

# Polar science and big data

Martin Siegert

- Overview of your work
- How did you start working with methodology side?
- Is your collaborative work with methodology side a win-win relationship, or do you get more benefit than methodology side?
- Can methodology side obtain a new research theme from your collaborative work and write technical papers?
- How do you educate/train pi-shaped scientists?

## IPY answered major questions about the Earth

*“...to observe geophysical phenomena and to secure data from all parts of the world; to conduct this effort on a coordinated basis by fields, and in space and time, so that results could be collated in a meaningful manner.”*

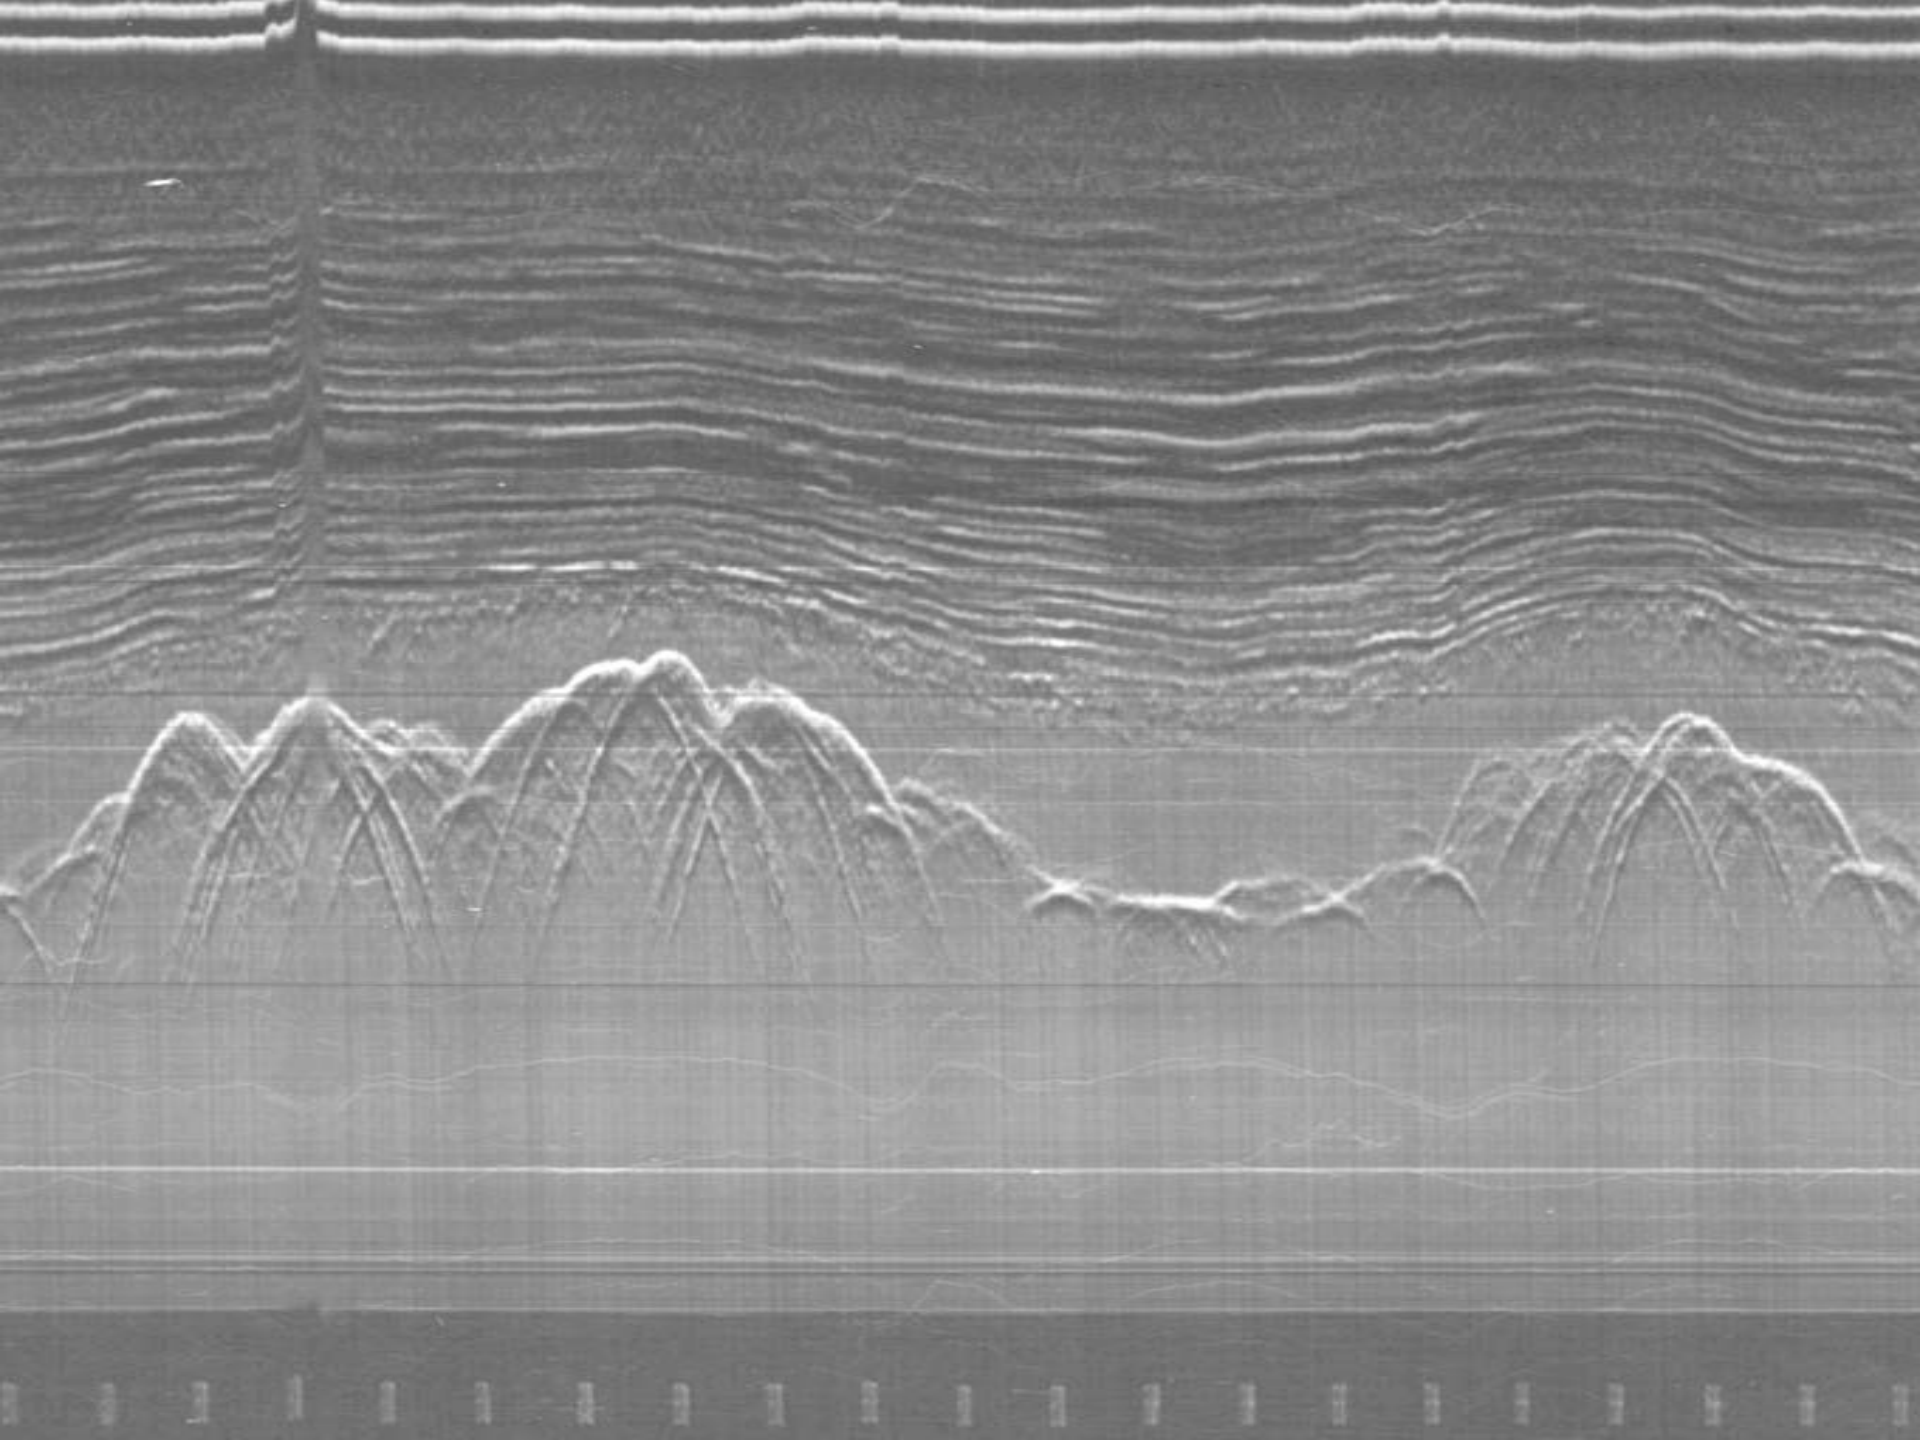

# Age of Geophysics, 1957 - present

**Gordon Robin, 1921-2004**

*“One of his most inspired decisions was to advance the charting of glacier and ice cap thickness by airborne radio echo-sounding rather than explosions conducted on the surface” (Telegraph, 5 Oct 2004)*

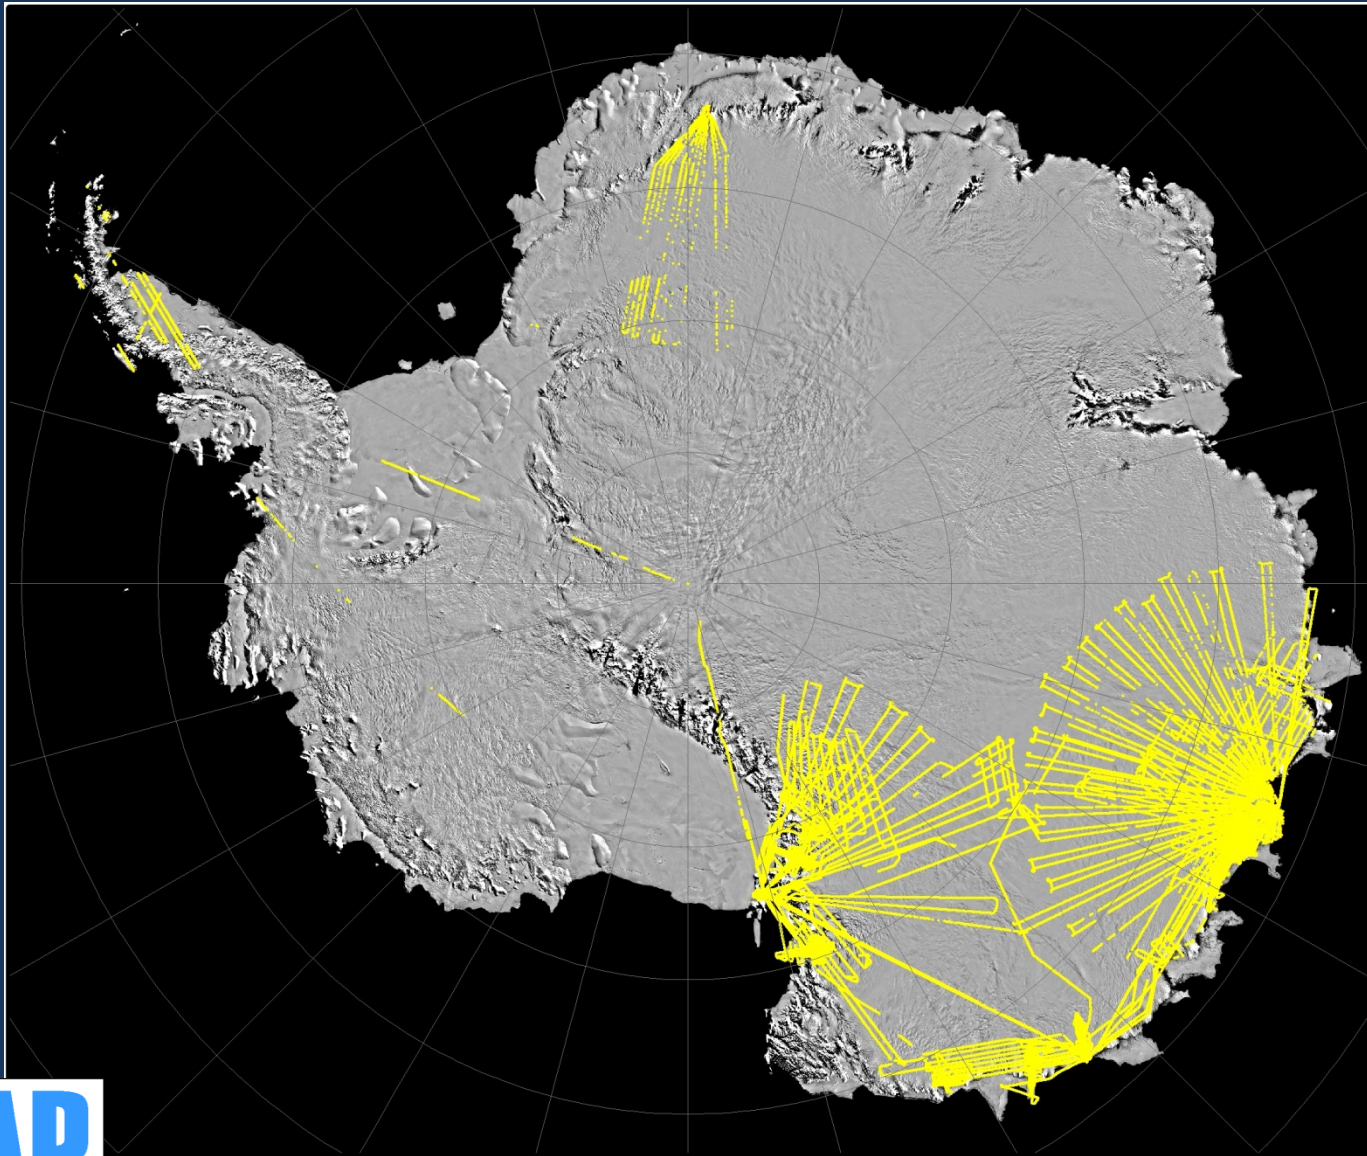

# ICECAP: 2008 – present (6 seasons)

DC-3T Basler

ICECAP flightlines

# UK Institute Ice Stream: 2010-11

Twin Otter

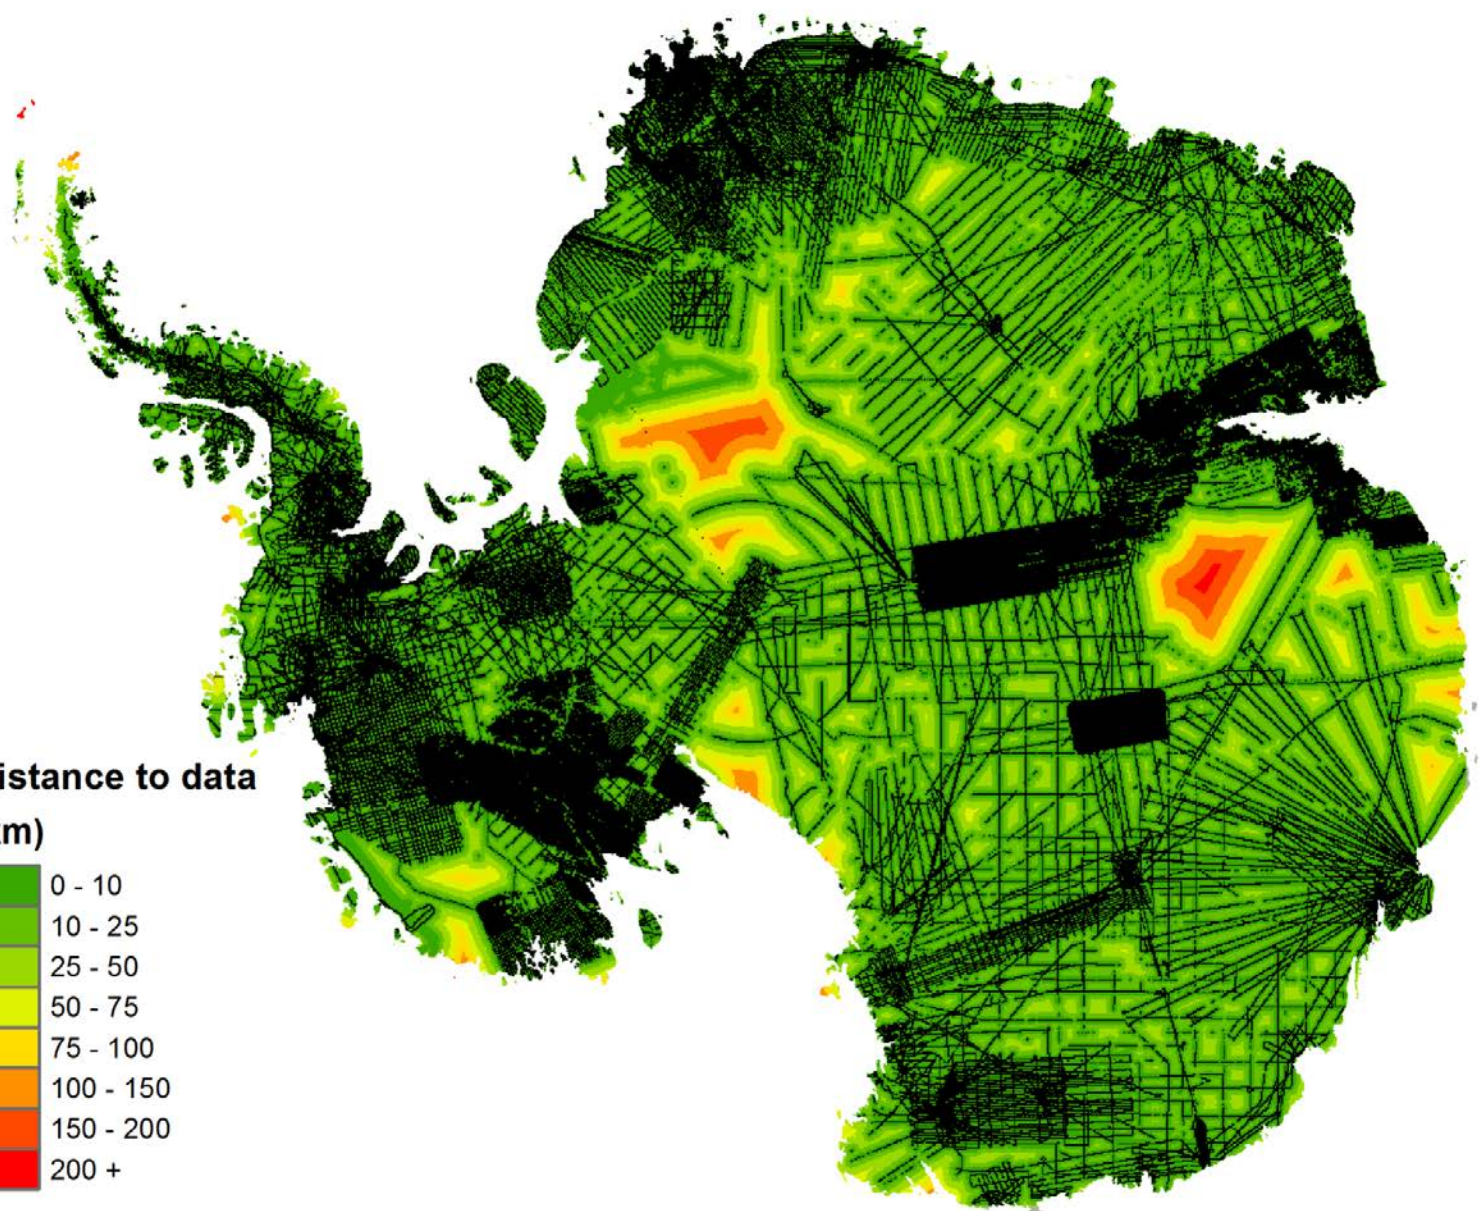

2001

**Why should we care?**

# Recent sea-level rise

- Overview of your work
- How did you start working with methodology side?
- Is your collaborative work with methodology side a win-win relationship, or do you get more benefit than methodology side?
- Can methodology side obtain a new research theme from your collaborative work and write technical papers?
- How do you educate/train pi-shaped scientists?

- Better processing of radar data
- Real time satellite data
- Autonomous aircraft and underwater vehicles
- Expansion of ground-based measurements
- Better models of ice, ocean, earth system

# Satellites and ground-based measurements

---

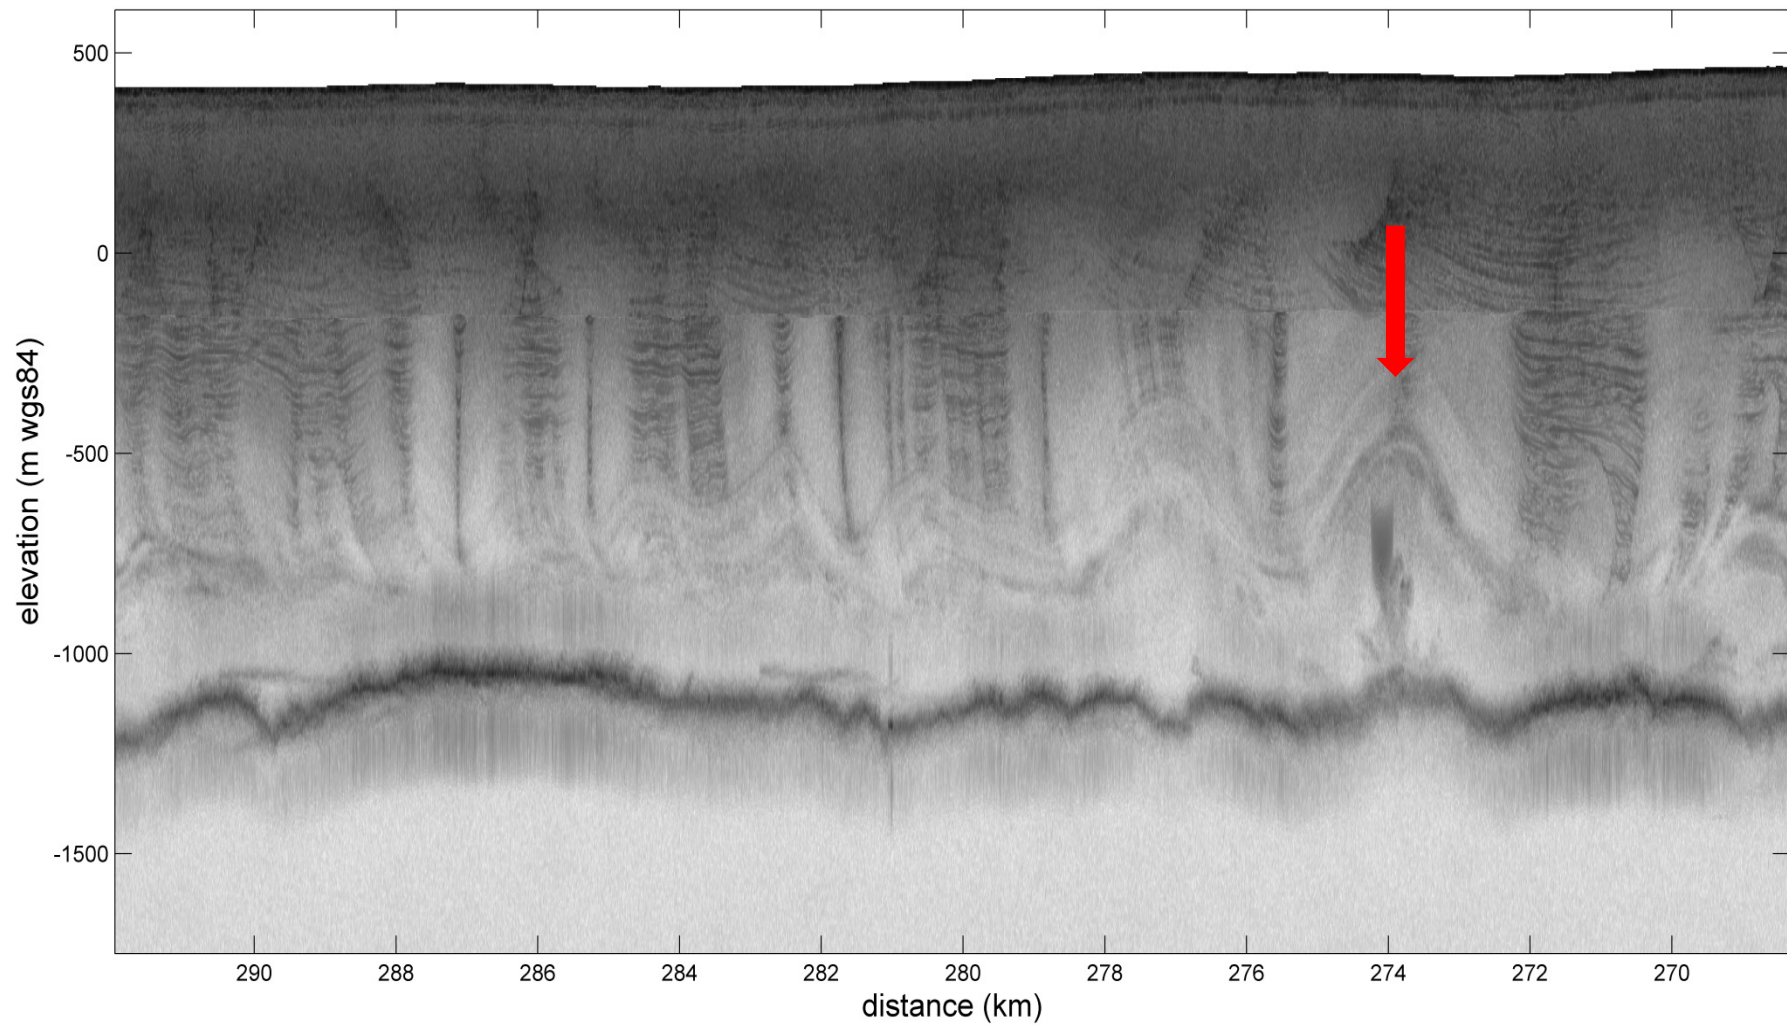

# Automation and autonomy

---

# Exploit the data

Ice flow is approx. into the page

# We need to understand data that's needed

---
