SKYPE FOR BUSINESS INTEGRATION

## Skype for Business Application Integration

When it comes to deploying a new phone system in the office, many workers are reluctant to give up the tools they are familiar with. The popularity of Skype means that many people continue using it even with new communication tools in place. To solve this problem, Zultys created a Skype for Business Integration plug-in. This is an optional add-on for the Zultys Flex Communicator. Zultys Skype for Business makes it easy for your teams to access Zultys enterprise-grade communications features without ever leaving their Microsoft application, simplifying workflow and increasing productivity.

Features:

- Exchange Presence information between Zultys' ZAC Unified Communications client and the Skype for Business client
- Initiate calls via the MX phone system from the Skype for Business client for smoother integration

Requirements:

- Lync 2013/Skype for Business client are installed and properly configured on the client PC. The Skype for Business server can be a local server onsite or the Office 365 cloud-based solution.
- Flex Communicator 3.0.6 and the Zultys Lync plug-in must be installed on the client PC.
