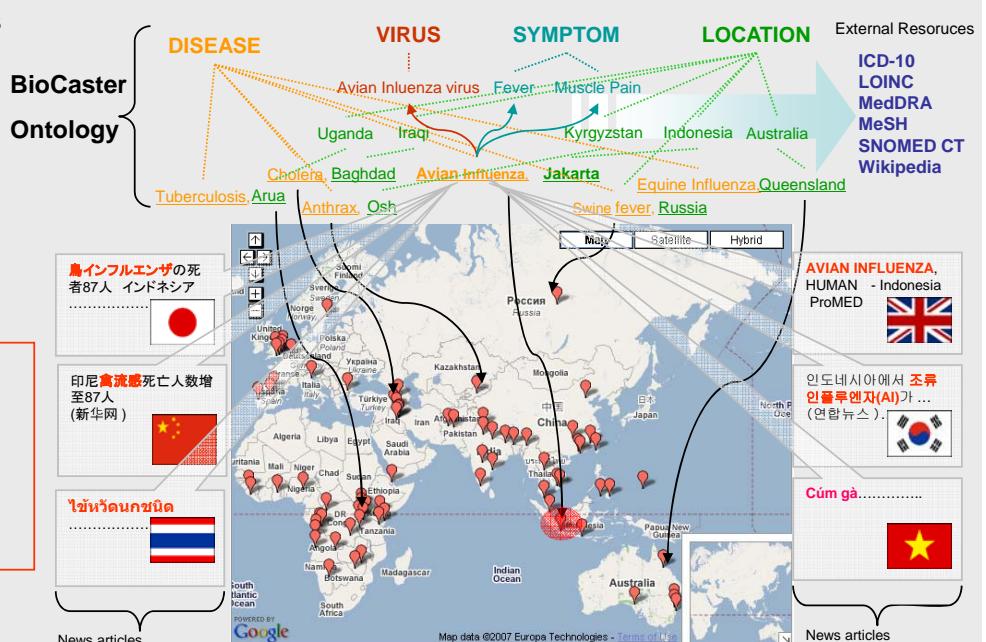

SYMPTOMS (症状) : <SYMPTOM>cough</SYMPTOM> <SYMPTOM>微熱</SYMPTOM>

VIRUS (ウイルス) : <VIRUS>Ebola virus</VIRUS> <VIRUS>ノロウイルス</VIRUS>

ANATOMY (身体部分) : <ANATOMY>liver</ANATOMY> <ANATOMY>腎臓</ANATOMY>

Development of a Public Health Ontology

■ At the heart of the system is a multi-lingual ontology, which has knowledge for disease surveillance, and serves as a basis for advanced searches and intelligent inferences.

BioCaster Ontology ver.2.0

4740 concepts
• Disease: 102
• Syndrome: 7
• Symptom: 120
• Animal: 74
• MicroOrganism: 105
+
• Location: 4316

5129 terms
• English
• Japanese
• Thai
• Vietnamese
• Korean
• Chinese
• French
• Spanish
