

5 POINTS

STORMSHIELD ENDPOINT SECURITY IS MORE EFFECTIVE THAN AN ANTIVIRUS

ZERO-DAY PROTECTION

Proactive protection without a signature base
No updates needed for offline environments
Protection against today's and tomorrow's sophisticated attacks

SECURITY POLICY

All security requirements are managed from a single policy
Modularity of security rules depending on context
(e.g. mobile usage, removable devices, during an attack)
or membership in a group
(e.g. department with a specific security policy adapted to a particular profession)
Simplified deployment and management of the security policy

Stormshield
Endpoint Security

PROTECTION AGAINST ILLEGAL OR MALICIOUS USE

Protection against users' malicious actions
Exfiltration of sensitive data prevented
Prevention of usage that fails to comply with the security policy *(connection of personal telephones and unsecure Wi-Fi for example)*

COMPREHENSIVE REPORTING

Comprehensive reports thanks to logs, especially on the use of removable devices or Wi-Fi
Thorough and in-depth analysis of threats *(potentially infectious USB keys, critical workstations, critical services or processes on the OS that may become victims of attacks, etc.)*

GUARANTEED SERVICE CONTINUITY

Zero impact on the continuity of your business
Attacks blocked without user intervention
Information reported in the central administration console

Stormshield Endpoint Security

The security solution that blocks unknown or sophisticated attacks that conventional defense systems do not detect.
